Dr. Zippeler, of New York, considered quite an authority on swimming, in a recent discourse asserted that any person about to learn how to swim should be firmly persuaded that his body is lighter than the water, and that when cool and deliberate he cannot sink as long as he keeps his mouth closed, breathing by his nostrils. He who has once learned how to swim may fearlessly resume the practice, though he may not have attempted it for many a year. To advance the learner in five minutes so far that without any support he may float or swim on his back, he suggests the following method: He has to lay himself on his back, merely supported by the teacher, so that he does not go under.

His extended legs are held either by a third person, by means of his heels, or, as is done in swimming schools, laid upon the steps leading into the basin, while the head is dipped into the water to a depth that it may run into his ears, the elbows bent backward, and the hands firmly pressed upon the breast. Meanwhile, the teacher supports the back of the learner, so that the body is extended in a horizontal position. He has previously received the assurance, which must be strictly and faithfully observed, that they will not permit it under any circumstances whatever that he may go under, for if at the very first attempt he is made to swallow any water, he will thereafter have less courage.

His body extended, the learner, however, is to be perfectly quiet. Whenever the teacher observes that he (the learner) has attained his balance, he (the teacher) removes his hand from under his back, when the former will at once perceive that his body is afloat, or that he is swimming. He is now convinced that, though without support, he cannot sink, a conviction much sooner and easier obtained than by the common method. Now removing his feet by a gentle pressure from their place of support, while he is admonished not to stir, he will be surprised to learn that his legs are now about gradually to sink. This maneuvering being repeated two or three times, the learner, being required to do so, gives a push with his legs, by which means he is now made to move without using his arms, conscious that he is now able to swim. Of course, they must be careful at once to support the learner, if, in consequence of an awkward motion, the upper part of the body is about to sink, so as not to swallow any water, and thus lose courage. This method, well proven, is far superior to the former of Mr. Pfuel. —*Boston Globe.*

HAMPTON, MAY, 1875.

The Agricultural papers in New England are never weary of assuring their patrons that no other calling is so safe as farming. A combination in winter of shoemaking, with unproductive labor in wood sawing, varied by personal slavery to domestic animals, is called by anything but its proper name of drudgery. Young men are advised and entreated to stop turning their backs on the old homesteads. At the Agricultural fairs the popular speaker is he who by charming allusions to the independence of the honest "tiller of the soil" can most neatly cover up the ugly facts that three-fourths of the farms in New England are carried on for the benefit of the hired man; and that only a few of the exceptionally good managers realize six per cent on their invested capital. Early rising, severe labor and pinching economy used to make eastern farmers rich. That it fails now to do so there is one sufficient cause; namely, the increasing competition of men in a milder climate.

Many of the products of a southeastern Virginia farm and of a northern farm are brought to the same market at the same expense. If we could imagine the hands themselves to be placed side by side, what would the northern man see as he looked over the fence?

Standing on a crusted snow bank in the month of January, our thickly clad friend would notice the small size and expense of his neighbor's wood pile and fodder stack. In the distance, near a stream, the cattle would be picking half their living. As he recalled his own hard labor in storing his root crops, he would see his neighbor's ruta-bagas standing just where they grew, ready to be sold or fed as wanted. Long rows of spring kale and cabbage would stretch across a field entirely unprotected. Without overcoat or gloves his southern acquaintance would be furnishing brains for half-a-dozen willing and docile hands. A man who could run a perfectly straight furrow would be "listing up" the ground for planting peas, while a small boy would follow the plow gathering up the remains of the fall potato crop.

Changing the time of year to the first of August, the northern man would see all his ideas confounded by the planting of peach blow potatoes; and the after harvesting of them when his own ground was covered with snow.

Dropping our illustration, we would say that in this favored tide-water region we have land as good as any in New England, and seasons at least six weeks longer at each end. How then can New England compete with us in farming?

The expenses of carrying on a farm are in every way lighter here. Wear and tear is vastly diminished by the entire absence of stones in the soil. Half the money locked up in New England barns and dwellings, becomes active capital when translated to our more genial climate. Seventy-five cents for men and from forty to fifty cents for women, *feeding themselves*, will secure selected hands, comparing very favorably with the Irish. Prompt pay and fair dealing are the secrets by which much more work for the money can be obtained from negro hands than from northern laborers, in everything which they are accustomed to doing. And a more docile class than the laboring men of the South could not be desired. Experience of their character, and constant oversight are necessary, but with these the southern farmer with from $5,000 to $10,000 seldom touches a tool himself.

It has been too common that emigrants from the North suppose their own methods of farming to be so far superior to those of the South that the local experience in the treatment of crops can be entirely disregarded. But for the man of energy and moderate capital, who is not bigoted in favor of any theory, but is willing to notice and learn how climate dictates systems, a grand opening is certainly offered in the South. The lack of such society as the emigrant happens to have been accustomed to, is the only real objection, and even that is becoming in some localities a thing of the past, and in all is likely to disappear, as the inducements to going south rather than west are more generally understood.

A large and attractive book entitled *Reminiscences of Gen. Robert E. Lee*, by the Rev. J. M. Jones of Richmond, has recently been purchased for the Normal School Library. We have perused it with interest and it has been commended to the attention of our students.

We have also read a book of interesting sketches of the war from a southern standpoint, called *A Rebel's Recollections*, by George Cary Eggleston. We heartily agree with the remarks of Oliver Johnson to the writer as quoted in his preface. The author consulted Johnson, whom he styles "The best 'original Abolitionist' he ever knew," as to whether he could publish this little volume of reminiscences without fear of offending excellent people, or still worse, reanimating prejudices that happily were dying. Johnson's reply was "Write, by all means. Prejudice is the firstborn of Ignorance, and it never outlives its father. The only thing necessary now to the final burial of the animosity existing between the sections is that the North and South shall understand each other. Anything which contributes to this hastens the day of peace and harmony and brotherly love which every good man longs for."

The worst root of bitterness in the South is the refusal of either class to look from the standpoint of the other. "Put yourself in his place," is the right answer to half the natural fault-finding in the world. The black man regards the Confederate cause as inspired by no other motive than the eternal enslavement of his race and can hardly conceive of the passionate enthusiasm with which that army consciously fought for their "Altars and their fires and the green graves of their sires," nor comprehend the marvelous self-denial and magnificent sacrifices for the "Lost Cause."

The Southerner paints negro morals in the darkest colors and dilates upon their indolence and general worthlessness instead of acknowledging that their vices and virtues together are the logic of their antecedents and trying to create that confidence and self-respect and inspiration that alone can form a basis of moral elevation and of manhood.

The recent struggle of the South illustrated some of the noblest traits of our human nature. From her armies emerged men whom the world will always admire, fighting, as we and most believe, against the cause of civilization and humanity, but splendidly true to their convictions of duty and for that cast away every comfort and life itself.

Shall we "make treason odious" by abusing these ideals of self-denial and heroism? We shall certainly make the rebellion successful by promoting what even now threatens, such an alienation of feeling between North and South that their union shall be merely mechanical and insincere, unable to stand the strain that the future is sure to bring.

While in general it is well to be silent amid intense and opposing convictions, it is better to be first to acknowledge all that one can that shall satisfy the self-respect of our opponents. We should "put ourselves in their place" and enter into their real thought and life. The poet sings of the want of this in these well-known words:

"Alas! for the rarity
Of human charity!"

The result would be an increased mutual respect, a basis of real peace, a conviction that a people who have passed through a furnace of experience heated seven times hotter than that through which we have gone, will be ennobled thereby, and should be won by every means into perfect untinual harmony—not by waiting for a century to do its slow work, but by cultivating respect and honor for those who command it and doing it as soon as possible.

THE GREAT REVIVAL IN ENGLAND.

Two American gentlemen, residents of Chicago, neither theologians nor highly educated men—one, Mr. Moody, an earnest and talented lay preacher; the other, Mr. Sankey, a beautiful singer—have been conducting enormous religious meetings in London and elsewhere, attended by from sixteen to nineteen thousand people at one time. Never before have there been such gatherings. They began in the country regions, did a great work in Scotland, and have now laid seige to London.

We quote from a London paper the following account:

"For the recent religious meetings, the 'Moody and Sankey Committee' hired upward of nine thousand chairs. On the very first Sunday evening, long before eight o'clock, when the service commenced, not only were all the chairs occupied, but several thousands of people were standing, and thousands more could not gain admission. It is difficult to estimate accurately the real magnitude of such a crowd; but I am inclined to think there were thirteen thousand people present. Every night through the first week the Hall was thronged in the same way, and there were vast crowds outside.

"On Sunday morning, January 24th, it was filled with people who obtained admission by ticket, and who, before they received their tickets, declared they were not in the habit of attending any place of worship.

"Night after night, long before the hour of service, long rows of carriages stood in the street, filled with persons who hoped that when the crowd about the doors had thinned, they might be able to find standing room just inside, and thousands streamed away because they found they had come too late to have a chance of pressing in. In addition to the evening service, there was a prayer-meeting every morning, at twelve o'clock, at which Mr. Moody gave an address of twenty or twenty-five minutes length, and Mr. Sankey sang.

"How is all this to be accounted for?

"The truest, simplest and most complete reply to the question which I can give is, that the power of God was manifested in an extraordinary degree.

"The services themselves were attractive. Mr. Sankey's solos evidently touched very many hearts; and the effect produced by the manner in which the vast audience united in such songs as 'Hold the fort, for I am coming,' and 'Safe in the arms of Jesus,' and 'The great Physician now is near,' was sometimes very thrilling.

"Mr. Sankey's melodies—whatever their demerits—are caught by thousands of people of all kinds, cultivated and uncultivated, men, women, and children, and are sung 'with a will.'

"But it was not the singing only which made the services interesting; there was great animation and variety in them. In the evening, they began with a hymn which the people sang together; but what would be the 'order' of the service no one knew, and I suspect Mr. Moody did not know beforehand. After the first hymn somebody generally offered a short prayer; if it was clear that the heart of the audience went with the prayer, he would then read a chapter and make a few remarks upon it as he read; if not, he would ask Mr. Sankey to sing a solo, or a solo with a chorus, in which the people joined, or else one of the most popular hymns. Then he would read the chapter, and perhaps have another hymn or offer a short prayer himself. Then would come another hymn, and then the sermon. Everything was determined by what was felt to be the actual mood of the moment. Generally the whole service was over in a little more than an hour and a quarter. Then came the 'after meeting,' of which I shall say something presently.

"Of Mr. Moody's own power I find it difficult to speak. It is so real, and yet so unlike the power of ordinary preachers, that I hardly know how to analyze it. Its reality is indisputable. Any man who can interest and impress an audience varying from three thousand to six thousand people for half an hour in the morning, and for three-quarters of an hour in the afternoon, and who can interest a third audience of thirteen or fifteen thousand people for three-quarters of an hour again in the evening, must have power of some

kind. The people were of all sorts, young and old, rich and poor, keen tradesmen, manufacturers, and merchants, and young ladies who had just left school, rough boys who know more about dogs and pigeons than about books, and cultivated women. For a time I could not understand it—I am not sure that I understand it now. At the first meeting, Mr. Moody's address was simple, direct, kindly and hopeful; it had a touch of humor and a touch of pathos; it was lit up with a story or two that filled most eyes with tears; but there seemed nothing in it very remarkable. Yet it *told*. I told Mr. Moody that the work was most plainly of God, for I could see no real relation between him and what he had done. He laughed cheerily, and said he should be very sorry if it were otherwise.

"One of the elements of Mr. Moody's power consists in his perfect naturalness. He has something to say, and he says it—says it as simply and directly to thirteen thousand people as to thirteen.

"This is an immense element of power. If our congregations came to hear us preach, instead of coming to hear *how* we preach, the effect of our sermons would be immeasurably increased.

"Mr. Moody uses the words of the home and the street; the plainer they are the better he likes them. He has given himself to God, all that he has, all that he is, and he uses every faculty and resource of his nature to prevail upon men to hate sin and to trust and to love Christ. To him nothing is common or unclean. He has humor, and he uses it; he has passion, and he uses it; he can tell racy anecdotes, and he tells them; he can make people cry as well as laugh, and he does it."

For every token of returning cordiality and good feeling between the North and the South we "thank God and take courage." No more striking evidence of this most desirable change has been afforded than the graceful act of General Ripley in returning to the State of Massachusetts the flag of the 54th. Mass. (colored) regiment. We give his admirable letter accompanying the presentation in another column.

The 54th. regiment was composed of colored men officered by the best and bravest sons of the State with the illustrious Robert G. Shaw at their head. It was ordered to South Carolina and its flag was lost in a gallant storming attack on Fort Wagner where its leader and scores who followed him fell on the parapet and were buried in the ditch.

About the time this memorable flag was received at the State-house, the citizens of Boston had made a presentation to the Washington Light Guard of Charleston, of a national flag emblazoned with the locked shields of the two states. Both these actions are significant of returning cordiality which we hail with heartfelt joy. As the Centennial celebrations of stirring events of the Revolution which made us a nation are crowding thick and fast upon us, may all bitterness arising from the recent unhappy differences be buried, and may a united North and South once more move on to a destiny worthy of their patriot sires.

The Southern Branch of the National Soldier's Home at Hampton, Va. has about five hundred inmates under the command of Capt. P. T. Woodfin. The grounds and accommodations are in beautiful order; the situation is one of the finest on the Atlantic Coast and a visit to these premises well repays the trouble of the journey. Of late, Captain Woodfin has earned not only the gratitude of his men, but the thanks of this entire community for the excellent entertainments in the "Soldier's Home Theater" which have delighted many and most pleasantly beguiled the weary hours of his "boys in blue."

We commend the advertisement of the Home Savings Bank to the attention of our readers. It is a carefully managed institution and worthy of the confidence of the public.

A BLOCKADE-RUNNER'S SCRAPE.

BY CAPT. S. W. ARMISTEAD.

The full history of the late war between the States will never be written, and the names of those who have displayed the firmest nerve and steadiest purpose, will never reach the ear of posterity. Many a deed requiring all of valor, coolness and resolution of which man is possessed, has perished with its performance simply because the actors were unknown to fame.

Except perhaps the scouts of the respective armies there was no class of men engaged in the war whose business was more hazardous and exciting than that of the blockade-runners. Engaged in enterprises, which, when successful, yielded immense profits, but which often ended in capture and imprisonment; operating mostly at night when man is naturally timid; often following circuitous and unknown roads, uncertain where to go for guidance or assistance; lurking during the day in the most insecure hiding places; the enemy passing often in sight and sometimes within pistol-shot; occasionally forced into encounters where life and liberty were the stakes, captivity or death the result of defeat, it required traits of character for its successful prosecution which few were possessed of to meet.

The following incident will serve to illustrate this assertion. I will give it as nearly as possible in the words of one of the chief actors.

"About the time," said he, "of Dahlgren's raid upon Richmond, myself and the companion who usually acted with me were on our way with a lot of blockade goods, from the lower peninsula to Richmond. We had nearly reached the Mattaponi, when we learned to our great uneasiness of Dahlgren's death, the failure of his plans and that his forces were retreating in the direction of Gloucester Point, and even then but a few miles in our front. Hastily inquiring of our informant the best place of secreting ourselves until they should pass by we were directed to a body of woods not far off, and thither we immediately repaired.

"After remaining there until nearly noon of the following day, I ventured out to reconnoiter the road, directing my companion to follow on with the goods if he heard nothing of me in the course of two hours. I had not proceeded far, however, before I perceived the enemy advancing from the river, and of course could only go back to my place of concealment."

On the next two days, a similar disappointment awaited me, so that in the end we were compelled to remain in that position for three days and nights. At length, however, the enemy disappeared and we made haste to resume our journey, but before proceeding far I perceived that the wagon was over-loaded and the horse was in a fair way to fail us altogether. I therefore proposed that my friend should take his share of the goods and go on, while I set about to find other conveyance for my own. After considerable difficulty I succeeded in getting them to the river, but here a new obstacle presented itself. The only mode of crossing was through an irregular ferry kept by a faithful "contraband." After much trouble in searching him out, I found him at a farm-house near the ferry and to my proposition to take me across he readily agreed, upon condition that I should help him to defend his boat that night if any parties should attempt to carry her off.

He said that a negro on a neighboring farm had made arrangements to come down there that night, take his boat and carry his family within the Yankee lines. Instructing him to call me in case the threatened attempt was made, I retired to bed hoping that night at least to enjoy a comfortable bed, and uninterrupted repose. In a very few moments, however, the ferryman came back and reported that the parties spoken of were after his boat. Making all possible haste, under his directions I soon reached the shore and there indeed I saw the boat with two colored men in it just pushing out from the shore. Upon their refusal to return, at my command, the ferryman let drive with his gun, but from the direction of the blaze I knew that he had not done them any damage. It had the effect of bringing them back, however, and as soon as the boat struck the beach I ordered them to get out and come ashore. One of them replied "I am coming," and started toward me, stumbling and stooping in such a manner that I began to think perhaps he had been struck by the ferryman's shot. I was soon undeceived, however, for when he got to within about fifteen or twenty feet of me, I perceived that he had a pistol and was aiming it directly at me. The secret of his irregular manner of approach was at once explained.

It was but the work of a moment to raise my pistol and fire, which was promptly returned on his part. Both of us having revolvers, we continued to fire until about the third round when he concluded to back out. Pressing my advantage as well as I could, I advanced upon him continuing the fire until my pistol was emptied, when I turned to look for the ferryman; but, lo and behold, he was not in sight. Calling to him to bring me his gun, he replied at a distance off that his gun was not loaded. Knowing that in a hand to hand struggle, I was no match for two, I then started on a retreat, but in a few minutes met the owner of the house at which I was stopping, who gave me a small pocket revolver. Returning to the scene of the fight I had the mortification to see the parties just landing on the other side. There was nothing to be done then except to go lower down where the river was somewhat narrower and keep watch until morning. This the ferryman promised to do and I went back to bed. About daylight I heard the discharge of two guns and a pistol, and on reaching the river found that, as was expected, the attempt had been made to run the boat through. The ferryman had fired upon them, but while he failed to hit them he compelled them to run her ashore and leave her.

"I had many personal encounters during the war, but I never met with a man who was more deliberate in his courage than he whom I encountered on the river bank that night. The ferryman said that he was a "boss'in'" fellow always talkin' 'bout what he could do," and I found that he was ready to back his boasting up.

There are very few men whose fire cannot be drawn by your own, but this negro reserved his, each time, until he supposed, at least, that he had good aim.

I afterward made inquiry concerning him and found that he had received three wounds from the effects of which he shortly died.

---

8 Stanhope Terrace, Gloster Road, South Kensington, London, *Jan.* 12, 1875.

To his Excellency the Governor of Massachusetts,—I have the honor to forward to your excellency the regimental color of the 54th Massachusetts volunteers, which was taken in action on the evening of the 18th. of July, 1863, by the garrison of Battery Wagner, under General Taliaferro, being part of the forces defending Charleston, S. C., under my command, when that work was assaulted by the Federal troops under General Gilmore. Since the close of the civil war in America, I have been generally absent from the country, and I have seen with regret the failure of expedients attempted to restore peace and content to the Southern States.

It seems to me, however, that the lapse of time and the course of events have produced a less embittered state of public feeling than that which existed just after the close of the strife. Under the existing state of things, I deem it decorous, if not a positive duty, to promote the oblivion of the animosities which led to and were engendered by the war. Such being the case, I prefer to look upon trophies of the character of the color in question as mementoes of the gallant conduct of men who, like Shaw, Putnam, and other sons of Massachusetts, sealed their devotion to the cause they adopted with their lives, rather than as evidence of prowess, on the one side or the other. The custodians of such a memento should be the authorities of the State served by these gallant men, and I, therefore, transmit the flag to your excellency for such disposition as the authorities of Massachusetts shall determine.

Your's respectfully,
Your obedient servant,
(Signed). R. S. Ripley.

The condition of agricultural laborers in European countries is something that would astonish the American farmer, who thinks the drudgery of the farm an unbearable affliction. The English laborer, who we think is roughly used by fate, working from infancy until incapacitated by age, infirmity and decrepitude, for a pittance which keeps him on the verge of starvation, is happily situated as compared with others; at least he has constant work while ability lasts; but the French laborer works only two hundred days in the year, the Russian even less; the Austrian works but two hundred and thirty-four days—and all these work from four in the morning until nine in the evening, with three hours' rest in the middle of the day. The Belgian farm laborers receive twenty-five to thirty-one cents a day. Rye bread, potatoes and curds furnish their food. At home their families live on black barley bread with a little grease and a decoction of roasted chicory root, without sugar and milk, for drink. These laborers share the beds or bedding of the cattle they tend, and a luxurious couch is a shelf on the stable wall and a bundle of straw beside the oxen. —*New York Tribune.*

Some one has been tampering with the general appropriation bill of Louisiana after its passage, and the measure as now officially printed is denounced as a gross forgery.—*Ex.*

THE

HOME SAVINGS BANK,

CORNER MAIN AND ATLANTIC STREETS.

Incorporated under State Charter, 1874.

AUTHORIZED CAPITAL	**$ 100 000.**
SUBSCRIBED "	**$ 20 000.**

Money in smallest amounts, received on deposit and interest at six per cent, allowed from day of deposit. Deposits paid on demand.

Exchange bought and drafts drawn on the National Shaw and Leather Bank, New York City; capital One Million.

Drafts drawn also on Baltimore, Washington, Richmond, and other cities.

Collections promptly made on all parts of the country. All investments made in this vicinity. Especial advantages given those customers who were depositors in the late FREEDMAN'S SAVINGS BANK.

☞ N. B. We have loaned since last November,—chiefly to colored citizens, and in small amounts—over twelve thousand dollars!

STANZAS WRITTEN IN THE CHURCH-YARD OF RICHMOND, ENGLAND,

BY HERBERT KNOWLES.

"It is good for us to be here: if thou wilt, let us make three tabernacles, one for thee, one for Moses, one for Elias."—*St. Matthew.*

Methinks it is good to be here,
If thou wilt, let us build,—but for whom?
Nor Elias nor Moses appear;
But the shadows of even that encompass with gloom
The abode of the dead and the place of the tomb.

Shall we build to Ambition? Ah, no!
Affrighted, he shrinketh away,—
For see, they would pin him below
In a dark narrow cave, and begirt with cold clay,
To the meanest of reptiles a fear and a prey.

To Beauty? Ah, no! she forgets
The charms which she wielded before,
Nor knows the foul worm that he frets
The skin that but yesterday fools could adore,
For the smoothness it held, or the tints which it wore.

Shall we build to the temple of Pride
The trappings which deck the proud?
Alas! they are all laid aside,
And here's neither dress nor adornment allowed,
Save the long winding sheet and the fringe of the shroud.

To Riches? Alas, 'tis in vain!
Who hide in their turns have been hid:
The treasures are squandered again;
And here in the grave are all metals forbid,
Save the tinsel that shines on the dark coffin-lid.

To the pleasures which Mirth can afford,
The revel, the laugh, and the jest?
Ah! here is the plentiful board!
But the guests are all mute at their pitiful cheer,
And none but the worm is a reveler here.

Shall we build to Affection and Love?
Ah, no! they have withered and died,
Or fled with the spirit above:
Friends, brothers, and sisters, are laid side by side,
Yet none have sainted and none have replied.

Unto Sorrow? The dead cannot grieve:
Not a sob, not a sigh meets mine ear,
Which compassion itself would relieve.
Ah! sweetly they sleep, nor love, hope, or fear,
Peace, peace! is the watchword, the only one here.

Unto Death, to whom monarchs must bow?
Ah, no! for his empire is known,
And here there are trophies enow!
Beneath the cold head, and around the dark stone,
Are the signs of a sceptre that none may disown.

The first tabernacle to Hope we will build,
And look for the sleepers around us to rise!
The second to Faith, which insures it fulfilled;
And the third to the Lamb of the great sacrifice,
Who bequeathed us them all when he rose to the skies.

TO THE STUDENTS OF HAMPTON.

V.

FOR YOUNG MEN.

If you, as young men who desire to maintain the external appearance of gentlemen, were to ask me what are the characteristics of a gentleman's dress, I should answer you with little hesitation, "Cleanliness, quiet colors, and well brushed boots." If you have these three requisites, you need not be over-careful about the cut of your coat and trousers, or the fashion of your hat; but even with these attained, you have not yet reached the foundation of the matter, for your dress really begins, not with the garments which are usually visible, but with the underclothing—and on this point I want you to understand very clearly what are the essentials.

As a matter of health you ought to wear next your skin, shirt and drawers of some woolen material, heavy in winter and light in summer, for this is a safeguard against sudden changes of temperature or the depressing effect upon the vital forces of extreme or unaccustomed cold. The woven undergarments, which can be bought at almost any dry-goods shop, are cheap and convenient, though flannel, either white or colored, is, on some accounts, better for this purpose. These garments must be changed, at least, once a week; do not on any account wear them longer than that; for, although they may not look soiled, they are most certainly saturated with the impurities thrown off by the skin, and will probably show it by their odor. It is well, too, to wear woolen stockings in winter; and for them the only rule I can give you is to change them whenever they are dirty.

You will see, of course, that I am taking it for granted that you yourselves are cleanly in your habits; that you understand the necessity of keeping your bodies pure and healthy; and knowing that this cannot be done without scrupulous attention to details, are glad to learn from the experience of others, just what those details are.

Remember, therefore, in your daily life, in your choice of garments, in the formation of your personal habits, and in the expenditure of your money, that the thing above all others which Society insists upon is "cleanliness," and that this cleanliness must begin with your skin and the clothes which you wear next it. You must make it a duty,—a matter of conscience, to be clean from head to—foot; and to this end, you must faithfully take the daily bath about which I have already so strongly spoken to you. Then you must change your underclothing, throughout, once a week, or oftener if necessary; and be very careful never to wear the same shirt at night which you have been wearing through the day. Supply yourselves with night-shirts of white cotton, and wear these and nothing else at night, taking off every article of clothing that you have worn through the day—for there is no more unwholesome personal habit than that of wearing a garment both day and night. You must change your night-shirt once a week, and when you take it off in the morning must see that it is properly aired before it is put away for the day.

As to your outer garments, the clothes in which you work will naturally be suited to the purpose for which they are used; and the fact that you do work in them will usually imply that they are not very clean nor entirely whole; but as most of you have it in your power to have one or more good suits, I want to say a word or two to you about those garments in the selection of which you have opportunity to show your individual taste.

Perhaps the first thing to be said here, is what I have already once said; namely, that your linen must be clean and neat and always simple—ruffles, embroidery, or any peculiarity of cut, being out of place and unsuitable. A clean shirt, collar and cuffs are indispensable, and when the two latter cannot, from motives of economy or convenience, be of linen, paper makes a neat and excellent substitute.

Any jewelry which you may wear—studs, sleeve-buttons, scarf pin, or watch chain, must be real of its kind, and simple in style; and, as a general rule, the less you wear of it the better. In wearing rings or any additional jewelry, a gentleman will be exceedingly careful as to both quality and quantity, as any attempt at show in this respect is almost inevitably vulgar and a sure evidence of bad taste.

Your cravats and neckties must never be of any bright color or combination of colors; plain, dark shades are always the best (except for occasions when you wear full dress; that is, parties, weddings, etc., when white or light colors are permissible), and black is always proper. In the selection of material for your coats and trousers, you will naturally be largely influenced by the climate in which they are to be worn—but here again, plain colors are the rule. You will very probably have noticed for yourselves that gentlemen usually wear suits made of one material throughout—in color dark gray, brown, blue or mixed, or suits in which the coat is of some very dark shade or black, and the trousers more varied, though never of any bright color or large pattern. Entirely black clothes are not worn except by clergymen or for mourning.

Boots and shoes must always be neatly kept and well polished, and care must be taken that they are sufficiently large for the feet.

In the choice of hats you will be guided by the season and the fashion as to material and shape, the chief thing being to avoid wearing anything which is conspicuous. Gloves must, usually be of some dark color—grey, drab, brown or black; while for full dress almost any light shade is proper.

In conclusion, I would say to young men as to young women, that the surest economy in dress is to buy good things and take care of them. Do not spend your money for useless trifles; and on no account spend more on your dress than you can honestly afford. Remember that you must never borrow anything even from your friends without asking leave, and that it is best to borrow and lend as little as possible. Let your garments be legibly marked with your name, and never wear other people's clothes if you can help it.

All toilette articles—brushes, combs, sponges, etc., are sacred to the use of their owner, and must, under no circumstances be considered public property, or put to any other use than that for which they were intended. A gentleman will be careful to supply himself with these things and to keep them strictly to himself, neither committing nor permitting any trespass. Furthermore, you must understand that in order to be gentlemen at all you must be gentlemen always, modest and refined among yourselves as well as in public; and in nothing is the modesty and refinement of a gentleman more clearly shown than in the simplicity of his dress and the care and neatness with which he attends to the details of his toilet. To form gentlemanly habits in this respect will be of the greatest value to you, and you may be sure that it is never too soon to begin the endeavor whose success will be mainly dependant upon your own resolution.

IN GENERAL SOCIETY.

In general society there are, as you know, many particulars in which what is proper for one sex is not proper for the other; and what is required of one sex is not required of the other; and these differences form a very important part of our social regulations, so that it becomes again necessary to divide our subject, and upon certain points to speak with regard primarily, to their diversity. In obedience, therefore, to a well-known rule of etiquette, I shall once more give precedence to the young women among my readers, and endeavor to show them what Society has decreed to be the essential attributes and duties of a lady; that is, what a lady must and must not do, when she is in the presence of others.

I have already asked you to notice that the foundation of good manners is the commandment, "Thou shalt love thy neighbor as thyself;" for even if you do not in your heart obey that precept, you must externally appear to do so, if you desire to be courteous and well-bred.

You must, that is, always endeavor to make those about you comfortable and happy, even when it is at your own expense; and upon this point it will be necessary to go somewhat into detail in order that you may fully understand what is expected of you; for in society you are brought into contact with so many different people under frequently changing conditions, that no single rule can cover your general demeanor.

Toward all persons of your own sex, toward old people of both sexes, toward invalids, or those who are in any way weaker than yourself, you must show deference; that is, you must invariably consider their comfort and pleasure, and must show them a certain external respect. In your turn, however, you will receive a similar deference from gentlemen; and in most cases you must understand that you are entitled to certain privileges by right of your sex. For example: you must not pass through doors or gates or up-stairs before other people, but must allow them to pass before you; you must not take the most comfortable or the only seat in a room, but must offer it politely to others, except in the case of gentlemen, who will allow you to precede them, to occupy the only seat, etc., and whose attentions you must accept always with suitable acknowledgement.

You must not sit or pass between the fire or the light and another person, or sit with your back toward any person; in short, you must not take the best of anything to yourself, but must share it with others, never pushing your own claims but trusting always to the politeness of your associates. In your own house especially, you must be watchful that your guests are cared for; while, when you are yourself the guest of other people, you must be careful to take no liberties.

In conversation you must not interrupt those who may be speaking, and you must never yourself talk in a loud voice or use coarse or rough language; while I advise you to break yourselves as quickly as possible of the habit of using frequent exclamations of any kind, but especially of using those which are irreverent if not actually profane; as "Good Lord," "My Jesus," etc. Sneezing, coughing, blowing the nose, etc., must be done as quietly as possible under cover of the pocket handkerchief; and you must on no account take anything from your mouth when you are in the presence of other people.

One of the chief charms in a lady is gentleness; in voice, in manner, in language, a lady is always gentle, and loud talking, or boisterous laughter and gestures are entirely inadmissible in refined society.

In social gatherings it is not customary for strangers to speak to one another, without being first introduced to some one who is known to both parties; and this ceremony of introduction consists in bringing together the two people whom you desire to introduce, and in mentioning the name of each one to the other; as, for example, "Mrs. Johnson—Miss Smith;" "Miss Smith—Mr. Jones;" the gentleman being always presented to the lady, and the single to the married lady. After this the parties introduced are expected under all circumstances to bow and begin a conversation in which, when one of the parties is a gentleman, it is already his duty to speak first. An acquaintance begun in this way may be continued or not at the pleasure of the individuals introduced, it being always in the power of one person to refuse to know another by declining to speak, bow, or otherwise recognize him or her; but it must be understood, that you must not intentionally fail to recognize any one to whom you may have been introduced, without good and satisfactory reasons for so doing.

(CONTINUED IN NEXT NUMBER.)

The file is rough, and the application of it harrowing to the soul; but all the more bright and lustrous will be the diamond when, at length thoroughly polished, it shines forth in the royal crown of Immanuel.—*Hewitson.*

SHE ALWAYS MADE HOME HAPPY.

In an old churchyard stood a stone,
Weather-marked and stained,
The hand of Time had crumbled it,
So only part remained.
Upon one side I could just trace,
"In memory of our mother!"
An epitaph which spoke of "home"
Was chiseled on the other.

I'd gazed on monuments of fame
High towering to the skies;
I'd seen the sculptured marble stone
Where a great hero lies:
But by this epitaph I paused,
And read it o'er and o'er,
For I had never seen inscribed
Such words as these before.

"She always made home happy!" What
A noble record left;
A legacy of memory sweet
To those she left bereft;
And what a testimony given
By those who knew her best,
Engraven on this plain, rude stone
That marked their mother's rest.

It was an humble resting place,
I know that they were poor,
But they had seen their mother sink
And patiently endure;
They had marked her cheerful spirit,
When bearing, one by one,
Her many burdens up the hill,
Till all her work was done.

So when was stilled her weary head,
Folded her hands so white,
And she was carried from the home
She'd always made so bright,
Her children raised a monument
That money could not buy,
As witness of a noble life
Whose record is on high.

A noble life; but written not
In any book of fame:
Among the list of noted ones
None ever saw her name;
For only her own household knew
The victories she had won—
And none but they could testify
How well her work was done.

AN ADVENTURE WITH A GRIZZLY.

"Talkin' of grizzlies, here's the track of one," said Tom Wilson, anddenly reining in his horse a short distance in advance of me. After a moment's examination of the huge impression, he continued: "It's a pretty fresh one, too; the feller can't be a great way off. This is just the kind of a place for 'em."

"Are there grizzlies in these mountains, Tom?" asked I, doubtingly.

"Yes, sir; the fust one I ever seed was in this very range, and he just about scart me to death, that's sartin, replied Tom.

"Tint'll be a good story for this evening, Tom, after we get into camp," said I, regarding the great track with no little curiosity, for I was still in doubt about its being that of a grizzly. "Are you sure it isn't the track of a cinnamon bear?"

"Yes, sir; there's no mistakin' the prent of a grizzly's foot," replied Tom. "And here," continued he, as he followed the trail a short distance, "is where he sot down. I would n't think strange if we see one afore long; this is the sort of country they like."

"I reckon we sha'n't find any better place to camp to-night than this 'ere. You see, there's plenty of wood, water, and grass—so we'll just stop here."

Dismounting from our animals, they were soon enjoying the luxuriant grass that grew around us, while Tom commenced preparations for supper. In gathering the wood for his fire, his keen eye detected a herd of deer in the distance, and seizing his rifle, he sallied out for one, leaving me alone to guard the camp.

After an absence of about half-an-hour Tom appeared staggering under the weight of a fine fat doe, which was soon dressed, and a portion of it broiling over the coals for our supper. This over, we threw ourselves upon our blankets, and while enjoying the cheerful light of our camp fire, Tom related his experience with the first grizzly he ever saw.

"You see, when I first came to this country, I did n't know much about it; but General Garland allowed I was the man he wanted to scout for him, and so I entered his service. When he was a-travelin' over the country, I used to make it a p'int to look round considerable when in camp, so as to get acquainted with it like, because in my business a feller had to know it pretty middling well.

"I'd heerd a good deal about grizzlies,

though I'd never seed one, for they don't have 'em up in Kentuck', where I come from, or in Texas either; but when I heerd old trappers talkin' about 'em, and tellin' how savage and strong they was, I always allowed that there warn't no kind of a h'ar that I was afeerd of, and I didn't know there was either. You see, I didn't let 'em know that I'd never'd seed one of the critters, for I made up my mind that if ever I come acrost one, I'd have a tussle with him, and he should n't get away from me neither, though I must confess I felt a little skeery of a critter that could crunch a man or kill a buffalo as easy as I could break an egg. Still, I talked big, 'cause talk is cheap you know.

"Well, one day we was to the north of this,—camped on the San Juan River. The valley was eight or ten miles long, and perhaps a couple wide, with the biggest oak-trees growin' in it that I ever seed growin' anywhere; some of 'em would measure twenty feet round the butts, and the General said he reckoned they was mor 'n a hundred years old.

"I got tired of stayin' round camp and doin' nothin'; so I walked down to where the animals was feedin', and talked to the herder a while, and then went on down the valley, lookin' at the rocks and mountains and trees, till I got a long ways from camp, and calculated it would take me a good hour to git back. After startin' on the back trail, I happened to notice ons tree, which stood a little to one side of my track, that looked so much larger than the others, that the idea came into my head to just examine it. I had a stout oak stick in my hand, and as I came up to the tree I hit the trunk two or three blows, to see if it was sound, you know. Then I thought I'd see how big round it was, so that I could tell the General how many steps it took to circumnavigate it. So I stuck my stick in the ground for a mark, and started.

"When I got about half-way round, I happened to look up, and I'll be blest if there was n't a grizzly as big as an ox, within two feet of me, a-settin' on his haunches, and watchin' me out of a hole in the stump of that tree.

"I brought up pretty sudden, I tell you, and took one good look at him. He looked meek enough at first glance, but in a jiffy he fixed his eyes on me, and his great month, which was half-open; with his white teeth, looked waterish like, as though it was just achin' to get hold of me. I see him kind er half raise one of his big paws, and then I started. I heerd him give a low, wheezy kind er growl, as he started after me, and I did n't wait to hear any more. If ever a feller run, that feller was Tom Wilson.

"I reckon I thought of every story I'd ever heerd about grizzlies; how savage they was; how they could beat a hoss runnin' any time. Ths more I thought, the faster I run, ths plainer I could hear the b'ar a-comin' after me.

"I declare I never knowed it was in me to run so. I throwed off pretty nigh all the clothes I had on, and was doin' jest my level best, when suddenly I tripped on somthin' or other, and went down. Then I knowed 't was all up with me for sartin, and I expected every minute to feel that bar's paw on me.

"I remembered how I'd heerd Nat Beal say, that if a grizzly thought n man was dead, he'd dig a hole and bury him, without hurtin' him any, and after a day or two would come back and dig him up. So I laid still and held my breath, waitin' for the b'ar to bury me.

"I could hear him diggin' the hole, and, though my eyes was shet, I could see jest how he looked, as he handled them paws of his.

"It seemd to me that I laid thers and held my breath for nigh an hour, expectting every minute to have the b'ar roll me into the hole. After awhile I ventured to peek out, and, would you believe it, there want no b'ar there!

"I jest picked myself up mighty sudden, and made tracks for camp, and I reckon if ever a feller felt beat that feller was mo, then and there.

"It was a long time before I said anything about my scareen camp; but, at last, I told the General, and I thought he'd split a-laughin'."

"Well, Tom," said I, "you must have been pretty badly frightened."

"Frightened! I jest tell you, sir, I was the worst scart man this side of the San Juan, and I did n't get over it neithsr in a hurry, sure's you're born."

"What had become of the bear?" asked I.

"Why, you see, he was asleep in that hole, and when I thumped on the tree with my stick it woke him up. As a nat'ral consequence, his curiosity was riz, and he poked his head out to see who was a-knockin', but," added Tom, with a laugh, "before he could say 'come in' I was gone. I've always owed grizzlies a grudge since that scare."

"Well, Tom," said I, "that's a pretty good story, and I don't blame you for running. I'll now fill my pipe and have a smoke before retiring. Will it be necessary to keep guard to-night?"

"No, I reckon not," replied Tom; "we hain't seen no trail for two days, nor any patches of corn, and I don't believe the Indians come into this region very often. Anyway we'll risk it to-night," with which remark he went out to take a last look at the animals before retiring, and upon his return spread his blankets a little distance from the fire, and was soon fast asleep.

Not feeling in a mood for sleeping, I replenished the fire, and sat smoking my pipe and laughing to myself at the ridiculous figure Tom must have cut, running over the prairie with nothing in pursuit; until, some hours later, a growing feeling of drowsiness warned me that it was time to spread my own blankets, which I did, and soon fell asleep.

How long I slept I do not know; but I was roused by a vague impression that something was wrong about the camp. Half awake, I turned over, and, opening my eyes, fancied that I could discovsr in the darkness the faint outlines of an animal, which I supposed to be one of the mules; so once more dropped to sleep.

In a short time I again awoke, and this time saw two eyes angrily glaring at me in the darkness. I sprang into a sitting posture; but as I did not then see them, supposed that I had been dreaming, and that the fiery eyes were the natural result of Tom's story.

The fire had burned low; occasionally a half-consumed brand would flare for an instant into a bright flame, casting a ruddy glow upon all things around, and then suddenly die out, leaving the darkness more intense, the gloom more profound, than before.

By straining my eyes, however, I detected the outline of a huge form in the dim light that I was confident could be no mule.

Springing to my feet, I called loudly for Tom, at the same time trying to get hold of either my revolver or rifle, which, in my confusion, I failed to find. While hunting for them, my hand encountered a miner's pick, and, grasping it, I turned to find Tom at my side, and a huge grizzly standing upon his hind-legs within six feet of us.

As he slowly waddled toward us, the light from the dying embers of the fire revealed his open mouth, gleaming white teeth and hugs paws, extended as if to embrace us both in one grasp, while his eyes shone like balls of fire.

Terrified as I was, I had presence of mind enough to raise the pick, and, just as Tom fired, I brought it down; but, with a hoarse, angry growl, the bear struck it a blow with one of his huge paws, with as much ease as a boy would bat his ball, which sent it spinning from my hand. He was within two feet of us when Tom again fired. This time the ball struck a vital spot, and the huge monster, with a howl of rage and defiance, reeled for a moment, and then rolled over on his side, dead.

Up to this time neither of us had spoken; but now the silence was broken by Tom, who exclaimed: "That was an ugly customer; let's start up the fire, and see what he looks like."

But I was in no condition to start up the fire, for as soon as the terrible excitement was over, the reaction came, and I sank to the ground trembling as though in an ague fit.

I soon recovered, and by the time Tom had a bright fire burning, was ready to examine the bear. As he lay stretched out before us, he was a monster indeed. His shaggy dun coat was thickly flecked with patches of grey, and his huge paws made me fairly shudder when I reflected what a narrow escape we had had from their embrace.

Daylight revealed the unwelcome fact that the creatures had attacked and killed one of our mules during the night, dragging the carcass some distance from the spot where he had been picketed.

The bear measured nearly seven feet in length, and six feet one inch in girth.

We greatly regretted the loss of our mule, for it prevented our taking with us the much desired skin of the grizzly as a trophy. The experience, however, taught us a lesson, and we never afterward failed to mount guard while traveling through the Sierra Madre country.

The Teachers' Cause.

By a Trustee of the Hampton Normal School.

THE TEACHER.

The feature of education that I shall discuss, and which may seem strange to many of you, is the power and influence of the teacher over the scholar. Were I to begin my education again, with the privilege of choosing between two classes of education, one consisting of a magnificent building in which were stoical professors, numberless books, and a systematic but lifeless routine of study; the other a shanty in which is a noble-minded man, of large soul and a generous, warm nature, I would say give me the latter. It is the words and actions of men and women that educate more than text-books. I would not say a word against the work of the institute; it is necessary and good so far as it goes; but you may write down all the teachers who fail and then examine into the cause of failure, and you will find that it is not from a lack of book knowledge, or a knowledge of studying out a lesson, but a lack of

KNOWLEDGE OF HUMAN NATURE;

they lack gumption. In order to be a successful teacher you must learn to read character and understand human nature. The trouble is, teachers are chiefly concerned in studying books and not to know the scholars to be taught; are only studying how to use the tools to the neglect of the important qualification of knowing the material upon which they are to work. Some of you will probably go into your schoolrooms this fall, and on the first day of school, as you make a superficial observation of your scholars, you will say: These scholars are just like the ones I had last term; are of the same grade and age, and you will commence running in the old groove. This is a great mistake. Of the myriads of beautiful flowers that adorn the earth, there are no two alike; so it is as regards children; there are no duplicates in God's creation. Every child that comes into this world is a new combination of elements. Your first and most important duty is to study the nature of each scholar; study the characteristics that are peculiar to each, that you may know how to awaken their nobler emotions.

I believe there is no profession in which there is so much danger of a shriveling up in intellect and powers as that of teaching. I assign as a cause the fact that teachers are too apt to imagine that they have learned all that is necessary for them to know.—*Hon. J. A. Garfield, M. C. of Ohio, in Cleveland Leader.*

A BORN TEACHER.

Let the teacher magnify his office, and by entertaining enlarged views of the scope of his duties, become more edequate for their discharge. By seeking out devices for arousing the interest of his scholers, insensibly will he find himself lifted to a more advantageous platform, whence he can labor both more effectively and with increase of comfort to himself. To illustrate: A young schoolmistress was timidly going through her first experiences, fearing she could not teach. A friend found her trying to bring into measures a bright refractory little fellow of four years of age, who said he "*could not*" trace a letter she had asked him to outline, and in fact his tones said, "would not, either." Instead of scolding or threatening, with pleasant voice and lively tone she suddenly suggested, "O Robbie, just let the lines stand for the road, and let your pencil be the horse. Now drive him up the road, Robbie; make him trot!" Robbie's imagination caught fire at once; the lately sullen features relaxed; the stubborn pencil began immediately to move in the track; the goal was soon won: and the observing friend retired, giving a pleasant nod of satisfaction, and saying of the young girl-teacher, "She will do—*she is* a teacher."—*Home and School, Louisville, Ky.*

TEACHERS should impress upon children the importance of signing their names legibly. Nowhere is indistinct writing so puzzling. Nothing of course can be learned from the sense, and it is impossible to say that a certain interpretation is nonsense, because almost any combination of letters *may* be a name.

SOMETHING TO READ TO THE CHILDREN.

Children always like to listen to stories—told, or read if the reader knows how to read a story as if he were telling it, which is the great ert of good reading. An excellent reward of a good day's work at school, and a strong inducement to win it, is a good story to hear at the close. Good suggestions, interesting information, and even n geueral waking up of a child's mental and moral powers may be effected by well chosen stories. Some that have appeared in the *Christian Union* are so excellently adapted to this purpose that we give one below for the teacher's use, and from time to time will give the rest, which you will have no difficulty in recognizing.

LIGHTNING IN JOHNNY'S HAIR.

"Combs can't blow, can they?"

Could you guess what Johnny meant by such n queer, backhanded question? I couldn't, nor his sister Mary, either. I was quite sure, however, that he meant something sensible, if one could only get at it; but Mary was doubtful.

"Blow what?" she asked, not so pleasantly as she might.

"Why, blow air," said Johnny, "to make wind."

"Of course not, you silly child; what makes you ask such a question as that?"

Mary thinks Johnny is a pretty bright little fellow in general, but on particular points she is always ready to call him a dunce, without stopping first to find out what he really means to say. The trouble is, she knows so little herself that she thinks she knows everything, at least everything worth knowing; and Johnny is all the time puzzling her with questions that she has no answer ready for.

"What have you seen to make you ask that question?" I inquired.

"I didn't see anything," said Johnny; "I just felt it—like some one breathing softly on my face and hand when I held my comb near."

"Nonsense," said Mary; "you just imagined it."

"No, I didn't," Johnny insisted; "I felt it really, this morning, when I was combing my hair."

"O," said I, suspecting the cause of his difficulty; "What kind of a comb was it?"

"A black comb," said Johnny.

"Horn, or rubber?" I asked.

"It's a rubber comb," said Mary.

"How did your hair behave when you were combing it?"

"Mean as anything," Johnny replied. "It stuck up like Mary's when its frizzed, and wouldn't stay anywhere."

Part of that was for Mary's benefit. Johnny likes to tease her.

"Did you think the comb made it do that by blowing it?" I asked.

"Not at first," said Johnny: "the comb seemed to crackle, and I put it to my ear to listen; then I felt the wind on my cheek."

"Suppose you bring the comb here," said I, "and show us what it did."

Johnny ran off for the comb, but came back quite crestfallen.

"It won't do it now," he said.

"As much as ever!" cried Mary, triumphantly.

"But it did this morning, truly," he said, rather humbly.

"Pshaw!" said Mary; "you imagined it."

Like many another discoverer, Johnny had to learn what it is to be discredited and ridiculed for knowing too much. Because Mary had never noticed what he described, she was as ready as older people to cry "nonsense," "impossible," and all that sort of thing, without stopping to consider whether he might not be in the right after all.

"You had better try it again some other day," I said to Johnny. "Try different combs. Try in the dark, too."

"What for?" Johnny asked.

"You might see something," I said.

"In the dark?"

"Yes, in the dark."

Johnny wondered how that could be; and he wondered still more when I suggested that it might be a good plan to try the comb also on Humpty Dumpty—that's his shaggy dog.

Two or three mornings after, Johnny came pounding at my door before breakfast; when I let him in he cried, "It blows now, sure!"

"What blows?"

"Why! the comb."

I took the comb from his hand and putting it to my cheek, said, "I don't feel any wind from it."

"That isn't the way," he said, reaching out for the comb. "You must do this first," and he ran the comb rapidly through his hair a few times, then held it to his cheek, saying, "I can feel it, plainly."

"See if it will blow these," I said, stripping some bits of down from a feather and laying them upon the table.

Johnny repeated the combing, then held the comb near the down expecting to see the light stuff blown from the table. To his great surprise it was not blown away at all, but on the contrary it sprang suddenly toward the comb, then dropped off as suddenly.

"That's queer," said Johnny.

I exeited the comb again and held it near the back of my hand, calling Johnny's attention to the fact that all the fine hairs stood up when the comh came near them.

"When you hold the comb near your cheek," I said, "the downy hairs stand up like that, and the feeling is just like that of a breath of air."

"Then it isn't wind that comes from the comb?"

"No, it is not wind."

"Maybe the comb is a magnet," suggested Johnny, seeing its attraction for light hairs, dnst and the like, as I held it over them. I took a small magnet from my table-drawer and held it near the feathers and hair. It did not stir them, no matter how much I rubbed it. It picked up a needle though, very quickly. Then I rubbed the comb, and though it attracted the feathers it had no effect on the needle.

"Is that like a magnet?" I asked.

"No," said Johnny.

"When the needle springs to the magnet it sticks there; but when the hair or down springs to the comb it flies away again instantly."

"It is very queer," said Johnny.

"Try this horn comb," said I.

Johnny tried it, but comb his hair as much as he might, the horn would not draw anything. Then he tried a shell comb, and an ivory comb, neither of them acting as the rubber comb did.

"I don't understand it at all," said Johnny.

"Nobody does fully," said I; "but if you keep trying you may learn a good deal about it in time."

Then we went to breakfast. It was several days before the subject was brought up again. "I've been watching a long time," said Johnny that evening. "I began to think it would never happen again, but it's a first-rate day to-day."

"Have you found out anything new?" I asked."

"Not much," said Johnny. "I tried Humpty and the comb crackled like everything. What makes it do that?"

"I think we'll have to study that to-night," I replied. "Where's Humpty?"

"In the kitchen. Shall I call him?"

"If you please; bring pussy, too."

Johnny was soon back with Humpty and Nabuchndnezzar—that's pussy. We call him Neb, for short. Then we went into the library and put out the lights.

"How can we see whet the comb does?" Johnny asked.

"Some things can be seen in the dark," I replied. Then I drew the comb briskly through Johnny's hair, making it snap and sparkle beautifully. "See," I said, bringing the teeth of the comb opposite my knuckle, "this is what makes the snapping."

"How pretty!" Johnny cried, as the tiny sparks flew from the comb to my knuckle. "What is it?"

"Lightning," said I.

"Lightning! In my hair?"

"Certainly," I said. "Let me comb out some more."

Johnny was almost afraid of himself when I brought another lot of sparks from his head.

"Folks had better look out when I'm around," said the little fellow, pompously. "Mary says I make more noise than a thunder-storm sometimes; I guess it's the lightning in me. Somebody'll get hit yet."

"Not very severely, let us hope," said I, laughing. "Suppose we try Humpty. Maybe he's a lightning-bug, too.

Sure enough, when we passed the comb through his shaggy coat the sparks flew finely. So did they when we rubbed him with the hand.

"Let's try Neb," said Johnny; "Here he is under the sofa; I can see his eyes."

But Neb had no notion of being rubbed the wrong way. As soon as the sparks began to show his patience gave out, and he went off with a rush.

"I guess Neb's lightning gave to his eyes and his claws," said Johnny.

After that we tried the sheep-skin rug, Mary's muff, and several other things of the sort, getting sparks from all of them.

"Everything seems to have lightning in it," said Johnny.

"Apparently," said I, "but you can't make it show in everything alike; anyway, not by rubbing. Try the chair-back, the table, the sofa, and such things. Generally when two things are rubbed together the lightning—or *electricity*, as it is commonly called—escapes quickly. When it can't do that, it accumulates—as it does in the rubber comb—and goes off with a snap when it gets a chance. When a cloud contains more electricity then it can hold, some of it jumps to another cloud or to the earth, making a flash of lightning. The thunder is its prodigious snap and the echoes of it. Are your slippers quite dry?"

"I think so," said Johnny, wondering what that had to do with lightning.

"I think the furnace has been on long enough to make the carpet quite dry, too," I said, turning just a glimmer of light on; "if it is, you can make a little thunder-storm of yourself easily."

"How?" Johnny asked eagerly.

"Just skip around the room a few times without taking your feet from the carpet."

Johnny spun round like a water-beetle for a minute or two; then I stopped him and told him to reach out his forefinger. When he did so, I reached my forefinger to his, and as the points came together *snap!* went a spark between them, whereat Johnny cried, "Oh!" and put his finger to his mouth.

"Did it burn you?"

"No," said Johnny, but it scared me."

He was not so badly scared, however, but he wanted to try it again and again, while I turned up the light and went on with my reading. By-and-by Humpty came out from under the sofa to see what was going on, and Johnny sent a spark into his nose. It didn't hurt him any, though it surprised him not a little.

"Wouldn't it be fun," said Johnny, "to give Mary a shock?"

"Charge yourself again," I said, "then come to me with your hands down."

Johnny did as I bade him, whereupon I stooped and kissed him on the mouth. It was his turn to be surprised that time.

Just then Mary came to tell the young lightning catcher that it was time to go to bed.

"All right," said the little rogue cheerily, skipping about the room. "Kiss me good-night, Mary, but don't touch me with your hands," he said at last, demurely holding up his mischievous mouth.

Mary gave the kiss, and got in return what she didn't expect.

"You little rascal!" she cried, "you've got a pin in your mouth."

"No, I haven't," he said.

"It's a piece of rubber, then."

"No, it isn't rubber."

"What was it?"

"Lightning," said Johnny. "See!" and he skipped a few times across the floor, then gave her a spark from his finger. Then he ran off to bed, laughing at Mary's bewilderment.

HINTS TO STUDENTS.

THE first hint we would make to our student readers is that the Teachers' Table often holds bits of information and suggestion that are just as good for students as for teachers.

Lest you may not always take this hint we will occasionally add some that are more pointedly directed to yourselves.

HINTS ON COMPOSITION WRITING.

1. In writing compositions, make no great effort at originality. Only the most mature minds, if any, can hope to present truths absolutely new. Do not expect it in youth. Be content to express old thoughts in your own words.

2. At first, do not go outside of your own mind. Turn the subject over and over in your head. Compel your brains, rummage your memory. Jot down roughly, with no attempt at order or completeness, any fact, principle, or illustration, that may occur to you. Mere catch-words will be sufficient. You have now a few materials: how shall you get more?

3. Consult books, magazines, the world of matter. Note hastily, indiscriminately, anything bearing on the subject. Do you wish for more material? Then,

4. Converse with intelligent persons on the subject. Draw out their opinions, and write them down, if they are good. By this time you will feel interested in your theme, and it is a great thing for a writer to be in earnest.

5. You have now a quantity of materials, but they are mixed. You see at a glance that some of them should be placed first, some a little further along, some near the end. Sort them accordingly. Often a good arrangement is to state, first, facts; secondly, arguments: thirdly, conclusions; or, in other words, to answer these three questions: What are the facts? Why are they so? What results follow?

6. At this stage, in a majority of cases, you will be delighted to find that so far from having nothing to say, you have more matter then you want. Strike out the least important. Keep the choice bits—the cream of the subject.

7. Your work is two-thirds done. You have got your materials: you have classified them. Now write out each thought in the quickest manner. Don't *at this stage* try to be witty, beautiful, or sublime. Express every thought in the briefest language, just as it occurs to you at the instant.

8. You have written through your subject. Now condense and adorn. Use ornament sparingly. Rewrite the whole and you will have a good composition.—*Virginia Ed. Monthly.*

THE SECRET OF GOOD READING is naturalness. Understand what your author wants to express, try to throw yourself into the spirit of it and say it as if you meant it. If it is a dialogue, seem to be talking it; if it is a description, seem to be telling it; if it is an essay on some great truth, seem to be urging it in earnest. A great clergymen said to a great actor, "How is it that people will cry over your fiction when I can't move them by the most solemn truths?" "That's plain enough sir," said the actor, "for you utter truths as if they were fiction, while I utter fiction as if it were truth."

WHAT'S THE USE OF RULES IN READING? do you ask, If we're only to read as if we were talking. They are merely to develop your powers and train you out of faults that show to some extent even in your talking, and to help you to the better understanding of your author. Just as scale practice and finger practice end all the preliminary instruction are necessary in the study of music.

Colored people ought to make good readers as well as good singers. They are apt to have sympathetic voices and a fondness for dramatic expression. The faults they generally need to look out for are indistinctness of utterance and leaving off final consonants of words—which makes a more musical sound often, but renders it almost impossible to understand a speaker at any distance. This indistinctness, and the hesitancy, which come from want of full comprehension of the writer's thought, or of familiarity with the words he uses, are points to be specially guarded by study and training.

A WORD TO THE WISE IS SUFFICIENT.

"Your handwriting is very bad indeed," said a gentleman to a friend more addicted to boasting than to study; "you really ought to learn to write better." "Aye, aye," replied the young man, "it is all very well for you to tell me that; but, if I were to write better, people would find out how I spell."

Correspondence.

From our London Correspondent.

LONDON, *November*, 1874.

One of the many advantages and pleasures to be derived from foreign travel is, that having once with actual bodily presence gone over the ground, one may at any time afterward, in an hour of rest or leisure, retrace his steps, recall pleasant scenes and incidents, in fact repeat his journeyings, if with less vividness of sight and impress on, at the same time with less of fatigue and confusion of mind and memory. Thus do I anticipate, in an occasional respite from the labors and duties which I trust are in store for me when I return home, a living over again of much that is pleasant and interesting in all my life here; and thus do I now find it a pleasant recreation, in the intervals of lessons and study and practice, to write out in detail the story of my summer vacation wanderings and sight-seeings. I find it very hard to tear myself away from Paris, and our many enjoyable and sometimes laughable experiences there very frequently and pleasantly present themselves before me. Sometimes in a hotel, cafe, shop, or public park, or garden, our elaborate attempts to express ourselves in correct French, if we wished to ask questions, or open a conversation, would be met and replied to in excellent English, and that, too, in times and places when we least expected it; and sometimes again, the efforts of those about us, to show off their accomplishments in this line by talking to us in our native tongue, were as ridiculous and amusing as any mistakes on our part could have been. Our shopping experiences were the most entertaining; but whatever other difficulties or perplexities our ignorance or theirs involved us in, we were met with polite and courteous patience everywhere. We went to the famous Parisian store "Au Bon Marche" which claims to stand unrivaled in the world for the extent, variety, and cheapness of its stock of goods. My purchases were not very extensive; but I can vouch for the fact of buying, for about seventy cents per pair, better gloves than those for two dollars and a half in Boston; and moreover, they will try on the purchaser's hand, if desired, pair after pair until a perfect fit is obtained.

We visited several minor places of interest and amusement, quite as much for the purpose of comparing them with similar resorts in London, as for the entertainment they offered in themselves. We visited the famous conjurer, Robert Houdin, and were duly astonished at his wonderful tricks; at the cirque (circus) in the Champs Elysees saw some magnificent horses and splendid feats of riding and leaping; looked in at the "Jardin Mabille" and saw equally wonderful though less agreeable feats (or feets) of dancing. This is a world-renowned place, of rather equivocal reputation and was not down on our programme, but having heard so much of it, as an institution of the "demi monde" of Paris, so thoroughly French in its character and management, as we passed the place one evening we were attracted to see what it was all about. To do it justice—in spite of its wild and frantic gymnastics, which they call dancing—the place was more orderly than we had been led to expect, owing perhaps to the presence of the police, in plain clothes and in sufficient force to put down at once any tokens of lawlessness or impropriety).

We spent a few hours of one day at the Jardin des Plantes, but found this by no means equal to the Zoological Garden of Regent's Park in London. There were to be seen many beautiful varieties of rare and exquisite tropical plants and blossoms; but in the collection of animals we were very much disappointed, the specimens being not nearly so fine or so well housed and cared for as here. One evening, after our late dinner, we started out for a stroll past the Grand Opera House (a magnificent building), down the Boulevard des Italiens, and after an hour or two brought up at the Theatre de la Gaiete and heard a French opera, well sung and splendidly gotten up in every way. The scenery, process ons and transformations were elegant and perfect of their kind—in true French taste and style. The only Saturday we spent in Paris was a fete day, though we could not find out whom it was in honor of, or what was the occasion of it. In fact all days are so much alike here that beyond finding most of the stores closed, we saw no signs of anything unusual. This day we visited the celebrated "Pere la Chaise" cemetery which I must say left anything but a pleasant impression on me. That part of it near the entrance by which we went in lies on a side hill; the avannes and paths are built up on each side with tombs or rather chapels about four feet square and seven or eight feet high, just large enough for a person to enter and kneel in, and these chapels being furnished with a front door with regular lock and key give the place the appearance of a miniature city with streets and blocks of houses; the paved avenues, too, add to this dismal effect. We did not spend much time there and on our way back visited the Luxembourg Palace, on the site of the "Old Bastilla" of infamous memory. The Luxembourg is a very pleasant place and in it are many fine statues and handsome pictures, but they are very much crowded and in much too small a place to be seen to advantage. And now to come to the last public building which we visited in Paris—the beautiful church of La Madeline, one of the grandest and most impressive churches I have ever seen; yet within this majestic and splendid edifice three hundred persons (who had taken refuge there during the Commune) were brutally hemmed in and murdered, not one being allowed to escape. Standing on the very spot where this fearful tragedy was enacted, it was hard to realize that such things could have been. But I am writing another Paris letter which I did not intend to do, having finished it up as I thought in my last letter but one, and taken you along in my last as far as Kenilworth on our homeward trip from Alvington to London; and I must hasten on or we shall not reach "home" in this letter.

We spent but a few hours in Kenilworth—only long enough to visit and explore the ruined walls of its famous castle and secure some slips of the ivy with which they are covered. Our next stopping place was Oxford, where we staid about twenty-four hours, arriving late in the afternoon; and there it was our good fortune to meet with one of the real County Fairs, such as we read of in English story books and which I had always wanted to see. Wandering out of our hotel soon after our arrival, we unexpectedly found ourselves right in the midst of it; booths of all sizes on each side of the street, penny trumpets, shooting galleries and shows of all kinds on every hand. We went into about a dozen; admission in all cases one penny. We saw the fat woman, the wax-work, the menagerie which was really quite good, the steam whirligig, and finally wound up our evening's entertainment at the three-penny theatre, whence it seemed doubtful if we should ever get out whole, we laughed so immoderately, and exhaustingly; couldn't discover whether it was tragedy or comedy, but saw some of the real rant and agony put in in grand style. One man was killed about twice in every scene, but he came out all right in the end.

Extremes meet—and the next day we devoted to visiting the universities. We went through Christ-Church and Magdalen Colleges; but as these were more upon the same order of buildings, institutions, libraries and the like, of which we had been seeing so many, and as our time was very short and we so near the end of our homeward route, I am sorry to say that neither my memory or my diary did me much in giving a proper or adequate description of them—and, alas! for the cultivation and refinement of our taste, that Oxford County Fair should have left a more vivid impression than Oxford universities. We took occasion to go through the Fairground on our way to the depot, and leaving by 5.30 express, a ride of about three hours brought us to London and, to finish this letter as I began my last, I was heartily glad to find myself here again. But what I shall find now with which to fill another letter I am at a loss to know; for what with having been kept in for a time on account of my eyes and an increase of work and study since I have been able to use them again, my daily routine is on somewhat of the tread-mill order and I see and know little outside of it. But with some of Mr. Micawber's faith that something may turn up, I close this story of my summer vacation.

K.

A LETTER of inquiry addressed to the SOUTHERN WORKMAN says, "I am a working carpenter and wish to get some information in order to settle in the South,—Virginia or North Carolina."

We regret that we cannot give our correspondent unqualified encouragement to seek here a market for his skill. The need of the South is not so much men, as *money* to employ

labor. As in the West, the good openings are for those who have at least three or four thousand dollars to operate with. There is comparatively little first-class improvement going on in the South. Lack of capital compels owners to be satisfied with the cheaper grades of work, and for such there are numerous competitors at wages ranging from one dollar and fifty cents to three dollars per day. There are sometimes excellent openings for sober and competent men to run saw-mills, or to superintend lumber getting, brickmaking, etc. But as a rule, labor, whether skilled or unskilled, is not as well paid in the South, nor is it nay more certain of constant employment.

Farming, mining, and manufacturing in the South offer tempting opportunities to the capitalist, because he can get more work done for his money than in any other part of the Union. But at present, this reason does not prove it to be a good place for those who have labor to sell.

AN OPPORTUNITY.

A colored clergyman writes to us as follows:

"I take the liberty of writing to you about my daughter. I have not got but the one, and I want to get her educated, but I am a poor man, and am not able to pay for it. If you will only take her, she can do any work that the university assign to her. She have been going to the public school, when in 1870, she had to stop to go to work, as I and her mother are able. I am only a minister of the Gospel. I am not able to support her, and I want her to be graduated for a teacher. She is very anxious to learn, and very smart in her books. She is quite young, twenty-one in May.

General, you will help us if you do take her. You will find her very studious and willing. Recommenders she can get."

Will not some of the friends of universal education, help the daughter of this poor minister to fit herself for a teacher? We have many such applications, which, without such help, must be refused.

LETTERS FROM GRADUATES.

GLOUCESTER COUNTY, VA., }
March 15, 1875. }

Dear Teacher,—My entrance into this field of labor has been beset with many difficulties.

My boarding place, which is very inconvenient to my school, necessitates a walk of five miles per day, having to cross two swamps whose waters when swollen high by incessant rains, as has been the case lately, are impassible.

The trustees of the house in which I was to convene my school and in which the former schools had been held, objected to my teaching in the house, because "the children might do some damage to the property." It is an ordinary frame building, poorly constructed, destitute of ceiling and of the comforts of an ordinary log-cabin. After finding that I was undaunted by opposition they consented. I accordingly commenced on the 9th of November.

Promises that "You shall have a fire" continued to come in every day. It was very cold and, as you readily perceive, these promises didn't mitigate my suffering or make the children any the more comfortable. At one time the prospects of the school darkened, my scholars commenced to desert me on account of the severity of the weather, cessation of work seemed inevitable.

"Hope deferred maketh the heart sick," I commenced to despair. On the 21st of December the County Superintendent, Wm. B. Wiatt, Esq., a gentleman of culture and refinement, visited my school, having at the time about seven scholars—I can't say in school, as they were not in the house but in a little ravine under an old elm, where they had made a fire. He said, "Mr. T——it is useless to work under such disparaging circumstances, as you can't maintain your average;" so my school was closed and it promised to be a final closure at that time. Fortunately it being near Christmas the trustees ordered the stove to be replaced for a "love feast" which was to take place on the 24th of December. The work was done in one day and further difficulties were easily surmounted. Imagine yourself in my place if you wish faintly to conceive of my sufferings: from the 9th of November to the 21st of December without fire and in a house you need not have left to contemplate the "starry heavens."

Here, and I doubt not elsewhere, the people need as much improvement religiously as they need intellectually. I desire to see the day, and trust it is not far distant, when their religious worship will not be interspersed with mirth and laughter; when they will no longer think it requisite to partially disrobe themselves at meetings and require a dozen worldly persons to hold them while "under the spirit," as they say, thinking that they the better prove their Christianity. It is wrong. Christianity cannot be proven by such barbaric demonstrations, but "By their works ye shall know them."

G. T. TAYLOR.

There will be "no such word as fail" for the negro race if such men as the writer of the following letter can be raised up. He represents well the class that the Hampton Institute is educating. The letter is reliable in every respect:

SWANSONVILLE, VA., *February* 22, 1875.

Dear Teacher,—Since I left your school I have taught two; one in Danville, Va. and the other near Swansonville, Va.; three months in Danville and fifteen near Swansonville, making in all an experience of eighteen months in the noble work of teaching.

I have passed two examinations and gave more satisfaction to the examiner than to myself.

I came to the above named place October 7, 1873, and organized a school in the woods, in a new house, with sixteen pupils, and taught a term of ten months. During that time I enrolled one hundred and three pupils. At the close of the school-year I had a picnic for the enjoyment of the children. It was largely attended by their parents. Dr. George W. Dame, the County Superintendent, was present and delivered an address which was listened to with much interest. That excited a greater desire for learning among them.

After a vacation of six weeks I began teaching the present term. I have a nice school of sixty-four pupils who are learning very fast. They take great delight in their studies and seem very anxious to learn. I can see a great difference between to-day and the day in which I organized this school. At that time there was not one who could read a verse in the Testament.

BRAHMINS AT PRAYER.—FROM "THE LAND OF THE VEDA."

There are now no less than fifty who can read the New Testament with understanding. I have a fine Sabbath-school, too; the old people take an active interest in that, which makes it very profitable.

The people of this neighborhood are, in general, interested in the cause of *Education*, both white and colored. The whites encourage me very much with their expressions of gratitude in seeing the children improving themselves. My trustees are very nice men. They hardly ever ask me about the children's reading, but about their manners; I can say that there is a great change among them.

The old people are very intemperate; they will spend their money for liquor and leave their families to suffer for bread; though I am proud to be able to say that there is a great reformation among the people here. They seem anxious to be improved, they listen to any one who attempts to instruct them. I find a great many who have those strange ideas of religion. They seem to think that honesty, truthfulness and temperance have nothing to do with Christianity. They believe in signs and wonders more than belief and love.

There is no preacher here, the people are not able to hire one; consequently, they hardly know what good preaching means. I find that the instruction which I received from your teaching in *Moral Science* stands first and foremost in all my teaching. The demand for moral teaching is far greater than any other among the colored race. I like this country very well; the people are kind and sociable, the climate is delightful, and the water is splendid.

Your friend and pupil,
WM. A. YANCEY.

MEASURING HAY.

To measure the contents of a stack of hay proceed as follows: If it is a round stack, tapering to a point from the ground, measure the width half way between the ground and the peak of the stack; multiply this width by itself, and divide by 7,354; this will give the average area of the surface covered by the stack. Then multiply that by the height from the ground to the point where the width was measured. If these measurements are feet, the sum found is the cubic feet in the stack. If the hay is chaff, or Hungarian, 500 feet will make a ton, or a cubic eight feet each way. If the stack is very solid, and was cut when dead ripe, 350 feet will make a ton, or cube of seven feet each way. If the hay is mixed with clover, about 700 feet, or a cube of nine feet each way, will make a ton. If it is all clover or light meadow grass, or red-top, 800 feet will be required to weigh a ton, unless it is pressed very hard, when some allowance must be made. These estimates are made from notes of a great many stacks and mows of various kinds, and will give a fair average.—*How to Make The Farm Pay.*

BRAHMINS AT PRAYER.

Brahmin is a derivative from Brahm, the Deity, and signifies a Theologist or Divine. The caste is analogous to the tribe of Levi under the Mosaic economy, but without the family of Aaron. All the benefits of the Hindoo religion belong to this class, and the code secured to them rights, honors, and immunities that no other order could claim, so that their persons were to be considered sacred and inviolate, and they could not be held amenable to the penalties of law, even for the worst of crimes. The intention of the legislator was, that from this learned class alone the nation was to take its astronomers, lawyers, prime ministers, judges, philosophers, as well as priests. They were to hold the highest offices, and to be supreme. The Brahmin is invested with that sacred string of three cotton strands, and the ceremony is called regeneration, and gives the Brahmin his claim to the title of the "twice born." For him, and for him alone, has the lawgiver laid down in detail the duties of life, even to his devotions. Each morning he may be seen, as here represented, on the banks of the Ganges, or other "holy" streams.

Anything more singular and whimsical than the forms prescribed for him were never enjoined upon humanity as religious ritual. In illustration of this, we ask the reader's attention to the following extract from a paper in the "Asiatic Researches," by Mr. Colebrook, as quoted by Dr. Duff. Speaking of the duties of morning worship, one of which is the religious ablution, as here represented, "the Sacred Books" strictly enjoin as follows:—

"He *may* bathe with water drawn from a well, from a fountain, or from the basin of a cataract; but he should prefer water which lies above the ground, choosing a stream rather than stagnant water, a river in preference to a small brook, a holy stream before a vulgar river, and above all the water of the Ganges. If the Ganges be beyond his reach, he should invoke that holy water, saying, 'O Ganga, hear my prayer! for my sake be included in this small quantity of water, with the other water, he must hallow his intended performance by the *inaudible* recitation of certain sacred texts. Next sipping water and sprinkling some before him, the worshiper throws water eight times on the crown of his head, on the earth, toward the sky; again toward the sky, on the earth, on the crown of his head; and lastly on the ground, to destroy the demons who wage war with the gods. During the performance of this act of ablution he must be reciting these prayers; 'O, waters! since ye afford delight, grant us present happiness and the rapturous sight of the Supreme Being. Like tender mothers, make us here partakers of your most auspicious essence. We become contented with your essence, with which ye satisfy the universe. Waters, grant it to us.' Immediately after this first ablution he should sip water without swallowing it, silently praying. These ceremonies and prayers being concluded, he plunges *thrice* into the water, each time repeating the prescribed expiatory texts.

"He then meditates in the deepest silence. During this moment of intense devotion he is striving to realize that Brahma, with four faces and a red complexion, resides in his bosom; Vishnu, with four arms and a black complexion, in his heart; and Shiva, with five faces and a white complexion, in his forehead. To this sublime meditation succeeds a suppression of the breath, which is thus performed: Closing the left nostril with the two longest fingers of his right hand, he draws his breath through the right nostril; and then, closing that nostril likewise with his thumb, he holds his breath, while he laternally repeats to himself the *Gayatri*, the mysterious names of the three worlds, the triliteral monosyllable, and the sacred text of Brahma. Last of all, he raises both fingers off the left nostril, and emits the breath he had inhaled through the right. This process being repeated three several times, he must next make three ablutions, with the following prayer: 'As the tired man leaves drops of sweat at the foot of a tree; as he who bathes is cleansed from all foulness; as an oblation is sanctified by holy grass;—so may this water purify me: from sin.' He must next fill the palm of his hand with water, and, presenting it to his nose, inhale the fluid by one nostril, and, retaining it for a while, exhale it through the other, and throw away the water to the northeast quarter. This is considered as an interual ablution which washes away sin. He then concludes by sipping water with the following prayer: 'Water! thou dost penetrate all beings; thou dost reach the deep recesses of the mountains; thou art the mouth of the universe; thou art sacrifice; thou art the mystic word *vasha;* thou art light, taste, and the immortal fluid.'

"After a variety of genuflections and prayers, of which these are but a mere sample, he concludes his devotions by worshiping the rising sun."

The Land of the Veda.

JAMES LEFFEL'S
TURBINE WATER WHEEL.

POOLE & HUNT,
MANUFACTURERS FOR THE SOUTH & SOUTHWEST.
Nearly 7000 now in use, working under heads varying from 2 to 250 feet! Twenty-four sizes.
The most powerful Wheel in the Market, and most economical in use of Water.
Large ILLUSTRATED Pamphlet sent post free.
Portable and Stationary Steam Engines and Boiler, Babcock & Wilcox Patent Tubulous Boiler, Blanchi's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.

Sunday-school Lessons on the Life of Christ.

LESSON I.

MAY 2, 1875.

THE BEGINNING OF THE GOSPEL.

MARK, I: 1-11.

1 The beginning of the gospel of Jesus Christ, the Son of God;

2 As it is written in the prophets, Behold, I send my messenger before thy face, which shall prepare thy way before thee.

3 The voice of one crying in the wilderness, Prepare ye the way of the Lord, make his paths straight.

4 John did baptize in the wilderness, and preach the baptism of repentance for the remission of sins.

5 And there went out unto him all the land of Judea, and they of Jerusalem, and were all baptized of him in the river of Jordan, confessing their sins.

6 And John was clothed with camel's hair, and with a girdle of a skin about his loins; and he did eat locusts and wild honey;

7 And preached, saying, There cometh one mightier than I after me, the latchet of whose shoes I am not worthy to stoop down and unloose.

8 I indeed have baptized you with water: but he shall baptize you with the Holy Ghost.

9 And it came to pass in those days, that Jesus came from Nazareth of Galilee, and was baptized of John in Jordan.

10 And straightway coming up out of the water, he saw the heavens opened, and the Spirit like a dove descending upon him:

11 And there came a voice from heaven, *saying*, Thou art my beloved Son, in whom I am well pleased.

Golden Text.—AND I SAW, AND BARE RECORD THAT THIS IS THE SON OF GOD.—John i: 34.

For the last six months we have been drawing our weekly lessons from Christ's life as recorded by Matthew, dwelling principally upon his words and discourses; we will now turn to Mark's gospel and endeavor to gether instruction rether from Christ's mighty acts and miracles thau from his direct words of teachiug.

Mark tells us uothiug of the early life of the Saviour. "The begiuuing of the gospel of Jesus Christ, the Son of God" very appropriately iutroduces his acconut of the life and death of our blessed Lord, for, although at the time Mark takes up the story Jesus had then beeu living thirty years upou the earth, yet it was uot until John's preaching that the good news was proclaimed that this Jesus of Nazareth, son of Joseph and Mary, was the Christ, the Sou of God. In the openiug verse Mark calls attention to the fact that it is no common history he is about to relate—not the deeds of any man, but the doctrine and doings of the Son of God. He first refers back to the old prophets who told of Christ before he really came, and whose words we find in the Old Testament. The two whom he quotes—Malachi and Isaiah—not ouly spoke of Christ but of the messeuger who was to prepare his way. We are told in this lessou that it was John who was so blessed as to be the immediate forerunuer of the Lord. There had been many other good men to tell that Christ would oue day appear, but as each of these prophets passed through the world the burden of their message had only beeu "He is coming! He is coming!" Of all these forerunners John was the nearest to Christ, and before the close of his ministry, his joy was fulfilled in being able to proclaim uot only "He is coming," but "He is come!" It was this which made him so greatly honored.

John prepared the people to receive Christ by telling them that they must be sorry for their sins and turn from them, and that if they thus did truly repent and trv not to hide the wrong they had done but confessed it to oue another and to God, he would forgive and save them for Jesus' sake. John in all his preachiug was careful to exalt Christ—to turn all eyes from himself to Jesus. In this, as in all other respects, he was a model preacher. A good preacher tells meu their sins; he calls them to sorrow for them; he talks plainly so that he can be easily understood; he suits himself to all classes (Luke iii: 10-15); and lastly, a good preacher always makes much of Christ. All thie John the Baptist did; and so began the gospel. He plainly told them (verse 7) that he was uot worthy to do the most lowly work for Him who would come after him. Although he himself was, according to Christ's testimouy, "a burning and shining light" yet his greatest joy was to seud his disciples away from himself to Him who was indeed "the Light of the world."

A few months after the commeucemeut of John's ministry Jesus came to him for baptism, to be thus set apart for his great work. This was the first appearance of Jesus in public as a teacher. He had been living quietly in the little village of Nazareth doing his daily work as a carpeuter (Mark vi: 3), patiently waiting for the time to come when it was the Father's will that he should leave his home in Galilee and enter upon the mission which had brought him from heaven. The prophecy was now fulfilled and Jesus appeared before meu as a divine teacher. Though Jesus was pure and holy he was baptized as if he had been a sinner because he had taken upon himself our nature[Christ's Baptism, Nov. No., 1874, SOUTHERN WORKMAN]. The descent of the dove and the voice of God proved to John and the multitude around that Jesus was indeed the loug-promised Messiah.

Conviuced, as we must be, that Jesus is God's beloved Son, may we all gladly listen to the earnest and most joyful words which John ever spoke: "Behold the Lamb of God that taketh away the sin of the world;" and all—teachers eud childreu—have him as our beloved Saviour.

LESSON II.

May 9, 1875.

AUTHORITY OF JESUS.

MARK I: 16-27.

16 Now as he walked by the sea of Galilee, he saw Simon and Andrew his brother casting a net into the sea: for they were fishers.

17 And Jesus said unto them, Come ye after me, and I will make you to become fishers of men.

18 And straightway they forsook their nets, and followed him.

19 And when he had gone a little further thence, he saw James the *son* of Zebedee, and John his brother, who also were in the ship mending their nets.

20 And straightway he called them: and they left their father Zebedee in the ship with the hired servants, and went after him.

21 And they went into Capernaum; and straightway on the sabbath day he entered into the synagogue, and taught.

22 And they were astonished at his doctriue: for he taught them as one that had authority, and not as the scribes.

23 And there was in their synagogue a man with an uncleau spirit; and he cried out,

24 Saying, Let us alone; what have we to do with thee, thou Jesus of Nazareth? art thou come to destroy us? I know thee who thou art, the Holy One of God.

25 And Jesus rebuked him, saying, Hold thy peace, and come out of him.

26 And when the uncleau spirit had torn him, and cried with a loud voice, he came out of him.

27 And they were all amazed, insomuch that they questioned among themselves, saying, What thing is this? what new doctrine *is* this? for with authority commandeth he even the uncleau spirits, and they do obey him.

Golden Text.—AND JESUS CAME AND SPAKE UNTO THEM, SAYING, ALL POWER IS GIVEN UNTO ME IN HEAVEN AND IN EARTH.—Matt. xxviii: 18.

IMMEDIATELY after the wonderful sight with whieh onr last lessou closed, Jesus was led of the Spirit into the wilderness where he was sorely tried aud tempted by the cvil one. In the meantime the faithful John was put in prison because he preached the truth so boldly that he had offeuded the king (Matt. xiv: 30-34).

Then Jesus came iuto Galilee and began his teaching and preaching. Heretofore he had lived in obscurity, but uow that he had begun his public life it was necessary for him to have followers. He might have chosen his first disciples from amoug the rich aud powerful, but he did uot choose to do so: he called them from the poor aud lowly to show us that none are too humble to be his followers. These brothers were eugaged in their houcst and lawful work when Jesus called them. If we are faithful in doing the work which God has given us to do—uo matter how common it may be—we may be sure that he will bless us. It is no dishonor to labor, "working with our hands the thiug which is good" (Eph. iv: 28); but idleuess and depeudence are at ouce a snare aud a disgrace. It is Satan who finds work for idle heuds, but Jesus called the industrious fishermeu to be his companions in the noble work of saving meu. Were they uot highly favored in thus being co-workers with the Blessed Master?

"And they went into Capernaum." Christ was in the hebit of keepiug the Sabbath by "going to worship" (Luke iv; 16); so the very first Sebbath day—althongh he must heve been very tired from his long journey—he went into the Jewish church and taught the people. He read to them from the Old Testament, the only part of the Bible which they had in those days, and theu explained it to them. It is not remarkable that they were "astonished et his doctrine," for he explained it better than they had ever heard it before because he was the wise and holy Son of God and so could teach them in his own name. He did uot need, as did the Scribes, to drew his euthority from any prophet or teacher who had gone before—how blessed they were to heve such a teacher!

While Jesus was reading aud makiug remarks a man disturbed the meeting by crying out, "Let us alone; whet heve we to do with thee, thou Jesus of Nazareth? This man hed an evil spirit in him, but Jesus had power even over that. The uuclean spirits whom no man could master knew that they must obey the voice of the Son of God. They kuew that Jesus was from heaven aud thet he was the Saviour of the world, and in that cougregation they were constrained to cry out, thus giving their unwilling testimouy, "I kuow thee who thou art, the Holy One of God." Christ with his word of commend rebuked the spirit, and, as he could not withstand Christ, he obeyed and came out of him aud the man was restored. Do you not think this man must have been very happy when he found he was delivered from the power of the evil spirit? Jesus can, and will if we ask him, drive away all the bad spirits thet come into our hearts. If all bad people, even drunkards and thieves, could be persuaded to apply to Jesus he would make them good. Jesus can change their hearts so that they will love the good things they now hate and hate the bad things they uow love.

God's house, too, is a good place to go to on the Sabbath day that Christ may teach us by his Word and that the evil that is in us may be driveu out. We have Christ's promise that he will meet those who gather together in his name (Matt. xviii: 20). Was it uot ever after a matter of rejoiciug to that man that he was in that church on that Lord's day, and there met with the compassiouate Jesus who was able and willing to help and deliver him?

When the people saw that these evil spirits were obliged to do whatever Christ commended it helped them to believe that he was whet he professed to be—the Son of God—the Saviour of sinuers. Great power indeed attended the opening of Christ's ministry. He merely called Simon and Andrew, James end John and straightway they followed him; he simply spoke to the evil spirits and their power over men was broken. "Whet a friend we have in Jesus!" Have we secured his friendship by straightway following him?

LESSON III.

May 16, 1875.

THE LEPER HEALED.

MARK i: 38-45.

38 And he said unto them, Let us go into the next towns, that I may preach there also: for therefore came I forth.

39 And he preached in their synagogues throughout all Galilee, and cast out devils.

40 And there came a leper to him, beseeching him, and kneeling down to him, saying unto him, If thou wilt, thou canst make me clean.

41 And Jesus, moved with compassion, put forth *his* hand, and touched him, and saith unto him, I will; be thou clean.

42 And as soon as he had spoken, immediately the leprosy departed from him, and he was cleansed.

43 And he straightly charged him, and forthwith sent him away.

44 And saith unto him, See that thou say nothing to any man: but go thy way, shew thyself to the priest, and offer for thy cleansing those things which Moses commanded, for a testimony unto them.

45 But he went out, and began to publish it much, and to blaze abroad the matter, insomuch that Jesus could no more openly enter into the city, but was without in desert places: and they came to him from every quarter.

Golden Text.—LORD, IF THOU WILT, THOU CANST MAKE ME CLEAN.—Matt. viii: 2.

AFTER Jesus had delivered the man from the power of the uncleau spirit, Jesus with his disciples came out of the synagogue aud went with Simon to his house. Simon's wife's mother was very sick with a fever; when they told Jesus about her sickness "he came and took her by the haud and lifted her up;" and she became perfectly well so that she was able to get up and minister to their wants. Was uot thet wouderful? As we shonld suppose, the story of these great cures spread rapidly throughout all the country, and that very same evening, et the close of the Jewish Sabbath, the people came to the house of Simou Peter, briuging with them many sick persons end those who were possessed with devils, and Jesus healed them all. How weary the blessed Jesus must have been that night, for he had preached the most of the day, and had talked with a great many people, and had performed a great many miracles; nevertheless, we read that he rose the next morning very early, "a great while before day," end weut away by himself to prey. If Jesus, the Holy Son of God, so felt the ueed of help from above, can we—weak and sinful—ever think of going to the duties or meeting the temptations of even a single day without secking—as did Christ—our example—the blessing and guidance of our Father in Heaven?

While Jesus was gone away to pray, so many people came to see him that Simon and the other disciples went out to look for him and when they found him they told him that all men were seeking for him. O that every one now—childreu eud all—might be fouud seeking for the Saviour! "Aud ye shall seek me and find me when ye shell search for me with all your heart" (Jer. xxix: 13).

There were many smaller cities around Capernaum, and Jesus and his disciples went to every one, preaching and teaching. In one of their synagogues a man who was a leper came to him to be healed. The leprosy is a very loathsome disease which need to be quite common in the country where Jesus lived. A person who has it may live a great many years, bnt all that time is never free from pain, and it is very seldom cured. Theu, too, oue who has this disease must live alone, for fear others mey take it; and uo matter how much they suffer no friend is allowed to stay with them. This poor men had heard how Jesus had cured other sick persons who had been brought to him, and he was sure he could cure him, too, although he had the worst of all diseases. We reed that he came "beseeching him and kueeliug down to him." Every one was afraid to have this poor sufferer come ueer them and no oue dared to touch him—but it was not so with Jesus. Taking into the accouut the iucurable uature of this disease, the leper's prayer, "Lord, if thou wilt, thou canst make me clean," shows no small degree of faith in Christ's power to heal him. Believing iu Christ's ahility he was assured of his willingness to do this great thing for him by his prompt reply, "I will, be thou clean." As soon as Jesus had spokcu he was cured. Moses had written in the Old Testameut what a persou who had the leprosy must do (Lev. xiv) and Jesus told the men to do what was writteu there but to "say uothing to any man" first. He, however, disobeyed Jesus, for he went out and began "to publish it much and to blaze abroad the matter." This man is sometimes excused for his disobedieuce on the ground that he was so thankful to Jesus that he could not refrain from telling others of the marvelous cure he had wrought upon him. Christ's work in that city was really hindered at that time by the leper's mistaken zeal.

Can we doubt that a carefnl obedience would have pleased the Master better than this yielding to his own impulsiva feeling? "To obey is better thau sacrifice" (1 Sam. xv: 22). Although we are none of us afflicted with leprosy, we heve in commou a grievous disease which only Christ can cure. We should do with our siu es this meu did with his leprosy. When he heard of Christ he went and prayed to him. His prayer is a model for ours, "Lord, if thou wilt, thou canst make ma clean." Christ will answer and heal us eveu as he did this poor man, for he is the Great Physician who came expressly to cure the sin-sick soul. Let us uot forget that we can best show our love and gratitude hy obeying implicitly his commands; for his owu words to those who would be his disciples are: "Ye are my friends if ye do whatsoever I command you" (John xv: 14).

LESSON IV.

May 23, 1875.

MARK ii: 13-17.

THE PUBLICANS CALLED.

13 And he went forth again by the sea side; and all the multitude resorted unto him, and he taught them.

14 And as he passed by, he saw Levi the *son* of Alphens sitting at the receipt of custom, and said unto him, Follow me. And he arose and followed him.

15 And it came to pass, that, as Jesus sat at meat in his house, many publicans and sinners sat also together with Jesus and his disciples; for there were many, and they followed him.

16 And when the scribes and Pharisees saw him eat with the publicans and sinners, they said unto his disciples, How is it that he eateth and drinketh with publicans and sinners?

17 When Jesus heard *it*, he saith unto them, They that are whole have no need of thy physician, but they that are sick: I came not to call the righteous, but sinners to repentance.

Golden Text.—FOR THEY HAVE WHOLLY FOLLOWED THE LORD.—Numbers xxxii: 12.

OUR last lesson left Jesus in the desert, whither he had repaired after cleansing the leper. He remeined there for some days and then returned to Capernaum, "his owu city." Although he came privately yet the interest excited by his miracles was such that his coming was soon known through the city. Here, while teaching in the house, he performed a wonderful cure upou a men sick of the palsy; so sick that he could uot walk or even stand, and so was brought to Jesus on a bed by four of his friends.

As no house could hold the vast uumber who came to Jesus, he went forth agaiu to the shore of the sea to address the people; all those gathered iu and aronnd the house where the paralytic was healed following him.

On his way to the sea he passed by the place where the reveuues or taxes were received. The Jews, we must remember, were theu under the Romans and they were obliged to pay heavy taxes—which was very galling to them as it constantly kept before them their own subjection. Levi was the man who sat "at the receipt of cnstom" and took the money. Probably he was a bad man, for it was only the worst and lowest of the Jews who would have anything to do with such a business. But though he may have been a very wicked man, Jesus did not pass him by. He spoke lovingly to him, "Follow me," and without questiouing, Matthew "arose" and followed him." Christ despises uo men, and meny whom man would pass by are called by him and become his true followers.

This was an occasion of such gladuess to Matthew that "he made a great feast in his owu house (Luke v: 29) and invited Jesus and his disciples, with his own friends—pnblicans and tax gatherers. Very likely he thought if they could only know Jesus, that they, too, would love him and believe in him as their Savjonr. The Scribes and Pharisees who were looking ou, found fault with him because he went to this feast and "ate with publicans and sinners." They questioned his disciples, but Jesus heard it and answered, "They that are whole need not a physician, but they that are sick; I came not to call the righteous, but sinners to repentance." Sick persons only needed his aid. A physiciau's proper place was amoug the sick. The Pharisees thought themselves whole and iu ueed of uothiug, while they cousidered the publicans—with whom they would not associete—as sick. Christ came not to call the self-sufficient—those who thonght themselves righteous—they did not wish for him—but sinners to repeutance. Where should he be but with those he came to call? Christ did not despise the publican and sinner. Noue need despair of salvatiou on account of their exceeding sinfulness. No amount of sin, if we are ready to leave it as did Matthew, and follow Jesus, can shut us out from his salvatiou; uor can any goodness of our own, such as these self-righteous Pharisees fancied belonged to them, deserve it. All have sinned, and consequently need Christ's salvation; but we may be, as were the Pharisees, so ignorant of our necessities, and so blinded to our condition, that we shall not be willing to accept it on his terms and thus shut ourselves out from the blessings of his salvation. May we all so realize our need that we shall hasten to apply to him whose assurance is, "Him that cometh to me, I will in no wise cast out" (John vi: 37).

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., JUNE, 1875. NO. 6.

TO A WATER-FOWL.

W. C. BRYANT.

Whither, midst falling dew,
While glow the heavens with the last steps of day,
Far through their rosy depths dost thou pursue
Thy solitary way?

Vainly the fowler's eye
Might mark thy distant flight to do thee wrong,
As, darkly painted on the crimson sky
Thy figure floats along.

Seek'st thou the plashy brink
Of weedy lake, or marge of river wide,
Or when the rocking billows rise and sink
On the chafed ocean side?

There is a Power whose care
Teaches thy way along that pathless coast,—
The desert and illimitable air,—
Lone wandering, but not lost.

All day thy wings have fanned
At that far height the cold thin atmosphere,
Yet stoop not, weary, to the distant land,
Though the dark night is near.

And soon that toil shall end,
Soon thou shalt find a summer house, and rest,
And scream among thy fellows: reeds shall bend
Soon, o'er thy sheltered nest.

Thou'rt gone, the abyss of heaven
Hath swallowed up thy form; yet on my heart
Deeply hath sunk the lesson thou hast given,
And shall not soon depart.

He who, from zone to zone,
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone,
Will guide my steps aright.

THE HIGHLANDS OF THE HUDSON.

The accompanying picture of the *Mary Powell* on her daily trip up the Hudson River gives a very fair representation of one of the great steamboats which are hotels and steamboats in one, fitted with every luxury, propelled by machinery which in its way is perfect, managed with order and regularity, and in all their appointments so complete, as to form a striking feature in American travel. The crowd of people gathered on her decks are doubtless flying from the heat and dust of New York, and are bound for some of the cooler regions to which the Hudson is so beautiful an avenue. The fleet of sloops and schooners, canal-boats, tug boats and barges, which crowd the river until it is like the busy thoroughfare of a city, are all laden with varied cargoes destined for some of the numerous towns and villages along the river shore, while here and there some trim yacht, or gay pleasure boat adds interest to the swiftly changing scene.

But the glory of the river itself, with its rocky shores, high, thickly wooded hills, broad lake-like sweeps, and continued succession of beautiful landscapes, is far beyond the power of pen or pencil to delineate. From its mouth, where it opens into the broad harbor of New York, the river runs northward, passing under the strange rocks of the Palisades, broadening into the Tappan Sea, past Stony Point, between interlocking hills, until it reaches the climax of its beauty where the government buildings of West Point and the ruins of old Fort Putnam look down upon its shadowy waters. Here is perhaps the most magnificent view in the river's length, for here between precipitous and desolate mountains one looks northward into the beautiful Newburgh Bay, with the blue tops of the Catskills looming grandly in the distance. Storm-king and Cro'-nest and Breakneck are the names of the great hills which form this northern gate of the Highlands of the Hudson, and they are wild and steep enough to be true mountains, the highest of them, Storm-king, rising 1800 feet above the river's level, while the character of all of them is mountainous, not hilly.

Nowhere in America is there a more beautiful afternoon's sail than this from New York to Newburgh, and it is pleasant to think that these great steamboats of which the *Mary Powell* is one, have brought all this beauty within easy reach of the tired, overworked and anxious denizens of the cities which lie at the Hudson's mouth. Surely it is not possible for any thoughtful man or woman to journey amid such scenes as these without some gratitude to the Hand which has lavished so much loveliness upon the earth; without some realization of the steps which lead from Nature up to Nature's God. To appreciate the physical beauty of this world, to enjoy the gifts of external life, is a full and never failing source of pleasure, and the more cultivated our senses the more of this keen and innocent pleasure will be ours. So let us teach ourselves to see aright the loveliness and glory which surround us, and not make the mistake of passing through the world with our eyes shut to half the good it offers us.

THE HEART OF AFRICA.

In reading the late accounts of the explorations in Africa, nothing is more interesting than the differences, physical and moral, which exist among the native tribes, and which in one way and another serve to keep alive the wars which are constantly raging among the various governments. It is reported that as the travelers in Central Africa proceed further south they find the people less nomadic and more inclined to regular rule, and therefore to civilization. The kings have their chiefs and great officers of state, their palaces with audience halls and courtiers, and in many respects approach more nearly to civilization than do the tribes inhabiting the shores of the Atlantic, and the northerly regions of Central Africa. These latter are regarded as the primeval African race, which has disappeared before the inroads and extensions of other more civilized and more highly developed tribes. Now that the way is fairly opened our knowledge of Africa will undoubtedly be rapidly extended; and there is something tremendous in the thought that this vast continent, so long shrouded by distance and danger, is at last to become familiar to us; to be made a matter of maps and guide books.

TO THE STUDENTS OF HAMPTON.

VI.

IN GENERAL SOCIETY (CONTINUED).

It is not customary for a lady to talk to or accept attentions from gentlemen whom she does not know; and I would here like to say to you that it is always better for you to be too reserved rather than too bold, in your manner, especially with gentlemen; for as you will soon find, the respect and courtesy which they show to you will almost invariably be in proportion to the dignity and modesty of your own demeanor.

Do not put yourself forward, do not endeavor to monopolize attention, do not talk much of yourself or your own affairs, do not in any way presume upon the general patience, and in conversation endeavor as much as you can to choose subjects which will interest all who are either listening or talking. Nothing is in worse taste than to talk in public upon purely personal matters, and it is often little short of disgusting to well-bred people to be obliged to listen to long descriptions of things and incidents which should properly only be spoken of between intimate friends and in privacy. As, for example, you should never talk before people of the state of your stomach, the medicines you may be taking, your visits to the dentist, any more than you should in general company, pick your teeth, scratch your head, or clean your nose or ears.

These and all similar faults both of word and of action, you must scrupulously avoid; and if you have nothing better to occupy your attention than such things as these, your first duty should be so to regulate your behavior, that, at least, you may not offend those who are more refined than yourself. You must never forget that there are many things which can properly enough be done and said when you are among people with whom you are familiar, which are out of place and unladylike in general society; and in this respect, it is never safe to allow yourself much liberty, for offences against propriety committed in public, will eventually result in your expulsion from good society, the first requirement of such society being, everywhere and always, propriety of behavior.

In conversing with those with whom you are not on intimate terms, it is rude to touch any part of their dress or person with your hands, or anything which you may have in your hands, as a fan, cane or parasol; to attract their attention by touching them or calling loudly, to look at them very closely, or to comment in any way upon their appearance. You must not point or stare at people either in the street or a room, and when it is necessary or desirable to point one person out to another, you must do it in a low voice, without any gestures, and so quietly that no one will notice it except the person to whom you are speaking. You must never make audible remarks upon the people about you, and when you unintentionally annoy or, discommode another person, as by stepping on a lady's dress, taking up a book which some one has for the moment laid down, or anything of the kind, you must immediately atone for your involuntary rudeness by saying, "I beg your pardon;" or "Excuse me." When it happens that you are the offended party, you must always acknowledge the apology made by the offender, using some such form of words as "Certainly," "It is of no consequence."

If you have any accomplishment which you can use for the amusement of others, you should always be willing to do your best when asked, though it is not usually proper for you to volunteer your services. If you can sing or play, or read well, and are asked to use your power for the pleasure of your friends, do not make the mistake of hesitating and offering a half-dozen excuses, none of which are sufficient, but as what you are able to do cheerfully and readily, showing your willingness to oblige, while, however, you should be careful not to do too much, thereby tiring your listeners instead of pleasing them.

If you join in games or dancing (to neither of which when properly conducted is there any objection), you must be careful that your fun and frolic do not degenerate into roughness, that there is no loud laughing or boisterous roaring; and you must remember that upon you as ladies rests the responsibility of excluding all coarseness and vulgarity from your presence. You can easily show your displeasure and disapproval, and I want you to appreciate the fact that in society the power lies principally with your sex; that in all social gatherings, and in the family life, it is you who must keep up the standard of refinement and demand propriety in the behavior of those about you.

I must advise you especially to guard yourself against the dangers arising from over-familiarity. Young people, as a rule, are apt to make friends easily and to be unnecessarily communicative, and in this way often get themselves into difficulties which might, at the outset, be easily avoided. Young women are probably somewhat more liable to make this mistake than young men, and I would therefore advise you in particular not to be too familiar even with your intimate friends, but to keep up a certain reserve which you will find to be often a great safeguard. Do not talk of your own affairs to all the world, do not attempt to pry into the affairs of other people, do not gossip about your friends and their faults; remember that modesty is essential to your womanhood, and that true modesty is spiritual as well as physical. By this I mean that the same instinct which will prevent me from making coarse gestures, from intruding on the privacy of others, from committing any action publicly, ought also to guard your tongue from loose speech, your eye from suspicion, and your thought from indelicacy, just as much when you are alone as when you are in a crowd; just as effectually at home as abroad.

I would like you to notice here that this modesty of which I speak is a very different thing from that awkard shyness which afflicts many young girls and which more often comes from too much thought of self than from too little. True modesty is often the surest relief from shyness, for it prevents any over-estimate of one's own importance, and frees its possessor from any undue sensitiveness as to the opinions of other people. That is, a young person who is really modest will not constantly wonder what other people are thinking of her, or imagine that she is an object of attention to any one about her, but will go quietly about her work or her pleasure, careful to be true and honest, but not too anxious about appearances, remembering that to "be" is better than to "seem."

In order to be graceful and ladylike in your manner you must be at your ease, not presumptous, nor over-sure of yourself or vainly confident of your own ability, but simply at your ease in that you are not constantly irritated by the thought that you may be making some mistake; doing something foolish or different from other people, or in some way showing that you are a stranger to the rules of society. And I think we shall come back here to our original proposition, namely, that you must think about yourself as little as possible. Do not fidget because you do not know what to do with your hands, or get nervous because you do not know whether you ought to stand up or sit down, but watch as closely as you can the behavior of the cultivated people whom you may meet; accustom yourself as much as you can to do as they do, and be sure that as a general thing, the one rule which will help you most, is to think of others more than of yourself.

It is very important for you to understand that to be respectful in your manner and address is essential. In your association with people older than yourself, with those who are in positions of authority, with those of supreme wisdom and experience, you must show special respect, not insisting upon your own equality, not advancing your own opinions, not contradicting others in asserting yourself, but listening rather than talking, and being content to follow instead of to lead.

I have spoken to you before of the impropriety of whispering in general society, and I have still something more to say upon that point. It is rude for anybody, but especially for young people, to converse in whispers, to monopolize conversation, or, to keep up a private conversation to the exclusion of others, but it is inexcusably so when they are in the presence of those who are older and better informed than themselves. Also this special respect must be shown to places as well as to individuals; in public meetings, at lectures, concerts or similar gatherings, but above all, in church your demeanor must be quiet and unobtrusive; you must do nothing to disturb others or attract attention to yourself, and in church or at any meeting for purposes of devotion, you must maintain a sober and reverent manner.

I do not know anything more displeasing in young girls than a habit of loud talking, and restless or bold behavior in public places. Your instinct of modesty ought to protect you from this fault; and if you are so unfortunate as to have contracted it, do your best to change and modify your manner, and let me advise you to make a beginning in the schoolroom. Politeness is as much in place in schoolrooms as in parlors, and if you do not practice it in the one place, you may be sure you will never be perfect in it in the other.

When any of your associates, of either sex, show you courtesy in any form, you must never fail to make due acknowledgement. It costs you scarcely a breath to say "Thank you," or "I am much obliged," or, "You are very kind;" but these little phrases spoken at the right time, are of real importance, and you should try to form a habit of using them, as well as of taking notice in other ways of the little favors which you ought to be able to accept as well as to offer kindly and freely. When you meet friends it is proper to inquire if they and their families are well, and to show interest in their well-being, and sympathy for their troubles, all of which can be done without exhibiting any impertinent curiosity, and is of course a very different thing from that personal questioning which is merely an attempt to pry into matters that do not concern you.

It is almost always rude and unkind to ridicule people whether they are friends or strangers, and as politeness means not only external forms, but also involves consideration for the feelings of those with whom you come in contact, you must remember that it is often just as ill-bred to say or do anything which you know is likely to hurt a person's feelings as it would be to slap a door in any one's face, or offer any similar rudeness.

If by accident you injure anything belonging to another person, you must make proper apology, and if in anything you can repair

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., JUNE, 1875. NO. 6.

TO A WATER-FOWL.

W. C. BRYANT.

Whither, 'midst falling dew,
While glow the heavens with the last steps of day,
Far through their rosy depths dost thou pursue
Thy solitary way?

Vainly the fowler's eye
Might mark thy distant flight to do thee wrong,
As, darkly painted on the crimson sky
Thy figure floats along.

Seek'st thou the plashy brink
Of weedy lake, or marge of river wide,
Or where the rocking billows rise and sink
On the chafed ocean side?

There is a Power whose care
Teaches thy way along that pathless coast,—
The desert and illimitable air,—
Lone wanderer, but not lost.

All day thy wings have fanned
At that far height the cold thin atmosphere,
Yet stoop not, weary, to the distant land,
Though the dark night is near.

And soon that toil shall end,
Soon thou shalt find a summer home, and rest,
And scream among thy fellows; reeds shall bend
Soon, o'er thy sheltered nest.

Thou'rt gone, the abyss of heaven
Hath swallowed up thy form; yet on my heart
Deeply hath sunk the lesson thou hast given,
And shall not soon depart.

He who, from zone to zone,
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone,
Will guide my steps aright.

THE HIGHLANDS OF THE HUDSON.

The accompanying picture of the *Mary Powell* on her daily trip up the Hudson River gives a very fair representation of one of the great steamboats which are hotels and steamboats in one, fitted with every luxury, propelled by machinery which in its way is perfect, managed with order and regularity, and in all their appointments so complete, as to form a striking feature in American travel. The crowd of people gathered on her decks are doubtless flying from the heat and dust of New York; and are bound for some of the cooler regions to which the Hudson is as beautiful an avenue. The fleet of sloops and schooners, canal-boats, tug boats and barges, which crowd the river until it is like the busy thoroughfare of a city, are all laden with varied cargoes destined for some of the numerous towns and villages along the river shore, while here and there some trim yacht, or gay pleasure boat adds interest to the swiftly changing scene.

But the glory of the river itself, with its rocky shores, high, thickly wooded hills, broad lake-like sweeps, and continued succession of beautiful landscapes, is far beyond the power of pen or pencil to delineate. From its mouth, where it opens into the broad harbor of New York, the river runs northward, passing under the strange rocks of the Palisades, broadening into the Tappan Sea, past Stony Point, between interlocking hills, until it reaches the climax of its beauty where the government buildings of West Point and the ruins of old Fort Putnam look down upon its shadowy waters. Here is perhaps the most magnificent view in the river's length, for here between precipitous and desolate mountains one looks northward into the beautiful Newburgh Bay, with the blue tops of the Catskills looming grandly in the distance. Storm-king and Cro'-nest and Breakneck are the names of the great hills which form this northern gate of the Highlands of the Hudson, and they are wild and steep enough to be true mountains, the highest of them, Storm-king, rising 1800 feet above the river's level, while the character of all of them is mountainous, not hilly.

Nowhere in America is there a more beautiful afternoon's sail than this from New York to Newburgh, and it is pleasant to think that these great steamboats of which the *Mary Powell* is one, have brought all this beauty within easy reach of the tired, overworked and anxious denizens of the cities which lie at the Hudson's mouth. Surely it is not possible for any thoughtful man or woman to journey amid such scenes as these without some gratitude to the Hand which has lavished so much loveliness upon the earth; without some realization of the steps which lead from Nature up to Nature's God. To appreciate the physical beauty of this world, to enjoy the gifts of external life, is a full and never failing source of pleasure, and the more cultivated our senses the more of this keen and innocent pleasure will be ours. So let us teach ourselves to see aright the loveliness and glory which surround us, and not make the mistake of passing through the world with our eyes shut to half the good it offers us.

THE HEART OF AFRICA.

In reading the late accounts of the explorations in Africa, nothing is more interesting than the differences, physical and moral, which exist among the native tribes, and which in one way and another serve to keep alive the wars which are constantly raging among the various governments. It is reported that as the travelers in Central Africa proceed further south they find the people less nomadic and more inclined to regular rule, and therefore to civilization. The kings have their chiefs and great officers of state, their palaces with audience halls and courtiers, and in many respects approach more nearly to civilization than do the tribes inhabiting the shores of the Atlantic, and the northerly regions of Central Africa. These latter are regarded as the primeval African race, which has disappeared before the inroads and extensions of other more civilized and more highly developed tribes. Now that the way is fairly opened our knowledge of Africa will undoubtedly be rapidly extended; and there is something tremendous in the thought that this vast continent, so long shrouded by distance and danger, is at last to become familiar to us; to be made a matter of maps and guide books.

TO THE STUDENTS OF HAMPTON.

VI.

IN GENERAL SOCIETY (CONTINUED).

It is not customary for a lady to talk to or accept attentions from gentlemen whom she does not know; and I would here like to say to you that it is always better for you to be too reserved rather than too bold, in your manner, especially with gentlemen; for as you will soon find, the respect and courtesy which they show to you will almost invariably be in proportion to the dignity and modesty of your own demeanor.

Do not put yourself forward, do not endeavor to monopolize attention, do not talk much of yourself or your own affairs, do not in any way presume upon the general patience, and in conversation endeavor as much as you can to choose subjects which will interest all who are either listening or talking. Nothing is in worse taste than to talk in public upon purely personal matters, and it is often little short of disgusting to wall-bred people to be obliged to listen to long descriptions of things and incidents which should properly only be spoken of between intimate friends and in privacy. As, for example, you should never talk before people of the state of your stomach, the medicines you may be taking, your visits to the dentist, any more than you should in general company, pick your teeth, scratch your head, or clean your nose or ears.

These and all similar faults both of word and of action, you must scrupulously avoid; and if you have nothing better to occupy your attention than such things as these, your first duty should be so to regulate your behavior, that, at least, you may not offend those who are more refined than yourself. You must never forget that there are many things which can properly enough be done and said when you are among people with whom you are familiar, which are out of place and unladylike in general society; and in this respect, it is ever safe to allow yourself much liberty, for offences against propriety committed in public, will eventually result in your expulsion from good society, the first requirement of such society being, everywhere and always, propriety of behavior.

In conversing with those with whom you are not on intimate terms, it is rude to touch any part of their dress or person with your hands, or anything which you may have in your hands, as a fan, cane or parasol; to attract their attention by touching them or calling loudly, to look at them very closely, or to comment in any way upon their appearance. You must not point or stare at people either in the street or a room, and when it is necessary or desirable to point one person out to another, you must do it in a low voice, without any gestures, and so quietly that no one will notice it except the person to whom you are speaking. You must never make audible remarks upon the people about you, and when you unintentionally annoy or discommode another person, as by stepping on a lady's dress, taking up a book which some one has for the moment laid down, or anything of the kind, you must immediately atone for your involuntary rudeness by saying, "I beg your pardon;" or "Excuse me." When it happens that you are the offended party, you must always acknowledge the apology made by the offender, using some such form of words as "Certainly;" "It is of no consequence."

If you have any accomplishment which you can use for the amusement of others, you should always be willing to do your best when asked, though it is not usually proper for you to volunteer your services. If you can sing or play, or read well, and are asked to use your power for the pleasure of your friends, do not make the mistake of hesitating and offering a half-dozen excuses, none of which are sufficient, but as what you are able to do cheerfully and readily, showing your willingness to oblige, while, however, you should be careful not to do too much, thereby tiring your listeners instead of pleasing them.

If you join in games or dancing (to neither of which when properly conducted is there any objection), you must be careful that your fun and frolic do not degenerate into roughness, that there is no loud laughing or boisterous romping; and you must remember that upon you as ladies rests the responsibility of excluding all coarseness and vulgarity from your presence. You can easily show your displeasure and disapproval, and I want you to appreciate the fact that in society the power lies principally with your sex; that in all social gatherings, and in the family life, it is you who must keep up the standard of refinement and demand propriety in the behavior of those about you.

I must advise you especially to guard yourself against the dangers arising from over-familiarity. Young people, as a rule, are apt to make friends easily and to be unnecessarily communicative, and in this way often get themselves into difficulties which might, at the outset, be easily avoided. Young women are probably somewhat more liable to make this mistake than young men, and I would therefore advise you in particular not to be too familiar even with your intimate friends, but to keep up a certain reserve which you will find to be often a great safeguard. Do not talk of your own affairs to all the world, do not attempt to pry into the affairs of other people, do not gossip about your friends and their faults; remember that modesty is essential to your womanhood, and that true modesty is spiritual as well as physical. By this I mean that the same instinct which will prevent me from making coarse gestures, from intruding on the privacy of others, from committing any action publicly, ought also to guard your tongue from loose speech, your eye from suspicion, and your thought from indelicacy, just as much when you are alone as when you are in a crowd; just as effectually at home as abroad.

I would like you to notice here that this modesty of which I speak is a very different thing from that awkard shyness which afflicts many young girls and which more often comes from too much thought of self than from too little. True modesty is often the surest relief from shyness, for it prevents any over-estimate of one's own importance, and frees its possessor from any undue sensitiveness as to the opinions of other people. That is, a young person who is really modest will not constantly wonder what other people are thinking of her, or imagine that she is an object of attention to any one about her, but will go quietly about her work or her pleasure, careful to be true and honest, but not too anxious about appearances, remembering that to "be" is better than to "seem."

In order to be graceful and ladylike in your manner you must be at your ease, not presumptous, nor over-sure of yourself or vainly confident of your own ability, but simply at your ease in that you are not constantly irritated by the thought that you may be making some mistake; doing something foolish or different from other people, or in some way showing that you are a stranger to the rules of society. And I think we shall come back here to our original proposition, namely, that you must think about yourself as little as possible. Do not fidget because you do not know what to do with your hands, or get nervous because you do not know whether you ought to stand up or sit down, but watch as closely as you can the behavior of the cultivated people whom you may meet; accustom yourself as much as you can to do as they do, and be sure that as a general thing, the one rule which will help you most, is to think of others more than of yourself.

It is very important for you to understand that to be respectful in your manner and address is essential. In your association with people older than yourself, with those who are in positions of authority, with those of supreme wisdom and experience, you must show special respect, not insisting upon your own equality, not advancing your own opinions, not contradicting others in asserting yourself, but listening rather than talking, and being content to follow instead of to lead.

I have spoken to you before of the impropriety of whispering in general society, and I have still something more to say upon that point. It is rude for anybody, but especially for young people, to converse in whispers, to monopolize conversation, or to keep up a private conversation to the exclusion of others, but it is inexcusably so when they are in the presence of those who are older and better informed than themselves. Also this special respect must be shown to places as well as to individuals; in public meetings, at lectures, concerts or similar gatherings, but above all, in church your demeanor must be quiet and unobtrusive; you must do nothing to disturb others or attract attention to yourself, and in church or at any meeting for purposes of devotion, you must maintain a sober and reverent manner.

I do not know anything more displeasing in young girls than a habit of loud talking, and restless or bold behavior in public places. Your instinct of modesty ought to protect you from this fault; and if you are on unfortunate as to have contracted it, do your best to change and modify your manner, and let me advise you to make a beginning in the schoolroom. Politeness is as much in place in schoolrooms as in parlors, and if you do not practice it in the one place, you may be sure you will never be perfect in it in the other.

When any of your associates, of either sex, show you courtesy in any form, you must never fail to make due acknowledgement. It costs you scarcely a breath to say "Thank you," or "I am much obliged," or, "You are very kind;" but these little phrases spoken at the right time, are of real importance, and you should try to form a habit of using them, as well as of taking notice in other ways of the little favors which you ought to be able to accept as well as to offer kindly and freely. When you meet friends it is proper to inquire if they and their families are well, and to show interest in their well-being, and sympathy for their troubles, all of which can be done without exhibiting any impertinent curiosity, and is of course a very different thing from that personal questioning which is merely an attempt to pry into matters that do not concern you.

It is almost always rude and unkind to ridicule people whether they are friends or strangers, and as politeness means not only external forms, but also involves consideration for the feelings of those with whom you come in contact, you must remember that it is often just as ill-bred to say or do anything which you know is likely to hurt a person's feelings as it would be to shut a door in any one's face, or offer any similar rudeness.

If by accident you injure anything belonging to another person, you must make proper apology, and if in anything you can repair

HAMPTON, JUNE, 1875.

In reply to special inquiries we give a few facts about truck growing in the neighborhood of Norfolk, Virginia, hoping that the subject may interest every one of our readers who relishes a strawberry, or respects an onion. In the last thirty years the business has gone from nothing up to annual shipments to northern cities of over a million harrels and crates; a quantity which if shipped by rail, would require three trains every day for six months in the year.

FOR PRACTICAL MEN WE GIVE THE FOLLOWING TABLE, OBTAINED BY CAREFUL INQUIRY, FROM GROWERS AND SHIPPERS.

	Time of Sowing.	Time of Setting in Open Field.	Time of Shipping.	Yield Per Acre.	Price At Wharf.
Kale	August	Nov. 20	March 10 to April 15	90 to 100 bbls.	50 cts. to $2.00 per bbl.; average, $1.25.
Cabbage, Large York	Sept. 25.		May 10 to July 1	100 to 150 bbls.	50 cts. to $2.00 per bbl.; av., $1.25.
Cabbage, Early	Nov. 30 to Feb. 15	Feb. 15	May 10 to June 15	40 to 50 bbls.	50 cts. to $2.00 per bbl.; av., $1.25.
Irish Potatoes	April 25	April 20	June 1 to June 25	40 to 50 bbls.	$3 to $6.00 per bbl.; av., $4.00.
Snap Beans	Aug. 1 to Sept. 1	May	July 1 to Aug. 10	100 to 300 boxes	35 cts. to $1.00 per box; av., 75 cts.
Sweet Potatoes	In March	July			
Radishes	March 1				
Strawberries		March & April	April 15 to May 1	1000 to 3000 quarts	5 cts. to 25 cts. per qt.; av., 10 cts.

The above figures are for experienced men, who have plenty of capitnl. Without both these requisites it is folly for any one to attempt to raise vegetables at Norfolk, in competitiou with growers further south.

The most successful truckers are located on rather stiff clay soil, drained by deep open ditches. Tiles are not in use,—the whole country being underlaid by beds of sand. Many of the pioneers in the bnsiness are now diversifying their labors hy planting fruit trees and keeping more stock, and it is generally admitted that it is most prudent to raise a large variety of products. There are, however, some heavy specialists, particularly in strawberries. One gentleman has been planting fifty acres and upward per year for several years past. A common method of combining trucking and farming is to grow a crop of early potatoes, followed the same year hy a crop of corn among which is sown cow peas at the last working of the corn, thus securing three crops in a season.

Freights to New York range from thirty-two to forty-two cents per harrel and twenty-five cents per crate. To Boston the charge is forty-two cents per harrel.

Eligible farms can he bought for from fifty dollars to one hundred and fifty dollars per acre, within three miles of the city. Twenty miles back good land brings from ten dollnrs upward according to improvements and water privileges.

Labor is ahundant near the city, and costs for men seventy-five cents, for women fifty cents; the hands feeding themselves.

At first sight it might seem that there are many ways to wealth now open to the colored men in America, in which his advances are limited only by his own ability. A closer view however, dispels this illusion. Thus in professional life prejudice diminishes the fees of the colored lawyer or doctor, by restricting their practice to the poorer class of customers. In real estate, and sometimes in agriculture, the most valuahle lands are reserved for white lawyers. In mechanical trades the colored apprentice is seldom able to get the best instruction, and therefore his work has a had name. While the negro can become wealthy in subordinnte stations; while in time a large hody of colored people may have means—if they then choose—to employ men of their own race exclusively, and to pay them handsomely; yet for long years it will be seen that the highest places are practically closed to colored aspirants.

What is left then to the colored man of high ambition? He knows that his race is in a hopeless minority. He perhaps realizes that to quarrel with the facts will not alter them. He cannot expect his people while weighed down hy poverty and ignorance to win against unburdened competitors. Faith in the slow progress of God's purposes may lead him to devote himself to the noble task of removing the depressing cause of his nation's degradation. But too often bitterness precludes resignation, and the man of large original genius feels his sphere too limited for his powers.

When in 1620 the first Africans set foot in America, can those who believe in the superintending care of Providence imagine that the event was merely nn accident? Those first twenty came from a heathen land. Excepting as slaves their race could have obtained no foothold among whites. By means of slavery Africa has planted an outpost in the midst of a civilization which could not otherwise have come in contact with Africans. And though those now here are as nothing to the whole race yet it is easy to believe that out of four million, a hundred may be found not unworthy successors to the twelve men of Galilee whose labors have given Europe all that is best in her history.

What nobler ambition for a young colored man than to be one of the hundred, worthy to organize Christian states in Africa?

The educated freedmen of America are challenged to produce a few resolute men whose apostleship in Africa shall inaugurate a new era. Here is n crusade that is worthy of all their powers. Will they shrink from it? The appeal of her wretched millions to the enlightened manhood of American negroes is direct, and the world waits to see what the latter will do.

Under the advice of a monk, the king of Spain opened the slave trade ostensibly to provide labor to replace the overworked and dying Indian tribes of the West Indies and to convert the captives to Christianity. After man's selfishness, rapacity and cruelty have done their work, do we not begin to see the Divine purpose dimly foreshadowed: and that the cunning priest was a better prophet than he knew.

Successful colored missionaries in Africa will elevate the self-respect of the race in this country, because there will be a better hasis of it when American negroes shall devote themselves to the most unselfish and elevated ends for which men can labor.

There need be no alarm about an exodus of virtue:—ninety-nine hundredths of all philanthropists prefer to begin and end at home. There are always enough to guard the forts and hulks; more are needed at the front. Every earnest man who dares to "hurn his ships" inspires a score who make good his loss to his own community.

A few years ago a search was made for colored men to work in Africa: none were found. We believe there are some of noble ambition preparing to respond to the next call.

A selection and training of the best material offered among the American freedmen is the most practical way of meeting the problem, the only liue of missionary effort which promises to turn out men physically fit for the African climate. And in view of the almost universal exclusion of colored men from the best facilities for education, the necessity of concentration to provide the highest form of practical preparation is manifest. The opportunities of large inatitutions are peculiar among the colored people in the fact that they have so wide a field of selection of material, aud attract and can secure the best specimens of the race. And if one student of the Hampton school proves to be endowed with the necessary hrains for evangelizing Africa, the whole cost of the institution will ho repaid.

The Annual Commencement exercises of the Hampton Institute will take place on Thursday the tenth of June. Ahout forty students nre expected to graduate.

A distinguished company of guests is expected from New York and Boston.

Never before, we believe, has such a large class of colored youth taken their diplomas from nn institution of learning. The power for good of these well-trained teachers, cannot he overestimated. The teachers make the people. The future of the colored race is in the hands of its educators.

Our February number contained an illustration of the act of a negro in saving the spire of St. Michael's Church in Charleston from the flames. In reference to this an esteemed correspondent aud friend of the Normal School writes as follows:

"I observe the piece on the nnmeless Carolina hero, an incident I nm well acquainted with, as the hero was a slave of a friend of my mother's, who sent him to request my mother to send my brother (Isaac, then an infant) to her house, as the fire was raging in our vicinity On his way he passed the church, and hearing of the reward offered, neglected his errand, and beat off the shingles with his head. I am sorry to say the reward given went to purchase his freedom, and the city gave no such proof of a sense of justice and gratitude as the poem attributes to the people. The lady had a family of negroes superior in intellect, who for their excellence were called 'the royal family.' The fire raged so furiously my parents (or rather my mother, for my father was at the fire) moved three times in one night. My brother's most faithful nurse, a sleve, took my brother away, and for three days my mother neither heard of him or knew where he was, but this occasioned her no uneasiness for she said she knew he would be well cared for by his nurse."

CENTENNIAL CELEBRATIONS.

A hundred years ago the 19th of last April, the Revolutionary War commenced. The hundredth anniversary of the hattles of Concord and Lexington were celebrated a few weeks ago. Nearly fifty thousand people were assembled in each town and the President and Cabinet attended together with many State Governors and distinguished citizens. It is impossible to give in our limits the faintest idea of the occasion. The leading orators of the land delivered eloquent orations, and in addition to the glorious "feast of reason," tables were set in two large tents or pavilions, each of which would seat at dinner five thousand persons.

We quote from the Editorial Column of the *Boston Advertiser* a few words headed

THE CRISIS.

By an almost universal consent the 19th of April, 1775, has been regarded as the turning-point in the history of the struggle between the colonies and the mother-country. Up to that time there had been hopes of a peaceful settlement of the questions at issue. From that time there was no loager a possibility of averting the terrible evils of a civil war. As Washington wrote to a friend in England, in the following June, "The once happy and peaceful plains of America are either to be drenched with blood or inhabited by slaves." This was the "sad alternative" which our fathers had presented to them. The Stamp Act riots; the fighting in State Street in March, 1770; the destruction of the tea in Boston harbor; the meeting of the first Continental Congress; Leslie's unsuccessful expedition to Salem, and demonstrations of various kinds elsewhera,—these all pointed in one direction. But no one of these events, nor all of them together, so influenced the destinies of America as the midnight march of Lieutenant-Colonel Smith with his eight hundred grenadiers and light infantry, and the armed resistance which they encountered the next morning. Local pride may claim thet the first blow in the war of American Independence was struck somewhere else and at some other time, but the verdict of history will not be reversed. We need not be surprised that the old halled of Chevy Chase came up to Horace Walpole's memory when he heard the first news of the hattle and the retreat, and thet he quoted from it in his letter to Mann, not quite accurately, indeed, but with singular fitness:—

"The child that is nnborn shall rue
The hunting of that day!"

The hunting of that day sealed the fate of the British empire in America and called into being a new world.

OUR DUMB ANIMALS.

The Normal School mourns—for "Lion" is dead! The King of beasts is no more! "Lion-heart!" the noble stallion who a few days ago was rejoicing in his strength —whose neck was clothed with thunder—the glory of whose nostrils was terrible—who, in the words of the ancient Solomon, was black but comely—and, as the modern Solomon, his inconsolable groom declares, was proof against the Epizoo and every other "Academic" and never lost a day's work when all other horses were laid up in ordiunry. Alas! that a treacherous nail lying in his path should have found the vulnerable spot in, this four-footed Achilles, and brought him to an untimely end. That a dumb beast, whose tongue never told a lie, and who never opened his mouth in abuse of any one, should perish by *lock-jaw*, seems a mysterious dispensation.

Not only the Normal School, but many of its friends who have experienced Lion's horsepitality, will grieve at his loss. Peace to his *manes*!

The following letter or address which we deem well worthy of republication (having been issued in pamphlet form) was written by a member of the class of 1870

—the first that graduated from the Hampton Institute. The writer has devoted

ADDRESS TO THE COLORED PEOPLE OF THE SOUTH, ON THE CIVIL RIGHTS BILL.

Respected Friends,—Meeting so many misled inquirers of Civil Rights, and finding so many who are anxious to know exactly what the bill contains, and what it does not, have induced me to consider your conditions generally.

I approve of your zeal in seeking reliable information, not only of the Civil Rights Bill, but of such other things as may be to your interest to know.

As to the Civil Rights Bill, I believe it is to your interest to have a fair knowledge of its provisions, and your numerous queries answered with some advice relative to the best manner of accepting its advantages.

And to accomplish this end, I can think of no better plan to diffuse the desired information successfully than to offer you a true copy of said bill with this address annexed.

The amendment to the constitution of the United States, known as the Civil Rights Bill, is not in itself so complicated as to need much explanation, but the false rumors set afloat since it was first introduced in Congress by Hon. Chas. Sumner, and the facts contained therein so exaggerated that many have been led to believe that which is not really true.

Therefore, I desire to favor you with a copy of the bill and address, that you may know your just and good rights before the law, and unjust wrongs to yourselves and people; that you may contend for the former whenever it is creditable to your interest or essential to your happiness, and that you may avoid the latter at all times.

Considering the conditions of the hill in the present mind of the people, it is advisable for os to be careful ond deport ourselvas as becomes men, lest we, through ignorance or imprudence, furnish a means for increasing that prejudice which already exists between the races, and which might result in an abuse of our own rights.

If you will examine tha first and fourth sections carefully, you will readily see that there are conditions and limitations established by law that will exclude persons of every race and color from the advantages and privileges set forth in the same sections.

Then it becomes you as men and as a race of men to rise and stand obove such conditions and limitations as will deprive you of any right that is granted to any other citizen of our country.

Remember that your character, brains and pockets have a great deal to do with this, and should be properly cared for. Let your deportment be commendable in every way, shape, form and fashion. Improve your minds in the way of education, and take care of your earnings.

Bear in mind that tidiness, good behavior, a pocket full of greenbacks, and a little commonsense will carry you anywhore on this side of "Jordan," and that tidiness and good behavior are two steps toward crossing ovor.

You are to remember that a great responsibility rests npon you, as free citizens of the United States and entitled to all the rights and privileges granted any othor men or race of men. And, as tho law makes no allowance for ignorance, it is your duty to prepare yourselves to meet such responsibilities, and to act your part as men.

Do not spend your time in idleness; and if you can spare a few dollars each month, save and invest the samo in real estate, or other valuable property, rather than spend it for trifles. Buy a few good books, and spend two dollars a year for a good weekly nowspaper.

It is not necessary that you should meddle with politics because you read popers; but it is necessary for you to read papers in order to keep up with the times.

Do not depend too much on heursay, for such oftener turns out nntrue than otherwise. See and read for yonrselves.

For fear of being called to a point of order, I must drop back to Civil Rights.

As to inns, public conveyances, etc., it is natural, and you will undoubtedly prefer to patroaize ood assist your own race as far as comfortable accommodations are practicable.

If you wish meals or lodgings at some public house or hotel, and can be comfortably accommodated by your own race, why not go thero, where you will be made welcome and treated with care?

But if you can find no place kept for the accommodotion of colored people, then go where you can find such accommodations rather than be left in the cold. It is your privilege to do so, provided you are a fit subject in overy other way, except race, color or previous condition of servitude.

If first-class accommodations are furnished you in a separate coach or cabin on public conveyances, I would prefer a seat in such a car or cabin with those by whom I could he cordially entertained. But if there is no such accommodation set apart for you, and you are crowded upon by base, and reckless beings, depriving you of all that tends to your happiness, just stop a moment and see if you are cleanly attired and in every respect fit to occupy a seat with decent people; and if you find nothing lacking except that you are not a white man, excuse yourself for being colored, and walk in another car or cabin (taking your lady along, if you have one).

If you ore deprived of such privileges for no other reasons than race, color, etc., you have the law in your favor.

First, "Be sure you are right and then go ahead."

As to theatres and other places of amusement, you care hut little about them. But if, in this case, you really wish to attend such places, it might be well to act on the same principles as are advised relative to public conveyances.

You can serve as jurors only when summoned and pronounced competent, and can complain only when persons in charge of the summoning of jurors fail to summon you or any of your race generally.

It has been rumored that the Civil Rights Bill affected social equolity in society, and from the flying rumors, one would almost be induced to believe that you could enter o man's private dwelling, whether he wanted you or not, and that he and his family, especially his daughter, would be compelled to pleasantly entertain you, or be sued for damages. Certainly you know better. The Civil Rights Bill has nothing to do with social equality. The laws of nature regulate society, and acts as governor of the same, and no act of any legislature can repeal such laws or impeach the governor.

A man is known by the company he keeps, because no one is compelled to keep company with others against his will. He may not be able at all times to say with whom he will associate, but he is able to say with whom he will not.

Character, education and wealth are the three grand principles upon which social equality is based, and the distinctions are as widely manifested among the whites themselves as that between the white and colored.

We notice but persons of like character and conditions generally accompany each other, forming a separate circle from those of a different character and condition.

Character, and the ways and conditions of men, are so varied and so interwoven that a definite line between classes and degrees of society cannot be drawn.

A few things to be remembered, and I will close my address. Don't forget that calling for refreshments at saloons or hotels, only for the purpose of provoking the proprietors, is abusing your own rights.

Don't forget that you are not worthy of nice lodging in any boarding house or fit for decent company unless you are cleanly in person and respectably clothed.

Don't forget that bad conduct will exclude you from good society, and deprive you of advantages tendered you in the Civil Rights Bill.

Don't forget that every man's private dwelling is, at least temporarily, his own and under his control.

Don't forget that all persons twenty-one years of age ore considered free agents, and that civil rights force no white lady to marry a colored man unless she wants him

Don't forget that the Civil Rights Bill does not demand mixed schools.

Don't forget that education is advantageous to all races and colors.

Don't forget that he who has a home of his own, has advantages not possessed by those who have not.

Don't forget that your future destiny depends upon your own good or bad works, and that all nations and races are looking upon you to see what you will make of yourselves.

Remember I wish you to be faithful to discharge the duties that you owe to yourselves, to your race and country, and that I, as one of your own race, desire that you should grow wiser and better as you grow older.

In conclusion, I might say that my aim in this address has been to answer your many queries and to give such advice as will be for our better. I hope you will examine both the bill and address carefully, and if I have given an incorrect representation in any way, or advised you injudiciously, please excuse me.

Very respectfully,

J. P. Weaver.

Augusta, Ga., *April* 26th.

Memorial Day was observed here with unusually imposing ceremonies. There was a large parade and procession and the cornerstone of the monument in honor of the Confederate dead was laid.

In his speech General Evans said:

"Let us do nothing to keep alive the passions of war. To study its lessons is prudence; to profit by its teachings is wisdom: but to stir up the old animosities is madness. The voice of this great monument will not be for war but for peace. It will say to us 'The Confederacy has expired; its great life went out on the purple tide of blood that flowed from the hearts of its sons.' We have buried it—we do not intend to exhume its remains. We were utterly defeated, and we dismiss our resentments. Sadly we parted with the dear old cross of stars which we followed through many a storm of shot and shell; but we take with the true hand of Southern honor the staff that holds the flag of Stars and Stripes. I respond with truest feeling to-day to the fraternal words of General Bartlett, spoken at the centennial of the first battle of the old Revolution."

Afterward the Ladies' Memorial Association decorated with flowers the graves of the Confederate and Federal dead in the Augusta Cemetery.—*Tribune.*

A HOMESTEAD.

BY CAPT. S W. ARMSTEAD.

The greatest blessing a poor man can have is a home of his own, however humble that home may be. A tenant is always to some extent, at the mercy of the landlord, and where he depends upon his daily labor for his daily bread, his relation to his landlord may almost be stated as one of absolute servitude. Should he be thrown out of employment, or stricken with disease, a few days generally suffice to consume the little cash in his hands, and just when his demands are greatest and his need sorest, he is liable to be ejected from his dwelling for the failure of his rent. Should his landlord even be considerate and promise to bear with him for a time, there is still the anxiety of mind preying upon him like a vulture, retarding his recovery or disqualifying him, to some extent, at least, for work. It is therefore not only a matter of wisdom, but a matter of duty that every poor man should make the acquisition of a homestead the prime object of his efforts.

Where land is cheap, as it is in Virginia, this is not so difficult a matter as might at first be supposed. It is no exaggeration to say that there are hundreds of colored men in and around Hampton, who, within the last eight years, have bought and paid for comfortable homes. In most instances, too, these homes have been purchased with the savings of men who have labored for from 75 cts. to $1.00 and $1.50 per day. It is a matter of interest to note how gradually and steadily this work has been done. In some cases, the lot has been bought, perhaps only a fourth of an acre, and paid for in small amounts at a time, ranging from ten to fifteen or twenty dollars; then the material for the house has been purchased and the work of erection done in the same piecemeal style, until the home was complete or at least habitable and comfortable. Such instances are commendable and worthy of all imitation.

The object of this article is to stimulate others to a like enterprise and perseverance. While the colored people labor under many disadvantages they also possess some advantages which enable them more easily to accumulate money than their white brethren of equal means. Their present condition in society does not require such expenditure to preserve their standing; the laws of fashion do not prevail with such rigor; and in regard to the matter of food, it is well known that from long habit, they can content themselves with simpler kinds and less variety than the whites. Their actual and necessary expenses in the way of living are thus reduced to the minimum, and with industry and economy almost any healthy man may in a few years lay by enough to purchase a home for himself and family.

All considerations urge him to this. He has at once a well defined object in view—an object worthy of his most untiring efforts. A habit of making and saving money is at once begotten. Instead of wasting the little surplus that remained of his week's earnings in things that were useless or unnecessary, he regards it as so much to add to the general sum and preserves it for that purpose.

Besides this a man never thoroughly identifies his interests with those of his fellow-citizens until he becomes a freeholder, a sovereign of the soil, a lord of the manor. His dignity and importance commence at the moment that he appropriates the soil; thenceforth he is an important element of society. Before, he was a cipher that only counted in connection with others; now he is a numeral, possessing individual inherent worth. Let every man, by all means, purchase a homestead.

BANK OPEN ALL DAY.

We notice by the Norfolk papers that The Home Savings Bank, in Norfolk, will, during the berry and truck season, remain open all day. This will prove a great convenience to hundreds of the readers of this paper, who, in the busy "picking" season cannot find time to visit the bank in usual bank hours.

If we can so impress the laboring people that they will regularly deposit in the Savings Bank, rather than leave their shillings and dimes at the grog shops, a great end will be attained, the community blessed, and homes made happy.

THE

HOME SAVINGS BANK,

CORNER MAIN AND ATLANTIC STREETS.

Incorporated under State Charter,

1874.

AUTHORIZED CAPITAL $ 100 000.
SUBSCRIBED " $ 20 000.

Money in smallest amounts, received on deposit and interest at 6ix per cent, allowed *from day of deposit.* Deposits repaid *on demand.*

Exchange bought and drafts drawn on the National Shoe ood Leather Bank, New York City; capital One Million.

Drafts drawn also on Baltimore, Washington, Richmond, and other cities.

Collections promptly made on all parts of the country. All investments made in this vicinity. Especial advantages given those customers who were depositors in the late FREEDMAN'S SAVINGS BANK.

☞ N. B. We have loaned since last November,—chiefly to colored citizens, and in small amounts—over twelve thousand dollars.

☞ SEND FOR OUR CIRCULAR.

THE MARY POWELL PASSING THE GATE OF THE HIGHLANDS.

your fault, must do so. You must never make use of the smallest article without asking leave of its owner; and even in so trifling a matter as taking up a book or newspaper belonging to any one else, must be careful that you are not in so doing annoying the owner; in short, you must always and everywhere be strictly scrupulous in regard to other people's property.

In making the acquaintance of young men, and in your association with them, I have already told you how important it is that you should be careful, modest, pure in word and deed, so that you may command their respect, and never have the misfortune to find your name in the mouths of gossips or scandal-mongers, or even worse, to know that it is bandied about among the very young men whose good opinion you are doubtless trying to win.

Do not, as a rule, accept presents from young men; do not go out with young men alone, but try always to have others of your own sex with you; do not take a young man's arm unless it is offered you, and not even then unless the time and place are suitable and the offer properly made; in a word, do not permit yourself to be familiar or free in your manner, except with those with whom you are intimately acquainted; while so long as you are under the guidance of parents, teachers or friends, you will find it best to trust to their judgment rather than your own in regard to what is proper and permissible for young women in their association with young men.

And now if I were face to face with you I should like to ask you, "What is it, which in your opinion, makes a lady?" and from your answers judge of my own success in this foregoing explanation. I cannot do that, but I can ask you to think for yourselves about the matter, and to answer to yourselves a few last questions.

To be a lady—is it not to be gentle, courteous and kind, to speak and move without roughness or rude noise, to be modest in look and word, to be considerate of others, to dress quietly and suitably, to be respectful, to be neither unduly shy, nor presumptuously forward, to be at ease in regard to all ordinary social rules, to be bright and cheery without coarseness—and to be all these not in public or at times only, but everywhere and always?

And of such an one can we not say, "Strength and honor are her clothing, in her tongue is the law of kindness—her price is far above rubies?"

At Home.

THE DOCTOR AND DEACON.

Deacon Rogers, he coma to me,
"Wifa is a-goin' to die!" said ha;
"Doctors great, an' doctors small,
Haven't improved her any at all;
Physic and blister, powders and pills,
And nothing sure but the doctor's bills.
Twenty old women with remedies new,
Bother my wifa the whola day through;
Sweat as hoocy, or bitter as gall—
Poor old woman—she takes them all,
Sour or sweet, whate'er they choose—
Poor old woman—she dara not refuse,
So she pleases whoever may call—
An' death is suited the best of them all,
Physic and blister—powdor an' pill—
Bound to conquer—and sure to kill."

Mrs. Rogers lay in har bed,
Bandaged and blistered from foot to haad.
Blistered and baadaged from head to toe,
Mrs. Rogers was vary low.
Bottle and saucer, spooa and cup,
On the tabla stood bravely up,
Physic of high and low degree,
Calomel, catnip, and boosaet tea.
Everything a body could bear,
Excepting light, water and air.

I opened tha hllods, tha day was bright
And God gava Mrs. Rogers soma light.
I opened the window, tha day was fair,
And God gava Mrs. Rogers some air,
Drugs and medicines—high and low,
I thraw tham aa far as I could throw.
"What are you doing?" my patinot cried,
"Frightaning death," I coolly replied.
"You ara crazy," a visitor said;—
I flung a bottla at har haad.

Deacon Rogers, ha coma to ma;
"Wifa is a-coming round," said ha,
"I really thiok she will worry through;
She scolds ma just as sha used to do.
All the people poohed and slurred—
All tha neighbors hava had thair word;
'Twas better to parish—soma of tham say—
Than be cured in auch an irregular way."

"Your wifa," said I, "had God's good care;
And his remedies—light, water and air;
All of tha doctors, beyond a douht,
Couldn't have cured Mrs. Rogars without."
Tha deacon smiled and bowad his haad;
"Then your bill is nothing," he said.
"God's be tha glory, as you say!
God bless you, Doctor! good! good day."

Medical Mirror.

UNTO THE THIRD AND FOURTH GENERATION.

"An acquired and habitual vice," says Dr. Elom, "will rarely fail to leave its trace upon ons or more of its offspring, either in its original form or one closely allied. . . . . The habit of the parent becomes the all but irresistible instinct of the child; the voluntary adopted and cherished vice of the father or mother becomes the overpowering impulse of the son or daughter; the organic tendency is excited to the uttermost, and the power of the will and of the conscience is proportionately weakened—weighty considerations in forming a judgement on the responsibility of those so fatally affected by this direct inheritance of crime."

Happy is the person whose virtuously inclined parents have transmitted to him a virtuous mind. To such the trials and temptations of life are shorn of half their power for evil. Great is the responsibility of such an one that he should raise still higher the foundations of morality and virtue in the pure hearts of his own offspring. Each parent by strengthening, purifying, and ennobling his own mind by a virtuous life, may impart to his children stronger tendencies to virtue than those were which he himself inherited. This a duty of each person in the regeneration and uplifting of humanity.

HENRY REYNOLDS, M.D.

"Precious Water, pure as can be,
Better far than rum or brandy.
If this speech provoke your fury,
Let your horse be judge and jury."

PERSEVERANCE. Did you ever know anybody stick to any kind of business, no matter how unpromising, ten years or most, who did not prosper? No one! no matter how bad it might be at the beginning—if he stuck to it earnestly and faithfully, and tried nothing else; no matter how hard he may have found it sometimes to keep his head above water; still, if he persevered, he always came out bright in the long run. . . . . A certain amount of opposition is a great help to a man. Kites rise against, not with, the wind. Even a head wind is better than nothing. No man ever worked his voyage in a dead calm. The best wind for everything, in the long run, is a side wind. If it blows aft, how is he to get back?—*Our Own Fireside.*

WASHING MUSLINS.

Another process for washing fine muslins of delicate colors, is to take some wheat bran—about two quarts for a lady's dress—and boil it for half an hour in some soft water, then allow it to cool, strain the liquor, and use it as a substitute for soapsuds. It removes dirt like soap, is inert regarding the colors, and requires to be rinsed out in only one clean water, and starching is unnecessary. This is the best method of washing fine muslins and calicoes. A great number of beautiful dresses are often spoiled in washing by the discharge of their colors, from the use of warm suds. In all cases, the suds and rinsing water for colored articles of dress should be used as cold as possible.—*Scientific American.*

WHAT HAPPENED TO JOE BARKER.

"Don't go out, Joe," said Mrs. Barker, as she saw her husband take his cap and move off quietly toward the door of his cottage.

"I'm not going to stay long."

And as Barker said this, he glided from the room, in spite of his wife's endeavor to detain him, and the anxious look of the children. Mrs. Barkar followed quickly, with the purpose of arresting his progress, and bringing him back into tha house.

"Isn't it too much?" exclaimed Mrs. Barker, as she went back into the house, after satisfying herself that Joe was fairly beyond her reach. "He's got his whole week's wages in his pockets, and ten to one if he doesn't get rid of nearly half of it before he comes home. I wish every tavern was burned down, and every tavern-keeper in the penitentiary—and it would be so before long, if I had my way. It's no better than robbery to take the money of a half-innocent like him. If I had only been in time to stop him, and get his money out of his pocket!"

Mrs. Barker was both vexed and grieved; so much so, that she sat down and wept.

It was all in vain that Betsy Barker, his faithful, though long-suffering, and often justly indignant wife, went many times to the tavern-keepers who sold him drink, and implored them, with tears, in the name of God and humanity, not to sell her husband intoxicating drinks. Coarse insult or wicked abuse was all she received—and she would go back, weeping and despairing, to her cheerless home and half-starving children.

Thus it was with Joe Barker and his family on the night in which we have introduced them to the reader. What was a little unusual for Joe, he had worked steadily all day, and without once going to the tavern to get a drink. In fact, Betsy had talked to him so earnestly in the morning, and had pictured to his mind so vividly the evil consequences of his way of life, that he had made one of his feeble resolutions to become a sober man. This resolution he had been able to keep through the day, sustained therein by the useful labor in which he was engaged. But, when evening came, and his thoughts went to the tavern and the good fellows there assembled with whom he was wont to meet, he was unable to withstand the impulse that led him thitherward. And so, seizing a favorable moment, he left the house ere his watchful partner could prevent it.

Diving down a narrow cross street, not far from the poor hovel in which he dwelt, Joe Barker was soon in front of "The Diamond," an old drinking haunt of the worst description. He was right against the closed door ere he noticed the absence of the large red lamp, which had so often tempted him with thoughts of good cheer within; and he pushed several times against the door, ere fully satisfied that it was fastened within.

"What's the matter here?" muttered Joe, in some bewilderment at so singular a state of affairs. Stepping back a pace or two, he looked up at the house. "Lamp out—door locked—shutters closed—what's the matter?—old Gilbert's not dead, I hope."

Two or three feeble raps were made on the door, but only a hollow sound came from within.

"I don't understand it at all," said Joe Barker, now observing, for the first time, that this particular neighborhood, usually crowded, so to speak, with noisy tipplers every evening, had a deserted look. Here and there a man might be seen moving briskly along, as if on some particular errand, or on his way home. But there were no groups at the corners, no loud talkers; none of the usual evidences of drinking and rioting.

"It can't be Sunday evening," thought Joe, and he stood still, trying to think, with his hand on his forehead.

No; it was not Sunday evening, he was certain of this; for he remembered that "The Diamond" had always been ready to receive customers—whether it were Saturday or Sunday evening.

"He's dead, or moved away." This was the only conclusion to which Joe could arrive. So he passed on, saying to himself—

"I'll go round to Sprigg's; for I must have a drink to-night."

And so the poor meagrely-clad creature went shuffling along the half-deserted pavement, where, aforetime, he had been wont to meet at every turn wretches sold to the vice of intoxication, and even more degraded than himself. But few of these were now to be seen, and they were evidently as much bewildered at the changed aspect which everything wore as he was.

Sprigg kept a drinking and gambling den in the next square from Gilbert's. Thither Joe Barker groped his way, for the street was unusually dark—the large lamp in front of "The Diamond" now extinguished, had, of itself, lit up the whole block. Stranger still, Sprigg's den was closed. A dim light, shining through one of the upper windows, encouraged Barker to hammer on the shut door for admittance. Two or three times he knocked before there was any evidence of life within. Then a window in the second story was opened, and a man's head thrust out.

"Who's there?" was growled in a gruff, almost angry voice.

"Hey! Sprigg, is that you?" cried Barker, "What, in wonder, is the matter?"

"Who are you, and what do you want?" returned Sprigg, sharply.

"I'm Joe Barker; come down and let me in. I want the stiffest glass of rum-toddy you can make; for I haven't tasted a drop since yesterday."

"If I do come down, it'll be a sorry time for you, old chap!" was the passionate answer of Sprigg. "Off with you, and this instant!"

"Why, what's in the wind now, naighbor?" said Barker, more puzzled than before. "Have you all shut up shop, turned pious, and joined the church?"

The tavern-keeper sputtered out an oath, as he drew in his head, and closed the sash with a heavy jar.

Joe Barker was mystified worse than ever. What could it all mean?

"Somebody must be dead." He looked for a strip of crape, but the old iron latch was guiltless of the drapery of mourning. A wooden block stood by the door, and upon this Barker sat down to think, if his mental processes could be thus dignified.

"The 'Diamond' and Sprigg's, both shut up! Can't make it out. Is the world coming to an end? Maybe somebody's murdered, and they've been closed by the police? Shouldn't wonder! They say Sprigg is a bad fellow, and that Gilbert was once tried for his life. That's it, as sure as a gun! I'll go right off to Paul Dixon's. They'll know all about it there."

Paul Dixon was another grog-seller, whose bar-room was close by, round the corner. Thither Joe directed his steps, impelled as much by an awakened curiosity as by an all-consuming thirst. Wonder of wonders! All was dark and silent in the neighborhood of Paul Dixon's. Even the great lamp, with its stained glass sides and variegated letters, had been taken down, and tha bare lamp-post, as it stood sharp against the sky, added to the deserted aspect of things, so new and strange and unaccountable.

"Something's wrong," muttered Joe Barker, in a subdued voice. "Something's to pay." He looked at the lamp-post, at the closed windows and door of Paul Dixon's tavern, and sighed. He really felt melancholy.

"I wish I had a good drink," he said, arousing himself. "I never was so dry in my life. I wonder if all the taverns are closed. Gilbert, Sprigg, and Dixon shut up? Can't make it out, nohow."

Thus talking with himself, Joe commenced retracing his steps, but very slowly, his eyes cast down to the pavement. So lost was he in a bewildering maze of doubt and suggestion, that, ere aware of an obstruction in his path, he came suddenly, and with quite a shock, against a very sober old-fashioned pump, that signified its consciousness of assault, by rattling somewhat noisily the chain of its iron ladle.

"Hi, hi! what's the matter now?" ejaculated Barker, moving back a pace or two, and trying to relink the broken chain of his thoughts. "Only the old pump! Aha! I've had many a cool drink here in my time, both as boy and man, and it never cost me a cent, nor made me more of a fool than some people say I am by nature. Good evening, Mr. Pump!" continued he in a sprightly manner, as though the contact with the pure element had sharpened his wits. "Let us shake hands, or handle, just as you please, for old acquaintance sake. I've been trying to get a drink for this half hour, but not a drop is to be had for love

or money. The rum-sellers have all shut up shop, it seems. I hope *you're* not on a strike, too. Let's see!"

Joe Barker lifted the handle, putting the iron ladle under the spout as he did so, and brought it down with a strong jerk. Out gushed the crystal water, looking clear and beautiful even in the feeble starlight. It filled the ladle, overrun its sides, and went splashing down upon the pavement. There was something pleasant in the sound, even to the dull ears of Barker; and there was a feeble awakening in his mind of dear old memories about boyhood, and the early times when he was a better man than now.

To his mouth he placed the brimming ladle, and drank a pure draught of nectar. Just as he had removed the vessel from his lips, and taken a deep inspiration, a hand was laid on his shoulder familiarly, and a friendly voice said—

"Cheaper drinking that, neighbor Barker, than ever was found at 'The Diamond,' across yonder, and a thousand times better into the bargain. I'm glad to see you returning to your old friend again, and hope you may never have occasion to desert him. Friend Pump is worth a score of your Sprigg's, Dixon's and Gilbert's. What a blessed thing that you are for ever rid of their friendly offices!"

"For ever, rid of them!" said Barker. "What does it all mean, neighbor? What have they done? Has any one been murdered?"

Murdered! No, not exactly that; but didn't you know that the old villain Alcohol died last night?"

"Died? What! I don't understand." And poor Joe Barker looked more bewildered than ever. "Died—how?"

"Why, Joe Barker! Is it possible you don't know that the Maine Law came into operation in our State to-day?"

"The Maine Law!" Joe took off his old cap, and laid one of his broad hands on his forehead. "The Maine Law! I heard 'em talking about it last election. They said it was a dreadful outrage upon our liberties, over at 'The Dismond,' and so I voted against it. What does it do, neighbor? Will it shut up all the taverns?"

"That's just what it has done already. You can't buy a drink of liquor in the whole town."

"You don't tell me! Good say I to that! Well, I couldn't make it out, nohow. I thought something strange had happened. All shut up? Ho! Ho! Sprigg said it would be the ruination of the town if the law passed. I rather guess he thought there was nobody in town left to be ruined except rum-sellers. And yon're sure every tavern has been closed?"

"I know it," was the decided answer.

"Then I'll run home and tell Betsy. But won't she be glad!"

And away the excited creature ran, as fast as his feet would carry him.

Poor Betsy Barker! When she had found that Joe had gone off with all his week's wages in his pocket, she felt like giving up. They were out of meal and meat, and the children's shoes no longer kept their feet from the ground. For herself, she had a garment but what was patched and repatched, until scarcely a whole breadth of the original fabric remained. She had laid it all out in her mind how she was going to spend the four dollars which her husband told her in the morning he would be paid for his week's work. It was a very small sum when set off against their very many, many needs; but she had apportioned it, in her thought, in such a way as to make it go the farthest in supplying things absolutely necessary. But alas! alas! Joe had gone off with the whole sum in his pocket, and she knew the chances were ten to one that he would not have the half of it left—perhaps not a dollar—when he came home.

The poor wife was disheartened, and who can wonder? She cleared off the supper things, and then sat down to mend an old jacket belonging to her eldest boy. As she turned it over and over, and noticed how torn and worn it was—more fit for the rag-bag than anything else—she let it fall into her lap, and, bending over upon the table by which she was sitting, buried her face in her arms. She did not weep now. Her feelings of despondency had in them too much of hopelessness for tears.

As she sat thus, the door opened, and her quick ears recognized the footsteps of her husband. Her heart fluttered instantly with a new hope, while the half oppressive weight on her bosom was removed. His return, so early and unexpectedly, was an augury of good. That he had been drinking, she doubted not; but there was ground for believing that he had not wasted all the money she so much needed. She did not raise her head until Joe came up to where she was sitting, and in a tone of exultation which he could not repress, exclaimed—

"Hurrah, Betsy! Good news! There's all my money—not a cent gone." And he threw a handful of silver coin on the table. "Good news! What do you think? Old King Alcohol's dead. I've just heard the news."

"Are you crazy, Joe?" said Mrs. Barker, looking in wonder and bewilderment at her excited husband.

"Not a bit of it, darling!" answered Joe, as he threw his arms around his wife's neck, and kissed her. "Nor drunk, either," he added, as she pushed him away. "Why, Betsy! Don't yon know we've got a Maine Law? I've been to Gilbert's, and to Sprigg's, and to Dixon's, but they're all shut up. Tomkins told me that a drop of liquor couldn't be bought in the whole town. Ain't that good news for you, old girl! Hurrah, boys! I'm as glad as if I'd found a new dollar. I never could pass their doors without going in for a drink, whether I wanted to or not. Somehow or other, it seemed as if I couldn't help it."

"Joe! Joe! *is* all true what you say?" eagerly exclaimed Mrs. Barker, now pressing forward upon her husband, and drawing, almost involuntarily, her arms around him. "*Is it all true, Joe?*"

"Every word of it, Betsy, as I'm a living man."

"Thank God! Thank God!" was the overjoyed wife's sobbing response, as her face fell upon the bosom of her kind-hearted, but weak and erring husband.

A month from that time, and what a change was visible in their humble dwelling! And not in theirs alone, but in thousands of dwellings hitherto desolate.

The Teachers' Table.

HOW TO TEACH GEOGRAPAY.

FIRST STEP.—Review the POINTS OF COMPASS, in training the pupils, until they are able to name any direction as the teacher points.

In connection with and following the instruction relative to the points of compass, lead the pupils to learn the location and the direction from the school of other streets near the school; also of prominent buildings, as churches, post-office, hotel, railroad depot, etc.; or of villages, lakes, farms, groves, forests, streams, etc.; within the range of the children's observation. The teacher should represent on the blackboard the situation of the schoolhouse, and the location or direction from it of the places mentioned, and allow the pupils to copy the same on their slates.

SECOND STEP.—While teaching the definitions relative to the FORMS of land and water, present first the picture, or a drawing upon the blackboard, of the object under consideration, as of an island, peninsula, cape, strait, lake, bay, river, etc.; then show how the same or a similar object is represented on a map. Follow this with a definition to be learned by the pupils. As the characteristic of each form of land or water—as that AN ISLAND IS LAND ENTIRELY SURROUNDED BY WATER—is learned, require the pupils to point out on a map several representations of islands, omitting the names of the particular islands in this stage. Proceed in a similar way to teach all the definitions.

During this step the instruction has for its chief object training children to recognize the various forms of land and water, by means of their characteristic features, and to describe each by suitable definitions; hence the attention of pupils need not be directed to the names and location of particular islands, isthmuses, straits, bays, etc., at this time.

THIRD STEP.—Commence the instruction relative to the names and location of particular places with the town, village, or city in which the school is situated, and extend it to other places in its vicinity. No fixed limit to the extent of this exercise can be given, since the length to which it can be profitably carried will depend, in some degree, upon the personal knowledge of the members of the class relative to these places. The teacher should aim, however, so to use the knowledge of those pupils whose personal visitations have made them acquainted with the locations of the greatest number of places, as to extend the knowledge of the other pupils.

Such attention should be given to the location upon a map of the town, village, or city in which the school is situated, and to the relative location and direction from it of the chief places in its vicinity, that the pupils will be able to point them out on an outline map. The name of the town, village, or city, of the county, and of the state in which the pupils live, should be taught, and their location shown on a map.

FOURTH STEP.—In teaching the SHAPE OF THE EARTH by means of a globe, lead the pupils to compare a marble with an orange, and both the marble and orange with a globe, and thus to notice that each one resembles the other in SHAPE only; also that each differs from the other in SIZE. By this means prepare them for understanding that the globe represents the earth only in SHAPE. Follow this with some simple illustrations as to the comparative size of the earth.

Next lead the pupils to compare the outline forms of the grand divisions of land, water, and of islands, etc., represented on the globe, with their corresponding representations upon hemisphere maps.

FIFTH STEP.—Talk with the pupils about people of different races and nations, and point out on the globe, also on outline maps, the location of the countries where each may be found; as Africa, the home of the colored man; China, the home of the Chinaman; Germany, the home of the Germans, etc. Proceed in a similar manner with the most familiar animals, and the most common productions of different countries. Give the name of the country, and show its location on a globe, also on an outline map. Point out Greenland as the home of the white bear; Africa as the home of the lion, zebra, ostrich, and camel; Australia as the home of the kangaroo; Spain as the country where cork and raisins are produced; South America as the country from which brazil-nuts and cocoanuts are obtained; West India as the place whence we obtain oranges, bananas, etc.

By means similar to those herein described, the pupils may be made to realize that GEOGRAPHY teaches them about the homes of the different people, animals and productions which they have seen and of which they have heard.

The aim of the teacher should be to give the pupils a good, general idea of the SHAPE OF THE EARTH, of the different portions of it as the HOMES OF RACES OF MEN, also as the places where particular fruits grow, and of some parts as having continuous cold weather or continuous warm weather. This object must be accomplished chiefly by oral instruction. However, the work may be facilitated by placing in the hands of the pupils suitable text-books on geography, to be examined by the children AFTER the lesson has been given orally by the teacher; but in no case should the pupils in this grade be required to study a lesson in the book before the subject of it has been presented orally by the teacher, as above indicated.

Each lesson may be gone over a second time by the teacher, after the pupils have studied the subject in the books. The order of the lessons, the topics presented, and the general character of the facts taught should conform to the directions given here, without regard to the order of presentation in the text-books in common use.

After completing the course of objective instruction in geography, as indicated in the preceding steps, the pupils will be prepared to commence the study of this subject in an intelligent manner from good text-books.—*How to Teach.*

Correspondence.

From our London Correspondent.

LONDON, *January*, 1875.

A second New Year has opened upon us in this far-away land; but we don't feel a bit blue about it, for we confidently hope that before its close, perhaps even before its mid-summer noon-tide, we shall see the dear home-faces again and be once more plodding about in the old familiar haunts from which we have been so long absent. *This* holiday season calls up very different sensations from those of a year ago; then we were fresh from home—strangers in this great bewildering city, and though we were outwardly very brave and jolly and not homesick at all—oh no! yet the thought that another Thanksgiving Day—another Christmas—another New Year must come and go before we set our faces homeward again, brought a coldness inwardly which those who have felt it can understand and appreciate. Our experiences at Christmas, a year ago, were so ridiculously forlorn that, as extremes meet, we couldn't help having some fun out of them. Having read and heard so much about an English Christmas, Christmas in "Merrie England," etc., I believe we had a vague idea that there must be Christmas cheer in the very air, and that we should in some mysterious manner be made partakers in it.

We had spent the Massachusetts' Thanksgiving Day very pleasantly with some American friends here, and our first plan for Christmas was to invite them to dine with us; but finding that this did not agree with the domestic programme (our landlady wishing to give the cook a holiday) we decided to postpone our invitation, take an "outing" ourselves, dine in the city, and see some of the famous Christmas pantomines; but on arriving *down town* found to our dismay every restaurant and every place of amusement closed! This is the custom here, and we had the pleasure of travelling back again and picking up from our private larder what crumbs of comfort—and crackers—we best could. I have a dim recollection of buns and lemonade for a Christmas dinner; but the very absurdity of the whole affair saved us from growing lachrymose and sentimental over it.

December 26th,—"Boxing Day" as it is called here, everything wakes up again, and the Christmas entertainments begin and are kept up in full blast until after the New Year opens. It is very pleasant to hear the "Waits" on Christmas-eve; their voices sound most delightfully as they rise on the quiet night stillness in the beautiful carols so familiar to our ears. They do not come in exactly the same style here as the Rev. E. E. Hale's "Christmas Waits in Boston;" none but an E. E. Hale could engineer such a party though, either on paper or in real life.

One very pleasant feature of this Christmas times to us was the arrival of a box from home containing many kind tokens of remembrance from our friends there, refreshing to the mind as well as the outer man, and so well-timed in its sending as to reach us the very day before Christmas, and being totally unexpected (until within a few hours of its appearance when we received a notice from the express agent in Liverpool, saying that such a box had been forwarded to our London address) it was of course doubly welcome, and though some of its contents were in a slightly mixed condition—as, for instance, a few sweetmeats in our nicely wrought slippers, and a little jelly in our new home-knit fancy woollen stockings, rendering them a little more *fancy* than the knitter originally intended—we found enough of the contents "in good order and well conditioned" to make our hearts glad and thankful for these substantial proofs of kindly remembrance as well as for the loving thoughtfulness which prompted and sent them.

We have done very little in the way of sight-seeing or visiting places of interest since our return to London in the autumn,—not that we have exhausted the resources of the city, by any means, but we have felt that time is very precious to us in this second and last season of study and practice here, and we are trying to crowd all the work we can into these short winter days; and in the evenings—unless there is a good concert or something in the musical line which we feel may be a help to us—we are glad to stay at home, go to bed early and rest our eyes and brains for the tasks which the morrow will bring. Our pleasant American friends, the C's, whose society we enjoyed so much last year and who were a part of our summer vacation party, went home in October. We missed them greatly and wished we were ready to take the home-bound trip with them; but as it is this winter, we are very fortunate in having in our near vicinity the W.'s,—one of the most delightful families I ever met; they, too, are Americans and have shown us great kindness. We visit them frequently and as there are two or three children in the family we feel perfectly at home there, for though one may not be especially fond of children in the abstract, I think they make their own home, as a general thing, seem much more home-ish to a visitor.

One of the London sights which a person need not go out of his way to see, but which comes to your very door (I might almost say to your bed and board) without money and without price, and whether you want it or not, is its fogs. London, certainly, I think, can carry off the palm for fogs; there are varieties of them, black, white and grey, and yellow—worst of all; and there are degrees of them, from the light (mostly haze) to the thickness which surrounds you like a solid wall and on which, as you approach a gas-light (for the gas is kept burning throughout the twenty-four hours when these prevail), your shadow is thrown with perfect distinctness. "It is an ill wind which blows nobody good," however, and these are the link boys' harvest; as the streets are so dark as to obstruct locomotion and impede travel of every description, the traveler *perforce* is often very glad to welcome the blazing torch which comes rushing toward him, and for a few pennies will guide him to his destination. I long sometimes for a good "spell" of real home winter-weather; this order here just now seems to be a cold, damp, thick fog over everything, slippery streets, and darkness visible everywhere. I have written a part of this letter by gas-light at high noon and I cannot see across the street to distinguish more than the outlines of the opposite buildings; this fog is yellow and everything looks ghastly and distorted; it always reminds me of Campbell's "Last Man"—

"The sun's ray had a sickly hue, etc."

This unnatural darkness is the cause of frequent accidents; we met with a slight one the other evening, so slight, however, as may be called an adventure rather than accident. Walking from Hyde Park to attend a concert at the Royal Albert Hall we found the fog so thick that we could only see from one lamp-post to another, by a luminous foggy haze; and when we left the Hall at the close of the concert, it had so increased that we found ourselves in utter darkness and thought our safest way was to take a "hansom" home;—this is a sort of one-horse-chaise, open in front, with the driver perched up behind. We couldn't see the horse before us, but put faith in cabby and resigned ourselves to "go it blind." The plegy quadruped was most uncommonly and inconveniently "fresh" for such an occasion and tore through the Park and rushed around corners in a way that made me shut my teeth together hard; but we kept quiet and went on tolerably well until a sudden jar, followed by an abrupt halt, shook us almost out of the vehicle, and to our astonishment we saw a lamp-post—or rather we concluded there must be a post, as we saw a street lamp in the air right in front of us—between us and the place where the horse ought to be. After a good deal of backing and filling we managed to extricate ourselves; but it seems that the street took a sudden curve just here, and the deceitful atmosphere causing our Jehu to mistake the lamp in the bend for one further on, drove

straight upon the curb-stone, nearly running down post, lamp and all. No serious injury was done, however, after all, and we reached home in safety at last, thankful to have escaped a less agreeable termination of our evening's adventures. K.

Our readers will be interested in the following letter from Liberia:

Monrovia, Liberia. *April 7*, 1875.

Mr. Editor,—By direction of President Roberts, I have to inform you that Benjamin Coates, Esq., of Philadelphia, forwarded to him sometime since, your letter of the 6th January, ultimo, in which among other things you inquired for the "proper address of Liberia to write to find out the demand for teachers there, and what their qualifications should be." Mr. Coates also informed him that you took deep interest in the elevation of the African race, and to that object you had devoted most zealously your time and talents.

It has always given, and will ever give, President Roberts sincere pleasure to afford any information in his power to men, such as you have been represented to be, who feel an interest in the educational system of Liberia, and manifest a desire to send laborers to its assistance in this particular.

The teachers in Liberia are in most instances totally unfit to fill the positions they hold—I speak of Common Schools. They have none of that training or culture which it was found necessary to give the teachers in the United States and other foreign countries. They, too often, fail to arouse in the minds of the children that interest which the young ought to have in their studies.

It is a notorious fact that the children who went to school fifteen, twenty or thirty years ago have made and are a more intelligent body, than any which have come up since.

Our teachers are required to go through no examination. They make no returns relative to the schools which they teach. There is no efficient system of examination nor of reward to those scholars who are diligent. A child goes to school six or seven years under such a state of things and when it leaves is as ignorant, materially, as when it commenced.

The knowledge of these defects in the educational system of Liberia, together with the psychological causes peculiar to a people most of whom have been in a state of servitude, has brought and is rapidly causing a distaste for, and a total want of appreciation of education and its value among the masses of the people.

The demand for, and the necessity of having good teachers is thus obvious; and if the schools established by them were of an industrial nature also, their value would be enhanced. The teachers must be properly qualified to teach Common Schools.

The same system as that pursued in the United States would do—varied, of course, to suit circumstances

For the last six or eight months President Roberts has been ill. Sometimes he feels better and at other times he is extremely feeble. This state of health prevents him from writing.

I remain, sir.

Your obedient servant,

Arthur Barclay.

Gen. S. C. Armstrong,
Hampton, Va.,
U. S. A.

LETTERS FROM GRADUATES.

An experienced teacher writes encouragingly of her colored school at Beaufort, S. C., as follows:

"During the winter the average attendance in my school has been ninety and ninety-five; this is on a plantation. The parents are truly ambitious for their children to improve and even excel, and the children are eager to learn. There is a marked improvement in the punctuality and regularity of the children each year, and in their order and cleanliness.

In Beaufort the people are building more comfortable houses for themselves, and putting fences around their lots, planting vegetable gardens, and cultivating flowers in their front yards. The first houses built had no glass windows; the second year windows were added; then piazza; now the people are building two-story houses, even on plantations."

Capeville, Northampton County, Va.

Dear Teacher,—As I have moved to a new place to teach, I thought to say a few words to you. I am now situated at the above named place teaching in the school which was taught by Mr. Geo. W. Cole last year. I am happy to say that the people are very anxious to learn and also to have their children to learn. I have in roll thirty-three scholars and they tell me that they are very little over half that will come after a while. I had more trouble with this school than I did at Belvidere, for the children are so very small that they don't understand the good of going to school, as larger children would. They are quite small, but the most of them have been to school some, with the exception of a few who are yet in their a b c's. I thought when I taught in Augusta that the large scholars were more trouble than the small ones were, and so they were there, but are not here. My smallest scholars here are between five and seven years old, and they don't really understand the good of schooling. Now my smallest ones in Augusta were between nine and eleven and seemed to understand the meaning of going to school. They seemed to have the rushing spirit; that is, one didn't want to see the other get ahead of him, and they all rush for the head of their classes. The only way they could keep ahead was by studying their lessons well, and that they did. I am sorry to say that that spirit doesn't exist here among the children, but I shall try to get it here as well as at the above named place.

I am happy to say that I have a very good Sunday-school with two classes, one of which I teach myself and the other is taught by Mr. John Weeks, the gentleman of which I board with his father. A. E. White.

Franklin, Southampton County, Va.
March 25, 1875.

Dear Teacher,—I write to inform you of my progress. I have been quite successful; my school numbers forty pupils. I had very bad health through the winter, but I never lost a day on that account. My schoolhouse is given to very much exposure which caused me to take very much cold. When I came here the people promised me they would fix the house comfortably, but they failed to do it. I wrought very much on it myself to make it fit to teach in.

While hearing a class recite this morning, two gentlemen rode up to my door and one of them civilly informed that I could teach here no longer; he said that he had received no rent for the land. The land being his he couldn't afford for them to have school on it without paying him, but I told him that the school board would settle that matter; with that they rode off.

My school will close the 15th of April. I would have sent for some papers for my Sabbath-school but it meets so irregularly (owing to the weather) I thought it would be useless.

Yours truly,

A. I. H. Tazewell.

Sub. District School No. 5,
Malden, Kan. W. Va. 1875.

Dear Teacher,—The six months' session closed March the 9th, according to law of Board of Education. The Trustee appeared in the school-room a few days before closing and proceeded to examine the scholars and stated his admiration of the advancement of the scholars. He impressed upon them the necessity of attending school regular, and if they did so, he would assure them they would continue to advance.

I beg leave to inform you of the success, and especially of the impression that has been made by the teachers of Hampton, on both scholars and people in this vicinity. The past winter there have been four schools here, taught by teachers from Hampton. The teachers have the best reputation. I have the knowledge of what I speak from white citizens that have spoken to me concerning the color teachers.

My scholars seemed to be anxious to learn and I must say made considerable progress. I had experience is a great lever in accomplishing much good. There may be some learned, but not having self-experience fail to accomplish what they might. I have often noticed this among the number of our race who have had a chance to learn little more than their fellow-servants. I have overheard others expressing themselves, using such high dictionary words, as they termed it, that it was unpleasant to be in their company. I am happy to say that I have never heard of the slightest degree in this respect prevailing among the Hampton students.

C. J. Spencer.

Hale's Ford, Franklin County, Va.
April 28, 1875.

Dear Teacher,—I take this opportunity to write you, so as to let you know how I am getting along with my school. I am doing as well as I can expect; I have been teaching ever since I first commenced last fall. I taught at Taylor's store five months; now I am teaching at Hale's Ford, and will continue to teach until the last of July, if nothing happens.

General, I want your advice about one thing, and that is this: These trustees want me to teach for them again next fall; as I think you know best I would like for you to think the matter over so I may learn your decisions; I would like to teach but, as you know, I would like to finish my *studies*. I have not told them yet positively what I intend to do.

Now for a word or two about this part of Virginia. I am sure you don't have any *idea* what a bad condition it is in regards of an education; it is almost past all hopes; ignorance and poverty are walking hand in hand. No longer than to-day I have had a white lady to come and ask me to back a letter for her. Since that is the case with these whites you may imagine how it is with the poor colored man who has never had an opportunity of being cultivated. It is true they are all free, but it reminds me more of the time when I was a slave than anything else. It is master and mistress just as it was twenty years ago. Now it may seem strange to you, but it is true; for all of them are ignorant, white as well as the *black man*; there are few of them that will speak whenever I meet them. You see they are living back here in these mountains where they can't see anything but woods and such like. I am glad to say I have been getting along nicely ever since I been here; of course I have had a few insults, but I don't mind that. I like this place for one thing, that it is so healthy. Let me hear from you soon.

Your old scholar,

Wm. C. Boyd.

(Glendower, Albemarle County, Va.

Dear Teacher,—According to promise I find myself seated, for the first time, to write you. As I did not get here early enough for the general examination, I was examined at the residence of Mr. D. P. Powers, County Superintendent, by that gentleman, whom it is my pleasure to know as a truly kind friend—a gentleman not only interested in the secular interests of our race, but their religious welfare also. I am told by colored people of his town, that he was the first to start their churches and Sabbath-schools on a firm basis at the close of the war; and is usually the arbiter of their church disturbances (which, I am sorry to say, occur too often).

I commenced my work here as teacher over the "Glendowe School," on the 12th of October. Thus far I have met with no discouragement, having since the first of my arrival determined never to be overcome by the ignorance and bigotry that is predominant in this section, as in other portions, of the South. At present my school numbers eighty-one. During the last two months my school has been greatly increased, mostly by young men and women who cannot come more than two months of the term.

You will remember the "Glendower School," to be the gift of generous and Christian northern friends, who have done, and still do, so much for our race. The "Gleadower School" was put in practical operation by students from Howard University in Washington, who opened school in the open air while the house was in course of erection, on or about the 1st of July 1869, and continued the same successfully through the summer of that year. The formal dedication of the house took place on the 18th of October, 1869. The Rev. Geo. B. Bacoo, of Orango, N. J., was present and took part in the services. Until 1874 this school was supported by its friends; after which, upon the application of the County Superintendent, they ceased to pay its teacher who is now paid by the State. I am told by one of its trustees that its cost reached nearly $2,000. It is certainly a building that any community might be proud of.

Respectfully yours,

Thos. Catton.

A young woman, now teaching near Wilmington, North Carolina, after a year's study at the Hampton Normal School, relates her experience as a teacher as follows:

"I hadn't been long home, after the term closed, before Mr.——— came with horse and cart, for me to go forty-three miles out to teach. 'Twas a mean place, everybody knows. The preachers are afraid to go there, but I was going. I rode to the first work that offered, and consented to go. It rained terribly, but Mr. E——— said he must go at five P. M. Sister persuaded him out of that, though, and we got off at five next morning. The horse just walked—walked! He didn't trot a step! We rode till dark, this way, and stopped for the night at a place I taught in last year. How they did beg me to come back to them again! At two o'clock I was roused to start again, and reached the place in time for breakfast. Was I tired? Oh! Well, I rested that day, and the next morning started to be examined—had twenty-one miles to go, and the horse *walked* all the way there and back. They all told me I couldn't get a certificate, for Lawyer D——— was a hard man, but I did get a third grade, and went to work on Monday morning. I had never one bit of trouble with the people. They are ignorant, but didn't meddle. I had Sunday-school in the morning, and there'd be as many white people sitting round on the ground outside, as there were colored, inside. The Sunday before I came away, they had christenings. Many of both races had never seen such a thing, and some told the mother that the baby would be sure to die if 'twas done. I told them 'twas no such thing, to give the baby to me, and I'd carry it up, and I did; and then the rest took heart.'

"Brave little soul! Who can count the good her fearless energy, ready hands and sunny ways are to accomplish! The spirit of prophecy must have spoken when she was christened "Comfort." She is now teaching at her own home, a few miles outside the city limits; she has Sabbath-school also, and seems untiring in work. I think that through her influence other young ladies will be induced to work in these dreaded distant districts next summer. 'Tis devoutly to be hoped for."

Agricultural.

IMPORTANT SUGGESTIONS TO WHEAT GROWERS.

The Binghamton *Republican* gives a report of a discussion at a recent meeting of the Binghamton County Farmer's Club, in which some new ideas to farmers were advanced, in a paper on wheat culture, read by Luther Jenison, Esq., one of the most observant and experienced farmers in that county. His theory is that one of the principal causes for the failure of the wheat crop in the older states is the common practice of closely screening the seed, and taking out all the small or end kernels, which he believes are the females, and sowing the masculine, or male kernels only. He has come to this conclusion as the result of experiments made by himself and other close observers during the past forty years.

Science and experience have sufficiently demonstrated that all bearing plants must possess both the male and female qualifications. Mr. Jenison argues that the longer kernels on a head of wheat or ear of corn are masculine and the smaller or end kernels are the feminine, and therefore the two must be sown together in order to insure fruitfulness.

His first experiment was with wheat, from which he had carefully screened all the smaller kernels. The wheat grew finely and had heads about six inches long, but did not fill. Here and there was a kernel scattered along the head, but only a few of the husks contained grain. While there was straw enough for twenty bushels, it yielded only eight. He sowed the same wheat once or twice more, with little better success. In 1841 he had about thirty bushels of this wheat on hand, which he carefully run through a fanning mill. He had enough of the screenings, by adding a half bushel of the larger grain, to sow two and a quarter acres. The wheat came up thick and grew finely, yielding about 35 bushels to the acre. Since then he has saved the screenings of spring wheat and washed them, skimming off the lighter kernels that rose to the surface, sowing the rest with the other grain, and has never failed of getting 16 to 25 bushels of spring wheat to the acre.

In 1849 he had a piece he wished to sow to winter wheat. His seed being foul, and not knowing where to get any better he screened it three or four times and sowed the plump wheat. The crop was almost a failure, yielding only about seven bushels. The heads were filled in the middle, but the tops and the huts were fuzzy and without kernels. He was satisfied that the power of propagation was taken away with the smaller kernels.

Mr. James White's experience was similar to this. He sowed a fallow with wheat which had been repeatedly screened, until none but the nicest, plumpest kernels were left. The heads grown from this seed did not fill. Only a small part of the centre of the heads filled. The ends were soft and fuzzy, without any grain. He was of the opinion that the better fillers were all screened out.

About fifteen years ago a gentleman in Georgia found a stalk of wheat with a remarkably long, well filled head, growing in the cleft of a rock. He saved it and sowed the seed from year to year until he had sufficient grain to supply all his neighbors with seed. It was called the rock wheat, and produced forty bushels, and sometimes more, to the acre. Being pure, there was no necessity for screening. The chaff was simply blown out and all the wheat sown, which he thinks accounts for the great yield. This same method for obtaining what are called new varieties has frequently been practiced with the same, or similar results.

When wheat is sown in drills it is an easy matter for a man to go through a field and cut into a basket, with a pair of shears, enough of the plumpest, best filled heads to sow an acre or two. This pounded out with a flail, and sown, makes the best seed that can be procured, and no doubt, if followed up, it would greatly improve the quality of our wheat, as well as increase the quantity. As thin seeding—a peck to half a bushel per acre—is now recommended by some of our most successful wheat growers, it would cost but little to save seed in this way for a large fallow.

Mr. Jenison says he is in the habit of going through his wheat field in the fall and picking out the cockle. He also pulls the chess just before the harvest. In this way his wheat is clean enough for seed when it comes from the threshing machine. His wheat sown eight or ten years in succession improves instead of "running out," as it is termed. Mr. Jenison estimates—rather steep in our opinion—that we lose about two-thirds of our wheat crop by the practice universally prevalent of sowing only the larger kernels.

It is now generally conceded, we believe, that to have corn fill out well we must plant all the grain that grows on the ear. If this is the case with corn, why not with wheat? Let our farmers try the experiment.

Sunday-school Lessons on the Life of Christ.

LESSON I.

MAY 30, 1875.
JESUS AND THE SABBATH.

MARK ii: 23-28.

23 And it came to pass, that he went through the corn fields on the Sabbath day; and his disciples be gan, as they went, to pluck the ears of corn.
24 And the Pharisees said unto him, Beheld, why do they on the Sabbath day that which is not lawful?
25 And he said unto them, Have ye never read what David did, when he had need, and was ahungered, he, and they that were with him?
26 How he went into the house of God in the days of Ahiathar the high priest, and did eat the shewbread, which is not lawful to eat but for the priests, and gave also to them which were with him?
27 And he said unto them, The Sabbath was made for man, and not man for the Sabbath:
28 Therefore the Son of man is Lord also of the sabbath.

MARK iii: 1-5.

1 And he entered again into the synagogue; and there was a man there which had a withered hand.
2 And they watched him, whether he would heal him on the Sabbath day; that they might accuse him.
3 And he saith unto the man which had the withered hand, Stand forth.
4 And he saith unto them, Is it lawful to do good on the sabbath days, or to do evil? to save life, or to kill? But they held their peace.
5 And when he had looked round about on them with anger, being grieved for the hardness of their hearts, he saith unto the man, Stretch forth thine hand. And he stretched it out: and his hand was restored whole as the other.

Golden Text.—I GAVE THEM MY SABBATHS TO BE A SIGN BETWEEN ME AND THEM.—Eze. xx: 12.

The occasion which called forth the teaching of the Master contained in this lesson was the plucking of the ears of corn by the disciples as they were passing through the field. The Pharisees, who hated Christ, thought, or pretended to think, that by so doing they had violated the fourth commandment, and judgieg from the spirit they always manifested toward Christ we may believe they were very glad to put to him the question "Why do they on the Sabheth day that which is not lewful?" In aeswer he referred them to David of whom a similar act was recorded in their own Scriptures (2 Sem. xxi: 1-7), nor did these over-scrupulous Pharisees condemn him on account of it. "He had need and was ahungered" was David's justification; Christ vindicated his disciples on the same ground. Their necessity justified them in doing what otherwise would heve been unlawful.

When Christ had thus met their objection, and in so wise a way that they could answer him nothing, he went on to teach them that the Sabbath was set apart fer man's highest good; "The Sahheth was made for man, end not man for the Sahbath." After God hed creeted the world and made it ready for man, last of all on the sixth day he made man in his own image, and on the seventh day God rested from all his work which he had made. But God did not rest because he was tired or needed it: he rested to teach us what we must do. God has made men and animals in sueb a way that they need rest every seventh day, and if they do not heve it they not only disobey God but they do themselves great harm. At the same tiue we come very far sheet of the design of God's holy Sabbath if we use it only as a day of *idle* rest. Every seventh day God wishes us to lay aside our usual labors, whatever they may be, not alone that our hodies may be refreshed hnt that we may have time to think of Ilim so thet our souls may be made better and that we mey ha prepared when called to leave these weary hodies to enter upou the joys which God has prepared for those who lovo him. Though we are not to do any unnecessary work, Christ, the Lord of the Sahhath, here plainly teeches that it is *right* for us to do what is needful in order to supply our *real* wants.

In the last part of the lesson Christ further teaches us hy his own example in the synagogue, that as well as to provide for our own needs we are to do anything in our power to help those who are sick and suffering.

ThePharisees, too, were there in their character as spies, wntching whether he would heal the man with the withered hand on theSabbeth day. Christ, who knew the thoughts of their hearts, called up the man and then reveeled to them his knowledge of their evil intentions hy the unanswerable question in the fourth verse. They could only hold their peace, for their own conscieuces must have told them thet Christ's efforts to do good to others were more lawful than the murderous designs against him, which, on thet very Sehbath day they were planning. It is right for us, as did Christ, to do on *any* dey whatever we can to help or comfort others in their sorrow, and if we keep aver in mind that the Sahhath is the Lord's dey and honestly strive only to do those things upon which we can ask his blessing, we shall ohey the command "Remember the Sahhath day to keep it holy."

LESSON II.

June 6, 1875.

POWER OVER NATURE.

MARK iv: 35-41.

35 And the same day, when the even was come, he saith unto them, Let us pass over unto the other side.
36 And when they had sent away the multitude, they took him even as he was in the ship. And there were also with him other little ships.
37 And there arose a great storm of wiad, and the waves beat into the ship, so that it was now full.
38 And he was in the hinder part of the ship, asleep on a pillow: and they awake him, and say unto him, Master, carest thou not that we perish?
39 And he arose, and rebuked the wind, and said unto the sea, Peace, be still. And the wind ceased, and there was a great calm.
40 And he said unto them, Why are ye so fearful? how is it that ye have ne faith?
41 And they feared exceedingly, and said one to another, What manner of man is this, that even the wiad and the sea obey him?

Golden Text.—HE MAKETH THE STORM A CALM SO THAT THE WAVES THEREOF ARE STILL.—Ps. cvii: 29.

The healing of the man with the withered hand so enraged the Pharisees that they immediately went out to plot how they might destroy Jesus. For this reason he withdrew to the shore of the lake and there ceased not to teach and to heal all the sick and afflicted ones who came to him.

Soon after this Jesus chose twelve from among his followers to be always with him that they might become fitted by his coutinual example and teachings, for the special mission which was to be entrusted to them.

Christ had now for some time been teaching in Capernaum, "his own city." The last day the multitude was so great that he entered into a ship and from there spoke to them the parables which preceda to-day's lesson. Instead of seeking rest and refreshment after tha labors of the day he was in haste to "pass over unto the other side." At another time he said to his disciples "My meat is to do the will of him that sent me and to finish his work"—and now as ever his own personal comfort and necessities were forgotten or disregarded, for "they took bim even as he was in the ship." Are we striving to pattern our lives after thet of the self-forgetting Jesus, who, may we ever remember, set us an example that we should follow in his steps," in this as well as every other particular?

After they had started a great storm arose, the waves beat over the boat until it was filled with water and even theseexperienced fishermen felt themselves to be in danger of sinking, for Luke tells us "They were in jeopardy" (Luke viii: 3). But wbere was Jesus all this time? "As they sailed he fell asleep." Jesus had a human body just as much affected by hunger and weariness as our own. He was so tired that in spite of the roaring winds and dashing waters he slept even as though he had a comfortahle resting-place. In this time of their extremity they bethought themselves of their Master and woke him with the almost reproacbful words, "Master, carest thou not that we perish? Without neticing their question he at once thought them out of their distresses, for at his quieting "Peace be still," "the wind ceased and there was a great calm." After rebuking the winds and waves Jesus had too a geutle word of rebuke for the disciples, "Why are ye so fearful?" With Christ in the ship, of whose sympathy and power they bad before had such convincieg proof, they ought to have been confident that he would in some way bring them safely to the other side.

Our life is hut a voyage to the other sida. We may have the all-powerful Christ as our Pilot; and theugh this will not prevent our meeting with trials and temptations by the way; yet these very trials may become blessings hy drawing us, in our weakness, to lean upon Him who is perfect strength. None who take Christ as a Pilot need fear that they will not be brought at last to the other side; for surely all tbose who put their trust in him he bringeth to their desired haven—the haven of eternal rest.

LESSON III.

June 13, 1875.

POWER OVER DEMONS.

MARK v: 1-15.

1 And they came over nnto the ether side of the sea, into the country of the Gadarenes.
2 And when he was come out of the ship, immediately there met him out of the tombs a man with an unclean spirit,
3 Who had *his* dwelling umeng the tombs; and no man could bind him, no, not with chains:
4 Because that he had been often bound with fetters and chains, and the chains had been plucked asunder by him, and the fetters broken in pieces: neither could any *man* tame him.
5 And always, night and day, he was in the mountains, and in the tombs, crying, and cutting himself with stones.
6 But when he saw Jesus afar off, he ran and worshiped him.
7 And cried with a loud voice, and said, What have I to do with thee, Jesus, *thou* Son of the most high God? I adjure thee by God, that thou torment me not.
8 For he said unto him, Come out of the man, *thou* unclean spirit.
9 And he asked him, What *is* thy name? And he answered, saying, My name *is* Legion: for we are many.
10 And he besought him much that he would not send them away out of the country.
11 Now there was there nigh unto the mountains a great herd of swine feeding.
12 And all the devils besought him, saying, Send us into the swine, that we may enter into them.
13 And forthwith Jesus gave them leave. And the unclean spirits went out, and entered into the swine: and the herd ran violently down a steep place into the sea, (they were about two thousand,) and were choked in the sea.
14 And they that fed the swine fled, and told *it* in the city, and in the country. And they went out to see what it was that was done.
15 And they come to Jesus, and see him that was possessed with the devil, and had the legion, sitting, and clothed, and in his right mind: and they were afraid.

Golden Text.—FOR THIS PURPOSE THE SON OF GOD WAS MANIFESTED THAT HE MIGHT DESTROY THE WORKS OF THE DEVIL.—I John, iii: 8.

Upon landing on the other shore the first person whom Jesus met was a man with an evil spirit, who had his dwelling among the tombs. This was a terrible affliction, for it made him like a person who is crazy. All tha attempts that had been made to restrain him were in vain. His friends had been really obliged to abandon him as hopeless, for he would not stay with them; night and day he wandered in the mountains among the tombs,—a terror to all who saw him and a torment to himself. But the far-reaching love of him who came "to set the captive free" sought out this suffering man and, unconsciously to himself, he was drawn by it to the compassionate Jesus who was ready and able to deliver him from the power of the evil one. The evil spirits knew who Jesus was; they recognized in him the Son of God, the judge of their evil works. Do we not here clearly see that a belief in Christ to be of any avail must be productive of good works, leading us to do only the things which are well pleasing to our Father in Heaven? The spirit, of which he was possessed, when obliged to answer Christ, called itself "Legion" because, we may suppose, it was so strong and fierce and manifested itself in so many different ways. At their own request Jesus allowed the spirits to enter into e herd of swine which were feeding near the mountains. The men who were taking care of them hastened into the city to tell their owners what had happened. When the men came from the city and saw this hitherto unmanageable maniac "clothed and in his right mind," they were afraid; and instead of coming to him for other and greater blessings which he would gladly have bestowed upon them, they begged him to leave their country—which he did; for Christ never remains any where an unwelcome guest.

How different it was with the man who was healed! He wished to go away with Jesus when he went, but Christ had a work for him to do. It was to go to his home and tell what great things the Lord had done for him. Great things, indeed! But Jesus will, if we will allow him, do great things for us, too; he will turn out all the bad tempers and spirits which would reign in our hearts, such as pride, selfishness, anger, disobedience, and many other things of which we can each think for ourselves. They make us unhappy now, and if we do not get rid of them they will surely keep us out of heaven; for God tells us that nothing that defileth shall enter therein. We cannot cure ourselves any more than could this poor man; but if we go to this same Jesus "mighty to save" we shall be delivered, as was he, from the power of evil; for "The blood of Jesus Christ his Son cleanseth from all sin."

LESSON IV.

June 20, 1875.

POWER OVER DISEASE.

MARK v: 24-34.

24 And *Jesus* went with him; and much people followed him, and thronged him.
25 And a certain woman, which had an issue of blood twelve years,
26 And had suffered many things of many physicians, and had spent all that she had, and was nothing bettered, but rather grew worse,
27 When she had heard of Jesus, came in the press behind, and touched his garment.
28 For she said, If I may touch but his clothes, I shall be whole.
29 And straight way the fountain of her blood was dried up; and she felt in *her* body that she was healed of that plague.
30 And Jesus, immediately knowing in himself that virtue had gone out of him, turned him about in the press, and said, Who touched my clothes?
31 And his disciples said unto him, Thou seest the multitude thronging thee, and sayest then, Who touched me?
32 And he looked round about to see her that had done this thing.
33 But the woman fearing and trembling, knowing what was done in her, came and fell down before him, and told him all the truth.
34 And he said nnto her, Daughter, thy faith hath made thee whole; go in peace, and be whole of thy plague.

Golden Text.—AND AS MANY AS TOUCHED HIM WERE MADE WHOLE.—Mark vi: 56.

The Gadarenes did not wish Jesus to remain in their country, so he took ship and left them to themselves, as they desired. Many people were waiting to receive him when he landed on the other shore; among them an anxious father who earnestly begged him to go home with him and heal his little daughter, who was even then lying at the point of death.

In the crowd which followed him while he was on his way to the house was a certain woman unnoticed, until tha Master himself called attention to her. She had been sick and a great sufferer for twelve long years. She was so anxious to be well and strong again that she had been to "many physicians" and had spent all her money in her fruitless search after health. At length hope had died out of her heart, for instead of getting better she rather grew worse. A pitiable case, wes it not? Probably she had heard of Christ curing the leper and the man sick of the palsy, and though these were affected very differently from herself, yet—as her conduct showed—she believed that the same power which had healed them could heal her also. Her words, "If I may touch but his clothes, I shall be whole," are proof of the strength of her faith. Sha was so eager and determined in this matter thet the crowd was no obstacle.

Multitudes were around Jesus, hut only this one woman so felt her need of his help as to press through the crowd and *touch* him for a blessing. Unless our needs lead us to actually apply to Christ, however near we may be to him, we are all unblessed. If we want the Savior's blessing we must do more than just wish for it; we must make our way through the crowd of cares, temptations and fears which would hinder us and earnestly ask it of him whose promise is "Ask, and ye shall receive."

But even now this woman did not understand the fulness and freeness of Christ's love; for upon hearing his question she feared that he might be displeased with her for doing this thing; nevertheless, she threw herself upon his mercy and came and "told him all the truth." The first word, "Daughter," from the Master's lips left no further room for fear. The avowel of her condition and what had been done for her drew out Christ's words of blessing—"Go in peace." Christ had for her not alone secret healing but an open and unmistakable blessing. The same kind loving message Christ speaks to every believing soul who heeors him hy a hearty and grateful confession. "For with the heart men believeth unto righteousness; and with the mouth confession is made unto salvation" (Romans x: 10).

LESSON V.

June 27, 1875.

POWER OVER DEATH.

MARK v: 22,23, 35-43.

22 And, beheld, there cometh one of the rulers of the synagogue, Jairus by name; and when he saw him, he fell at his feet,
23 And besought him greatly, saying, My little daughter lieth at the point of death: *I pray thee*, come and lay thy hands on her, that she may be healed; and she shall live.
35 While he yet spake, there came from the ruler of the synagogue's *house certain* which said, Thy daughter is dead: why troublest thou the Master any further?
36 As soon as Jesus heard the word that was spoken, he saith unto the ruler of the synagogue, Be not afraid, only believe.
37 And he suffered no man to follow him, save Peter, and James, and John the brother of James.
38 And he cometh to the house of the ruler of the synagogue, and seeth the tumult, and them that wept and wailed greatly.
39 And when he was come in, he saith unto them, Why make ye this ado, and weep? the damsel is not dead, but sleepeth.
40 And they laughed him to scorn. But when he had put them all out, he taketh the father and the mother of the damsel, and them that were with him, and entereth in where the damsel was lying.
41 And he took the damsel by the hand, and said unto her, Talitha cumi; which is, being interpreted, Damsel, (I say unto thee,) arise.
42 And straightway the damsel arose, and walked; for she was *of the age* of twelve years. And they were astonished with a great astonishment.
43 And he charged them straightly that no man should know it; and commaaded that something should be given her to eat.

Golden Text.—THE HOUR SHALL NEAR THE VOICE OF THE SON OF GOD: AND THEY THAT HEAR SHALL LIVE.—John v: 25.

The incident which was the subject of our last lesson—you will remember—occurred while Jesus was on his way to the house of Jairus to heal his little daughter who, even when her father came to Jesus, was lying at the point of death. While Jesus was speaking to the woman the report came that all was over—the sad, sad message "Thy daughter is dead." She was his only daughter and when he heard that she was really dead his heart must have been very hopeless and heavy, for we do not read that he made any further appeal to Christ. He believed that Jesus could heal the sick; he had yet to learn that he could also raise the dead. But the sympathizing Saviour was not forgetful of the feelings of this afflicted father, for he turned at once to him with the words of cheer and assurance "Be not afrnid, only believe." Ha who doeth all things well knew that the delay would be better for them than haste, for it brought to them a knowledge of Christ's loving power in that they were permitted to see that even death was subject unto him.

When he reached the house he found a great company gathered together weaping and wailing over the dead child, as was the custom of that country. Putting out the noisy mourners, he entered the room where the dead child was, taking with him only the parents and Peter, Jemes and John. He then spoke to the child, "Damsel, (I say unto thee,) arise." And now Christ's words were proved true to the ridiculing, unbelieving crowd. *She* was not dead, and at his mighty word her never-dying soul came back to the lifeless body and they were astonished, as well they might be, to see her arise and walk. Christ here teaches us, too, that death is everywhere and always a sleep. At tha great resurrection day he will show the same power over all menkind which he did at the bedside of Jairus' little daughter. Those who have loved Jesus will meet their children and friends—not for a little longer life and love on earth, but for the eternel life of Heaven where all shall "meet to part no more." But not only those who have loved and served Christ, but they, too, who have been careless of his love—who have lived and acted wickedly will ha called to come forth from their graves. Tho first will awaka "to everlasting lifa;" tha last, "to shame and everlasting contempt" (Dan. xii: 2). For which resnrrection is each one of us preparing? May it be ours to sleep in Jesus!

"Asleep in Jesus! blessed sleep
From which none ever wake to weep."

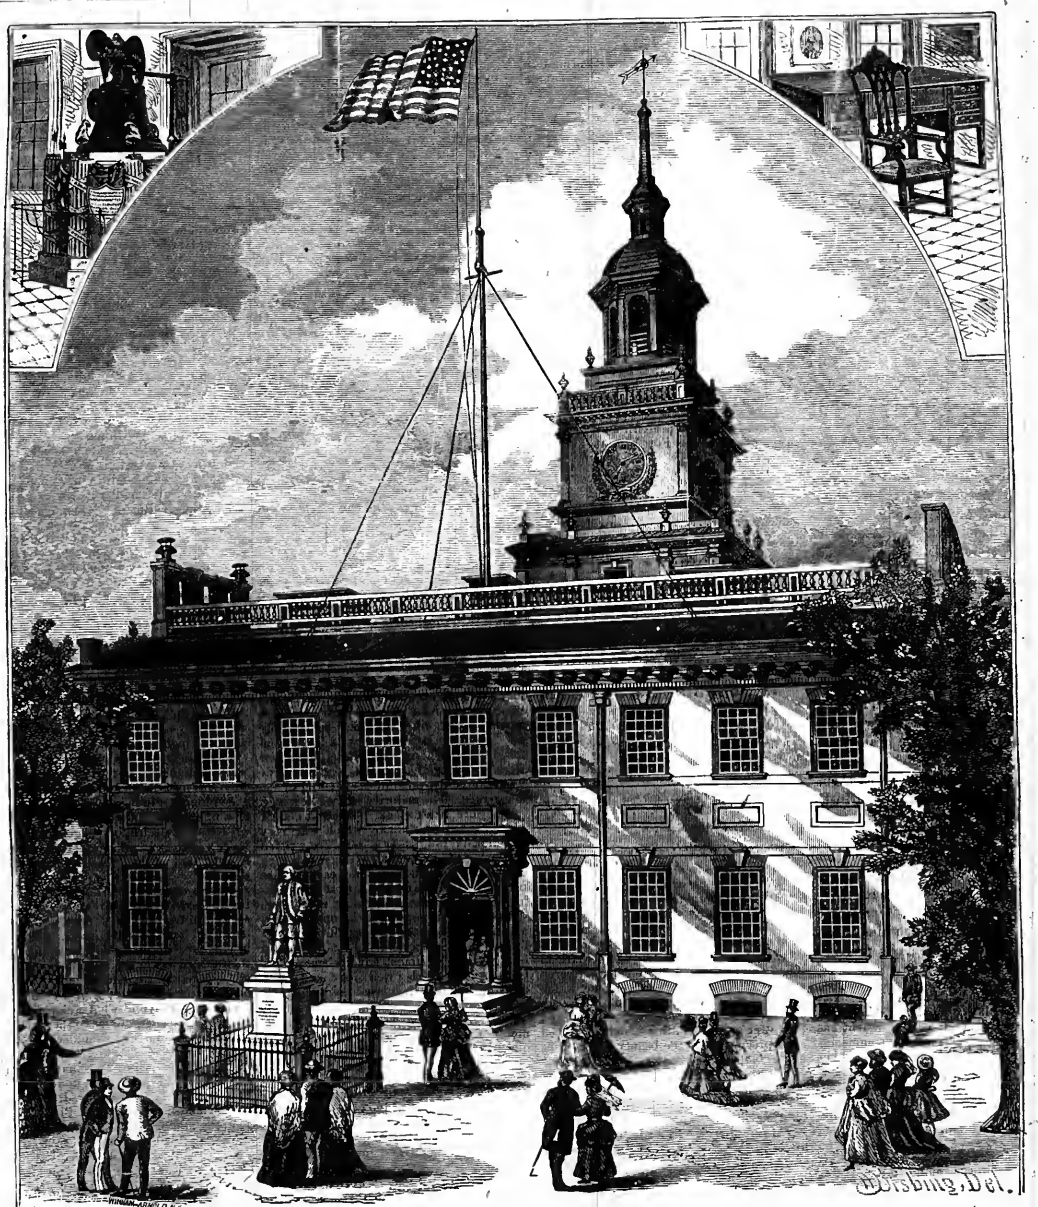
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., JULY, 1875. NO. 7.



INDEPENDENCE HALL, PHILADELPHIA.

INDEPENDENCE HALL.

The picture upon our first page places before our readers an accurate view of "Independence Hall," the building in which "the representatives of the United States of America in general Congress assembled," solemnly published and declared "that these United Colonies are, and of right ought to be free and independent states." In 1733 this plain, two-story building was erected for the use of the Colonial Legislature of Pennsylvania, and it was within its walls that the Continental Congress of the old thirteen states met, and on the morning of July 4, 1776, deliberately signed the momentous Declaration of Independence, which is the foundation of American liberty. The paper was read from the steps of this building to the crowd assembled in Independence Square, and to the waiting people of the city the great deed was proclaimed by ringing peals of the bell which hung in the square tower.

The Hall in which the old Congress met is now kept as a museum, and in it are preserved many memorials, among which is this same bell, which, according to the inscription graven upon it, "proclaimed liberty to the inhabitants." It was originally made in England, but being broken the first time it was rung after be-

HAMPTON, JULY, 1875.

THE sixth annual meeting of the Board of the Trustees of the Hampton Normal and Agricultural Institute, was held at Hampton, June 9th.

The following members were present: Rev. Geo. Whipple, of New York, President; Rev. E.M.Cravath, Hon. R. W. Hughes of Norfolk, Rev. T. K. Fessenden of Connecticut, Judge Ketcbum of New York, Mr. Antbony M. Kimber, of Philadelphia, Mr. Alexander Hyde of Mass., J. F. B. Marshall and S. C. Armstrong. The Curators of tbe land fund, donated by Virginia, were represented by Hon. W. H. Ruffner, Supt. Public Instruction of Va., Hon. O. M. Dorman of Norfolk, Col. Thos. Tabb, of Hampton, Hon. Caesar Perkins, of Buckingbam C. H., Revs. Wm. Thornton and James H. Holmes.

The business of tbe School was carefully attended to, and the State Curators, who were invited to be present at all of the proceediags, expressed themselves as fully satisfied. Tbe Institution has a very small debt, and its affairs were found to be in good condition.

The following day, June 10th, was devoted to tbe Rhetorical exercises..

Tbe "*Hartford Courant*," represented by Capt. J. C. Kinney, contains an admirable account of tbe day's proceeding's, from which we quote.

"To-day, Thursday, June 10th, the exercises of ths sixth aanual commencement have been held. Your correspondent has had some experience of college commencements in New England and elsewhere, but be has never witnessed or listened to exercises so completely satisfactory from beginning to end, nor which, taking into consideration ths objects and aims of tho course of Instruction, gave such ample proof of a good work accomplisbed. The design of the school is to fit its graduates to do helpful work among the ignorant and degraded colored masses of the south. For such an object Latin, Greek, and the higher mathematics are useless, and they are wisely omitted from ths course. A practical English education is given sufficient to make good teachers, and with it there seem to have been imparted some comprehension of the the needs of the race and a genuine missionary spirit.

There were present at the exercises a goodly nnmber of distinguished friends of the school from the north and from Virginia. Among the former were tbe Revs. E. E. Hale and Phillips Brooks of Boston, the Rev. Dr. Taylor and Dr. Whipple of New York the Rev.Dr. Speer of Pittsfield, the Rev. Messrs. Harding of Springfield, Grout of Concord, Fessonden of Connecticut, Charles L. Brace of New York, W. E. McKee of New Haven, Foster of Meriden, represenatives of THE COURANT, Springfield *Republican*, Richmond *Dispatch*, New York *Times* and *Tribune*, *Christian Union* and *Congregationalist*. Among the Southern gentlemen present were Colonel B. S. Ewell, president of William and Mary's college and formerly chief of General Joe. Johnston's staff, General Pags, of Fort Morgan and other fame, Judge R. W. Hughes, of Norfolk, Judge Dorman of Norfolk, Rev. Mr. Jones of Richmond, formerly chaplain of General Lee. The morning was devoted to a survey of the farm, and to the closing term examinations. The graduating class were questioned in Book-keeping, History, Physiology, Algebra, (the rudiments) and in primary lessons in metaphysics. They showed satisfactory progress, having evidently been taught to think for themselves, and to inquire into the reason of things.

At twelve o'clock, the students and visitors assembled in Academic Hall, where several of the old songs were snng, after which the graduating class were escorted by the others to Virginia Hall, where a plain dinner was served. The invited guests inspected the admirable culinary arrangements of the building and then met at the president's house, upon the piazza of which they enjoyed a bountiful lunch. At half-past one the graduation exercises began in the beautiful chapel in Virginia Hall, which was crowded to overflowing. Many citizeas were present, and a number of officers from the Fort with their wives. Following is the

ORDER OF EXERCISES.

Music—"My Lord, what a morning,".....	
Salutatory.....	Alice M. Ferribee
Recitation—Horatius at the Bridge	W. P. Henry
Essay—Beauty.....	Sallie P. Gregory
Music—"Nobody knows the trouble I've seen."	
Essay—Compulsory Education.	Charles W. Green
Debate on the Annexation of Cuba.....	Robert J. Whiting / Booker Washington
Music—Male quartette. "Farewell my own true Love.".....	
Reading—From Dickens' "Squeers' School."	M. M. Mendenhall
Recitation—High Tide on the Coast of Lincolnshire.....	Maria L. Ferribee
Essay—Old Time Music.....	Joseph B. Towe
Music—Old Plantation Melodies.....	
Recitation—Sandalphon.....	Joseph C. Mebane
Valedictory—The Black Man as a Voter and Citizen.....	John W. Collins
Presentation of Diplomas.....	
Music—	

The exercises were notable for the good taste of all who participated. The girls were dressed plainly and neatly with no attempt at display, and they, in common with the young men, conducted themselves with unassuming dignity. Alice and Maria Ferribee are two sisters of full African blood and features. The former delivered a well-expressed address of welcome, which would compare favorably with similar addresses at our northern high-schools, and the latter gave recitation which indicated an appreciation of the beauty and pathos of the composition. The essay on "Beauty," dwelt especially on the methods available to all of beautifying their homes, and evidenced an aesthetic taste and the beginning of culture. The essay by Green in favor of "Compulsory Education," contained good ideas well put. Ths Cuban debate was above the average of such performances, the speaker on the negatives making an excellent and logical argument, indicating a careful study of the question and a keen appreciation of its merits. But the great feature of ths oratorical exercises was the address on "Old Time Music." I do not hesitate to say there will be nothing better, nothing half so effective at any of the coming commencements. There will be more of tbe graces of oratory, doubtless, but in originality of conception, beauty of expression, earnestness, and power to sway the feeling of tbe listeners, there will be nothing to compare with it, and I venture to say there has been notbing to equal it at Yale or Harvard in a dozen years. The speaker Joseph B. Towe, is a full blooded North Carolina negro, formerly a plantation hand. The musical talent has been especially developed in him, and he has been one of the leading jubilee singers of Hampton. His theme was the old plantation music, and he carried his audience with him in warm sympathy as he told of its origin, its varieties, plaintive, joyous, spiritual and festive, and of its wonderful power over the music-loving and superstitious negroes. After describing each different variety, he led the school in singing a specimen, producing an effect simply indescribable. When he concluded there was hardly a dry eye among the visitors. I am able to give but the faintest outline of the address, which is worth publishing in full, or make it one of the attractive parts of the jubilee concerts by repeating it at the cities of the north.

Tho other rbetorical exercises are worthy of mention, but I will only specify the valedictory which showed a comprehension of the ignorance and superstition of the black race, and the necessity of virtue, intelligence, and harmony between the races. The native whites, he said, must convince the blacks that they are their best friends, and this can only be done by action, for the blacks have learned that words are cheap. It should be mentioned that all the essays and addresses were original productions, revised by the teachers only in cutting down. The singing furnished by the students added greatly to ths attractions, of the afternoon. The diplomas for the graduating class were presented with a few appropriate remarks by Dr. George Whipple of New York, president of the board of trustees.

Mr. Charles L. Brace of New York, writes as follows in the *New York Times*, June 15tb.

HAMPTON, VA., June 10, 1875.

The morning previous to the trying ordeal of public speaking was spent by the students in examinations, at which great numbers of guests were present. I was struck with the fact that, though the rooms were crowded with strangers, and the students were naturally in a state of high excitement, the dress and manner of all were exceedingly quiet and modest. The girls looked like respectable working-girls, and the boys much as young country teachers would anywhere. All had remarkably good heads, and many showed large frontal development of the brain; some few were so white that at the North no one would have dreamed of their being of tbe negro race. The majority seemed however, of the pure black stock. The first class I visited was in grammar, which was very ingeniously taught by a sentence written on the board in *echelon*, as it were and then copied by the students, and each phrase parsed by the means of a sort of grammatical notation, written opposite each word.

There was no copying from one another, and no help from the teacher, but each performed the work perfectly. Another class in algebra were almost equally successful. Geography was also well done, and map-drawing, though I missed here Guyot's system.

In the afternoon we met in the grand new Memorial Hall, (just endowed by a bequest,) which I have before described. A large audience of blacks and whites, the colored visitors usually sitting (though not in all cases) on the sids with the students, and many colored working people crowding at tbe doors, listening with intense interest to the words of their young orators.

No other Commencement that I ever attended had one tenth of the moving interest of this, for a deep tone of reality vibrated through it. All in sympathy with ths college felt that this was a fore-post of civilization on the old ground of barbarism. All knew that many critical eyes were on every act of the performance, and both whites and blacks were conscious that this was a portion of the great test which was to show the quality and destiny of a race.

One Southern gentleman afterward, in a most friendly and humane speech, alluding touchingly to this being "Decoration Day" at the South, spoke of the line of mighty events which lay between "those graves and tbe institution." One could not but think solemnly of how many brave men had died before this simple school for blacks could be, and what a serious thing ths experiment was. Then each original speech bore on the great questions of the day, and as they were all evidently composition of these youth, they seemed to throw light on some of the most important problems of State; that is, how this great colored population and their chosen young men regarded certain questions of vital interest. Never, therefore, was a college Commencement so listened to. The feature which struck me most in these speeches was the remarkable good sense and moderation of them, and their freedom from all tinge of bitterness. The speaker apparently felt the difficulties of the great problem as much as white speakers would. They even, in some cases deprecated the giving of suffrage to either white or black without the "intelligence test." They apparently saw the danger in admitting a vast mass of ignorant persons at once to complete political control in their communities. They confessed the readiness by which their race were influenced by demagogues and sharpers, and while admitting the virtues and sacrifices of Northern men who had come South truly to befriend the blacks, they denounced the adventursrs or "Carpet-baggers," who would merely make use of the negroes to secure money or office. One speaker advocated in the strongest terms compulsory education for both whites and blacks. An exceedingly interesting feature in the exercises was an animated debate on the "Annexation of Cuba," by two Virginia negroes, Whiting and Washington. The arguments for it, such as would naturally attract the colored race, such as the emancipation of the Cuban blacks, the doing away of the slave trade, the increase of the colored vote, and the new market products, was presented with much skill by ths former. But the second disputant, Washington, gave a most terse and vigorous argument against annexation; urging that the difficulties before the country in the emancipation of 4,000,000 blacks were quite enough without adding that of the Cubans; that annexatiou would flood the country with ignorance and crime, and above all, would increase the power of the Roman Catholic Church, which "was already so degrading to the the great masses of white voters." The speaker dwelt on curses of the recent war, under which ths whole country was suffering, and called upon the people not to plunge into another war for the sake of useless territory. These and other points, presented with great vigor evidently carried the whole audience, both white and black, with the speaker, who was enthusiastiely applauded. Many of the students alluded to their former condition of slavery, but without any tone of reproach or of desire for vengeance, and yet there was an expression on their faces which showed that all had felt the "iron in the soul."

Not an expression of hostility or ill-feeling appeared in any address. Each speaker seemed to feel that the fortunes of his race depended on the self-control, virtue, and intelligence of each individual, and that their future was in their own hands. They all, apparently, deprecated any intruding of themselves socially, or of pressing their social rights beyond what was proper and convenient. Their advice to their companions as to whom they should vote for and what share they should take in political life was characterized by remarkable good sense and sharpness of understanding. The valedictory address, by John Collins, a Maryland negro, on "The Black Man as a Voter and Citizen," was a striking instance of this wisdom and sound sense. The most interesting speech of the occasion was made by Joseph Towe, a full-blooded negro from North Carolina, on the "Old Time music of the Negroes." He stated that the beautiful melodies which so much delighted every lover of music when sung by ths negroes were derived from native African airs, and that an old negro still lived in North Carolina who spoke the African languages, and knew more of these melodies than any other negro in the South. The speaker described with what eagerness the slaves would work to some of these cheerful melodies, and, suddenly stopping, said, "I will give you an instance," when immediately a chorus in the audience struck up a lively planta-

tion song, which called out vociferous applause. The speaker then detailed the different melodies which were once in favor among the slaves, and stopped while describing each class for the choras among the students to give an example. The effect was wonderfully lively and impressive. The student stated, what no doubt is true, that as the negroes are emancipated and become educated, they are dropping this old music which belongs to the days of slavery, and that, unless they are preserved in type, these sweet melodies are destined to entirely pass away. The speaker was greatly applauded when he closed, and the address hereafter will be published as a remarkable contribution to our knowledge of "negro music." One young girl, Sally Gregory, read a very pretty essay on "Beautifying the rooms of a house."

All agree that these young women, as they go to honseholds of their own, keep remarkably neat and tasteful rooms, and show the æsthetic ability of the race by creating beauty from very simple materials. A peculiar feature of all the addresses was that they closed with a fervent and sincere religious sentiment—for the college is peculiarly a religious seminary.

It was a cheerful thought after these Commencement exercises that this band of modest, sensible, and intelligent men and women were going abroad through the South to be teachers and leaders of their race. This class of forty or fifty will, during the Summer months, earn money by waiting in hotels or by household service, and then in the Autumn they will take charge of schools for colored pupils, for which places there are vastly more teachers demanded than the institution can supply.

We extract a few words published by the Rev. Edward Everett Hale of Boston, in the *Advertiser*.

There are now two of the finest school buildings I have ever seen, Virginia Hall and Academic Hall,—with arrangements of admirable completeness for the purposes of the institute. The farm buildings, the chapel and many smaller buildings make up a very considerable establishment. But the contrast between the old barracks and the present edifices is not greater than one observes between the pupils first collected here and the body of young people whom we see here to-day, whose examinations have interested us all profoundly. The young men are so well "set up," to take a phrase from the drill-room, and the young women are so womanly and simple in all their movements, that one feels as if the change were that of a generation instead of six or seven years. You see the tone of the school is now thoroughly established. As soon as a new student comes, he enters a set of self-respecting, intelligent, determined scholars, and he takes the tone and manner of those he finds here. They are all eager to improve, and their mutual influence must be reckoned as not second to the influence of their books and their teachers.

This high tone of the school, which arrests your attention in a moment, is not, of course, gained without sedulous care and system. But, from all I can learn, I should think the discipline of the place, because systematically established, moved forward very easily. Everything is neat, even to Quaker precision, and the habits of order and cleanness formed are such as must be invaluable among the teachers of a race which has not been too much tempted to those virtues. I did not know what are the gymnastics, but I have been struck by the ease and even grace of movement of most of the pupils of both sexes.

The spirit and vigor of the examinations spoke well for both teachers and pupils. But I could not but feel that already the teachers of the blacks have a far easier task than had those pioneers whom I saw in the last years of the war, and the first of the peace, who had to awaken, to keep awake, and at the same time to teach the sluggish natures they had awakened. In all the classes we have seen to-day the pupils have been on the *qui vive* as fully as the teachers. The relation between teacher and pupil is charming, and nothing better could be asked than the eagerness of the one and the affectionate respect of the other.

You must remember that this is a normal *and agricultural* institute. Whether it is best or not for pupils in other schools to be at work with their hands, there is no doubt that for more than one generation the teachers of the black race must be men who can teach them how to cultivate the land—and must be men who are sure that labor is not disgraceful. By an arrangement, original I think with General Armstrong, the daily farm detail is one-fifth of the men in the school. The classes go on as if there was no such detail. Each pupil must make up his studies just as if he had been sick or had lost tho exercise in some other way. On Saturday there are no studies in school. On that day a larger or smaller force can be thrown on the fields as may be necessary.

The farmer gains a regular force on the land. The scholar learns what ten hours' work is,—knows that he can do it, and that he is not an ornamental workman. For all his work he is credited on the books of the institute—I think eight cents an hour—and what he earns thus goes so far toward meeting the charges of his instruction. The average pupil earns about five dollars a month—which is rather less than half the charge. A young man who comes with seventy dollars in hand can earn enough in addition to it to carry himself through the year. Some students earn more, for there are printers, tailors, shoemnkers among them,—and, as always, the skilled mechanic can make more wages than the untrained laborer. The girls are detailed to work in the lauadry and in the sewing room. This last supplies the storerooms of the school with shirts, frocks and underclothing,—which the pupils buy, as they might buy at any shop where were wares as cheap and good as these. In fact, these are very cheap and are excellent.

I know how many of your readers have interested themselves in the building up of the Hampton Institute. I can only express my regret that they could not all have been present to see the gratifying results of what has been done here already. It is not simply that two hundred and forty scholars are under such good training here. More than this,—here are forty well-trained men and women who go out every year determined that there shall be forty more schools, of which they are to be teachers. You are building up a class whose calling is to compel the blacks to establish and to maintain school education. Your work, therefore, enlarges itself rapidly and indefinitely; and while it is done as well as it is done now the reputation of Hampton all through the southern country will be steadily advancing.

FROM THE EDITORIAL CHAIR ON WHEELS.

CHARLOTTE, MICHIGAN, *Decoration Day.*

From this far northern peninsula between the two great lakes, the field detachment of Hampton Students send greeting to their brethren in camp on the peninsula of the York and the James. Hard at work you are, like them, in tha same good cause, and their thonghts, which know the way to Hampton well, are with you more than ever as the closing days of school draw near, and especially to-day which they have spent as you have, among the soldiers graves. After our concert here on Friday evening an invitation was received, and gladly accepted, to furnish tha singing for the ceremonies of Decoration Day which are observed here with great solemnity and interest by all the best citizens.

Charlotte is a beautiful western town, sitting in green pastures, but with no still waters near or than the two miles distant Battle Creek, its name, suggestive of wild Indian warfare, strangely at variance with these peaceful fields. Ten miles off lies Olivet, where the American Missionary Association claims a flourishing college, sister to Oberlin and Berea. On Saturday afternoon we drove out there through the country charming in the freshness of the late northern spring. Tho class was most hospitably entertained by the Faculty of the college, and in tha evening the church was crowded for our concert. At its close, Mr. Brown, professor of music at the college, proposed a vota of thanks (which was unanimously accorded) to the Students for their musical treat, and to Mr. Fenner for his "remarkable training of them." Mr. Brown remarked that he had never heard pianissimo to equal theirs. Class No. 1 at Hampton will be glad to know that their successors are sharing their successes. Mr. Fenner happily responded with thanks for the cordial reception, and hoping that the interest of Olivet would be enlisted in the cause still more than in the singing, and their appreciation be given to our motives and objects in working still more than to the success of our efforts.

To-day has been a pleasant though a laborious one, singing in the morning to the Baptist Sunday School, and in the evening to a crowded Union meeting in the Hall, while the afternoon was devoted to the Decoration ceremonies. The Students occupied seats on the platform in the crowded cemetery with the ministers and the orator of the day. The musical selections were, as you see, touchingly appropriate and were beautifully rendered. After the opening prayer by the Rev. Mr. Earl of the Methodist Church, the "Soldier's Farewell" was sung by Miss Carrie Thomas and the quintette of young men. There are many soldier's graves in Charlotte, and many in the throng that must have had tenderer relations than of simple patriotism with the sleepers under the flag-marked mounds. Tears streamed over many faces as the sweet, thrilling strains of melody after melody floated over the summer plain, breathing of parting, of hope, of heavenly rest.

In the pause that followed the Soldier's Farewell, the simple ceremony, in which you have so often joined at Hampton, of decking the soldier's graves with flowers—not southern roses, but lilacs and spring wild flowers—was performed by a number of young ladies of the town with a company of militia, while the band played a dirge. After an oration by Rev. Mr. Bruske of the Congregational church, the class sang very sweetly "Soma o'Dese Mornin's. Carleton's poem, "Our Army of The Dead," was read by the officer of the day, and then the male quintette of Students, with Miss Carrie Thomas, closed the services with the beautiful, and by you well remembered, strains of the "Home of the Soul." The class had never sung better, and full effect was given to the beautiful arrangement of the melody. It fell upon the hushed assembly

Like the benediction
That followeth after prayer,

bringing sweet hope to all sorrowing hearts of the glorious day when

With songs on our lips and with harps in our hands
We shall meet one another again.

After the Union meeting in the evening, the Students were pleasantly entertained at the house of Mr. Musgrave. They will long remember Charlotte with affection for the cordiality of their reception here, both in public and private.

And now their faces are bound homeward; yet, as they cannot hope to reach Hampton before the school has closed and you are all scattered, perhaps you will be glad to hear some little account of their journeyings which you cannot hear from their lips.

There has been very little time for editorial correspondence during the burden and heat of the days of pilgrimage, and this review of them must be very short.

We left you, as you know, on the 19th of February, for New York and Brooklyn, in which cities tha new class made its *debut*—a severe test for a company with but four weeks of preparation and the reputation of the original class to sustain. Some stage fright and some failures were inevitable; but it is only fair to say that the trying ordeal, was passed fully as well as could have been expected, and that the class has, on the whole, been steadily improving and winning favor wherever it has gone.

From New York the course lay up the Hudson and over the N. Y. Central road to Buffalo, taking most of the principal towns, finding at many of them pleasant remembrance of the old class, and enthusiastic reception of themselves. You will understand it when we allude to the pleasant meeting with old friends at Newburgh and Claverack.

While you were luxuriating in peach blossoms and May-flowers, we were crossing and recrossing the broad Hudson in sleighs. We made Albany our head-quarters for a week, and spent a Sunday in Syracuse, cordially received by the churches which for some of you have such tender associations.

From Syracuse we branched off upon the "Old Road" to Auburn, where we had the pleasure of meeting that remarkable representative of the colored race, Mrs. Harriet Tubman, whose wonderful life of faith and works of deliverance among her people gave her long ago the title of their "Moses."

At Rochester we had a repetition of the enthusiastic reception of last year, and the satisfaction of hearing that we did not diminish the reputation made then. We may accept the urgent invitation we received to stop there on our return. Jamestown, the home of Senator Fenton, and Ithaca, tha seat of Cornell University, were among tha new places visited. A short run through the corner of Pennsylvania, stopping at Erie, Meadville and Sharon, and then on through the the luke towns of Ohio and Michigan; receiving at most of tha places which class No. 1 had visited, a reception equal to that of last year. Cleveland, Oberlin and Detroit we were obliged to give up, as they had just been visited by our brethren—the Jubilee Singers of Fisk University.

We hope to visit the former two cities on our way east. At Parkersville, Ohio, our young women were hospitably lodged at the Female Seminary—a child of South Hadley—and we were all delightfully entertained by the Principal, Miss Evans, and her teachers and pupils.

At Elyria we had a very pleasant meeting with three of our Hampton graduates—Eliza Nottingham, Samuel Windsor and James Richards, who came down to attend our concert from Oberlin where they are pursuing an advanced course of study.

We have spent the last three weeks, and expect to spend one more, in Michigan, and have seen much to interest us. There is not time to speak as fully as would be interesting of the thriving western towns—of Flint, and Saginaw, and Bay City, and Grand Rapids and the rest, with their wonderful lumber trade and salt works; whole forests falling yearly under the pioneers axe, their huge trunks floated to market on the swift western rivers, sawed up into boards and cut up into shingles at the rate of millions a day. A few hours' ride northward from Bay City on Lake Huron would have brought us into the "forest primeval" where no settler's axe has yet rung. Cold rains and short purses forbade the trip, and now terrible forest fires are raging among tha giants. We had to content ourselves with a walk among the mills and along the Moskegan, where hundreds of raftsmen in picturesque costumes of red shirts, and blue, were hard at work sorting the logs as the swollen current hurried them down.

There are curious facts about the salt works of Michigan. With no indication of salt at the surface, the keen eyes of science penetrated the overlying strata and saw salt at the bottom. Artesian wells were sunk hundreds—a thousand feet in the earth, and up sprang the briny liquid holding ninety-five per cent of salt. Then, a happy coincidence was perceived. The refuse of the lumber mills, especially tha sawdust—which the Wolverines do not believe is good for sawdust puddings, and hardly know what to do with—was just the thing for feeding the fires under the salt boilers. So every considerably mill owner sank a shaft, and salt and shingles are "birds of a feather" in Michigan. Even now the lumber manufacturers are at a loss how to dispose of the superfluous refuse, and mountains of sawdust rise in every mill yard, while the slabs and small sticks are sunk in masses to build wharves and even to make land.

It is sad to think of the shivering poor in our eastern cities whom this waste would make glad. Here, the best seasoned wood for burning is sold for one dollar and fifty cents a cord—delivered.

Just across the peninsula, at Grand Haven on Lake Michigan, the mountains are of sand instead of sawdust. The cutting off of the forests has left a free path for the winds which sweep over the lake and carry the sands of its shore inland, piling it up in immense sand "dunes" or drifts, of shifting size and shape, sometimes threatening the fishermen's huts with burial. One is apt to wonder that some enterprising glass-company does not settle here and utilize the sand, as the salt men have the sawdust.

"If one could only sweep it up,
Said we, it would be grand."

It might be grand, but it would not be Grand Haven.

The old class will remember pleasantly the Eastman family at Grand Haven, and be glad to hear that class No. 2 have equal reason to be grateful for a cheering welcome and hospitality that pilgrims in a strange land know how to appreciate. Mr. and Mrs. Eastman's parents were among the earliest settlers in Michigan; Mrs. Eastman's father having been for many years a zealous missionary to the Indians. Very few of the representatives of the tribes he labored among are left. A little settlement of fishermen's huts on the Grand River numbers in it a few Ottawas and Potter

Grand Haven was our furthest western point, and now we are once more looking homeward and expect to reach Hampton by the middle of July. Several reasons have conspired to make the campaign a less successful one than it should have been. Hard times everywhere, a late and stormy spring, and a not sufficiently prompt possession of the field have made heavy odds to fight against; while we have not only been in tha wake of tha Fisk Jubilees once more, in their last tour before sailing for England, but have suffered, as they have, great injury from the fraudulent speculators who take their name and prejudice the people who discover their impositions against all companies of colored singers.

Against all these obstacles, and tha added one of frequent illness from the inclement weather, the company have bravely fought and, with allowance for the common imperfections of humanity, claims to have done what it could for the cause of Hampton and asks a welcome home.

THE FLAG.

There's a flag hangs over my threshold,
Whose folds are more dear to me
Than the blood that thrills in my bosom
Its earnest of liberty;
And dear are the stars it harbors,
In its sunny field of blue,
As the hope of a further heaven,
That lights all the dim way through.

JULIA WARD HOWE.

GEORGE WASHINGTON.

By broad Potomac's silent shore,
Better than Trajan lowly lies,
Gilding her green declivities
With glory now and evermore;
Art to his fame no aid hath lent;
His country is his monument.

ANONYMOUS.

THE UNITED STATES PATENT-OFFICE.

One of the most prominent buildings in Washington is the Patent-office; a white marble quadrangle enclosing a large open court, with beautiful flowers, fountains and shrubbery. The building itself is about four hundred and ten feet long by two hundred and seventy-five broad, varies from sixty to seventy-five feet in height, and covers more than two and a half acres of land.

In 1790 Congress passed a bill to "promote the progress of science and the useful arts, by securing to authors and inventors the exclusive right to their respective writings and discoveries," and this was the beginning of our present Patent-office. By this bill, and the minor laws which grew out of it, the general public is benefited, in that inventions of all descriptions are encouraged, while individual inventors are protected and enabled to utilize the products of their genius.

In 1837 there were 700 applications for patents; 435 were issued, and the receipts were over $20,000. In 1871 there were 19,472 applications; 13,033 were issued, the receipts were over $678,700. The process of obtaining a patent is necessarily somewhat troublesome, as it is of course important to avoid infringements and the granting of worthless patents, while the fact that over 125,000 have already been issued in this country, shows how much labor and time must be required for their examination. "Any person who is the original and first inventor of any new and useful art, machine, manufacture, or composition of matter" may obtain a patent for it, subject to certain conditions. The invention, however, must have been reduced to a practical form, by the construction of the machine itself, or a model of it, by making a drawing of it, or by such disclosures of its exact character that from the description, the improvement itself or a model of it can be constructed. A fee of fifteen dollars is required on applying for a patent to be filed for examination; and twenty dollars must be paid when the patent is issued. A written description must accompany the application, explaining in concise, exact terms, the invention, and if possible a drawing or model. Each application is classified and taken in regular order by skilled examiners, who compare it with patents already granted, with the applications rejected, with foreign patents, etc., after which, if the invention is found to be useful and new, and does not infringe with the rights of any previous patentee, a patent is granted. At present patents are granted for seventeen years, and no extensions are given except by special act of Congress; while all trade marks and designs, as of new patterns, or shapes, etc., are subject to the patent laws.

In the Patent office at Washington is now to be found a most valuable and interesting collection of models, drawings, descriptive catalogues, etc.; while a large library of books of reference, books on models, and on mechanical and kindred subjects, affords every facility not only to the official examiners, but to visitors desiring to make investigations. A large volume is issued every week, containing specific outlines and drawings of the patents issued since the publication of the preceding volume; besides which, a weekly "Official Gazette" is issued, giving an index of all patents granted during the current week, and containing other important information.

The long halls of the great building are lined with glass cases filled with models, many of which are beautiful and interesting, for here every mechanical and useful art is represented. The largest apartment is that devoted to agriculture, and it seems as if there were no end to the improved implements, fertilizers and manufactured products which are here exhibited. In short, the whole collection and the system which it represents are full of interest, and are of course of immense importance to our national prosperity and to individual inventors.

We are very apt to take the privileges, comforts and protection which we receive from a well-organized government, as a matter of course, and permit ourselves to forget that we, too, must share the responsibility of its support, and a glimpse within the circle of government work may help us to realize how vast the machinery is, and how much its smooth working depends upon the honesty and fidelity of individual citizens.

TO THE STUDENTS OF HAMPTON.

VI (CONTINUED).

FOR YOUNG MEN.

The principal power in general society undoubtedly lies in the hands of its female members; that is, it is to them that Society looks for a careful maintenance of etiquette, and for the support of a high standard of refinement, and you will understand this when you remember how many things you do, as young men, among yourselves, which as gentlemen, you would not, on any account do in the presence of ladies. Now, of course, the rougher life, which, as a general thing falls to the lot of young men, and the fact that in their struggle with the world they have little time for social culture explains, this and to a certain extent excuses that went of grace and case which is so much more frequent among young men than among young women. But, and I want you to lay this to heart, neither this nor any other reason, however plausible, can or ought to induce you to abate by jot or tittle your constant endeavor to become and to *be* gentlemen. If you will once take the trouble to learn what it is to be polite and well-bred, and will honestly try to form the habit in yourselves, you will find that you need never be too tired, or too busy, or too careless, to be gentle and courteous in your manner to those about you, and you will find, too, that every step which you take in this direction, will bring its reward, and that, in the end, you will be more than repaid for the exertion which at the outset may, not improbably, seem to you very great.

I have no intention, as you see, of encouraging you with the assertion that it is an easy thing to be a gentleman, for that I think would be the surest road to your ultimate discouragement, but I want you to believe and act upon what I am sure is the truth; that is, that by care, patience, watching the habits of those who are better bred than yourselves, and modestly accepting instruction in whatever form it may come, you can make of yourselves gentlemen of whom your friends and teachers will have no need to be ashamed.

Now if you have read what has already been written to you, you have learned several things which I shall here merely recapitulate in brief. You have learned that thorough cleanliness is essential, that your dress should be neat, quiet and always suitable to your occupation, and that at table your behaviour must be most carefully regulated. We come now, naturally, to your demeanor in general society; that is, in all social gatherings, in all public places, in the street and the house; wherever, in short, you are brought in contact with your fellow beings, and the details which I shall try to make plain to you, demand your serious attention.

Consideration for others, either real or apparent, is the foundation for good manners, and what you need to learn is to show such consideration constantly and easily, to make it so entirely habitual as to require no special effort. There are certain forms which, you will have to follow, certain rules which you will have to obey, and the more thorough your knowledge of these, the pleasanter your social relations will be, both to yourself and others.

Many of the principal of these rules relate to the respect which you are expected to show in certain ways, and in greater or less degree, to all whom you may meet. For example, you must invariably give precedence to all women—young or old, rich or poor—to all old people, to all invalids, and to all to whom from their position or character you desire to show especial respect; that is, you must never enter a room, carriage, etc., before such persons, or precede them through doors, gates, etc., or seat yourself before they are seated; but on the contrary should always be ready to assist them by the numberless little attentions which a gentleman has it in his power to bestow. Do you ask what these attentions are? Did you never see a gentleman assist a lady or any one who was old or weak from a carriage, or open a door for them to pass through, or carry a parcel for them, or pick up anything which they may have dropped, or close a window for them, or in a hundred ways do something for them which it would be hard or disagreeable for them to do for themselves?

If you will notice how wide the difference is in these matters between a rough, untrained man, and a gentleman, you will soon be convinced of their importance and the necessity for training yourselves to remember them, for everywhere and always it is these *little* things that mark a gentleman's manner.

You must not pass between the fire or the light and any one, must not sit in any awkward or familiar position in the presence of others, must not smoke without asking permission, must not chew or above all things, spit, must not cough, sneeze, or blow your nose loudly or obtrusively. You should always carry and carefully use a pocket handkerchief, with it you can cover your mouth when you sneeze, cough, or yawn (turning your head aside at the same time), while the various other uses to which it can be put make it an indispensable article of your attire. If you can avoid it, you should not sit or stand with your back toward any one, and when in company should never yawn, as this latter is a rude indication that you are tired of the people about you.

To whistle or sing audibly is in very bad taste, and you must most certainly not allow yourself to pick your teeth, scratch your head or any part of your person, clean your nails, or take any similar liberty before people.

You must not talk in a loud voice, call loudly to attract another person's attention, must not use rough or coarse language, and must never, anywhere or at any time, be guilty of profanity. In regard to this last fault I would gladly speak to you at length and most earnestly, but I think the sin has been wisely summed up in the words of a famous clergyman who once said that "there could be no excuse for profanity for it was not only wicked and ungentlemanly, but also consummately foolish;" a description so true that it ought to be enough to deter any thoughtful man from the use of so-called strong language. In a less degree it also applies to any coarseness or vulgarity of word or gesture, than which nothing is more repugnant to refined persons, and as this is a specially dangerous fault for young men, who are apt to take a good deal of license among themselves, you will have to guard against it very carefully, remembering that the expressions which you permit yourself to use habitually when you are with your daily companions, will almost invariably crop out in your general conversation. If you use coarse, rough language and gestures when you are with the men and boys who are your ordinary associates, you will find it very difficult to change your custom when you are with other people, for which reason (and for many others), it is best, if you mean to be a gentleman at all, to be a gentleman always.

When the door of a room which does not belong to you, or in which you have not at least an equal right with others, is closed, do not try to open it; but knock and await the answer of those within. When you enter a room always remove your hat, and touch or remove it when you meet an acquaintance; while upon your first entrance into a room you should speak or bow to each person in it, unless of course the number is very large, and should do the same upon leaving. When you are introduced to any one you should bow and begin a conversation upon some subject of common interest, shaking hands, in this country, not being usual except among friends. In conversation, be careful not to put yourself and your opinions forward, to interrupt any one who may be speaking, to talk much of yourself or your own affairs, or to introduce any merely personal subject.

Do not talk (except to intimate friends or in private) about the state of your health, your clothes, your teeth, about anything in short which can only be of interest to yourself and your near friends, and try to reach a happy medium between uneasy shyness and presuming self-confidence, being quiet and unassuming, but neither careless nor awkward.

Do what you can always for the entertainment of others, and when you join in games or similar amusement, do so without noise or roughness, and with due regard to the pleasure of your companions.

If you are a guest in the house of others, you must upon your arrival first greet your host and hostess, and never leave without making a proper farewell to them; in your own house you must politely and kindly receive your guests, doing your best to make them at ease, and to give them pleasure. When you are away from home you must be careful to take no liberties, and must understand that many things which it is proper to do in your own house, you cannot do in other people's houses without rudeness.

I believe that with young men, as with young women, the safest means to obtain graceful and pleasing manners is to think as little of yourself as possible. Of course it is necessary for you to give some thought to your appearance and to your general demeanor, but my meaning is that you are not to think of yourself selfishly or with over-sensitiveness. Do not be too anxious as to the opinion that may be formed of you; do not constantly wonder whether people think you are good-looking, or well-dressed, or well-mannered, or "smart," but watch closely the behavior of the most cultivated people you know, imitate their action when you are in doubt or ignorance as to what is proper, and then forget yourself and try to make those about you comfortable and happy. This may seem to you an odd rule whereby to measure yourselves, but I assure you that if you will put it in practice you will find it covers a great many of these details which seem so hard to master when you are obliged to take them one by one. You will find in many cases when you are perplexed as to the proper thing to do that the answer to the question "What will be most agreeable to those about me," will solve your doubts and decide correctly for you.

For example nothing is more ill-bred than over-familiarity, and, as a general thing, nothing is more disagreeable to the people to whom it is offered. Do not approach too closely to any one to whom you may be speaking, especially if it be a lady; do not touch any part of the dress of any one near you; do not whisper, point, or stare; do not make remarks upon the appearance of others while you are in their presence, and do not ridicule or make fun of either strangers or friends.

Do not keep up a private conversation to the exclusion of other people, and do not in any way amuse yourself at other people's expense, for, as I have said before, the rudeness which unnecessarily wounds another person's feelings, is just as inexcusable as the rudeness which stares a person out of countenance or occupies a comfortable seat while some tired woman stands.

If you unintentionally commit any rudeness, or trespass upon the rights of others, you must never fail to ask pardon at once, saying, "I beg your pardon;" or, "Excuse me;" or using some similar form of words, and when possible must atone for your rudeness in other ways as well.

In church, at concerts, lectures, or any public gathering, you must always be quiet and orderly, on no account talking in a loud voice, or in any way making a disturbance or attracting attention; while at church or any religious meeting your behavior must be reverent and marked by proper respect for the place wherein you are, and the occasion which has called you there.

You should try always when you are among people to sit or stand quietly, unless there is good reason for moving. To shuffle your feet, move your chair uneasily, fidget with any part of your dress, or anything you may be holding, is very annoying, and if you allow it to become a habit will often make you an unpleasant companion to well-bred people. Teach yourself to do what you have to do neatly and quickly, and then do not embarrass yourself and others by constant and needless movement.

You probably sufficiently appreciate the importance of showing deference to those whose years, station or character make their claim to it evident, but I should like to make you feel that it is a good thing to practice politeness toward your companions whom you consider on an equality with yourself and not especially entitled to your respect. The minor courtesies of society cost so little when they have once become habitual, and go so far toward making life smooth and pleasant, that you will find it no waste of time to practice them in your intercourse with your fellow-students and laborers. Do not be ashamed to offer a seat or a newspaper, to say "thank you" for any little kindness, to pick up anything that your companion may have dropped and return it to him; but on the other hand, be always ashamed to keep on your hat even in a room full of men, to spit recklessly here and there, to yawn in a friend's face, to take the best seat, to ridicule or mock any unavoidable peculiarity in another, to roughly reject or ignore any favor done for you; because for your own sake, if you are not moved by any less selfish reason, you had better give your companions such treatment as you in turn desire to receive. More than this, there are few, even among rough boys, who do not feel the charm of a courteous and kindly manner, and the example in this respect of a single boy may work greater good than pages of written advice.

It is not unusual to hear boys and very young men say scornfully or carelessly that all these things are for girls: "men" have no time or need for them, but surely in so saying they prove nothing but their own ignorance or laziness. If you will make a fair trial of this matter you will find that it is possible to be refined and gentlemanly, in spite of hard work, small opportunities and a rough life, and it is foolish for you to undervalue the importance to you of a pleasing and sensible manner. A man's success in life is sure to be more or less affected by the external proof which he gives of the training he has received, and it will be greatly to your advantage if early in life you teach yourselves to be polite and careful in your behavior to all people.

INDEPENDENCE BELL—JULY 4, 1776.

When the Declaration of Independence was adopted by Congress, the event was announced by ringing the old State-House bell, which bore the inscription "Proclaim liberty throughout the land, to all the inhabitants thereof!" The old bellman stationed his little grandson at the door of the hall to await the instructions of the door-keeper when to ring. At the word, the young patriot rushed out, and clapping his hands, shouted:—"*Ring!* RING! RING!"

There was a tumult in the city,
In the quaint old Quaker town,
And the streets were rife with people
Pacing restless up and down—
People gathering at the corners,
Where they whispered each to each,
And the sweat stood on their temples
With the earnestness of speech.

As the bleak Atlantic currents
Lash the wild Newfoundland shore,
So they beat against the State House,
So they surged against the door;
And the mingling of their voices
Made a harmony profound,
Till the quiet street of Chestnut
Was all turbulent with sound.

"Will they do it?" "Dare they do it?"
"Who is speaking?" "What's the news?"
"What of Adams?" "What of Sherman?"
"Oh, God grant they won't refuse!"
"Make some way there!" "Let me nearer!"
"I am stifling!" Stifle, then!
When a nation's life's at hazard,
We've no time to think of men!"

So they surged against the State House,
While all solemnly inside
Sat the "Continental Congress,"
Truth and reason for their guide
O'er a simple scroll debating,
Which, though simple it might be,
Yet should shake the cliffs of England
With the thunders of the free.

Far aloft in that high steeple
Sat the bellman, old and gray;
He was weary of the tyrant
And his iron-sceptered sway.
So he sat, with one hand ready
On the clapper of the bell,
When his eye could catch the signal,
The long-expected news to tell!

See! See! The dense crowd parts
Through all its lengthy line,
As the boy beside the portal
Hastens forth to give the sign.
With his little hands uplifted,
Breezes dallying with his hair,
Hark! with deep, clear intonation
Breaks his young voice on the air:

Hushed the people's swelling murmur,
Whilst the boy cries joyously;
"Ring!" he shouts, "Ring! grandpapa,
Ring! oh, ring for Liberty!"
Quickly, at the given signal
The old bellman lifts his hand,
Forth he sends the good news, making
Iron music through the land.

How they shouted! What rejoicing!
How the old bell shook the air,
Till the clang of freedom ruffled
The calmly gliding Delaware!
How the bonfires and the torches
Lighted up the night's repose,
And from the flames, like fabled Phœnix,
Our glorious liberty arose!

That old State House bell is silent,
Hushed is now its clamorous tongue;
But the spirit it awaken'd
Still is living—ever young;
And when we greet the smiling sunlight
On the fourth of each July,
We will ne'er forget the bellman
Who, betwixt the earth and sky,
Rang out, loudly, "Independence;"
Which, please God, shall never die!

—One Hundred Choice Selections.

PAUL BOYNTON,

THE FISH WITHOUT FINS.

In this age of wonderful invention, which has seen the birth of the steam-boat, the railroad, the electric telegraph and the sewing machine, people often say, "Well, the next sensation will be the navigation of the air." But while they are looking up into the clouds for the great American baloon-ship, which is to take us all to Europe without fear of seasickness some fine day, behold the new sensation appears in a different element. The adventurer is not a man-bird, but a man-fish, at home on the rolling deep.

Of course he is an American, and his name is Paul Boynton. He has been employed for seven years in the coast-guard service on the New Jersey coast, and in two seasons at Atlantic City, a summer watering place, he is said to have saved about seventy persons from drowning.

All his nerve and courage as a swimmer, as well as his confidence in his wonderful swimming dress, must have been required in the terrible test to which he has put it, to the astonishment of the world.

The *New York Herald* gives the following thrilling account of his successful experiment.

"Boynton sailed from pier No. —, North river, in the national steamship the Queen, on Saturday, October 11, 1874. He had but little or no baggage with him, as at the last moment he decided to jump overboard when two hundred miles outside of Sandy Hook, and swim back to New York. This, however, was abandoned, as the commander of the ship was a man of little faith and vetoed the experiment, Boynton remaining on board an involuntary passenger. The dress taken with him, and which he intended to use, was simply a rubber suit, or armor, of peculiar pattern, containing compartments, which are inflated at will. Its weight was about fifteen pounds, yet the necessary articles required on the perilous trip increased this avoirdupois. There were two dozen signal lights, two

MISSION CHURCH AT PASUMALAI.

pounds of cheese, six pounds of crackers, one piece of Bologna sausage, one axe and one bowie-knife for sharks, signal flags, rockets, an extra suit of clothes and a large double-bladed paddle with which to propel himself. The crackers and cheese were no doubt consumed before Boynton could venture upon his little trip. This he at last was enabled to do, by the permission of the captain of the Queen, as the vessel approached the Irish coast.

It was on the evening of the tenth day out and it blew a gale. Without any unnecessary fuss, Boynton drew on his India rubber air-tight suit and inflated the air chambers; in his air-tight sack he placed food for three days, a compass, a bull's-eye lantern, some hooks (just to beguile the time on the water,) some signal rockets and a United States flag. In his inside pocket he placed a mail which the passengers had given him to post, he strapped his bowie-knife and axe to his side, and, grasping his paddle, was lowered into the water, amid the cheers of the passengers, at half-past 9 o'clock P. M. It was a wild, dark night. He was close to the Fastnet rock, with Cape Clear three miles from him and Baltimore, Ireland, toward which he intended to make, was in a direct line seven miles away. He lay on his back paddling vigorously, and soon the lights of the vessel were lost in the night. In a quarter of an hour more his spirit almost quailed, when tossed high on the crest of a wave he could no longer see the coast-line or any lights. The wind blew, the rain poured down and the tide set dead against him. He was drifting out to sea, and, to add to the awful loneliness of the situation and to increase the dreadful peril, the gale increased in violence. That night for many hours no mail boat crossed the Irish channel, and great destruction was done on the coast. And through these awful hours of darkness this man was tossing about at the mercy of the waves, some fifteen miles from land. The wind was so violent that he had to give over paddling and with one hand shade his face (the only part of his body exposed) from the blast. Once his paddle was wrenched away by a heavy sea, but it fortunately came into his hand again. For several seconds a wave would completely submerge him, then he would shoot on to the crest and take breath before he again was hurled down a sloping mass of water, which seemed one hundred feet to the bottom. As a result of this tossing he became seasick, a thing which never before happened to him. His indomitable spirit, however, conquered everything, and about 1 o'clock the wind began to blow directly on shore. His paddle was plied vigorously, and at 3 o'clock on Wednesday morning he perceived he was near breakers, and the rock-bound coast west of Skibbereen loomed up before him. His danger now was not less than it was during the height of the gale, for as a wave would raise him almost on a level with the cliff tops he could discern nothing but a threatening wall of rock. He made his way along parallel to the coast, and fortunately lighted upon almost the only landing place for miles around. He saw an opening in the cliffs and propelled himself cautiously toward it. While hesitatingly examining the entrance a sea struck him, carrying him on; another and another followed in quick succession, and in an almost senseless state he was hurried high and dry upon the beach. It was then 4 o'clock in the morning, and he had been nearly seven hours on the water, traversing a distance of thirty miles. The apparatus had behaved admirably, and divesting himself of it he stood quite dry in his navy uniform, which he wore beneath. That having been done he let off one of his signal rockets without effect. It showed him, however, a narrow path in the rocks. Up this he clambered and got on to a mountain road which brought him to the coast guard station. He was hospitably received and discovered that the place he had landed at was Trefaska Bight, some miles east and south of Baltimore. During the morning he reached Skibbereen and posted the letters intrusted to him and arrived in Clark on Wednesday night, October 21, where he was the hero of the hour. The more the populace heard of the feat the greater was their wonderment, as it was deemed impossible for a man to pass unharmed through such an experience."

Since the first dangerous but successful experiment, Captain Boynton has made several others, in British waters, in the Thames and the boisterous English Channel, in the presence of throngs of people, including on one occasion the Queen of England who has ordered the life-saving equipments for the royal yacht.

The greatest value and blessing of the wonderful invention is in its power of saving life, and hasten the time when, as far as danger and terror are concerned, there shall be no more sea.

MISSION CHURCH AND SEMINARY AT PASUMALAI.

This engraving is from a photograph of the church at Pasumalai, South India—the seat of the Theological Seminary of the Madura mission. The institution is situated on the great road from Madras to Cape Comorin, three miles southwest of Madura. A mile and a half further on is the famous rock of Sikkanda-malai; while the great heathen temples of Madura, and the no less famous temple of Sikkanda-malai are in view across the plains. The institution is not only upon one of the great routes of commercial travel, but the great gatherings of pilgrims and worshipers that assemble at the weekly, monthly, and yearly feasts at these centres of idolatry, almost daily pass and repass its doors. Thus situated, outside the city, is well located for quiet study; and at the same time, preachers and teachers from it exert a wide influence over the district, through their labors among the worshipers frequenting the feasts.

This school was first gathered thirty-one years ago, at Tirumangalam, and was removed to Pasumalai, in 1845, on the completion of the buildings erected for it. Its object, as at first planned, was to raise up native assistants for the missionaries in their preliminary work,—preachers, teachers, and translators,—making it a strictly missionary institution in the best sense of the term. It has undergone various modifications as the work of the mission has changed and advanced. Latterly, for several years, it has been conducted purely as a theological school for the training of pastors and preachers. Since its organization, not far from four hundred young men have been connected with it. Nearly two hundred and fifty of these have found their direct work in laboring for the evangelization of their own countrymen, as preachers and teachers, throughout Madura and the adjacent districts. Few churches in India have had a wider influence than the one worshiping in the edifice here represented. Occasionally, there are to be found in its Sabbath audiences educated men from Madura, who, Nicodemus-like, desire to learn privately more of Christ, and heathen pilgrims to the great feasts at Madura at Sikkanda-malai, from remote places. The native pastor, ordained in 1871, is at the same time the native instructor in the theological school.—*Missionary Herald.*

KILL YOUR FISH.

If any animal but a fish were allowed to die a lingering death by suffocation, or should be drowned, people would be quite unwilling to eat the meat of such animal, and would consider it an imposition if a provision dealer should send such things for their tables. And yet it is usual when fish are caught to leave them without air (*breathed in their way,*) and they die an unnatural death, after a struggle perhaps for hours. No one seems to think *their* flesh is injured by this suffering. Nevertheless it is. So that if one has no thought for the unnecessary suffering of the fish, he ought to kill it instantly, out of regard to his own stomach. He would find a great improvement in quality. Strike the fish a sharp blow just back of the eyes, or with a knife divide the backbone. We have called attention to this before, but are reminded by a friend that it is not generally understood.—*Our Dumb Animals.*

(Continued from 1st page.)

ing hung in the tower of Independence Hall, it was re-cast in Philadelphia, and was the first bell ever cast in this country. The chair in which John Hancock, the Speaker of Congress sat, and the table at which the Declaration was signed, are preserved, and in the corners of our illustration are views of the bell, chair and table. In front of Independence Hall stands a statue of George Washington, erected with money contributed by the children of the public schools of Philadelphia.

As most of our readers already know, the one hundredth, or centennial, anniversary of our national Declaration of Independence is to be celebrated with great ceremony and appropriate services, and although the plans are by no means matured, yet so much interest is exhibited, and so much time, strength and money have already been dedicated to the work, that there is little doubt that demonstration will worthily celebrate the cause which calls it forth.

Philadelphia has been chosen as the proper place for the anniversary rejoicings, on account of its numerous associations with the early history of our government, and the especial fact that the first congress met there, and Independence Hall will doubtless play a very important part in the ceremonies. It is believed that those families, throughout the country, who are fortunate enough to possess relics of the troubled times which gave our nation birth; will gladly lend them to the various committees appointed to receive them in Philadelphia, and that the result will be a most interesting and unique collection.

If some of the "Fathers" could but come back in the flesh, to see the grandeur of the nation whose infancy they nursed, what, we wonder, would be their criticism upon the use we have made of the great inheritance they left us? Are we honest, true, brave, liberty loving and God fearing, as our Fathers were?

The Teachers' Table.

"O'sr happy children wouldst thou hold firm rule,"
And sun thee in the light of cheerful faces?
Love' hope and patience, these must be thy graces,
And in thine own heart let them first keep school."

ADVICE TO A NEW TEACHER.

1. Do not attempt to hsnr a lesson until you have order. Let all your efforts be directed to this as a matter of first importauce.

2. Take a dsy or a week, if nccessary, to drill your class in putting awny their books and slates quietly, walking on the floor and in going to and from the class.

3. Keep in good humor, and avoid being hasty in word or action.

4. Do not scold or threatsn.

5. Make only such rules us you find necessary for the good of your school.

6. Exact prompt obediences.

7. Keep your eyes open.

8. Bc firm, kind and impartial.

9. See that your school is properly equipped with books, slates, pens, pencils, &c.

10. Study your lessons.

11. Hcar them without a book as for as practicable.

12. Movs about omong your scholnrs and cndcuvor to see all that they do.

13. Rely upon yourself in the managcment of your school.

14. Visit other schools whencver procticuhls.

15. Labor diligently for self-improvement.

EVERY teacher, as soon after the commencement of his term of school as practicable, should make it a sacred binding duty to visit all the families in the district having children to bs cducated, seek the co-operation of the parents, and secure, if possible, the regular attendcnce of the children at school. By an early acquaintance with the people, frequent friendly visits to the parents, and the manifestation of a warm personal interest in the cducational welfare of the children, the teacher gains a prestige that cannot fail to produce the best results. Absenteeism, truancy and tardiness, the bane of all schools, may, in a measure, be hrokcn up through this system of visitation.

You are doubtless trying to teach your pupils to read and to spell well, to master their arithmetic so that they can computa accurately and quickly, to learn their geography so that they may read an ordinary newspaper intelligently, and to acquire such a knowledge of grammar that they can analyze and parse Paradise Lost or the Essay on Man correctly. Well, this is all right; teach them these things so that they shall know their text-books well, and—what is of more importance—hs able to apply what they learn to the practical affairs of every day life. But it is not about these things that I want to talk now; I have something of more importance on my mind.

Do your pupils all speak the truth? And do they always *act* in a truthful manner? Do you invariably set them an example in these respects that is worthy of imitation? If sums among them are faulty in this particular, have you created such an atmosphere in the schoolroom and on the play ground, that the offenders are made to feel ashemed of themselves; and do you observe e constant improvement? Do your pupils all know that, when a task is set them, they will certainly be held to a faithful and prompt performance of that task? Is oll their school-work of such a character that it is constantly fitting them to mect worthily the duties and responsibilities of coming life?

DEFINITIONS.—Excreises in which the definitions are to be written on slntes, in short senteuces, should be introduced in alternation with oral exercises of a similor character. It is desirable that an oral excreise of this kind, given as a lesson on one day, should be followed on the next day with the some words to be defined in a written exercise, thus training the pupils to write as well as to talk.

In the oral definitions, let the pupils he required to tell what given words mean, in their own language, as well as to use them in short sentences. One pupil may be requested to give a brief definition of a word, another pupil to use it in a sentence, and another to illustrate its meaning by describing its use. Habits of reciting formal, memorized definitions by using thns several modes of giving the meaning of the sama word, and the pupils would learn to define, and use words intelligently.

MANAGEMENT.—In the case of a boy thoroughly and persistently ill-disposed, there should be no temporizing, no evading of an issna; but when a boy gencrally well-bshaved blunders into a little fit of temper, it is better that the teacher take his act as a joke, laugh him out of his tantrum, or ignore his state of feeling and go on as if nothing wera wrong; whersupon the hoy regains his good humor, is glad that the teacher's anger was not aroused, and is more careful of his conduct the next time he is annoyed.

SOMETHING TO READ TO THE CHILDREN.

Wa hope that teachers and children were interested in the Johnny story, and are looking out for another. Here it is:

JOHNNY STUDIES BOTANY.

Johnny is an imitative little fellow. Whensver hs sees anyone doing onything, he is very opt to want to do it too. He came the other day to my summer study-room—in the hay barn on the hill, where the air is always fresh and cool—and found me busy with a lot of plants that I had gathered in the woods that morning. He looked on curiously for a little while, then nskcd what I was doing thot for.

"Doing what?"

"Why, picking all those weeds to pieces and putting them away in those big books."

"I'm afraid you haven't been looking sharp," I replied. "I don't put away those I pick to pieces."

Johnny was still agoin for two or three minutes, then he hroke out with, "What do you pick them to pieces for?"

I told him they were plants that were new to me, and I was studying them to learn what they were like and what their relations were.

"Relations! Do plants have relations?"

"Certainly," I replied.

"Thot's queer! And is that the way you learn so much about them?" Johnny oskcd.

"Chiefly."

"I wish I could do thut," he said, after another period of silent watching.

"So you can."

"When?"

"Any time; now, if you want."

"Will you show me how?"

"With pleasure."

"Right away?"

"Right away."

"Well," said Johnny, after woiting awhile, "I'm rcady."

"So am I."

"But I don't know what to do," said Johnny.

"You must get your plants first," said I.

"Where?"

"Anywhere—out in the garden, if you like."

Johnny ran to the garden and was soon back again with his hond full of leaves and stems.

"Will these do?" he asked.

"Suppose you wanted to study animals, and I should give you the ear of a dog, tha tail of a cat, the foot of a hen, a cow's horn, and a piece uf ahecpskin to begin with; do you think they would help you much?"

Johnny laughed at the idea of such a funny mess, and said he thought a whole dog would be better.

"A good deal batter," said I: "And a whole plant would be better than all these pieces."

"Can't you tell what their names are from the pieces?"

"I could," I replied, "hut nomes sre not what you are to study. You are to study plants."

"Of course," said Johnny, not knowing what else to say.

"I will go with you," I said, "and show you how to get something to study."

When we reached the garden, I stooped to dig up a weed that few boys in the country do not know something about—purslain, or, as it is commonly called *pusley*.

"What's the usa of taking that?" inquired Johnny. "Everybody knows what thot is."

"We'll take it, for all that," I said; "perhaps we may learn something about it that you never noticed before."

"That's catnip," said Johnny, as I began to dig up another plant that stood near the first. "You aren't going to take that, are you?"

"Why not?"

"'Cause," said Johnny, "I've known catnip ever since I can remember."

"Shut your eyes," said I. Now tell me what kind of a stalk catnip has."

"Why," said Johnny, hesitating—"it's just like——any other stalk."

"Like pusley?"

"No; pusley hasn't any stalk; it just sprawls on the ground."

"Like mullein stalk?"

"No," said Johnny; "not like that."

"Like corn-stalk or thistle?"

"Not like them either," said Johnny. "It's like——I guess I don't remember exactly what it is like."

"So you don't know catnip as well as you thought," said I.

"These two will be enough to begin with," I continued. "Study them carefully, and when I have finished with my plants I will come to see how you get on."

Johnny soon tired of studying hy himself, or maybe he did not find very much to learn; at any rate it was hut a little while before he stood at my table, plants in hand.

"Well," said I, as I put away my work, "What have you discovered?"

"Catnip-stalk is square," said the botanist.

"Good," said I; anything more?"

"It smells," said Johnny.

"What like?"

"Like—like catnip-tea."

"Very like," said I. "What else have you learned?"

Johnny hesitated.

"Is the pusley stem anything like catnip?"

"Do you call those stems, when they don't stand up?" was Johnny's reply.

"Yes, those are stems."

"They're round," said Johnny, "and smooth. Catnip is fuzzy a little, and the stems are straight."

"Anything more?"

"The leaves are bigger than pusley leavss, and thinner and softer," said Johnny, comparing them.

"We havn't finished with the stalk yet," I said.

"Can you tell me anything more about it?"

"That's all I know," said Johnny.

"How about the color?"

"It's green."

"Is the pusley-stem green?"

"Some of it, and some of it's almost white, and some is almost red; queer, isn't it?" He went on, spreading the plant out as it grew in the garden. "The under side of the stem is pale, and the upper side is red—tauned, I guess, in the sun."

"It looks like it," I said; "what's the color inside?"

"Shall I break it?"

"Certainly."

Johnny bent the pusley-stem with both hands, and to his great surprise it snapped short off.

"Oh!" he cried, "how brittle it is; I didn't think it would break so sudden."

"Try the catuip-stem."

"It won't break," said Johnny.

"Cut it with my knife."

"It's tough," said Johnny, "and woody and hollow. Tho stalk is square but the hole is round."

I took the knife, cut tho stem across at a joint, and said: "I don't see ony ho'e horo."

Johnny was puzzled. "See," I said, splitting the stalk lengthwise, "the hollow is closed up at the joints where the branches begin."

"I shouldn't have thought of that," said Johnny. What a lot of things there is to learn about one stem."

"We've scarcely made a beginning yet," I said. But before we go farther, let us recall what we have already found out.

"Tho catnip stalk is square; stands up straight; has a strong odor; is slightly fuzzy; is green; is rough and woody; will not break easily; is hollow, except at the joints; and—"

"That's all I can think of," said Johnny.

"And the pusley-stem is round; lies flat on the ground; is smooth; brittle; pale green below, and red on top; solid—Are you sure of that?"

Johnny split a pusley-stem its whole length, and said there was no sign of a hole in it, adding, meditatively, a moment after: "It takes a great deal of study to find out all about a plant, don't it?" if it *is* a weed."

"A very great deal," I said.

"I think I know all about these, now," said he.

"Oh, no!" said I, "not nearly. You havn't learned anything about the roots yet, nor the branches, nor how they grow, nor about the flowers, nor the seeds, nor when they come up in tha spring, nor when they die in tha fall, nor what things eat them, nor what they are good for, nor what their relations are, nor—"

"I'll never be able to learn all that!" cried Johnny, fairly frightened by the magnitude of the task he had undertaken. "And there is such a lot of plants!"

"It would be a terrible task, indeed," I replied, "if you would have to learn it all at once. But you haven't. Just keep your eyes open, and take notice of the different plants you see, and you will get better and better acquainted with them every year. Tha older you grow the faster you will learn, and the more you will enjoy it. In a few years it will be pleasanter than play to you."

"I hope so," said Johnny, resolutely; "if I've got to learn them all. I'll try, anyhow."

—*Christian Union.*

HINTS TO STUDENTS.

IT is stoted on good outhority, thst *ten-elevenths* of the criminals of this country are illiterates.

In the three States, Pennsylvanio, Ohio, and Illinois *one-tenth* of the illiterates are paupers, while only *one three-hundredth* of those who can read and write are so. Can such facts as this, and that stoted above, mean otherwise than that education is one of the essential conditions to both morality and thrift? Morality and thrift never grow in any soil but that of education. They are never possessed hy man or woman whosa mind has not been led out, by some means or other, from the feebleness of its childhood. There can be neither virtue nor economy without thought; and there can be no thought without something to feed it and exercise it.

HOW TO STUDY HISTORY.—The Pennsylvania *School Journal* gives a method of *teaching* United States History which seems to be an admirable one. We do not put it into our Teachers' Table, thinking that most of the teachers who would read it may find it beyond the needs of their pupils. But as students, any may find in it valuable hints for the study of any history:

"The method of teaching United Stotes History, here presented, claims the merit of simplicity. On account of its very simplicity it may not have been practiced by some teachers, hut we venture to present it, hoping that what has been found to work well in our own school may interest others as well. History is the only branch in the study of which we do not insist upon the uniformity of text-books. The pupils are encouraged, rather, to have among them works by different authors, or what is better still, each pupil is recommended to have several works. This may create skepticism in the learner, on account of his discovering many instances in which the authors differ, but this very skepticism is turned to account in leading him into the most excellent habits of research and of "hunting down authorities." In assigning lessons and hearing recitations the "topic" method is used, written classifications being required in all possible cases, and information bearing on the topic accepted from any source. In the preparation of lessons, concerning any of the "wars" for example, the pupil is requested to read carefully the various accounts given, and then classify the knowledge thus obtained under such headings as cause, time, territory, parties engaged, principal generals, principal battles, result, treaty, &c., at his discretion. The following classification made by a young pupil, under the writer's care will further illustrate:

French and Indian War.
- (1.) *Time.* 1754—1763.
- (2.) *Territory.* Pennsylvania, New York, Canada.
- (3.) *Parties Engaged.* French and Indians against English and Colonists.
- (4.) *Principal Generals.* Montcalm, Dieskau, Braddock, Wolfe, Amherst, Prideaux.
- (5.) *Principal Battles.* Fort Necessity, Braddock's Defeat, Ticonderoga, Qushec, &c.
- (6.) *Result.* In favor of the English. All Canada falling into their hands.
- (7.) *Treaty.* Ratified at Paris in 1763.

This plan of disposing of the "wars" interests our pupils very much, while in treating of the "administrations" they are instructed to prepare a classification of what *they* may consider the "leading events." This plon cultivates briginolity in the pupil, and to any teacher who may have failed to interest his class in history we hcg leave to recommend it."

T. B. MCCAIN, CLAYSVILLE, PA.

A HINT TO THE SINGING CLASS.—Students of vocal music want to take speciol care of their throats. An eminent physician, who makes throat and lung diseases a specialty, says the pressure of the collnr on the arteries of the neck is very bod for the health, and asserts that about three-fourths of all throat diseases would be cured be wearing very loose collars and neckties. Worth trying.

THE PRAYER.

Ah God, for a man with heart, head, hand,
Like some of the simple great ones gone
Forever and ever by,
One still strong man in a blatant land,
Whatever they call him, what care I,
Aristocrat, democrat, autocrat—one
Who can rule, and dare not lie.

TENNYSON.

Correspondence.

CALIFORNIA.

SAN JOSE, CAL., *May* 25, 1875.

Dear Hampton Scholars,—As I remember that the last regular class which entered Hampton School while I was there as a teacher, is about to graduate, I feel like writing one more letter to you before you go out in different ways. I am sorry that I have not carried out my intention of writing to you every now and then, not only personal messages, but more descriptions of the country in which I now live, and in which you have always seemed interested.

Perhaps you will like to hear about the United States Mint at San Francisco, where most of the gold and silver money of the country is coined. The government has lately finished a very fine new mint building with improved facilities. Its tall stone chimneys are more noticable than almost anything else in San Francisco. On presenting ourselves as visitors, we found one of the four regularly appointed conductors ready to show us about. First, we could not help noticing the cars that had been taken to render the building as near as possible fire-proof. It stands in the centre of a block, separated from other buildings by a wide granite pavement. The building itself is of granite and iron; there is no wood used in its construction except for the doors, window-sashes and stair hand-rails. The door and window casings, and even the mop-boards, are of iron—the floors of iron and stone, filled in with cement. We were led first to the basement, where we saw the steam boilers and furnaces. Then we went into the melting rooms. Here we saw the gold and silver as it is sent in from the mines. Some of the gold was in dust, as washed out from river beds, some, amalgamated with mercury as it comes from the quartz mines. You probably know that for a long time almost all the mining in California consisted in "washing" gold out of gravel and sand beds, where it had accumulated in river bottoms. The earth was placed in a pan and washed off as mud, the heaviest grains of gold being left at the bottom. But now, these surface mines have been mostly exhausted, and the larger share of the California gold comes from deep mines. There the gold exists in small veins and particles in hard quartz rock. This rock is dug out of the mine and crushed in a heavy quartz mill, and then mercury is poured upon it. Mercury has a great attraction for gold and mixes with every tiniest speck of it, thus picking out the little grains and forming them into one mass. Some of the gold is refined at other places and brought to the mint in bars; so is the silver, and we saw a pile of "silver bricks" about the size of building bricks. After we had watched the beautiful melted metal poured from the crucibles into molds, first as pure gold and silver, and afterward hardened by a certain proportion of other metal as alloy, and, finally, after the last melting, brightened by a bath of sulphuric acid and water, we went to the rolling rooms. The bars are passed between rollers which have a pressure of one hundred and fifty tons. Curiously enough the bars do not grow wider under this pressure, but only increase in length. They grow so hot, under the pressure and friction, that the workmen who handle them are obliged to wear padded gloves, and the bars would break were they not annealed. Finally, by successive rollings, the bars become long, thin strips of the right thickness for coins. Then they are cleaned again and covered with a thin coat of oil, to prevent scratching, and are now ready for cutting. It is very pretty to see the heavy punch cut from each strip a row of little round pieces. Beside each punch machine stands a weigher, who weighs carefully the blank coin cut from each strip; if it is not of just the right weight the strip is sent back to be re-rolled, or even remelted. The round, blank coin next goes to the milling machine, which cuts its edge into the little ridges you have noticed. Then a stamp imprints upon it the government impress, and it is no longer a piece of gold or silver, but a coin, with a recognized value wherever it may go. One of the boxes, with $20,000 worth of fresh shining gold pieces in it, is a very pretty sight. They look so exactly alike you would think certainly they were now ready to go out into the world; but the government is not yet satisfied with their accuracy. They are sent up to the filing and weighing rooms, where you will see long tables at which are sitting ladies who test them. Each lady has a very delicate balance before her with which she tests them. If it is a little too heavy, she files it to the exact weight; if too light, she rejects it. The ladies all wear leather aprons and sleeve coverings that none of the filings may be lost in their dress. In fact one of the most noticable things about the mint is the extreme care taken to avoid any waste of the precious material. All the floors are of smooth, fitted stone, and are swept every day, the sweepings being taken to the refining room where all the gold and silver they contain are extracted. On the lower floors, where the larger coal fires are kept and there is more refuse, the stone floors are covered with gratings fitted in sections, so that it can be taken up. In each department are the most accurate scales. The amount of gold and silver going into a room, and the amount coming out, are carefully recorded, that there may be no loss by waste or stealing.

I must not omit to tell you of the steam engine which does the work of the mint. It is claimed that it is the finest in the world—not, of course, in size, but in perfection of finish. Certainly it is a beauty. I would not have believed it possible that so large an engine could run so noiselessly. Laying your hand on the metallic corner pillars which support the whole, you could not detect the slightest trembling—not so much as that caused in the case of a watch by its ticking. The engine cost $75,000, and the builder says that he lost $25,000 in making it.

Last of all, we went into the banking room, where all the gold and silver is received, and all the coin paid out to those who brought their bullion to be coined. The mint is capable of coining $250,000 a day in $20 gold pieces, and on some days is said to make nearly that amount. I should not dare to tell you how many millions of dollars a year are sent out. And so accurate are all the processes that the exact amount of coin a quantity of bullion will make can be told in a very short time. For instance; the Bank of California sent in $150,000 worth of gold to be coined, the morning I was there, and received the coin for it that very afternoon, the gold having been already put through so many processes that its fineness and value could be actually estimated.

The U. S. government has the reputation of making some of the handsomest coin in the world. Certainly there can hardly be a prettier piece of money than our twenty dollar gold pieces. You may see as many of these twenty dollar pieces, I believe, in one California town as in a whole state at the East. They stand in little piles on the cashier's desk of every bank, and look much prettier than the greenbacks we see at the East. Greenbacks and postal currency are not used here at all; neither are copper or nickel cents or three cent pieces. All the business is transacted with gold and silver coins; of which, silver half and quarter dollars are the most common.

I am afraid you will get the idea that money is to be had in California almost for the picking up. Nothing could be a greater mistake. California is thronged, this spring, with immigrants who seem to think they have only to come here to live an easy life. Some of them are unwilling to work now that they have got here, except at light work in places which precisely suit them. There has never been such a rush of immigration to California since the early days of the gold fever. Probably this is due to the remarkably cold winter experienced throughout almost all the country except the Pacific slope. California has many climates; still, it is, on the whole, very mild when compared with the eastern coast. Our winters here in San Jose are far less severe than those at Hampton. Last winter there was no snow, except a little flurry for half an hour. It has seemed very strange to sit here, in an almost summer climate, and read about the intense cold throughout the East. Eastern people, at the same time, shut in by storms and reading of our flowers and green grass, resolved to try it themselves. For two or three months the chief topic of California papers has been "What shall we do with the immigrants?" Ten thousand came during the month of April; probably not far from as many more have come within the last month. Meetings have been held and measures decided upon for advising them as to the best parts of the state in which to find homes. To complicate matters, last winter, though so mild and bright, was not at all favorable to California, as there was not a sufficient fall of rain. You know there is no rain in California except during a few winter months. Winter before last was very rainy, and it was followed by a remarkably fine crop. Last winter there was very little rain, and the crops will be very light—the wheat-fields are already very dry. Old Californians predict a hard season, and I fear among the immigrants many will be sadly disappointed. Especially, they will, if they think they are coming here to have easy times, for most of the work now awaiting hands is *hard* work.

I should like to tell you many more things about California, but the subject is so large that I can only describe a little bit to you at a time.

During the two years since I left Virginia, I have been able to think that many of my old students were still scholars at Hampton; now, the last full class that I knew is to be scattered. I have thought of you as middlers and then as seniors. I wonder how much you have improved during these years of study and training. I trust if I were to see you again I should recognize your mental and moral growth—should find you better fitted to be of service in the world than when you entered Hampton School, three years ago. Let me tell you some of the things I should hope to find you had gained. I hope those old Arithmetic problems you once thought so difficult have grown clear as day, while you have learned to cope with more general problems in Algebra. I hope you have become *readers:* that is, that instead of stumbling slowly through a book, you can now quickly and intelligently find out what it has to say to you, and that you are in the habit of thus turning to books and newspapers as friends. This is one of the greatest gains in education. And with this, I am sure you have learned how to speak and write the English language more correctly—to do this well, is one of the surest marks of a cultivated person. And I trust your eyes have been opened to some of the many wonderful things God has spread around in nature, through a taste of the study of Natural Philosophy, Physiology, and other sciences. I hope you have learned a great deal about teaching, so that the schools you take charge of may be really useful. I hope, most of all, that you have a clearer idea of your duties, as citizens, as men and women, as Christians, and a stronger purpose to fulfil these duties in your daily lives. I trust, too, you are true scholars, not puffed up with what you have learned, but feeling, more humbly than at first, how very small a dipper you have filled from the great ocean of knowledge; feeling, not that you have finished your education, but that it is just begun. And I hope you are not only better acquainted with books, but better workmen, more faithful, more industrious, more energetic than ever before. To sum it all up, I hope that you may go out strong, capable, earnest, humble, moral, Christian young men and women; ready to live good lives and to help others to do so.

Have I imagined too much? Each of you can meetally answer to himself. As I say these things, I am thinking of you, not only as a class, but as individuals. I think first of this one—then that—then the other—of those whom I remember so distinctly. I have too little leisure to write so many letters, so I have done the next best thing I could, in writing to you all together. If you are pleased that I have done so, I shall know it by receiving many letters from you in future. Now, and in future, letters will reach me directed to me at San Jose, California. Even should I leave the place at any time, they would be forwarded to me. My interest in you will not cease, and I shall hope for a long time to receive occasional letters from you, which will help me to avoid losing acquaintance with you. You could hardly fail to interest me by telling me anything which interests yourselves.

With pleasant remembrances, I am
Your old teacher and friend,
L. M. WASHBURN.

LETTERS FROM GRADUATES.

Some of the disadvantages under which our graduates labor, are set forth in the following extract from a letter from one of them. It is to be hoped that the State will take measures to remedy the evils before the best teachers get other employment:

"Another disadvantage under which we teachers have to labor is, we can't draw our money till three or four months after our schools close, which compels us to sell a draft at a discount of five dollars, and selling three or four in that way we lose nearly a month's salary. If some change is not made in some way, either in extending the length of the session, or paying a larger salary (or at least paying it promptly), teaching school will be pecuniarily very profitless. Schools are needed very much here, but there is no money to employ teachers.

PRICE'S FORK, MONT. COUNTY, VA.,
March 9, 1875.

Dear Teacher,—Since I returned from your school I have been teaching school in order to pay for my schooling and to pay the debt I owe for last term, or part of last. I have not received my money yet, for there is not any in treasury, but I know I will get it and when I do I will be sure to pay you. Will you tell me exactly how much I owe?

I suppose you know where Bleckehurg is; I am teaching four miles this side of it. I am so thankful that I can return to school again, and I try very hard to make some money to come back again. I want to come to school next term if I live. Since I have been teaching school I just begin to realize what a teacher has to suffer, and I often say to myself, if I live to get back to school I will try in all the ways I can to please my teachers.

I remain ever thankful for the benefits received at your school.

Very respectfully yours,
B. E. A.

LIBERTY, VA., *April* 30, 1875.

Dear Teacher,—Money is very scarce in Bedford County; we cannot get any to pay our board bills or school bills, and that is the reason of my bill not being paid. But we are expecting money in the treasury about the last of July or the first of September. If so, I shall pay up the first opportunity, at any rate I shall settle up before the first of January. You shall hear from me again, as soon as there is any prospect of some money.

My school term closed on the 3rd of April. I had two weeks' vacation, and am now teaching an independent school. The County is so poor that the superintendent couldn't let the public schools go on any longer, there being no funds.

Independent schools do not pay very well, so I think I shall not teach it very long, but expect to go to North Carolina and get a school there to teach through the summer till October, when I shall return to Hampton.

G. M. F. C.

LIBERTY, VA., *May* 4, 1875.

Dear Teacher,—My father's large family of thirteen children, and most of them too small to do anything, and father's infirmities of here late, has taken all of my earnings, though I don't know that I ought to have let it go in this direction rather than to pay old debts.

I thank you kindly for the deduction you made, and I will commence paying on it before long, if no bad luck, and I am in hopes that I may be able to cancel the debt before January next, if I live.

Very respectfully yours,
P. M. L.

THE
HOME SAVINGS BANK,
CORNER MAIN AND ATLANTIC STREETS.
Incorporated under State Charter,
1874.

AUTHORIZED CAPITAL $ 100 000.
SUBSCRIBED " $ 20 000.

Money in smallest amounts, received on deposit and interest at Six per cent, allowed *from day of deposit.* Deposits repaid on *demand.*

Exchange bought and drafts drawn on the National Shoe and Leather Bank, New York City; capital One Million.

Drafts drawn also on Baltimore, Washington, Richmond, and other cities.

Collections promptly made on all parts of the country. All investments made in this vicinity. Especial advantages given those customers who were depositors in the late FREEDMAN'S SAVINGS BANK.

☞ N. B. We have loaned since last November,—chiefly to colored citizens, and in small amounts—over twenty-five thousand dollars.

LESSON I.

JULY 6, 1875.

MARTYRDOM OF THE BAPTIST.

MARK vi: 20–29.

20 For Herod feared John, knowing that he was a just man and an holy, and observed him; and when he heard him, he did many things, and heard him gladly.

21 And when a convenient day was come, that Herod on his birthday made a supper to his lords, high captains, and chief *estates* of Galilee;

22 And when the daughter of the said Herodias came in, and danced, and pleased Herodias and them that sat with him, the king said unto the damsel, Ask of me whatsoever thou wilt, and I will give *it* thee.

23 And he sware unto her, Whatsoever thou shalt ask of me, I will give *it* thee, unto the half of my kingdom.

24 And she went forth, and said unto her mother, What shall I ask? And she said, The head of John the Baptist.

25 And she came in straitway with haste unto the king, and asked, saying, I will that thou give me by and by in a charger the head of John the Baptist.

26 And the king was exceeding sorry; *yet* for his oath's sake, and for their sakes which sat with him, he would not reject her.

27 And immediately the king sent an executioner, and commanded his head to be brought: and he went and beheaded him in prison.

28 And he brought his head in a charger, and gave it to the damsel; and the damsel gave it to her mother.

29 And when his disciples heard of *it*, they came and took up his corpse, and laid it in a tomb.

Golden Text.—BE THOU FAITHFUL UNTO DEATH, AND I WILL GIVE THEE A CROWN OF LIFE.—REV. ii: 10.

Soon after the healing of Jairus' daughter Jesus went back again to his own country and calling the twelve apostles out from among his followers sent them forth in his name. It was at this close of this first missionary tour that news was brought to Jesus by John's disciples of the cruel death of his faithful friend and forerunner. This sad incident forms the subject of our lesson to-day.

When the wicked Herod heard of Jesus and his wonderful works his conscience smote him for his crimes, and he feared that Jesus was the great prophet whom he had slain risen from the dead. John, as well as preparing the way for Christ, which was his special mission, denounced the hypocrisy of the Scribes and Pharisees and did not hesitate, when occasion required, to rebuke the crimes even of a king. He did not shrink from reproving wickedness in high places, and thus fearlessly discharging his own duty, left the results with God. Let us not forget that Herod did not always turn away from John's preaching; he had some drawings toward the good—has even did many things which were right; yet, after all, he loved his sins better then anything else and was more ready to listen to the words and obey the wishes of a very wicked women than his was to follow John's teachings.

This woman hated John because his holy life and words were a constant reproof to her, and she was determined to have him killed. The longed-for chance came at Herod's birthday feast. She sent her daughter to dance before the company, and Herod was so much pleased that, under the excitement of the hour, he made the rash oath which cost John his life. Instructed by her wicked mother the girl asked the head of the faithful John. "Exceeding sorry" we are told the king was, but he was not sorry enough to undo his wretched work and spare the faithful prophet. It was foolish and wicked in Herod to make such a promise; that was his first wrong step. It was still more wicked for him to keep it, for God's plain command is "Thou shalt not kill." Always remember "a bad promise is better broken than kept." If we have been betrayed into making a wicked promise, the only right thing to be done is to repent of it immediately and to show our repentance by all just possible reparation. By no means are we to feel obliged, as did the weak and foolish Herod for "his oath's sake and their sakes which sat with him," to fulfil rash vows. This is fearing God rather than man.

When John's disciples heard what had befallen their beloved teacher they came and took his body and laid it in the tomb—and then "went and told Jesus" (Matt. xiv: 12). In this hour of their sorrow and bereavement they took all their trouble to him who only could comfort and sustain them. In him whom their deceased master had hailed as the Promised Messiah was henceforth their only hope. And the dear Jesus, now that he has ascended to Heaven, is as ready to sympathize with all the bereaved and suffering children of earth as when these sorrowing disciples came to him with their grief. It is our privilege to "go and tell Jesus" *all* our troubles—little and great; but this sympathizing friend—the Friend love all others—would gladly have us bring to him our joys as well as our sorrows, and, if we thus improve our privilege, we shall find in his love and friendship, whatever may be our condition or circumstances, the occasion of our greatest and continual joy and rejoicing.

LESSON II.

July 11, 1875.

FIVE THOUSAND FED.

MARK vi: 34–44.

34 And Jesus, when he came out, saw much people, and was moved with compassion toward them, because they were as sheep not having a shepherd and he began to teach them many things.

35 And when the day was now far spent, his disciples came unto him, and said, This is a desert place, and now the time *is* far passed:

36 Send them away, that they may go into the country round about, and into the villages, and buy themselves bread: for they have nothing to eat.

37 He answered and said unto them, Give ye them to eat. And they say unto him, Shall we go and buy two hundred pennyworth of bread, and give them to eat?

38 He saith unto them, How many loaves have ye? go and see. And when they knew, they say, Five, and two fishes.

39 And he commanded them to make all sit down by companions upon the green grass.

40 And they sat down in ranks, by hundreds, and by fifties.

41 And when he had taken the five loaves and the two fishes, he looked up to heaven, and blessed, and brake the loaves, and gave *them* to his disciples to set before them; and the two fishes divided he among them all.

42 And they did all eat, and were filled.

43 And they took up twelve baskets full of the fragments, and of the fishes.

44 And they that did eat of the loaves were about five thousand men.

Golden Text.—THOU OPENEST THY HAND AND SATISFIETH THE DESIRE OF EVERY LIVING THING.—Ps. cxiv: 16.

As soon as the apostles had told Christ of their cares and labors he took them apart into a desert place to rest awhile. Although they departed privately by ship the eager multitude were so intent on following that they went around the head of the lake afoot, and when Jesus arrived he found them already there awaiting him. Their persistence and earnestness secured to them Christ's blessing, for such an appeal was never made to him in vain. So interested was Christ in talking to these people, and so intent were they upon his instructions, that they seem to have taken no notice of how the day was passing. Their bodily wants were, for the time being, forgotten. Being reminded by his disciples of their need of food and that it was quite time he should send them away to tha villages to get bread, Jesus improved the occasion to show that he was not regardless of any of their needs, but was as ready and able to feed their hungry bodies as he was to give the teaching which would satisfy their hungry souls. After a little consultation and going out to see what provision it was possible to make for them they found that all they had with which to feed this great multitude was five loaves and two fishes which a little lad had brought with him. Well might they inquire "What is that among so many?"

How those disciples must have wondered what Christ was intending to do, when, notwithstanding the total insufficiency, he gave the brief, calm command "Make the men sit down." We know that this miracle made a profound impression upon them for it is the only one which all four of the evangelists have recorded. Obedient to Christ, however, without questioning, the apostles seated the multitude, and when they were arranged in orderly groups upon the grass Jesus raised his eyes to heaven, gave thanks, blessed the loaves and gave to the disciples who distributed it among the multitude.

"The Lord will provide," was one of the great lessons of this miracle to all who witnessed and partook of the multiplied bread. Christ was sought that day in the desert for heavenly blessings and he made the earthly needs of those who followed him his care. "Your Heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God and his righteousness and all these things shall be added unto you" (Matt. vi: 32, 33).

Did you ever think, too, what must have been the glad surprise of that little lad as he saw his five loaves and two fishes which he had carried about all the day so multiplied by the dear Jesus as to be the means of feeding and refreshing all those tired and hungry people. He little knew for what purpose he had brought his little basket with its contents into the desert with him. But it was just like the kind and loving Christ, who never forgets the children and wishes every body to be happy, to allow this little boy to see that he was willing by his added power to make even his small stores a blessing to multitudes. And so, too, our little things—our words, our actions and services—small and insignificant as they may be in themselves—if we seek Christ's blessing upon them may be made of great use to those about us, and we may have the joy of knowing that others are made better and happier by our lives. Let us notice, too, that though Jesus created food he did not waste it. Those disciples might have thought there was no necessity for hindering themselves with what was left, for Christ could easily supply them with more in the same way—but not so! Christ meant to teach them and us that God's good gifts are never to be wasted. A wonderful miracle—was it not? Yet, when we think of it, is tha way in which God gives us "our daily bread" any less a miracle? Can we explain how the blessings of rain and sunshine which only he can give, so multiply the seed sown that the abundant harvest—sufficient to satisfy the desire of any living thing—is the result? No; we can only say, "It is God's way." Let us ever remember that we need daily bread for our souls as well as our bodies. May we daily go to Jesus, who is himself "the bread of life," with the prayer "Lord, evermore give us this bread." If we thus go we shall be filled, for the compassionate Saviour never turns any empty away.

LESSON III.

July 18, 1875.

THE SYROPHENICIAN MOTHER.

MARK vii: 24–30.

24 And from thence he arose, and went into the borders of Tyre and Sidon, and entered into an house, and would have no man know *it*: but he could not be hid.

25 For a certain woman, whose daughter had an unclean spirit, heard of him, and came and fell at his feet:

26 (The woman was a Greek, a Syrophenician by nation;) and she besought him that he would cast forth the devil out of her daughter.

27 But Jesus said unto her, Let the children first be filled: for it is not meet to take the children's bread, and to cast *it* unto the dogs.

28 And she answered and said unto him, Yes, Lord: yet the dogs under the table eat of the children's crumbs.

29 For a certain woman, when she was come to her house, she found the devil gone out, and her daughter laid upon the bed.

Golden Text.—THEN JESUS ANSWERED AND SAID UNTO HER, O, WOMAN, GREAT IS THY FAITH: BE IT UNTO THEE, EVEN AS THOU WILT.—Matt. xv: 28

When the multitude had eaten and were filled Jesus straightway dismissed them, and his disciples and himself instead of seeking sleep "went up into a mountain apart to pray." Toward morning knowing that his disciples were in peril (a violent storm having arisen), he—the ever-present friend in trouble—went to them, walking upon the sea, and immediately the wind ceased. They soon came to the shore and, as it was everywhere that Jesus went, the people from the whole region round about brought their sick unto him and he healed them. Here, too, the unfriendly Scribes and Pharisees gathered together, not to profit by his teaching, but to call in question his works, and if possible to find occasion of fault in him. In such words as he only could speak he unveiled their hypocracy, and then for temporary rest withdrew to the borders of Tyre and Sidon, wishing no man to know it.

The story of the great works which he had done in Galilee had been told here and a Syrophenician woman who had heard of him, impelled by a mothers love, hastened into his presence to beseech him for her afflicted daughter. In Matthew's account we are told as he passed along she first presented her request, but he answered her nothing. But she was too deeply in earnest to turn back discouraged et this first trial and in spite of the endeavors of the disciples, who besought him to send her away, she was determined to press herself into his notice. We can hardly imagine such words of apparent coldness coming from those lips which were always beforehand with words of tender pity and mercy for needy suppliants; nevertheless, the chilling answer was, "It is not meet to take the children's bread and cast it unto the dogs." But He who knew the hearts of all men saw that hers was the rare trust which discouragement only served to strengthen. She did not come with claims; she was willing to accept a share of the blessing in the lowliest place. Humility, meekness and perseverance were in the prompt response, "Truth, Lord, yet the dogs under the table eat of the children's crumbs." Such importunity was pleasing to the Master. It secured to her not only a crumb, but the utmost desire of her heart. Jesus would not allow her to remain any longer in the agony of suspense. The gracious words "O woman, great is thy faith: be it unto thee even as thou wilt," more than made up to her for all the previous delay and seeming harshness.

Until now it is probable that her daughter had been violent and unmanageable, but when she went back to the house she found her quietly lying upon the bed, completely freed from the power of the evil spirit. If this woman had turned back when the disciples found fault with her, or had been discouraged because Jesus did not answer when she first spoke to him, her daughter might never have known the joy of being well.

Let us learn from this woman that however poor and lowly we are—whatever may be our trials and discouragements—even though it might seem that Christ himself had turned away from us—to still carry our case to Jesus asking his help and He will see that in His own good time our persevering faith is rewarded.

LESSON IV.

July 25, 1875.

THE DEAF MUTE.

Mark vii: 31–37.

31 And again, departing from the coasts of Tyre and Sidon, he came unto the sea of Galilee, through the midst of the coasts of Decapolis.

32 And they bring unto him one that was deaf, and had an impediment in his speech; and they beseech him to put his hands on him.

33 And he took him aside from the multitude, and put his fingers into his ears, and he spit, and touched his tongue;

34 And looking up to heaven, he sighed, and saith unto him, Ephphatha, that is, Be opened.

35 And straightway his ears were opened, and the string of his tongue was loosed, and he spake plain.

36 And he charged them that they should tell no man: but the more he charged them, so much the more a great deal they published *it*;

37 And were beyond measure astonished, saying, He hath done all things well: he maketh both the deaf to hear, and the dumb to speak.

Golden Text.—O LORD, OPEN THOU MY LIPS; AND MY MOUTH SHALL SHOW FORTH THY PRAISE.—Ps. li: 15.

There was no longer any seclusion or repose for Jesus in the region where he had healed the daughter of the Syrophenician woman and so he continued his journey through the coasts of Decapolis until he came again to the sea of Galilee, near which he had performed so many of his miracles. Matthew tells us (Matt. xv: 32) that at this time great numbers of sick and afflicted were brought to him to be healed and among them the case of the deaf mute which Mark specifies and which is the subject of our lessou to-day.

It was well for this poor man that he had friends who cared for him, for since he was deaf he could not hear for himself the story of the cures which Jesus had done and if it had not been for his kind friends he might never have been healed. Yes, it was through the help of his friends that this man received Christ's blessing. The blessed Saviour does not now live upon the earth among men as he did in those times, so that we cannot really take out friends by the hand and lead them to him, but we can tell them of his love and that he died to save them from their sins. It is the privilege of those who have for themselves found the friendship of Christ to hold him up by their Christ-like lives and loving words before those who hitherto have seen no beauty in him that they should desire him, and if we can only so lift Christ up before them that they can realize for themselves the great love wherewith he loved them we shall thus be the means of leading them to him and they will be drawn into his service on earth and thereby be fitted to see him face to face in the heavenly home—for Christ's own words are "I, if I be lifted up, will draw all men unto myself.

This man who was brought to Christ was not wholly dumb. He was deaf, but he could never have been born deaf or he never would have learned to talk. After he lost his hearing he lost the use of speech, or at least spoke with great difficulty.

He chose his own way of benefitting the man; instead of putting his hand upon him as his friends requested, he first took him aside from the multitude. We have no authority for saying why Christ withdrew the man from the crowd, but may it not have been that he intended by taking him aside and shutting him up to himself to make him feel that it was He alone who was dealing with him; and would not such a step be likely to make a deeper and more lasting impression upon him? He performed the cure in a peculiar manner. The man's ears needed to be opened. He might have been relieved by a simple word, but the considerate Jesus, who always adapts himself to people with whom he is dealing, knew that it was necessary that faith should be developed in the man who could not hear, and so by signs he encouraged his belief in his ability and willingness to help him. Accordingly he put his fingers into his ears and touched his tongue, which the man could both see and feel, and then raising his eyes to heaven—to show that it was by no mere human power he did this—"he sighed, and saith unto him, Ephphatha, that is, Be opened." Christ here sets us an example of prayer. If our Divine Redeemer looked up to heaven surely we need to seek God's blessing by earnest prayer upon every day which we begin and every work upon which we enter. At the word of Christ's power the words of all the prophets who lived hundreds of years before Christ came to earth were verified in this man, "the ears of the deaf shall be unstopped (Isa. xxxv: 5); for immediately he spoke plainly and heard again the voices of his friends and all the other pleasant sounds which come to us. It is a great deal for which to thank God that we can speak and make ourselves understood.

When they witnessed this wonderful miracle the astonished crowd responded "He hath done all things well." And can not we give these words even a wider significance then those Galileeans for, doubtless, they knew Christ only as a healer of bodily infirmities, but Christ, as we know, can do even greater things than these. Those who are spiritually deaf he can heal by giving the "hearing ear," and he can put a new song into the months of those who are spiritually dumb. Whatever means God may take to make us hear his voice let us never lose our confidence that He who has the ordering of our lives knows far better than we do what is best for us; and at all times, in sorrow and adversity as well as in joy and prosperity, may we be able out of full hearts to say, "Let him do what seemeth him good," for, "He doeth all things well.

Sunday-school Lessons on the Life of Christ.

LESSON I.

JULY 4, 1875.

MARTYRDOM OF THE BAPTIST.

MARK vi: 20-30.

20 For Herod feared John, knowing that he was a just man and an holy, and observed him; and when he heard him, he did many things, and heard him gladly.

21 And when a convenient day was come, that Herod on his birthday made a supper to his lords, high captains, and chief *estates* of Galilee;

22 And when the daughter of the said Herodias came in, and danced, and pleased Herodias and them that sat with him, the king said unto the damsel, Ask of me whatsoever thou wilt, and I will give *it* thee.

23 And he sware unto her, Whatsoever thou shalt ask of me, I will give *it* thee, unto the half of my kingdom.

24 And she went forth, and said unto her mother, What shall I ask? And she said, The head of John the Baptist.

25 And she came in straitway with haste unto the king, and asked, saying, I will that thou give me by and by in a charger the head of John the Baptist.

26 And the king was exceeding sorry; *yet* for his oath's sake, and for their sakes which sat with him, he would not reject her.

27 And immediately the king sent an executioner, and commanded his head to be brought: and he went and beheaded him in prison.

28 And he brought his head in a charger, and gave it to the damsel; and the damsel gave it to her mother.

29 And when his disciples heard of *it*, they came and took up his corpse, and laid it in a tomb.

Golden Text.—BE THOU FAITHFUL UNTO DEATH, AND I WILL GIVE THEE A CROWN OF LIFE.—REV. ii: 10.

Soon after the healing of Jairus' daughter Jesus went back again to his own country and calling the twelve apostles out from among his followers sent them forth in his name. It was at the close of this first missionary tour that news was brought to Jesus by John's disciples of the cruel death of his faithful friend and forerunner. This sad incident forms the subject of our lesson to-day.

When the wicked Herod heard of Jesus and his wonderful works his conscience smote him for his crimes, and he feared that Jesus was the great prophet whom he had slain risen from the dead. John, as well as preparing the way for Christ, which was his special mission, denounced the hypocrisy of the Scribes and Pharisees and did not hesitate, when occasion required, to rebuke the crimes even of a king. He did not shrink from reproving wickedness in high places, and thus fearlessly discharging his own duty, left the results with God. Let us not forget that Herod did not always turn away from John's preaching; he had some drawings toward the good—he even did many things which were right; yet, after all, he loved his sins better than anything else and was more ready to listen to the words and obey the wishes of a very wicked woman than he was to follow John's teachings.

This woman hated John because his holy life and words were a constant reproof to her, and she was determined to have him killed. The longed-for chance came at Herod's birthday feast. She sent her daughter to dance before the company, and Herod was so much pleased that, under the excitement of the hour, he made the rash oath which cost John his life. Instructed by her wicked mother the girl asked the head of the faithful John. "Exceeding sorry" we are told the king was, but he was not sorry enough to undo his wretched work and spare the faithful prophet. It was foolish and wicked in Herod to make such a promise; that was his first wrong step. It was still more wicked for him to keep it, for God's plain command is "Thou shalt not kill." Always remember "a bad promise is better broken than kept." If we have been betrayed into making a wicked promise, the only right thing to be done is to repent of it immediately and to show our repentance by all just possible reparation. By no means are we to feel obliged, as did the weak and foolish Herod for "his oath's sake and their sakes which sat with him," to fulfil rash vows. This is fearing God rather than man.

When John's disciples heard what had befallen their beloved teacher they came and took his body and laid it in the tomb—and then "went and told Jesus" (Matt. xiv: 12). In this hour of their sorrow and bereavement they took all their trouble to him who only could comfort and sustain them. In him whom their deceased master had hailed as the Promised Messiah was henceforth their only hope. And the dear Jesus, now that he has ascended to Heaven, is as ready to sympathize with all the bereaved and suffering children of earth as when these sorrowing disciples came to him with their grief. It is our privilege to "go and tell Jesus" *all* our troubles—little and great; but this sympathizing friend—the Friend above all others—would gladly have us bring to him our joys as well as our sorrows, and, if we thus improve our privilege, we shall find in his love and friendship, whatever may be our condition or circumstances, the occasion of our greatest and continual joy and rejoicing.

LESSON II.

July 11, 1875.

FIVE THOUSAND FED.

MARK vi: 34-44.

34 And Jesus, when he came out, saw much people, and was moved with compassion toward them, because they were as sheep not having a shepherd: and he began to teach them many things.

35 And when the day was now far spent, his disciples came unto him, and said, This is a desert place, and now the time is far passed:

36 Send them away, that they may go into the country round about, and into the villages, and buy themselves bread: for they have nothing to eat.

37 He answered and said unto them, Give ye them to eat. And they say unto him, Shall we go and buy two hundred pennyworth of bread, and give them to eat?

38 He saith unto them, How many loaves have ye? go and see. And when they knew, they say, Five, and two fishes.

39 And he commanded them to make all sit down by companions upon the green grass.

40 And they sat down in ranks, by hundreds, and by fifties.

41 And when he had taken the five loaves and the two fishes, he looked up to heaven, and blessed, and brake the loaves, and gave *them* to his disciples to set before them; and the two fishes divided he among them all.

42 And they did all eat, and were filled.

43 And they took up twelve baskets full of the fragments, and of the fishes.

44 And they that did eat of the loaves were about five thousand men.

Golden Text.—THOU OPENEST THY HAND AND SATISFIETH THE DESIRE OF EVERY LIVING THING.—Ps. cxiv: 16.

As soon as the apostles had told Christ of their cares and labors he took them apart into a desert place to rest awhile. Although they departed privately by ship the eager multitude were so intent on following that they went around the head of the lake afoot, and when Jesus arrived he found them already there awaiting him. Their persistence and earnestness secured to them Christ's blessing, for such an appeal was never made to him in vain. So interested was Christ in talking to these people, and so intent were they upon his instructions, that they seem to have taken no notice of how the day was passing. Their bodily wants were, for the time being, forgotten. Being reminded by his disciples of their need of food and that it was quite time he should send them away to the villages to get bread, Jesus improved the occasion to show that he was not regardless of any of their needs, but was as ready and able to feed their hungry bodies as he was to give the teaching which would satisfy their hungry souls. After a little consultation and going out to see what provision it was possible to make for them they found that all they had with which to feed this great multitude was five loaves and two fishes which a little lad had brought with him. Well might they inquire "What is that among so many?"

How those disciples must have wondered what Christ was intending to do, when, notwithstanding the total insufficiency, he gave the brief, calm command "Make the men sit down." We know that this miracle made a profound impression upon them for it is the only one which all four of the evangelists have recorded. Obedient to Christ, however, without questioning, the apostles seated the multitude, and when they were arranged in orderly groups upon the grass Jesus raised his eyes to heaven, gave thanks, blessed the loaves and gave to the disciples who distributed it among the multitude.

"The Lord will provide," was one of the great lessons of this miracle to all who witnessed and partook of the multiplied bread. Christ was sought that day in the desert for heavenly blessings and he made the earthly needs of those who followed him his care. "Your Heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God and his righteousness and all these things shall be added unto you" (Matt. vi: 32, 33).

Did you ever think, too, what must have been the glad surprise of that little lad as he saw his five loaves and two fishes which he had carried about all the day so multiplied by the dear Jesus as to be the means of feeding and refreshing all those tired and hungry people. He little knew for what purpose he had brought his little basket with its contents into the desert with him. But it was just like the kind and loving Christ, who never forgets the children and wishes every body to be happy, to allow this little boy to see that he was willing by his added power to make even his small stores a blessing to multitudes. And so, too, our little things—our words, our actions and services—small and insignificant as they may be in themselves—if we seek Christ's blessing upon them may be made of great use to those about us, and we may have the joy of knowing that others are made better and happier by our lives. Let us notice, too, that though Jesus created food he did not waste it. Those disciples might have thought there was no necessity for hiding themselves with what was left, for Christ could easily supply them with more in the same way—but not so! Christ meant to teach them and us that God's good gifts are never to be wasted. A wonderful miracle—was it not? Yet, when we think of it, is the way in which God gives us "our daily bread" any less a miracle? Can we explain how the blessings of rain and sunshine which only he can give, so multiply the seed sown that the abundant harvest—sufficient to satisfy the desire of any living thing—is the result? No; we can only say, "It is God's way." Let us ever remember that we need daily bread for our souls as well as our bodies. May we daily go to Jesus, who is himself "the bread of life," with the prayer "Lord, evermore give us this bread." If we thus go we shall be filled, for the compassionate Saviour never turns any empty away.

LESSON III.

July 18, 1875.

THE SYROPHENICIAN MOTHER.

MARK vii: 24-30.

24 And from thence he arose, and went into the borders of Tyre and Sidon, and entered into an house, and would have no man know *it*: but he could not be hid.

25 For a *certain* woman, whose daughter had an unclean spirit, heard of him, and came and fell at his feet:

26 (The woman was a Greek, a Syrophenician by nation;) and she besought him that he would cast forth the devil out of her daughter.

27 But Jesus said unto her, Let the children first be filled: for it is not meet to take the children's bread, and to cast *it* unto the dogs.

28 And she answered and said unto him, Yes, Lord: yet the dogs under the table eat of the children's crumbs.

29 And he said unto her, For this saying go thy way; the devil is gone out of thy daughter.

30 And when she was come to her house, she found the devil gone out, and her daughter laid upon the bed.

Golden Text.—THEN JESUS ANSWERED AND SAID UNTO HER, O WOMAN, GREAT IS THY FAITH: BE IT UNTO THEE, EVEN AS THOU WILT.—Matt. xv: 28

When the multitude had eaten and were filled Jesus straightway dismissed them, and his disciples and himself instead of seeking sleep "went up into a mountain apart to pray." Toward morning knowing that his disciples were in peril (a violent storm having arisen), he—the ever-present friend in trouble—went to them, walking upon the sea, and immediately the wind ceased. They soon came to the shore and, as it was everywhere that Jesus went, the people from the whole region round about brought their sick unto him and he healed them. Here, too, the unfriendly Scribes and Pharisees gathered together, not to profit by his teaching, but to call in question his works, and if possible to find occasion of fault in him. In such words as he only could speak he unveiled their hypocrisy, and then for temporary rest withdrew to the borders of Tyre and Sidon, wishing no man to know it.

The story of the great works which he had done in Galilee had been told here and a Syrophenician woman who had heard of him, impelled by a mother's love, hastened into his presence to beseech him for her afflicted daughter. In Matthew's account we are told as he passed along she first presented her request, but he answered her nothing. But she was too deeply in earnest to turn back discouraged at this first trial and in spite of the endeavors of the disciples, who besought him to send her away, she was determined to press herself into his notice. We can hardly imagine such words of apparent coldness coming from those lips which were always beforehand with words of tender pity and mercy for needy suppliants; nevertheless, the chilling answer was, "It is not meet to take the children's bread and cast it unto the dogs." But He who knew the hearts of all men saw that hers was the rare trust which discouragement only served to strengthen. She did not come with claims; she was willing to accept a share of the blessing in the lowliest place. Humility, meekness and perseverance were in the prompt response, "Truth, Lord, yet the dogs under the table eat of the children's crumbs." Such importunity was pleasing to the Master. It secured to her not only a crumb, but the utmost desire of her heart. Jesus would not allow her to remain any longer in the agony of suspense. The gracious words "O woman, great is thy faith: be it unto thee even as thou wilt," more than made up to her for all the previous delay and seeming harshness.

Until now it is probable that her daughter had been violent and unmanageable, but when she went back to the house she found her quietly lying upon the bed, completely freed from the power of the evil spirit. If this woman had turned back when the disciples found fault with her, or had been discouraged because Jesus did not answer when she first spoke to him, her daughter might never have known the joy of being well.

Let us learn from this woman that however poor and lowly we are—whatever may be our trials and discouragements—even though it might seem that Christ himself had turned away from us—to still carry our case to Jesus asking his help and He will see that in His own good time our persevering faith is rewarded.

LESSON IV.

July 25, 1875.

THE DEAF MUTE.

Mark vii: 31-37.

31 And again, departing from the coasts of Tyre and Sidon, he came unto the sea of Galilee, through the midst of the coasts of Decapolis.

32 And they bring unto him one that was deaf, and had an impediment in his speech; and they beseech him to put his hands on him.

33 And he took him aside from the multitude, and put his fingers into his ears, and he spit, and touched his tongue;

34 And looking up to heaven, he sighed, and saith unto him, Ephphatha, that is, Be opened.

35 And straightway his ears were opened, and the string of his tongue was loosed, and he spake plain.

36 And he charged them that they should tell no man: but the more he charged them, so much the more a great deal they published *it*;

37 And were beyond measure astonished, saying, He hath done all things well; he maketh both the deaf to hear, and the dumb to speak.

Golden Text.—O LORD, OPEN THOU MY LIPS; AND MY MOUTH SHALL SHOW FORTH THY PRAISE.—Ps. li: 15.

There was no longer any seclusion or repose for Jesus in the region where he had healed the daughter of the Syrophenician woman and so he continued his journey through the coasts of Decapolis until he came again to the sea of Galilee, near which he had performed so many of his miracles. Matthew tells us (Matt. xv: 32) that at this time great numbers of sick and afflicted were brought to him to be healed and among them the case of the deaf mute which Mark specifies and which is the subject of our lesson to-day.

It was well for this poor man that he had friends who cared for him, for since he was deaf he could not hear for himself the story of the cures which Jesus had done and if it had not been for his kind friends he might never have been healed. Yes, it was through the help of his friends that this man received Christ's blessing. The blessed Saviour does not now live upon the earth among men as he did in those times, so that we cannot really take out friends by the hand and lead them to him, but we can tell them of his love and that he died to save them from their sins. It is the privilege of those who have for themselves found the friendship of Christ to hold him up by their Christ-like lives and loving words before those who hitherto have seen no beauty in him that they should desire him, and if we can only so lift Christ up before them that they can realize for themselves the great love wherewith he loved them we shall thus be the means of leading them to him and they will be drawn into his service on earth and thereby be fitted to see him face to face in the heavenly home—for Christ's own words are "I, if I be lifted up, will draw all men unto myself.

This man who was brought to Christ was not wholly dumb. He was deaf, but he could never have been born deaf or he never would have learned to talk. After he lost his hearing he lost the use of speech, or at least spoke with great difficulty.

He chose his own way of benefitting the man; instead of putting his hand upon him as his friends requested, he first took him aside from the multitude. We have no authority for saying why Christ withdrew the man from the crowd, but may it not have been that he intended by taking him aside and shutting him up to himself to make him feel that it was He alone who was dealing with him, and would not such a step be likely to make a deeper and more lasting impression upon him? He performed the cure in a peculiar manner. The man's ears needed to be opened. He might have been relieved by a simple word, but the considerate Jesus, who always adapts himself to people with whom he is dealing, knew that it was necessary that faith should be developed in the man who could not hear, and so by signs he encouraged his belief in his ability and willingness to help him. Accordingly he put his fingers into his ears and touched his tongue, which the man could both see and feel, and then raising his eyes to heaven—to show that it was by no mere human power he did this—he sighed, and saith unto him, Ephphatha, that is, Be opened." Christ here sets us an example of prayer. If our Divine Redeemer looked up to heaven surely we need to seek God's blessing by earnest prayer upon every day which we begin and every work upon which we enter. At the word of Christ's power the words of all the prophets who lived hundreds of years before Christ came to earth were verified in this man, "the ears of the deaf shall be unstopped (Isa. xxxv; 5); for immediately he spoke plainly and heard again the voices of his friends and all the other pleasant sounds which come to us. It is a great deal for which to thank God that we can speak and make ourselves understood.

When they witnessed this wonderful miracle the astonished crowd responded "He hath done all things well." And can not we give these words even a wider significance than those Galileans? for, doubtless, they knew Christ only as a healer of bodily infirmities, but Christ, as we know, can do even greater things than these. Those who are spiritually deaf he can heal by giving the "hearing ear," and he can put a new song into the mouths of those who are spiritually dumb. Whatever means God may take to make us hear his voice let us never lose our confidence that He who has the ordering of our lives knows far better than we do what is best for us; and at all times, in sorrow and adversity as well as in joy and prosperity, may we be able out of full hearts to say, "Let him do what seemeth him good," for, "He doeth all things well.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. III. HAMPTON, VA., AUGUST, 1874. NO. 8.

THE RED CROSS, 1870.

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, F. RICHARDSON, RICHARD TOLMAN, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

The Southern Workman should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

HAMPTON, AUGUST, 1874.

SUCCESS IN BUSINESS.

From that momentous period in boys' lives, when frocks are exchanged for trousers, they speculate on what they will be when they are men. At first, fancy only is consulted. They will sail ships, or drive stages with four horses. After a while, they find that nothing they undertake is altogether jolly; that every bodily occupation has its peculiar ache; and every mental pursuit is exhausting, and crowded with competitors. As years advance, young men, finding obstacles in all paths, begin, in earnest, to inquire where lie their most available forces.

It is precisely at this turning point of life that a most important thing is apt to be lost sight of, and, perhaps, only realized after years of painful experience; namely, that the strongest of all business forces is whole-hearted perseverance. No trade could have become established among men, unless it was capable of yielding support: and at almost any business, an average person can make an honest living, if he will, and if his will is strong. Should a man fail at one undertaking, he will probably fail at others; the fault being usually in himself. Napoleon found it good, practical policy, never to have anything to do with unsuccessful men.

Hence, it is of the highest importance for a beginner, to stick to his first choice. He has in one short life, scarcely time to see how much he can make of any one profession. But he may notice that the front ranks in none of them are crowded. He who changes from one business to another, throws away time as well as the practical experience which he has gathered. But, whoever bends himself steadily to one chosen occupation, finds his field grow with his growth, until the prentice boy may become a millionaire.

In America, where people rise from poverty more frequently than anywhere else in the world, examples enough are to be seen of men who prove that they have the secret of success, by succeeding. When a beginner selects an occupation, he will do wisely to hunt for those who have prospered in the same field, and find precisely how they have managed. He may safely disregard the profuse advices of neighbors who do not themselves prosper. Successful men seldom make a noise about their methods; yet their actions are better worth study, than are cart loads of volunteered advice from those who are accustomed to having what they call bad luck. A beginner needs to model himself not upon good preachers, but upon good practicers.

In most occupations, money is chiefly made by *directing* the labors of others. But it is fortunate for most young men that they have not capital at first, to hire others. As in war, no one is fit to command until he has learned to obey; so in business, he who begins by working for a master, learns to manage employés of his own. While in a subordinate station, if a young man succeeds in making himself necessary to his master, he has taken a long stride toward success in life. Sorry hands are the first to be discharged; but there is always a demand for those who study their employer's interests; and whoever is remarkable for honesty, industry and good-will, has acquired a character worth to him, at least, a thousand dollars. As business is founded on confidence, a man will rise in proportion as others rely on his word, and on his judgment and energy.

Business success is only half gained by filling the purse. He is fortunate, who, early in life, discovers that money is as slippery as an eel. A thousand bargains offer themselves of things very desirable, but which can, somehow, be done without. If a man does not watch his expenses, he will go backward, no matter how much he earns. Many deserving persons are always at the bottom of the hill, because they do not cut off every outlay not essential to success; and because in undertaking new enterprises, they do not count the costs just as carefully as they estimate the profits.

THE FREEDMAN'S BANK.

The failure of this institution has been the first intimation which has really reached its ignorant depositors, that their hard earnings were not secured by the national government.

The funds were at first invested in United States securities only, as its charter at that time demanded. Afterward, this policy was changed, with the sad results of to-day. The bank, owing about three and a third millions to its depositors, has only one-ninth of the amount in cash and United States bonds. The remaining eight-ninths are in securities which have become unsaleable. The Southern Workman feels that he has been wounded in the house of his friends.

It may be some consolation to the pure-minded founders of the institution, to reflect upon the good which it has actually accomplished. During its short nine years of activity, it has shown poor people the accumulative value of little sums. It was far better for most of its depositors to have saved and lost, than never to have saved. Habits of self-denial have been formed; much money which would have gone for finery and folly has been rescued; and although mismanagement has cut off a percentage, yet there will be more left to many of its depositors, than they would have had, if the bank had not helped them to save.

Perhaps a salutary lesson will be drawn from the downfall of this strong institution, which, if fully understood, will be worth all its cost. It may impress the truth, that land is the sort of riches least likely to fly away from its owner. The values of stocks, bonds, and bank accounts, depend upon the honesty of other men, or upon their good judgment. But when land is prudently purchased, it is the owner's fault only, if it does not increase in value. It is the last kind of property to be disturbed by the price of stocks; and it alone, cannot be lost, stolen, or borrowed. Its possession means to a poor man an escape from rent, and is the first step toward independence. The Freedman's Bank will have fulfilled its noble purposes, if it has taught the people to be their *own bankers*, and set them on the road toward earning their *own homes*.

MEETING OF THE EDUCATIONAL ASSOCIATION OF VIRGINIA.

The ninth annual meeting of the Educational Association of Virginia, and the first ever held in this part of the state, assembled at the lecture-room of Christ Church, in Norfolk, Tuesday night, July 14th. After an appropriate prayer by Rev. Dr. Armstrong, of 1st Presbyterian Church, Prof. N. B. Webster, chairman of the local committee, announced the completion of the usual arrangements for entertainment, places of meeting, etc., and introduced the Hon. John B. Whitehead, Mayor of Norfolk, who had been requested to welcome the association to the hospitalities of the citizens. The cordial welcome to the "City by the Sea," was responded to by the President, Prof. B. L. Gildersleeve, of the University of Va., who proceeded to deliver his annual address, which was heard with marked attention.

Prof. L. M. Blackford was elected president for the ensuing year; and the meeting adjourned till 10 o'clock, the next day.

Among the prominent gentlemen attending the sessions of the convention, we noticed the state superintendents, Rev. Dr. Ruffner, of Virginia, and Prof. Newell, of Maryland; and of city and county superintendents, J. H. Binford, Esq., of Richmond; S. H. Owen, Esq., of Petersburg; Maj. J. F. Crocker, of Portsmouth; R. L. Crane, Esq. of Alexandria; J. J. Ladd, Esq., of Stannton; E. B. Macon, Esq., of Princess Anne Co.; J. C. Weaver, Esq., of Accomack Co.; and John F. West, of Norfolk Co.

The colleges and academic institutions were well represented by such professors as Atkinson, Blackford, Buchanan, Curry, Doggett, English, Garnett, Gildersleeve, Harris, Hogg of Alabama, Hoxton, Massie, McGuire, Minor, Price, Smith, Toy, Venable, Vawter, and Webster.

Of distinguished Virginians in attendance we recollect Lieutenant Governor Withers; Hon. John Goode; Judge Blow; and Rev. Drs. Armstrong, Blackwell, Barton, Peterson, and Thomas.

The regular work of the association consisted of the reading and discussion of papers on educational topics.

The paper on Geographical Instruction, read by R. L. Carne, Esq., elicited considerable discussion, in which Messrs. Binford, Owens, Ladd, Jones, Webster, and Withers participated.

Among the most important papers read and discussed, were the following: namely,—On Latin Translation, by Prof. W. W. Smith, of Bethel Academy; on Instruction in Chemistry, Physiology, and Natural History, prepared by Professor Davis, of Virginia Agricultural and Mechanical College, and read by Professor W. O. English; on The Study of Languages, by Professor Turner, of Hollins Institute; on Prizes and Honors in School, by Rev. R. H. Phillips, of Staunton Female Institute; and on The Best Practical Method of Teaching the Elements of English Grammar, by Prof. N. B. Webster, of Webster Institute, Norfolk. On all these papers there were pleasant and highly interesting debates.

Besides the papers above named, and the President's address, an able essay was read by Rev. Dr. Ruffner, on Mental and Moral Science in their Relations to Education; an address was delivered by Prof. Thomas R. Price, of Randolf Macon College, on The Place of the Mother Tongue in Education; and another address, by Rev. Prof. J. L. M. Curry, of Richmond College, on Our Public Free School System in its Relation to Colleges. It is to be hoped that all these papers and addresses will be published in the "Educational Journal," or in pamphlet form.

An invitation from the Principal of the Hampton Normal Institute to visit the school and partake of a collation was accepted, and on Friday afternoon the steamer *Mystic* was chartered for the excursion. About two hundred and fifty citizens and their guests, including a delegation of about twenty from the Maryland Association, enjoyed a delightful trip down the river and Hampton Roads, and were met at the wharf of the Normal School and escorted to Virginia Hall. After looking over the building, all assembled in the dining hall to partake of a lunch and listen to some fine music by the band of the National Soldiers' Home.

In tendering thanks for the invitation, Professor Blackford, president of the association, in a graceful speech, expressed his deep interest in the success of the Hampton Normal and Agricultural Institute. The Principal explained the origin, objects and prospects of the Institute as fully as possible in the brief time allowed by the arrangement to reach Fort Monroe in time to witness the dress parade. The party consisted of persons from remote parts of Virginia, from Maryland, Alabama and South Carolina—most of them representative men in the cause of education; and by the interest they took in all they saw, testified unmistakably, to the kind feelings entertained by the Southern people toward the efforts to instruct and elevate what President Blackford called "a long neglected class of our people."

Altogether, the Norfolk meeting of the Educational Association of Virginia, has been most pleasant and profitable to the entire community as well as to the members themselves; and all classes of our population will feel, directly or indirectly, the benefits of the stimulus it has given to the great cause of Education.

BUYING LAND.

While theorizers are expounding the designs of Providence as to the future of the colored race, a most important movement is going on by the race itself. Instead of rushing en masse to Africa, or aiming at occupations in which competition is active and powerful, the negro is quietly, wherever opportunity serves, securing to himself the title deeds of certain pieces of land. The soil may be poor, and the cabin rude and small, but its owner feels it to be like a firm footing in a bondless swamp. Without rents to pay, it is possible to lay up money, even for a man who works most of his time for others. A land-owner being a taxpayer, is directly interested in electing honest officers only, to spend the public money. By buying land, the negro is taking the most effectual means open to him, toward recognition as a useful citizen and a power for good in society and politics.

In all civilized countries, the class of land-holders furnishes the most influential men in other pursuits. Farmers, or the sons of farmers, have always taken the lead in America; and it may safely be assumed, that until an influential body of colored farmers exists, the negro never will be able to live down the calumnies of his enemies.

The peasants of Europe come to the United States in search of a chance to show what is in them. They find cheap lands; make a comfortable living; and their children become wealthy. The happiness, if not the existence of the negro in America, is staked upon his answer to this question: Can the colored farmers do as well on the cheap lands at the South, as the European emigrants have done at the West?

The author of the interesting article on the Opium Trade in California, published in this number, writes in a private letter as follows:

"I feel a little like the Chinese merchant here, who wondered why white people wished to know the bad side, and seldom took any interest in the improvement of his race, in their factory labors, in their service as domestics, in their eagerness to learn, etc. The Sunday-schools are very flourishing; and last Saturday, a foreign and Chinese Sunday-school joined numbers and went on a picnic. It was a curious mixture of dress, customs and games, and indicated a very friendly spirit, and a desire to improve. Selfish men are constantly trying to crowd back these celestials, and use the papers against them; but, still they come; and, on the whole, for good. They bring their vices, but they learn a great deal of good, and are of immense service as industrious workers. Housekeepers value them exceedingly. The Chinese question here, is what the negro question is, in the East."

AN EXCURSION.

There is nothing more refreshing to the tired denizens of the city than a visit to the country. Sweltering amid the heat and dust; pursued by cares and anxieties; annoyed by the constantly recurring jars of business, misunderstandings, and personal altercations; driven along irresistibly with the current of trade; spurred on by inexorable necessity or stimulated by the excitement of gain; no time for friendly intercourse; no time for domestic enjoyment; no time for thought; no time even for prayer; no time for any thing but work, work, work,—what a deliverance they experience when they can escape from the chains of their servitude to the freshness, joyousness and liberty of the country.

How the energies are quickened; how the recuperative forces are stimulated; how the heart pulsates; how the feelings glow.

The mind released from its long tension, recovers its elasticity; the finer sentiments, so long kept in abeyance, so long restrained by prudence and mastered by policy, now exult in the freedom of unfettered exercise; all the faculties assert their prerogatives; the whole man comes back to himself. He has been, all the while, an artificial man, living in an artificial world, a kind of twelve-hour clock, wound up in the morning, running down at night, resting a while in sleep, to begin the next day the same monotonous tick-tack, tick-tack of business life; keeps time very well, too, as all good clocks ought to do. Why, as long as he is so near me, I shall never be compelled to buy a time-piece. See! there he goes down to business half-past six exactly; yonder he comes from the Post-office, quarter past seven; yonder goes his boy around the corner for his julep, just eleven o'clock; there, he passes by to dinner, one o'clock precisely; and so on through the day.

But he has come out from all these things now, and left his mask behind him. Nature, in her artless grace, unbosoms herself to him; and he, through force of association and reciprocity of confidence, unbosoms himself to her.

What a ridiculous figure this grave, dignified man of fifty, cuts, as he goes whistling over the fields, jumping over the ditches and climbing over the fences, tasting the berries on the roadside and the sour-grass on the balk-row, just to see if they have the same flavor as when he was a boy. But hold! what makes him pause, looking thoughtfully and sad, while a tear, the first since the wrinkles came, steals hurriedly down his cheek as if afraid to linger in that unfrequented track? Ah! he sees just ahead of him the tangled growth that marks a country graveyard; and his thoughts have in a moment, carried him back over the lapse of thirty years, to the hour when in just such a place as this, he looked for the last time upon a mother's face, laid her form beneath the sod, and turned away alone, stricken, despairing, to fight the battles of life. Don't restrain your sighs nor check your tears. It is not weakness that wrings them from you, but the strength of an inner, purer nature, asserting its long neglected claims. Weep on, poor world-weary, world-hating, and yet world-loving brother of humanity, while your Mother Nature beholds you in the purest phase of your self-abused character.

But all this is not what I intended to write about. When I commenced, I purposed taking an imaginary trip to the country, in the neighborhood of "Fox Hill," stopping at the principal farms and prying somewhat, still with friendly eye, into the amount, manner, and kind of business done on each. Well, it is not too late for that now: so let us "jump into the wagon," and make a dry land excursion. Don't be in a hurry, now; for we wish to observe things carefully; and, besides, "Rosinante" is somewhat incompetent, and still more averse to rapid locomotion. To use the language of a venerable "ward of the nation" when speaking of himself: he is "not swift, but constant."

Hold up there, now; we will go in at this gate with the mulberry on each side. Fine farm, showing care, enterprise, management, and their legitimate consequence—thrift. Who lives here? Why, Colonel J. C. Phillips, one of the best farmers in Eastern Virginia. Here he comes to meet us, wide brimmed hat, linen coat, and breeches in his boots. A farmer will be a farmer, you know, summer or winter.

Well, we pass over our short conversation with the Colonel, in which we learn that he raises corn, wheat, oats, potatoes, garden truck and fruits. We can see from the corn rows, wheat stocks, and potato vines, that his land yields well. We can also see, that the soil is light, well cultivated, easily drained, and as the farmers say, "lays well." The fact of the business is, the colonel has a good farm and is making money on it. Well, he deserves it; for he is a genuine type of the old Virginia gentleman—I had like to have said old gentleman; for his hair is getting suggestively gray; but I can easily remember when he was a youngster; and I am nothing more than a boy, yet. Passing along by the handsome little farm owned by R. B. Wood, Esq., we next come to a fine residence on the roadside, the outward appearance of which, is a standing advertisement of thrift and comfort. This is owned by C. W. Hickman, Esq., and is just such a farm as that of Colonel P. But good gracious! if all those children are his, this would make a splendid location for a female institute.

What magnificent oaks these are! and that is the finest field of clover I have seen since the "late unpleasantness." Every thing in good order, and a general welcome to all who are worthy of it.

Get up, "Rosinante," we 'll pass on to the next. Heigho! a country schoolhouse. We 'll just drive as near to the ditch on the other side as possible; for the experiments of my boyhood are too fresh in my memory for me to feel any degree of comfort in close proximity to a schoolhouse. Turn in here, and we 'll spend the night with the "Big Corporal," and continue our journey to-morrow—I meant to say, next month. CRAB.

OPIUM TRADE IN CALIFORNIA.

Probably there is not an evil among the many that have stalked abroad to demoralize, degrade and destroy the human race, more to be deplored than that of opium. Its extensive use in most of the Oriental countries—once almost confined to that division of the world—is, now, in this age of commercial communications; in these times when men go to and fro in the earth, carrying with them the peculiar habits of their nationalities,—spreading and deepening its grasp. Like the kindred evil of alcoholic liquors, to which, in its general social effects, it bears a strong resemblance, it finds its way to new lands, and with it carries its palsying influence upon the energies of new countries. California, with its thousands of Chinese, opens a profitable market for the opium trade; and with every year the trade increases. Two lines of steamers bring their loads of coolie emigrants and their large cargoes of this East India drug. It is estimated that no less than ten thousand dollars worth enters the Custom-house of San Francisco by every vessel, and that the annual trade amounts to about a quarter of a million. It is also the opinion of those who are acquainted with the matter, that a large quantity outside of this estimate finds its way into port through the devices of smugglers. The article being easily hidden, the duties enormous, and the penalty amounting to nothing more than confiscation of the article, the temptations are strong; and not only the China men and women, but sailors, passengers, and officers of ships, find strong temptations to overreach authority and law. Custom-house officers are employed to inspect every individual Chinese or foreigner, who lands on American shores from China; and a certain percentage is allowed on all smuggled opium. A lady is employed to inspect Chinese women. Sometimes it is found braided in the hair, sometimes packed in the hollow sole of a Chinese shoe, and sometimes bound on the limbs. It has been moulded in the shape of eggs and whitened over to escape notice; made to imitate the roots of plants; and covered with some earthy substance to counterfeit the medicinal herbs used by the Chinese doctors; or concealed among the dried lizards and other reptiles used also as medcine. Usually it is in the form of a thick paste like tar, but sometimes dry and hard as flint. The duties are a hundred per cent. A merchant sometimes pays twenty-five hundred dollars duty on a single importation.

The streets of the Chinese section of San Francisco abound in opium dens: the corner groceries of the celestials. Low and dark and vile with heavy odors, the opium smokers recline en mass supported on straw pillows. Each individual pays for his whiffs, takes a long bamboo pipe on the end of which is dropped a small quantity of the opium paste. A few inhalations produce the desired affect, and hours of heavy sleep follow. Once addicted to the habit, an opium smoker rarely ever reforms; mind and body become enfeebled, and the power of self-control is soon gone. When the consequent sufferings become unendurable, an overdose quiets the bodily pain forever. The proportion of opium smokers is hard even to guess at. Probably about half of the Chinese men and a very few of the women are consumers. The same discouraging influences which drive the California miner to intemperance, operate to increase the proportion of smokers amongst the Chinese. Restraining influences are fewer than in his own land. Home, wife, children far away, and frequently disappointed in his money making schemes, a Chinaman takes to his pipe as a white man to his cups. The better class of Chinese citizens look upon the evil as a serious one. They are quite willing to use their power, feeble as it is, against the trade, and are extremely reluctant to give foreigners information about its consumption. A good Chinese emperor once exclaimed: "I know that wicked and designing men, for purposes of lust and profit, will clandestinely introduce the poisonous drug; but nothing under heaven shall ever induce me to legalize the certain ruin of my people." Alas! that such wisdom cannot prevail.

Another dark side of Chinese life in San Francisco is the constant slave trade carried on in Chinese girls. These girls are bought in China,—kidnapped sometimes—brought to San Francisco and sold for vile purposes. They are generally very young, often not over twelve years of age. Their treatment is brutal and degrading in the extreme, often so much so, that they appeal to the city authorities or missionaries for protection. It is for the relief of this class of women, that a Chinese Home has been opened, designed also as a "Normal School for the training of Bible Readers."

Correspondence.

LONDON, *May* 31, 1874.

Every stranger who comes to London, must of course visit the Tower, that ancient and world-renowned edifice, so prominent in English history almost ever since England began to have a history, and around which clusters so many interesting associations, some, indeed most of them, of so dark and terrible a nature, that the very name "Tower of London," caused an involuntary shudder and a thrill of indignation at the remembrance of the bloody and cruel deeds which have been done within its walls.

The antiquity of this building has been a subject of much discussion; but, it is generally believed to have been erected by William the Conqueror, in the early part of his reign, and strongly garrisoned at that time by his Norman followers, in order more fully to awe his new subjects into a more secure allegiance.

It stands upon the north bank of the Thames, the principal entrance being on the west side; while on the south side is an arch called the "Traitors' Gate," through which state prisoners were formerly brought by way of the river. Near this Traitors' Gate is the Bloody Tower, supposed to be the scene of the murder of the two young princes, Edward V. and his brother, who were smothered by order of Richard III. It is not knowu, however, on what special account this part of the building received its gloomy appellation, which was given to it sometime during the reign of Queen Elizabeth. For nearly five hundred years before this, it had been a royal palace; and we were shown the apartments occupied by Queen Elizabeth previous to her accession to the throne, and also the stone under which the bodies of the unfortunate princes were found. The principal buildings or parts of the immense pile —all of which is included in the Tower—are the Church, the White Tower, the Old Miut, the Record-office, the Jewel-office or Keep, the Horse Armoury, the Grand Storehouse, the Lion's Tower, and the Beauchamp Tower. The church, or St. Peter's Chapel, as it is called, is principally remarkable as the depository of the headless bodies of numerous illustrious personages, who suffered either within the walls or just outside of them, on Tower Hill; among whom, may be mentioned the good and accomplished Lady Jane Grey, and Anne Boleyn Catharine Howard (two of the unfortunate wives of Henry VIII.), and many men of high rank both in the church and state. The White Tower is supposed to be the oldest part of the whole edifice, dating as far back as 1070. This consists of three lofty stories, with vaults underneath, in one of which, Sir Walter Raleigh was a prisoner, and where he wrote his History of the World. I stepped into the horrid place, but had no desire to linger within its walls.

In another, we saw the beheading axe—a most villainous looking thing—the block, and the executioner's mask of black leather; also a horrid instrument of torture called "The Scavenger's Daughter," which, by means of a cruelly ingenious arrangement of screws, could, by slow degrees, crush a man into a lifeless, shapeless mass. But enough of such horrors. Thank God! their day is gone by. Within this White Tower is the ancient chapel of St. John, originally used by the English monarchs, and said to be the finest specimen of Saxon architecture in England. It is a very massive chamber of oblong form, with vaulted roof and heavy coinmns, with large squared capitals curiously sculptured, and having a cross on each, and presenting a very imposing appearance.

In the Jewel-keep we saw the crowns of the last four or five generations, Queen Victoria's surmounting the rest. This is a magnificent work of art, weighing one and three-quarter pounds, and valued at one million pounds sterling, about five millions of dollars. It is one mass of diamonds and other rare and precious gems—rubies, emeralds, etc. This *light and airy head-dress* is not intended for every day wear. On state occasions it is borne on a cushion, by some noble official of the Royal Household, in the grand procession, while the crown actually worn by the Queen, is a small, though very splendid tiara of gold and gems. Here too was the famous Koh-i-noor bracelet; this name, signifying "Mountain of Light," was given to it centuries ago by the Eastern Monarch; in whose possession its existence first became known to the world. Its history is curious and eventful; but after passing through many illustrious hands, it has now been for a long period one of the trophies of British conquest, and here it is likely to remain.

Among other interesting and beautiful things here, we saw the Royal baptismal service—the sceptres made of gold and incrusted with diamonds and other paraphernalia used at coronations, such as the sceptre with the dove, St. Edward's staff, the three swords which are carried before the sovereign; namely, the "Curtana" or sword of mercy, pointless;

(See page 63).

A MAN'S A MAN FOR A' THAT.

ROBERT BURNS.

Is there, for honest poverty,
That hangs his head, and a' that?
The coward slave, we pass him by,
We dare be poor for a' that!
For a' that, and a' that,
Our toils obscure, and a' that;
The rank is but the guinea's stamp,
The man's the gold for a' that.

What tho' on homely fare we dine,
Wear hodden gray and a' that;
Give fools their silks, and knaves their wine,
A man's a man for a' that!
For a' that and a' that,
Their tinsel show and a' that;
The honest man, though e'er so poor,
Is king o' men for a' that.

Ye see yon birkie called a lord,
Who struts and stares, and a' that;
Though hundreds worship at his word,
He's but a coof for a' that:
For a' that and a' that,
His riband, star and a' that;
The man of independent mind,
He looks and laughs at a' that!

A king can make a belted knight,
A marquis, duke and a' that,
But an honest man's above his might
Good faith he maunna fa that;
For a' that and a' that,
Their dignities, and a' that,
The pith o' sense and pride o' worth
Are higher ranks than a' that.

Then let us pray that come it may—
As come it will for a' that—
That sense and worth, o'er a' the earth,
May bear the gree and a' that;
For a' that, and a' that,
It's comin' yet for a' that,
That man to man, the world o'er,
Shall brothers be for a' that.

ROBERT BURNS.

In a miserable little cottage in the southern part of Scotland, there was born in the winter of 1759, a boy who was destined to bear through a short life the burdens and glories of genius, who was to write some of the most beautiful songs in the English tongue, and yet to lead a life of coarse dissipation, and, with the means of riches in his hand, to be always a poor and needy man.

Robert Burns' father was a small farmer, who, being unsuccessful in his attempts to improve his condition, died, leaving his family penniless. Throughout his lifetime, however, he devoted himself to his children, training them carefully himself, and obtaining for them better education than was usual among men of his class, so that Burns was a fair English scholar, and developed, early in life, a strong taste for the songs and ballads of his native country. He worked as a farm laborer for years, writing constantly, and producing some of his finest compositions in the midst of the homely life from which, as yet, he had no thought of escaping. His "Mountain Daisy" and "The Mouse" were composed while holding the plow, "Death and Doctor Hornbook" while resting himself at the roadside; while "Hallowe'en," "The Cotter's Saturday Night," and many charming ballads, were written during his residence at Morsgiel, a farm which he and his brother leased together. Although the poems which were produced at this time were read by a small circle of friends, Burns had no idea of publishing them; and his foolish dissipation resulted finally in such entanglements that he made up his mind to leave Scotland and go out to the Island of Jamaica, but was actually unable to procure the money necessary to pay his passage. At this crisis, the thought for the first time presented itself to him, of making his poems a source of pecuniary profit; and he at once opened negotiations with a printer, and an edition of six hundred copies was rapidly sold, from which he realized enough to enable him to commence his journey. Just as he was about to sail, however, he received letters containing such favorable criticism upon his work, that he determined to take courage, and once more try his fortune at home. He went back to Edinburgh, where he soon became known, and achieved sudden fame, being introduced into the society of persons of highest rank, by whom he was admired and flattered as a sort of curiosity. None of his new acquaintances, however, gave him any substantial help or wise advice; and he says bitterly of himself, "The great misfortune of my life was to want an aim." He took a farm again in 1788, and married a woman to whom he had been attached for years; but he was an unskilful farmer, and soon gave it up, and settled down upon the salary of three hundred and fifty dollars per annum, which he received as an excise officer, and which was his only support during the remainder of his life. He was extremely proud, and often refused to take money which he had fairly earned; while he yielded so often to the temptation of drink, and was naturally so careless, that it is little wonder that he died at the age of thirty-seven, in poverty even greater than that in which he was born. His widow and children were cared for by public sympathy; and his memory is cherished now as the memory of a man rarely gifted; but during his lifetime he was undoubtedly neglected and misrepresented, and many of the vices and misfortunes which preyed upon him might have been averted by a little tender care on the part of those among whom his lot was cast. As a poet, however, his fame is secure, for he wrote many songs which are sung wherever the English tongue is spoken, and treasured everywhere as gems of true poetry.

THE RED CROSS.

During our own great war and the late war between France and Germany, much has been done to relieve the sufferings of the sick and wounded by societies of surgeons and nurses, carefully organized, and generously supplied by government, and private charity, with the means to carry on their noble work.

This system originated with a brave and tender-hearted English woman, who, years ago, in the Crimean war (between Russia and England), went out from England single-handed, and begun what seemed the almost hopeless task of caring for the sufferers stricken by shot and shell, or, worse still, by the fatal influences of climate, scarcity of food, and exposure. Many women followed her, and gave such strength and power of purpose to the work, that Florence Nightingale and her corps of nurses found their names written high up upon the roll of Fame, and their example a power for good throughout the whole civilized world. When our own war broke out, hardly a week elapsed before the "Sanitary Commission" hoisted its flags, and opened its rooms to receive and send help to our soldiers; and hundreds of women rallied to the work which they alone could do, and, as time showed, could do so well. Other societies were formed, and there was scarcely a village through the length and breadth of the land that did not contribute its share toward the support of nurses and hospitals, sending food, clothing, and luxuries of all kinds to the men whose duty led them daily into the jaws of death.

Still more recently, in the Franco-German war, this same work was continued; and not only did the two conflicting nations care in this manner for their own sick and wounded, but the other European nations, and even our own country, sent nurses and supplies to assist in the great charity which knew not the difference between friend and foe, when friend and foe alike lay in need of help.

Our first-page picture shows a member of the English society of nurses, the badge of her sisterhood, a Red Cross, being bound upon her left arm. We see that she is standing in the dismantled room of some fine, old house, a room from which the rich furniture, the costly hangings, the beautiful pictures, have all vanished, to make place for hospital cots, surgical appliances, and the thousand articles needed in such work as this nurse has to do. She has just unpacked one of the great packages sent from England by some stranger hands, and with her arms filled with bandages, is going back to her ward, where, doubtless, the surgeon is waiting for her help. Looking at all these things, and realizing how much suffering and terror they represent, who can help praying that there may be no more war; but, that, instead, men may everywhere be led to see how fair a thing is Peace.

THE SHIP OF THE DESERT.

In the great deserts of the East an animal abounds, whose existence seems a direct proof of the wisdom and beneficence of Providence: for it is so exactly adapted to the peculiarities of its native country and the needs of the people whom it serves, that it is scarcely possible to doubt the purpose of its creation. The "ship of the desert," *i. e.*, the camel, is of such importance in the life of Eastern nations, that were it to become extinct, the result would be the depopulation of the whole of the desert country; and we offer the following description to our readers, hoping that they will stop for a moment to consider, how vast are the interests, how great the creative wisdom, which this single animal represents.

"Designed to live in regions where but scanty nourishment of vegetation and water can be found, the camel meets the demand of the most perfect possible organization. All fulness of form is sacrificed, the head is small and earless, the neck bare of flesh, while the thighs and legs are stripped of every muscle not essential to movement, and the dry, meagre body has only the vessels and tendons required to knit the frame together. The jaw is powerful enough to crush that hardest of elements, the tough and scanty vegetation of the desert; and the foot is a mass of soft muscle, which slides helplessly in the mud, and is unfit for climbing, but is perfect for traveling over the even surface of the sandy plain. The camel is condemned to become the easy slave of men, because it has no defense against its enemies, being destitute of horns or tusks, and not sufficiently swift of foot to enable it to escape by running. Its flesh is sweet, nutritious food; its milk the best of beverages; of its hide, tents are made; of its hair, the most splendid shawls the world can show; and its bones serve for weapons of war, and agriculture, and for domestic utensils. The hump is a fatty growth upon the camel's back, and in suffering or starvation it is the last part of the animal exhausted, as it wastes away very slowly."

In long journeys, the camel can exist and toil for days, entirely without food; but usually he snatches the coarse shrubs growing beside his sandy path, and depends upon them and upon the absorption of his hump, for his nourishment. His internal water sacks supply fluid, which prevents him from suffering from thirst; while the wonderful scent, which enables him to detect the existence of water at a long distance, often saves the lives of his less acute human companions. Then when the terrible desert sirocco darkens the air with clouds of sand, and burns the flesh, and closes the painful nostrils, the camel finds his advantage. He has no ears to be filled with the driving sand; his ugly nostrils close up impenetrably; and his deep-set eyes, overhung by his huge brow, will be the only eyes in the whole caravan, which can safely look upon the awful scene. His shambling gait seems awkward and slow; but, such are his powers of endurance, that he can accomplish a long journey in a shorter time than a horse, besids carrying a burden of from four hundred to one thousand pounds; or, for short distances, as much as fifteen hundred pounds. His patience is great, and he bears uncomplainingly the ill-usags and hard work to which he is often subjected, although he is believed, by the natives, to be capable of life-long hatred of those who ill-treat him. In desert traveling, one often meets with a camel laden with a man, his wife, their numerous children, and household goods, all packed in two carefully balanced panniers, hanging upon either side of the great, slow-pacing animal, who thus wins his title, "the Ship of the Desert."

FLOWERS.

The glory of the summer is just now at its height, and the long, hot days, when the whole world seems brilliant with light and color, make it almost incredible, that, in the not distant future, the chilly barrenness of winter is waiting for us. We hardly realize, that, by and by, the earth will put away its green grasses and leaves, its gay and delicate blossoms, its rich fruits, and take on, instead, a brown mantle of decay, or the white garment of the snow. But it will come, this wonderful, never-failing change, and under grey, cold skies, with deserted fields and bare gardens about us, we shall think regretfully of the lovely blossoms, the luxuriant growths of the summer time.

Now, why do not more of us try to carry some of this beauty with us through the dismal winter days? Why do we not remember that a little forethought, a little labor, will enable us to keep our rooms fair with bright and fragrant flowers, from the first frost till the incoming of another spring? To gather a few seeds, to cut and start a few slips, is no difficult matter; and the pleasure their growth will bring from week to week is known only to those who have tried the experiment. Hanging baskets of coarse wicker work, of wire, or earthern basins, or gourds, or cocoanut shells, may be placed in our windows, and filled with such seeds and cuttings, as shall make them sources of delight all winter long. Put in rich earth, and then plant, for example, morning-glory seeds and cuttings of ivy, with a fern or two; and you have a little garden which asks nothing of your hands except regular watering, and once a week a thorough washing of its leaves with warm soapsuds, and which returns to you, for every moment that you spend upon it, hours of pleasure. Then, in common flowerpots, or, indeed, in anything which will hold earth, you can plant certain bright, hardy, little plants, which are not dainty in their requirements as to soil and temperature, but, which, with small encouragement, will blossom energetically for weeks and weeks. Petunias, the common varieties of geraniums, salvias, pansies, etc., all do well in this way, and are pleasant friends to have beside us in our living rooms, when rain and wind keep us within doors, and the biting frost has laid low the last summer flowers. A little ingenuity in training the climbing plants, ivies, etc., upon framework, or about the windows, will often transform a room into a bower of greenery; and this may be done without shutting out any of the precious sunlight, which is even more necessary to the human occupants of a house, than to the plants which they cherish.

The cost of all this pleasure and beauty is—what? A little care, a little trouble, a little perseverance, a little time—no money, no special knowledge, no unusual advantages. The receptacles for the seeds and slips, may, as we have said, be made from almost anything that will hold earth; the earth itself is cheap enough, and within everybody's reach; and the seeds and cuttings are to be had by almost everybody for the gathering and choosing. Only, it must be remembered, that in order to have our little house gardens in order for the winter, it is necessary to begin work before the winter comes; and now is the time to collect seeds to be planted a month or two later, and to start cuttings for the luxuriant growth which will by and by gladden our eyes.

Use a few leisure moments in summer, then, wherein to lay up stores of beauty and enjoyment for the winter, whose cold breath will make our bright-faced flowers doubly precious to us.

WATER AND ITS USES.

This all-important subject is never more important than when the summer heat makes us realize more keenly our dependence for health and comfort upon a pure and abundant water-supply; and a word or two here as to the necessity of the free and constant use of water for our houses and our bodies, may not come amiss, and we trust may increase the attention of our readers to this pressing matter. As there is nothing which can, to any extent, take the place of water, and as we actually cannot subsist without it, we ought, in the first place, to see that our houses are conveniently and fully supplied with it, from wells or springs; and, in the second place, to make sure that such supply approaches, as nearly as possible, to absolute purity. Then our housekeepers should remember that no house can be wholesome to live in, which is not clean, and that no house can

be clean without the use of plenty of water; while every one of us should understand that a daily bath from head to foot, is a necessity both of neatness and of health; and should make this daily bath a matter of duty. It is not, of course, indispensable that the water used for cleaning and washing should be as pure as that used for drinking; and for the former purposes, rain water caught in cisterns, or even in open tubs, is best, and usually most convenient to obtain. The wells which furnish our drinking water should never be near enough to any outhouse, sewer, cesspool, or other source of contamination, to receive impurities from them; but this is often more easily said than done, and in crowded neighborhoods, or where there is any uncertainty about the position of the well, it is altogether safer, especially in hot weather, to *boil* the water used for drinking. This may, at first, seem rather troublesome; but habit will soon make it easy to keep three or four quarts of this boiled water always on hand, and this in itself is a safeguard, in many places, against some of the more ordinary illnesses of summer. It is, in short, the simplest way of purifying drinking water; and although it does not, by any means, remove all impurities, it nevertheless goes far in that direction.

But, to recur to the external use of water, we feel that it is scarcely possible to say too much as to the desirability, the necessity of the daily bath. It is one of the tests of civilization: for no person of civilization can tolerate physical uncleanness; while there may be a deeper meaning than we think for, in that connection of "clean hands and a pure heart." Those who have grown up in ignorance or have allowed themselves, in spite of knowledge, to become careless in this matter, will doubtless find that it requires some resolution to make a beginning; but we heartily wish that every one who reads these words, would, at once, decide to try the experiment of taking a thorough bath, every morning for a month. It is easier to commence in hot weather than in cold: for the refreshing effect is more immediately felt; but this is one of those cases in which virtue will be found to be its own reward; and whoever will persevere now from this first of August until the first of the coming September, will be almost sure to find that they have laid the foundation of a habit, which will bring them health and happiness so long as they live. A thorough bath of cold water in summer or winter, strengthens the muscles, cleanses the skin, stimulates the blood and the nerves, and is the first step in a life of cleanliness, toward which life we should all of us constantly aspire.

THE INDIAN BIBLE.

On the 2d of November, 1631, the Rev. John Eliot landed, from the ship *Lion*, at Boston, and in the following year, settled as teacher and preacher at Roxbury, Massachusetts. He devoted himself, at once, to the conversion of the Indians, and, learning their language, translated in 1863, the Bible into the Indian tongue. This was the first Bible in any language, printed in America; and it naturally made the Harvard College press (from which it was issued) famous, two editions, of three thousand copies in all, appearing in the years 1663 and 1666. "Up Bihlum God," which means the Book of God, is a portion of its title; but there is but one man now living, who can read the language in which this unique book is written, the tribe for whom it was prepared, being entirely extinct. So far as is known, there are but fifteen copies of Eliot's Indian Bible in America, and a still smaller number in Great Britain; a copy, which was sold in New York in 1868, having been purchased for $1,130, the highest price ever paid for a printed book in one volume, in this country. The devoted and faithful Eliot labored for many years, and won for himself the title of "Apostle to the Indians," a name which truly he well deserved.

The wicked are not always so happy nor the good so unhappy, as is imagined; and vice is, nine times out of ten, its own punishment.

BY J. ENDECOTT LINDEN.

THE WAY.

(*Isaiah* 35:8).

A highway hath the Lord cast up,
The "Way of Holiness;"
Wherein his own redeemed may walk,
Whom he doth love and bless.

"No lion shall be found thereon,"
Nor any conscious sin;
And though a fool, the wayfaring man
Shall never err therein.

To find this way, my anxious soul
Had sought, with many a tear,
Till Christ himself revealed it me,
With his own words of cheer.

"I am the Way, the Truth, the Life;"
Frustrating not his grace
By any effort of my own,
I bow before his face.

So, now, a refuge strong from sin,
From both its guilt and power;
I find at last, sweet, perfect rest
In Christ my Rock, my Bower.

Oh that beneath his cleansing blood
I may through life abide;
Till he shall send his loving hand
To waft me o'er the tide.

Then, safe within "my Father's house,"
Where the many mansions be,
I'll sing his power which, from all sin,
Through faith, hath set me free

LEFT BEHIND.

LEFT BEHIND.

Poor Ponto! It made him sad to be left behind, and I do not wonder at it. One bright autumn day his little master, Henry, had said to him, "Ponto, would you like to go to the beach? Uncle Charles and I are going to the beach."

Now, if there was anything that Ponto liked more than another, it was going to the beach, and chasing the little birds along the wet sand, and seeing the foamy waves come up and chase him, as if they were saying, "Leave those little birds alone."

And so, when Henry spoke of going to the beach, Ponto jumped up and barked with delight, and tried to lick his little master's face with his tongue. Then he ran round as if he wanted to say, "Oh, I'm so glad, so glad! for I do love to go to the beach."

But there is many a slip between the cup and the lip. Now, it happened that Mr. Cross was to make one of the party to the beach, and Mr. Cross did not like dogs. He said he would not have a dog with him: so Uncle Charles had to tell Henry that Ponto must stay at home.

Henry was greatly disappointed at hearing this. "Poor Ponto!" he said, "after all, I cannot take you with me to the beach. You will have to stay at home."

Ponto did not quite understand these words; but when Henry tied a string to his collar, and fastened it to a ring in the wood-shed, then Ponto understood that his little master had changed his mind, and would not take his dear dog with him to the beach.

Ponto whined and cried when he found he was not to go, and felt sad enough, when, through the open window of the wood-shed, he saw Henry, Uncle Charles, Mr. Cross, and all Henry's brothers and sisters, going off to the steamboat that was to take them to the beach.

"This is too bad!" thought Ponto. He tugged at his rope, but could not break it; then he lay down on the floor; then he jumped up and barked; and then he gnawed at the rope. "I do so like to frolic on the beach with my dear master!" thought Ponto.

For more than twenty minutes he tried to get away; and when, at last, he had almost given up trying, the rope broke, and Ponto was free. With the rope dangling at his collar, he ran at once down to the wharf; but the steamboat had started. Ponto saw it, and barked long and loud; but Henry could not see or hear him.

Henry and his party arrived at the beach without Mr. Cross; for, just as they were starting, a summons from his wife compelled Mr. Cross to leave. It was now too late to get Ponto, and Henry missed him so much that he was sad.

But that forenoon while he was in the water with his uncle, learning to swim, he saw all at once a dog running along the sand. "Can that be Ponto?" cried Henry. Yes, it was indeed Ponto. As soon as the boat returned to the wharf, Ponto got in, and on its next trip sailed down to the beach without paying his fare: for the captain supposed he belonged to some one of the passengers.

How glad Ponto was to see his young master! And how glad was Henry to see Ponto. They had a fine time together in the water. Was not Ponto a clever dog to find his way all alone to the beach? and to know, that, by staying on board the boat, it would take him where he could find Henry? I think I never knew so bright and good a dog as Ponto.—*The Nursery.*

For the Southern Workman.

AN AMERICAN NOBLEMAN.

In America, you know, we do not believe in giving patents of nobility to descend from father to son, so that an idle young fellow can content himself with the glory of his great grandfather's hard-earned title. "The field is the world: let every man win his own laurels; for the only true nobility is the nobleness *in* him"—that is what we say.

The standard of true nobility has varied with the world's growth. Brute force, physical courage, chivalrous deeds, intellectual power have all had their turn in earning renown; and the older the title, the more likely it is to have been won in the distant dark ages, by a sledge-hammer of a hand that could not write its own name. David tells of a time when "a man was famous according as he had lifted up axes upon the thick trees." One would be more famous now if he could devise some way to save the labor of cutting them down by hand: for this nineteenth century is pre-eminently the age of invention.

And America is pre-eminently the country of inventors. American inventions are famous the world over; and foreign nations, whose notions of ranks and titles have been so different from our own, are recognizing the nobleness of American inventors, by conferring upon them their own orders of nobility.

During the great World's Fair, held at Vienna, Austria, a year ago, for the purpose of collecting and comparing the works of all nations in art and science, a letter came to this country from the commissioners in charge of the United States department, announcing that the Emperor of Austria had created Thaddeus Fairbanks, of Vermont, inventor of the Fairbanks scales, a Knight of the Imperial order of Francis Joseph. "It seems," they said, "that the emperor, who is fully imbued with the spirit of the age, has grown convinced that no country can become truly great, save through its manufacturing and commercial activities; and being impressed with the inventive genius of Mr. Thaddeus Fairbanks, desires to confer some mark of personal respect and honor upon him."

Of course, every one knows what the Fairbanks scales are. Whatever we want weighed, from a letter to a loaded freight car, we like to bring to Fairbanks' scales. They have taken the first premium at more than one World's fair, and are used in every quarter of the globe, and their very name suggests fairness in the balance. It is pleasant to know that their inventor is still living to enjoy the honors and wealth that his genius has brought him, and to bless not only the world with his inventions, but his own town by the true nobleness of his character.

The Hampton Students, on their way to Canada, had the pleasure of a visit to the great manufactory in St. Johnsbury, Vermont, the largest of its kind in the world, from which over fifty thousand of the Fairbanks scales are sent out annually, to all quarters of the globe.

The process of casting the glowing molten iron into the sand moulds is always a brilliant, beautiful sight; and a walk among powerful, giant machines working away, almost by themselves, as if the brains were in them, instead of in one small, human head, is interesting, even to one who does not understand their operation. For some interesting statistics as to the manufacture, we are indebted to Mr. E. A. Walker, who showed us through the works.

"The establishment employs constantly a thousand workmen, principally Americans, most of whom have been in the manufactory from twenty to forty years.

"The sales of the house reach $2,000,000 annually, with a rapidly increasing demand. The establishment, which has been an assured success for over fifty years, has works that cover over ten acres of ground.

"The Fairbanks scales are produced in three hundred varieties—of all sorts and sizes—from the most delicate standard of the druggist or banker to the ponderous railroad-car or canal-boat scales. They are adapted to the standard of all nations, and marked with the signs of each. Large invoices are constantly sent as far as Japan. They are carried on the backs of camels across the deserts of the East, and supplied to the entire world.

"One of the most remarkable manufactures of this company is the 'Railroad Track Scale.' This is one of the later inventions of that great mechanical genius, Thaddeus Fairbanks. The platforms are built ranging in length from thirty to one one hundred and fifty feet. The larger of these are used for weighing freight trains as they pass, and correspond in structure to the most substantial railroad work.

"The 'Live Stock Scale' is another specialty of this establishment, of the Fairbanks make. They have weighed in the Union Stock Yards of Chicago, in the past seven years, 17,400,000 animals, taking them on by the drove at once. Thus both the drover and the butcher know what they are doing when they buy and sell.

"To our agricultural population, these scales are invaluable. By their aid can be ascertained the actual difference between what they buy and sell, and the various successes of their fattening processes on cattle. Anything that has weight, and can be handled and moved, Fairbanks can weigh. The largest scale is registered five hundred tons; but those of double its range are frequently built to order. To weigh a loaded steamboat, a railway train in motion, a drove of cattle, at once, six thousand bushels of grain an hour, would seem hardly possible; but these are everyday tasks for the Fairbanks scales.

"All the scales are subjected to the nicest tests before being 'sealed.' The minutest films of metal are used for the more delicate trials. Masses of iron, weighing hundreds of pounds, are placed alternately on the different corners of the scale platform, and if the difference in position changes the 'record,' the scale is condemned. The thoroughness of the work, and this severity of the test, is the explanation of the world-wide reputation of the Fairbanks scales for accuracy."

Mr. Thaddeus Fairbanks is the oldest, and the only one living, of three brothers once associated in the business, created by his inventive genius. One of them was governor of his state; and his son, the Hon. Horace Fairbanks, is the inventor of some valuable additions to the machinery. The beautiful houses of several members of the family are grouped on the hills above the manufactories; and their public spirit and benevolence extend beyond their own *fair banks* through all the town, whose fine, free library, and art gallery, containing able works of our own and foreign artists, were gifts of Hon. Horace Fairbanks; and its academy was built at an expense of $80,000, by Mr. Thaddeus Fairbanks, our true, American nobleman.

WRECKED AT HOME.

Left alone on Grampus Rock, with all sign of rescue fading away into the night, things looked pretty dismal for ten shipwrecked boys. Some of us had never slept away from home before in our lives, —unless, perhaps, when we lay in haymows and barns, on the "night before Fourth o' July." For on that night, at twelve o'clock precisely, it was the custom of the entire boy population of Fairport to ring the church bell—the "town bell" we called it—and build a bonfire on the Common. These amusements were forbidden, being destructive to the sleep of the older people, to say nothing of burning fences and dry-goods boxes. So we escaped from home and hid away in hay-lofts, until the hour when the clangor of the town bell and the flames of bonfires should banish sleep from the entire town for the rest of the night.

"I say, fellers," said Jack Adams, "this is like sleeping out, night before Fourth o' July."

Bill Keeler whimpered: "But we aint got no fire." Bill's grammar always was a little shaky.

Fire! There was an idea! If we only had a fire, it would not be so lonesome. But there was nothing to burn, it seemed; and Dandy Blake said that fish-bones and sea-weed would not catch afire, even if we had matches.

Matches! Who had any matches? It would be strange if, out of ten boys, at least one-half did not have some stray matches among the odd lumber stored in their pockets. There was a general rummaging, and pockets turned inside out gave forth nails, twine, chalk, fish-hooks, sinkers, knives and other such valuables; and in Ben Dennett's vest pocket—for Ben wore a real waistcoat—were found three matches! In Rufe Parker's jacket was found one more. It had worked through a hole in his pocket, and slipped down into a corner of the lining, where it was captured with great triumph.

But what to burn? Here were the matches, but no wood.

"Let's burn the boat!" cried Jem Couner.

Little Sam burst into tears. "You shan't burn my father's boat," he said.

"Pho! there's nothing left of her but small pieces. We are in for it now, and it'll be no worse to make a fire of the old thing than to make a wreck of her, anyhow."

"And we shall catch it, anyhow," added Bill Keeler, gloomily: "so we may as well be hung for an old sheep as a lamb." Still the idea of burning even the fragments of old Snowman's boat was a little appalling, even to us shipwrecked young mariners.

"I move we burn the *Red Rover*," said Jack Adams, removing his battered cap by way of making himself presiding officer. "All in favor of that will say 'aye;' contrary-minded, 'no.' It's a vote," he added, as a shrill chorus of ayes rose on the chill air.

A melancholy procession of boys took up the line of march over the rock to the other side, where the main part of the wreck still lay. The old hatchet was found under the after-part of the boat, where it had been left. Armed with this, Ben Dennett struck the first blow, shivering off a huge chunk of pitchy pine in an instant. This set an example; and we all rushed at the wreck like hungry wolves, each one tearing away a slice, Sam Snowman vieing with the rest in the work.

With great glee—laughing and joking at our misfortune—we lugged the wood over the ragged spur of rock to the leeward, where we were out of the wind. Some slivers of dry pine and fragments of newspaper from somebody's pocket served as kindling. One of Ben Dennett's matches was carefully scratched on a dry stone, under his cap, the entire company crowding around to keep off the air. It fizzed a little, sputtered, choked Ben so that he gasped for breath, then—it went out. Three were left. Another and another were scratched, each boy holding his breath; and each went out irresolutely. Ben had wet his matches when he went overboard.

Rufe's one match was all we had left. Little Tommy began to tremble with fear and cold as that was produced and anxiously drawn across the surface of a smooth, dry stone. It fizzled, crackled into a clear flame, and in a moment a bright, yellow blaze was leaping up from the little knot of pine and dry sea-grass. Each boy gave a great hurrah of joy; and we had a jolly fire.

We brought over, bit by bit, the entire wreck of the once proud *Red Rover of the Bloody Seas*, and prepared for the long night before us. Some of the fragments of the old craft had floated away and were lost. Some were rescued from the detached rocks, where they had lodged. Jerry Murch waded out into the swirling tide and secured a piece of the broken gunwale, which he particularly coveted. Leaving the rock, to return, he cut his bare foot on a sharp shell, and, giving a little howl of pain, tumbled over into the current, which bore him swiftly away.

Speechless with terror, and with mouths wide open, the boys stood helplessly looking at their comrade as he was swept out from Grampus. But Ben Dennett, dropping his armful of wood, dashed into the water, struck out bravely, grasped Jerry by his long, red hair, and dragged him into shallow water. As they regained the shore, Jerry, dropping his bit of timber, which he had held all the time, rubbed his head ruefully, and said, "You needn't have pulled a fellow's hair so."

"That's the way always to save a drowning man," said Ben. "Aint it so in story books? You know the hero seizes the other hero by his flowing locks, and all that sort of thing."

But the rest of the boys executed a sort of war-dance around the heroic Ben, doing him honor for saving two lives that day. We had not forgotten that he took Tommy Collins on his back when we were wrecked; and nobody thought it less heroic because the water then was only knee-deep.

The roaring fire put a different look on things right away. Basking in the cheerful blaze, we watched the limpets broiling on the hot stones; for we were ravenously hungry, and even these tough morsels of shell-fish tasted very nice. There was no water, and the hot, salty limpets made us somewhat thirsty. But the Fairport boys were not used to whimpering much; and though some of them licked their chops, as they looked across at the little stone farm-house at the entrance of the harbor, and remembered the nice, brown pans of milk in the dairy, nobody complained.

Some of the little fellows were dozy, but not one of us thought of going to sleep. It was pretty clear that we could not be found until daylight; and Jem Conner's suggestion that we put our fire on top of the rock, so that it might be seen from town, was scouted as a wild and extravagant project.

"Who could see the fire so far off? And who would bother themselves about us, anyhow?"

That was boy-reasoning. Yet, at that very moment, and all through that anxious night, the island-dotted bay, the rotting wharves, the marsh, and the spruce-covered pastures were searched painfully by anxious men and mothers, who could not give up their children for lost.

Unconscious of the pother which our absence was making in the distant, unsleeping town, we little midgets perched ourselves on the rocks about the fire, and told stories.

"Give us the 'Drummer Boy,'" said Bill Keeler.

This was one of Rufe Parker's stories, inherited from his grandfather's time, but common property in Fairport. Every Fairport boy knew the story of the drummer boy's melancholy ghost; but Rufe always told it well.

"No, don't let 's have that; it 's a ghost story," said little Sam Snowman, glancing around the gloomy picture with a scared look.

"Oh! bother the ghost!" said Ben. "I've heard it lots of times. Heave ahead, Rufe. Who's afeard?"

As Ben was the hero of two rescues from drowning, he was allowed to have his way, and Rufe then told his tale.

"It was a wild and gloomy night in the month of March—"

"No, no," broke in Jem Couner. "'It was a tempest-tossed and weeping night in the month of March.' That's the way it goes. I've heard it lots of times."

"I aint neither," replied Rufe, angrily. "And I just want to know who's telling the story—you or I?"

"O shut up, Jem!" said several of the boys; and Rufe, somewhat heated in this interruption, went on:

"It was a wild and gloomy night in the month of March" (with a withering glance at Jem), "when the British abandoned Fort George, situated on the heights of Fairport. They went away in such haste that they forgot a little drummer boy, aged fifteen, who was in prison in the dungeon—the which you may now see in ruins in the lower left-hand corner of the fort, as you go in from the side toward town; but the roof 's fallen in, so that you can't see all of the dungeon, but you can see where it was; and us fellers have been in there many a time, and know it's so."

Taking a long breath, Rufe proceeded: "Well, this poor little drummer boy, aged fifteen, when he heard the soldiers marching away in a hurry, jumped up and beat 'The Retreat' on his drum, which he happened to have with him; but in vain. Though he beat his drum with uncommon energy, and made a deuce of a row, he couldn't attract the attention of his departing comrades, who marched off in double-quick time—for the Americans were after 'em,—and so left their unfortunate drummer boy shut up in the dungeon—aged fifteen."

"But he was aged fifteen once before," interposed Tommy Collins, whose eyes were as big as saucers.

"O cork up, youngster!" said Ben Dennett. "Heave ahead, Rufe."

"A great many months, mayhap years, passed away before the dungeon in old Fort George was visited by anybody. The war— Oh! I forgot to say in the right place, that this was in the Revolutionary War. The war was over, and some people thought they would explore the dungeon, to see if, mayhap, they might find some curiosities, and, mayhap, some stores of gold and silver. But, there in a dark and dismal corner, their tin lantern—for they had one of those tin lanterns from Rowell's store—their tin lantern showed them a heap of skeleton bones bent over a rusty, dusty drum. *It was the little drummer boy, aged fifteen!*"

Proceeding in a ghostly whisper, and glancing aronnd on his terrified audience, so as to mark the effect, Rufe went on:

"When Fort George was evacuated, it was the fifteenth of March, Seventeen Hundred and something or other; and now, on the fifteenth of March, every year, his ghost comes to the old dungeon and beats his ghostly drum. People don't remember it, sometimes; but when it is another wild and gloomy night in the month of March, they hear from the old fort the hollow rolling of the drum. Then they say, 'It's the fifteenth of March;' and so it is. And, last March, me and Bill Williams hid behind Oliver Bridges' house, and we heard the drum, just as sure as a gun. It was an uncommon wild and gloomy night, just like this" (the stars were shining thickly in the sky while Rufe was talking); "and, if we'd waited, we would have seen the ghost of the little British drummer boy, aged fifteen."

Some of the chubby faces about the fire grew pale as this blood-curdling story was concluded. The place seemed more lonely than ever, while the boys listened to the soft lapping of the waves on the rocks, and the far-off note of the sea on the wild shores of the bay. It was late—how late nobody knew; we had nothing but the stars to tell the time. Most of us were dreadfully sleepy; but everybody was too much afraid to sleep. What might not happen in the darkness and silence of the night?

As we boys cronched together about the flickering fire, suddenly cries of distress and horror were heard from the other side of the rock. There were sounds of groans and shrieks for an instant; then all was still. Again, the yells and cries grew more and more sharp, as of a person in mortal anguish; then they sank away in a sobbing groan. Every boy stood at once on his feet, his eyes starting from his head, his form motionless; and not a word was said. Bill Keeler's seal-skin cap actually rose three inches on the top of his head, held there by his white hair, which stood on end with terror. You could have hung your hat on Rufe Parker's eyes, they stuck out so.

Nobody stirred. Jack Adams was the first to speak:

"Let's go and see what it is!"

And away he dashed, like a brave old mutineer of the ship *Bounty*, as he was, before his comrades could still their chattering teeth long enough to say "No." Every boy followed Jack, each one afraid of being left behind.

Half-way over the rock, there came another loud, wild cry. This time we heard the startling words:

"Help! help! help!"

And jumping down on the other side, the whole mob of boys tumbled over Jem Conner, who was lying under a crag, howling in his hands, speaking-trumpet fashion, and making all these unearthly noises just for a lark.

"O you scarecrows!" said he. "Before I'd be fooled so!"

He had stolen away while Rufe was telling the ghost story; and he knew just about when to come in with the chorus of groans and yells. He had the tale of the drummer boy all by heart.

"Pshaw! who was afraid? We knew it was you," said Jerry Mnrch.

"Of conrse, we did," said little Snowman, his teeth still rattling like a pair of castanets.

Jack Adams said it was a mean joke—so it was—to try to scare a lot of little fellows like that. Jack was almost always right.

Finding their way back to the fire, the excited boys sang a few mournful little songs about Old Dog Tray, who was gentle and was kind, and whose tail hung down behind, just like any other Old Dog Tray; but it was a very dull business. One by one they sank off to slumber, and all was still save the low wash of the waves, the solitary cry of a night-hawk overhead, and an occasional snivel from a heap of legs and arms where some of the poor, little, old soldiers were dreaming of home.

Once, toward morning, there was a general alarm. One of the boys, awaking from a troubled sleep, caught sight of a sail creeping down by Nautilus Island. He sang out, hastily, "Sail ahoy!" Bnt the little craft was too far off to hear his hail. The half-awakened boys stood disconsolately about, rubbing their aching limbs and eagerly watching, as the sail, ghostly in the grey dawn, faded away in the mist and disappeared behind Holbrook's. We left the water's edge, and, seeking our uneasy bed once more, slept hrokenly until sunrise.

It seemed a moment after—but it must have been several hours, for the sun was rising over Kench's Mountain—when I was awakened by the rattle of oars pulled noisily into a boat, and the sound of voices. Starting up in the chilly air, I beheld Gitchell's boat, her keel just grating on the rocky beach of our island. In the bow stood old Gitchell, with the painter in his hand. He saw the boys rising, one hy one, from the rocks. The remark he made was, "Wal, I swan to man!"

Uncle Oliver, Captain Bakeman and 'Si Redman were in the boat. They had been searchiug for us all night. The harbor had been explored in every direction; and now, toward morning, the whole distance as far up as Nigger Island having been covered, they had extended their search to Grampus, hut with faint hopes of finding the young brood so far out to sea.

We were rescued. And nothing in life ever tasted so good as the half-warm water which we found in a small keg on board. There was nothing to eat, though old Gitchell, with a dark grin, offered us a chunk of pig-tail tobacco, on which he allayed his own hunger.

What a triumphal voyage was that which we made homeward! A soft, westerly breeze sprang up with the sun; the clumsy old boat, dear to fishing excursions and chowder parties, seemed a barge of beauty. Somewhat lame and sore with our uneasy rest on the rocks, and faint with long fasting, we hoys were joyful enongh to forget all trial, and entertained our rescuers with marvelous tales of our night's adventures.

As the old craft drew near the town, the news of our coming, spread: for the boys swarmed over the gunwale, and crowed prodigiously their greetings. The wharf was dotted with tearful parents, sisters and brothers, some of the latter looking half envious at the heroes of the rescue. We were received with open arms. Nobody thought of scolding. A great terror had been removed. Each father and mother, I suppose, thought, "For this my son was lost and is found, was dead and is alive."

Even old man Snowman, as he took little Sam into his big arms, brushed a drop of dew off his weather-beaten cheek with the back of his tarry hand, and only said, "You blamed little rat."

There was rejoicing in Fairport that summer morning; and in many happy homes a great cloud of sorrow was lifted, as the young prodigals were welcomed with smoking breakfasts, and with that little show of feeling which a New England cool self-restraint permitted.

It was a peaceful end to what at one time seemed a most perilous adventure. Looking back at it now over the still lapse of years, it does seem like a narrow escape. Perhaps we trnant yonngsters were much to blame for the night of tearful apprehension which we brought into the quiet old town. Perhaps—and who shall say that each one did not deserve to "catch it," as little Sam expected he should, when he reached home after the wreck?—*St. Nicholas.*

A NEW WRITING-MACHINE.

The *Mechanics' Magazine* figures and describes a new form of writing-machine, the invention of the Rev. Malling Hansen, superintendent of the Royal Deaf and Dumb Institution of Copenhagen. The machine is designed for rapid writing, and is also capable of being used by the blind. The work is done by means of a series of keys, moved by the fingers something in the same way as the keys of a concertina, each key leaving the impress of its proper letter or character on the paper below, when it is struck by the finger. The keys are so disposed, that the imprint of each type, when struck, is directed to, and received upon, a central spot, over which the blank paper is made to travel by means of suitable machinery.

Besides offering great facilities for copying purposes, the machine is said to rival stenography as a means for reporting speeches or taking down dictated composition. Rapid writing rarely exceeds four letters per second; while in ordinary speaking, from nine to ten, and in rapid speech, from fifteen to twenty letters are uttered per second. This machine, with a little practice, enables the operator to take down an average of twelve letters per second, and an expert manipulator can considerably exceed this. The instrument is in use in London, and its performances are said to be very satisfactory.

BRONZING OBJECTS OF WOOD, ETC.

Objects of wood, stone-ware, and porcelain, picture-frames, etc., may, it is stated, be made to receive a beautiful bronze, by applying, by means of a brush, a thin layer of a water-glass solution, and then dusting this over with fine bronze powder. The excess of the powder is to be removed by gentle tapping; and the article, if of porcelain or some stone-ware, slightly heated. The bronzing may be polished by means of an agate stone, and thereby made to assume a beautiful effect.

(From page 59).

and the swords of justice, temporal and ecclesiastical. But the most interesting room to me was the Beauchamp Tower, a chamber into which prisoners were brought to spend the night previous to their execution. The walls are covered with carvings and inscriptions cut by many a noble hand, one in particular, by Lord Dudley, the husband of Lady Jane Grey: it is a coat of arms with the letters IANE, cut above it. There are ninety-one of these inscriptions, all of them most sadly and painfully interesting. The entrance to this tower is through a little door, which opens upon a secret staircase built in the thickness of the wall. As we came out and walked across the Tower yard, we were shown the stone and railing marking the spot where the scaffold formerly stood. We were conducted all over the place by one of the warders, dressed in the ancient style. But one must make many visits, and explore the place very thoroughly, to take into his memory one half the curious and wonderful things to be found here.

Not far from the Tower, stands the splendid Monument erected by Parliament in commemoration of the great fire which occured in 1666. I have climbed to the top of this, two hundred and fifteen feet, by its marble staircase, consisting of three hundred and forty-five steps. I was rewarded by a glorious view from the balcony over the capital. The column is of the Doric order, fluted, upon a pedestal twenty-eight feet square, the north and south sides of which, each have an inscription in Latin—one describing the desolation of the city laid in ashes, and the other its glorious restoration; on the east side is a statement of the time at which the pillar was begun, continued and finished, covering a period of six years; and the west side is covered by a finely carved emblem of the scene, which contains many allegorical and some historical figures. I have been told by one of my uncles, an old habitue of London, and well versed in its history, that this great fire commenced at Puddling Lane and ended at Pie Corner; but I do not find any such appetising names in this locality at present.

Agricultural.

DRAINAGE AT NORFOLK.

II.

If two kernels of wheat be sown, one in Egypt and the other in England, the one in the latter country is in danger from too mnch moistnre at the roots; while the one in Egypt has entirely different peril to encounter. The compact coating of Nile mud causes Egyptian grain to flourish, not merely by fertility, hnt by keeping ont the hot, drying air, which would rob the earth of all its moisture. Travelers inform us, that, while Egypt is one of the richest countries in the world, no wheat is there produced on porous soils.

The climate of Norfolk, for a month before wheat harvest, is more similar to that of Egypt than to that of England. Our prevailing winds, at that season, instead of being laden with moistnre and imparting it to porous soils, as in England, come over a hot country and suck up moistnre wherever they find it. Plants need to drink as much as animals; and whether the climate and soil of Norfolk furnish the wheat plant with too much or too little water, is to be determined, not hy foreign, or northern, but by Norfolk experience. Without cautious trials, it would surely be a wild thing for Norfolk farmers to rnsh into tile drainage, merely because it is an English panacea.

Northern farmers drain, that they may be ahle to work their soils early in the spring. At Norfolk, there is seldom a month in the year, in which, soils provided with occasional ditches, are too wet to work.

English farmers drain so as to escape the rust. Norfolk farmers, would, by tile draining, run the risk of forcing their wheat into growth in January, and its loss or serions injnry by our long, cold springs. It would be far more profitable to lose the crop by rust, than by a costly, winter forcing-apparatus of tiles.

If Norfolk were a green isle with a large home market, and its farmers had nothing to fear from competitors southward, an expense of thirty or forty dollars per acre in drains, might pay wealthy men a good interest, hy enahling them to gain a few days over their neighbors. As the case stands, there is yet no proof that the outlay would not consume the profit.

Wheat is a valuahle crop, but not the only one. We have others not known in England (such as corn), which are less risky, as valuable, and better suited to our soil and climate. It is yct to be proved, that drainage would not injure these sunmer crops, by letting in the hot, dry air about the roots.

In the Northern states, the more the ground is stirred, the moister it is. At Norfolk, any old nncle will tell you that you will kill cucumbers, by hoeing them in a dry time.

In the North, wheat is the first thing sown when the new land is broken.

At Norfolk, the practice is to sow no grain or clover until several years have elapsed, and the soil becomes compact. Porosity is feared hy the farmers; and the fact is worth many theories. Surface flooding, hy sudden torrents, is the chief danger from water, dreaded hy the Norfolk farmer, after he has tapped his beds of sand. Before he spends on drains several times the value of his land, it were well for him to try it on a small scale, considering carefnlly the force of the old adage, that "Circumstances alter cases."

As for wheat growing, it is to be hoped that English and German farmers who come to Virginia, may notice how much has been accomplished at the North, in avoiding rust by selecting early ripening varieties of seed. Effort in that direction, and in proper enrichment of the ground, seems much more promising of valuable results, than does tile draining to a Norfolk OBSERVER.

For the SOUTHERN WORKMAN.

SOME THOUGHTS ON FARMING.

BY A WOMAN.

Tilling the soil appears to have been the most ancient and time honored employment.

When the sun first rose on the earth, warming and vivifying the myriad germs of vegetable life concealed in her bosom, there sprang up, in great luxuriance, the thorn, the thistle and the briar, as well as the kindly fruit, for the food of man.

Now, here in this field of labor, was placed our Ancient Ancestor, with the command to select and cultivate snch plants as were necessary to his wants,

His first implements must have been rather rude: for as yet, the brain to conceive, and the hand, to fashion the spade, the hoe and the plow, had not come into being.

From that time, to the present, our blessed Mother Earth has given us, lavishly, from her stores, tenfold, for all our care and attention.

To receive the greatest reward for our labor, we must understand what constitutes the particular kind of soil we intend to cultivate, and the nature of the vegetable life we wish to nourish upon it, and see if the earth contains the food required for a vigorous growth. Though, from the earliest times until now, men have tilled the ground, they have hnt slowly come to the great truth of the immutable laws, which govern everywhere in nature, in the earth as well as on it, that the relation of *cause* and *effect* is clearly seen in the productions of the soil.

For long ages, men worked on, as moles, in the dark; but, in modern times, in a few of the most enlightened nations, men of the ablest minds have devoted lives of industry and toil to investigation and experiment; and farming has become a science.

We have agricultural colleges, where our young men learn the art and science of farming, and magazines exclusively devoted to conveying a knowledge of the best methods of agriculture. There is a right as well as a wrong way of doing things in this department, as in others; and to be a successful farmer, one must learn the art. Instead of the rude plow of the Egyptian, which was only a sharp stick, we have the steam plow, all manner of planters and reapers, machines so multiplied and numerous, that, little more is required, than to direct the machinery.

Yet, with all these helps, many are content to farm in the old way. They take upon large tract of land, never examine the earths which

compose it, indeed, are quite ignorant of whether it is suited to the crops, whether it requires manures or what kinds. They break up fifty acres or more for corn, plow a shallow furrow, plant, paying little attention to the kind of seed, work it once or twice, and then let the weeds tend it the rest of the season. Just so with other crops: about half put in; weeds allowed to grow all along the fence-rows, every year bearing a greater abundance, —notwithstanding all this careless, ignorant way of farming, nature is friendly, and a considerable yield is produced.

Now, if one-third of the ground was broken and done intelligently and thoroughly, the best seed selected, fertilizers used if needed, not a weed allowed to hold up its head—and working hand in hand with *nature*—the result would be, with less hard labor, a harvest such as would astonish the possessor. A little, well done, is better than much badly performed.

If the farmer is ignorant, so much the worse for his business. There is little excuse for him. He has his daily and yearly observation and experience of the operation of the laws of Nature. He is in the midst of her fields and groves, and she waits to pour her treasures into the lap of her faithful and obedient children. If he is too indolent to learn wisdom with these golden opportunities, he pays a heavy penalty.

If the farmer is poor, let him look to his ways: it is the result of ignorance, carelessness, or extravagance. The want of industry and economy, is the common parent of almost all the poverty in the world. To practice economy is a lesson which many are long in learning, and some never master. Where you find ten indnstrious laborers, there will be but one who knows how to save. It is an old and true saying, "Take care of the cents, and the dollars will take care of themselves." This appeals most emphatically to the consideration of the farmer.

There is great waste here in this favored land, for want of barns and sheds to shelter the stock in winter. Horses and cattle will keep fat on one-third less food, if protected from cold and storms—"The merciful man is merciful to his beast." Then there is a great saving in mnnres, which can always be used to advantage somewhere on the farm, but lose much of their value when exposed to the winter rains.

Another great item of waste is farming tools: they should always be kept dry, under cover, when not in use; they will work better, and last twice as long, as when left out; besides, there is much valuable time consumed, and often loss of temper, in hunting a plow here, and a hoe there, where it has been left, in the field, when last year's crop was put in; then, some one must run after the spade, sticking in the ground, in the garden, or lying rusting in the fence corner; the scythe is hanging in a tree, or, at best, in an open shed; and after considerable trouble, the things are found, rusty and weather-beaten, and in poor condition for use.

Another item, is the harness for the teams: it is often either hung on the fence, or thrown down in a heap, in what is only an apology for a stable, tramped on and broken. When put on, a buckle gives way—the place is supplied with a string,—a strap or a trace breaks, —a piece of rope is tied on; after a time, the whole sett is in such a bad condition, that a spirited horse breaks loose, runs off, and there is a general smash-up, making a heavy bill for repairs. Now, a little care in keeping the harness blacked and greased, and hung up in the dry, with one or two hours' work in mending occasionally—which every farmer ought to do—would be a great saving; indeed, he should be able to repair the most of his implements; and he will generally find wet days enongh for that purpose, if he will so apply them.

Particular care should be taken, in gathering the crops. It is poor economy, to raise more corn than can be gathered in the autumn. It should be cut, husked, put in dry cribs, secure from rats, the fodder stacked near the barn—which should never be very distant from the house, so convenient that the farmer can visit and feed his cattle, at least, twice every day.

Allowing the fodder to remain standing after the corn is removed, and turning the stock in, to shift for themselves, through the winter, is slovenly and wasteful. The corn blades, after a few heavy frosts and drenching rains, are of little value for food, and the cattle live at starvation point. This, the humane farmer will not permit.

The crops should, as soon as practicable, be put in readiness to take advantage of the best market.

To you, lords of the soil, the most honorable and independent of any class of laborers, I would say, Let your ambition be, to have the neatest and best managed farms in the state; the finest stock—the most carefully tended and the most profitable; and your prosperity will be a beacon light to the surrounding neighborhood, and a blessing to yourselves. Rest not satisfied at any point short of the highest intelligence, the soundest wisdom and morals, and the greatest refinement in taste and manners. Not in vain, should the sweet influences of Nature breathe around you, in your daily walks. The strength and the virtue of a nation lie in her yeomanry.

Be faithful to your high calling.

THE UNORGANIZED SUBSTANCES FOUND IN PLANTS.

Let us now examine those complex substances in the juices and cells of plants, produced out of the sap, which are not possessed of organized structure, although they are most of them destined by nature to be ultimately converted into organized structure. They are the organic elements combined into complex molecules, waiting for the final touch, which is to make them the abode of life. They may therefore be called *organizable bodies*. Most of our food, and many of the luxuries of our tables, are obtained from these substances, by arresting them in their progress of development.

SUGAR is one of these; produced out of the vegetable sap by the agency of *cell-life*. Sap is not at all sweet when it enters the spongioles of the roots, but it becomes so, as it ascends toward the leaves, by a new arrangement of the organic elements. We find by analysis, that each complex molecule of sugar is composed of twelve atoms of carbon, twelve atoms of oxygen, and twelve atoms of hydrogen. This can only be accounted for by the redistribution of the elements of carbonic acid and water; of the former, twelve atoms of its carbon and twelve atoms of its oxygen have united with twelve atoms of the hydrogen of the latter, leaving the remaining twelve atoms of the oxygen of the carbonic acid, and the whole of the oxygen of the water to ascend to the leaves, and pass off through the stomata. Sugar is therefore made by a similar process to that which is employed in the formation of wood-substances. The only difference is, that the operation of condensation has not been carried so far. Less oxygen has been dismissed, and more hydrogen connected with the other ingredients. There is therefore, relatively, less carbon in each molecule. Hence, sugar is a substance not so highly carbonized as wood. It is found in the cell-liquid of nearly all kinds of plants. It differs slightly from the common *cane sugar* in having more oxygen and hydrogen in its molecules; and is therefore a trifle less carbonized. It is called on this account *grape sugar*, to distinguish it from the *cane sugar* of commerce. Sugar is very soluble in water, and therefore is particularly well-fitted to be easily carried about wh—ver nourishment is needed. It is, indeed, the food of all vegetable textures that do not contain nitrogen in their composition. Sugar is found in solution only in the juices of plants; but by depriving it of the watery particles with which it is always accompanied in the living plant, it assumes the crystaline form; but we find the crystals of sugar, indeed those of all organic compounds, put on curved outlines of rounded grains; while those of saline inorganic compounds take the form of crystals, bounded by straight lines and angles.

STARCH is also a complex *organizable body*, produced out of vegetable sap by the agency of cell-life. It is merely sugar a little more highly carbonized. Each of its molecules is found on analysis, to contain twelve atoms of carbon, ten atoms of oxygen, and ten atoms of hydrogen. It is therefore formed by twelve atoms of carbonic acid losing fourteen atoms of oxygen, and acquiring ten atoms of hydrogen from water, the oxygen escaping to the leaves, as in the formation of sugar. Starch is always found in the interior of vegetable cells, in the condition of little rounded grains, attached together. They remain loose and free in the cell-liquid so long as the cell-walls continue unbroken. These starch-grains are readily seen when sought for by a microscope; but are, nevertheless, small enough for over three thousand of them to lie side by side within the breadth of an inch. The green color of living vegetables is due to a thin coating of coloring matter, round the starch grains, within the cells. The fact is, that the grain is itself a delicate cell, packed full of starch-molecules, surrounded by a thin film, which, from being wrinkled, gives it a corrugated appearance. When starch-grains are placed in boiling water, the cell-films burst, and the starch-grains escape, and are changed into a soluble gum. Taking advantage of this property, the laundress gives stiffness to linen and cotton fabrics by immersing them in a solution of starch, and drying them again by applying hot irons.

The cells of some plants get packed so full of starch-grains, that almost all other contents are excluded. This is the case with the potato; in the tuber of which, they lie loosely amidst each other, and in no way attached to the film of the containing-cell. The starch in the potato is an extraneous substance, formed in the cell for employment elsewhere, and not an essential portion of its structure. It is designed for the nourishment of the young shoots of the plant, when they are produced in the next growing season. When they are pushed forth in the spring, the tuber is robbed of its starch, and loses its "*mealy*" properties. Starch is deposited in nearly every kind of seed, and, there, it is destined, as we before stated, for the support of the germ during the early stages of its existence. The starch remains fixed and unchanged during the winter; but when the time arrives in the spring, for the development of the germ, it is converted into "*diastase*," a soluble sugar, which can be taken up by water and conveyed to the radical and plumule, till they are so far developed as to be able to draw their support from the earth and air.

The starch deposited in the grains of barley, for the nourishment of the germ, is prematurely converted into sugar by the process of malting. If the grain had been allowed to fall in the ground, and to remain there until the spring, the rain and sun would have done just what the malster effects by soaking the grain into water, and drying it again on the stove.

When potatoes are boiled that they may be employed as articles of food for man, a somewhat similar change is effected. The starch-grains are burst and converted into a kind of soluble gum, which is more fitted for immediate digestion. Starch can be procured from all parts of plants, but most constantly and abundantly from their seeds.

(TO BE CONTINUED).

THE FLORA OF HAMPTON.

JUNE—CONTINUED.

Briza media—*quaking grass*. Baptisia tinctolia—*wild indigo*. Prunella vulgaris—*self-heal, heal-all*. Liriodendron tulipifera—*white wood, tulip tree*. Magnolia glauca—*white bay, beaver tree*. Liquidambar styraciflua—*sweet gum*. Linum Virginianum—*yellow flax*. Andromeda arborea—*sorrel tree*. Medicago sativa—*lucerne, medick*. Melilotus alba—*white melilote clover*.

JULY.

Circium lanceolatum—*common thistle*. Polygonum persicaria—*smart weed*. Delphinum consolida—*larkspur*. Fostoronia deformis—*Fosteronia*. Silene armeria—*catch fly*. Sericocarpus conyzoides—*white-tipped aster*. Spiranthea gracilis—*slender ladies' tresses*. Lobella Boykinii—*slender lobelia*. Lysimachia quadrifolia—*four-leaved loosestrife*. Sedum pulchellum—*white stonecrop*. Vitis vulpina—*fox grape*. Vitis festivalis—*summer grape*. Tecoma radicans—*trumpet flower*. Castanea vesca—*chestnut*. Plantago major—*larger plantain*. Pogonia ophioglossoides—*snakemouth arethusa*. Rubus occidentalis—*black raspberry, thimbleberry*. Scutellaria pilosa—*hairy skull-cap*. Asclepias phytolaccoides—*poke-leaved silkweed*. Stylosanthes elatior—*pencil flower*. Xanthoxylum Americanum—*prickly ash*. Polypogon Monspeliensis—*polypog grass*. Salsoia kali—*saltwort*. Hydrocotyle interrupta—*pennywort, navelwort*. Geum album—*white avens*. Typha latifolia—*broad-leaved cat-tail*. Pluryma leptostachya—*lop seed*. Centaurea calcitrapa—*star thistle*. Rhexia Virginica—*deer grass*. Diospyros Virginiana—*persimmon, seed plum*. Castanea pumila—*chinquapin*. Quercus phellos—*willow oak*. Hypericum mutilum—*St. John's wort*. Ilysanthes refractra—*ilysanthes*. Diodia Virginiana—*Virgian diodia*. Cepbalanthns occidentalis—*button bush*. Sanicula Marilandica—*Maryland sanicle*. Seriocarpus tortifolius—*twisted-leaved aster*. Callicarpa Americana—*French mulberry*. Allium mutabile—*garlic, wild onion*. Borrichia frutescens—*sea oxeye*. Discopleura capillacea—*bishop weed*. Martynia proboscidia—*unicorn plant*. Elymns striatus—*lyme grass*. Centrosema Virginianum—*sea pea*. Teucrium Canadense—*germander*. Cnidoscolos stimulosa—*spurge nettle, tread softly*. Clethra alnifolia—*sweet pepper bush*. Scablosa atropurpurea—*purple scabish*. Lactuca elongata—*trumpet milkweed*. Rhus quercifolium—*oak-leaved sumach*. Chimaphila maculata—*prince's pine, bitter wintergreen*. Sanicula Canadensis—*sanicle*. Atropa belladona—*deadly nightshade*. Mcutha piperita—*peppermint*. Ludwigia alternifolia—*seed box*. Passiflora coerulea—*blue passion flower*.

REMOVAL OF INK BLOTCHES FROM WRITING.

When ink blotches have been formed over writing which it is desired to decipher, we are advised to brush off the spot carefully with a weak solution of oxalic acid by means of a camel's-hair pencil. In this way layer after layer of the superincumbent ink will be removed, and finally the writing itself will, in most cases, come to view. This is especially possible where some considerable interval has elapsed between the two applications of ink. As soon as the letters are visible, the brushing should be continued for a time with clean water, so as to arrest the tendency of the acid solution to make a further change in the ink.

Publisher's Department.

SUBSCRIBERS TAKE NOTICE!

Every subscriber, who will send us a new name and one dollar, will be entitled to one of our premium oil chromos, provided they make such a request, and designate the chromo they wish. For two new subscribers we will send "Returning Home" ready mounted. For five new names we will send the above picture nicely framed in black walnut and gilt. *We do not send premiums to those who do not request them.* When frames are sent, the receiver will pay the express charges.

JAMES LEFFEL'S

Improved Double

TURBINE WATER WHEEL.

POOLE & HUNT,

BALTIMORE,

MANUFACTURERS FOR THE SOUTH & SOUTHWEST.

Nearly 7000 now in use, working under heads varying from 2 to 240 feet! Twenty-four sizes from 5 3-4 to 96 inches.

The most powerful Wheel in the Market, and most economical in use of Water.

Large ILLUSTRATED Pamphlet sent post free.

MANUFACTURERS, ALSO, OF

Portable and Stationary Steam Engines and Boilers, Babcock & Wilcox Patent Tubulous Boiler, Ebenezi's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Palleys and Hangers.

SEND FOR CIRCULARS.

HAMPTON

Normal & Agricultural

INSTITUTE.

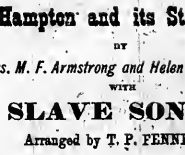
Fall term opens Thursday, October 1st, 1874. All who desire to enter should appear at that time.

The course of study continues three years and embraces the elements of an English and Scientific Education.

Graduates are able to secure situations as teachers in the public schools of the South, at salaries ranging from twenty-five to forty-five dollars per month.

Circular or catalogue sent, on application to S. C. ARMSTRONG, Principal, Hampton, Va.

N. F. BURNHAM'S



WATER WHEEL.

The best in the Market, and sold at less Price than any other first class Wheel.

Send for a Pamphlet and be convinced, N. F. BURNHAM, York, Pa.

$5 per cent. guaranteed with

1874 TURBINE

"Hampton and its Students,"

BY

Mrs. M. F. Armstrong and Helen W. Ludlow;

WITH

SLAVE SONGS,

Arranged by T. P. FENNER.

FOR SALE AT THE OFFICE OF THE

Treasurer of the Normal School.

Sent by mail on receipt of $1.50.

EXPEDITION FOR LIBERIA.

TO INDUSTRIOUS AND WORTHY PEOPLE of color desirous of removing to Liberia, The American Colonization Society will give a passage and subsistence on the voyage—made in about forty days—and support for the first six months after landing. Single adult persons get ten acres, and families twenty-five acres of land. These are all gifts—never to be repaid. Those wishing to remove to Liberia should make application, addressed to William Coppinger, Corresponding Secretary and Treasurer of the American Colonization Society, 450 Pennsylvania Avenue, Washington, D. C.

British, Marine, and Land and Freshwater Shells.

COLLECTED IN GREAT BRITAIN, IRELAND (east and west coast), ORKNEY, SHETLAND, HEBRIDES and CHANNEL ISLANDS, also from DOGGER BANK (many of them by deep sea dredging), on sale or exchange for American Shells, Flowering Plants, Ferns, or specimens of Natural History, suitable for a museum.

Catalogues of the Species will be sent on application to GEORGE DIXON, AGRICULTURAL INSTITUTE, HAMPTON, VA.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., SEPTEMBER, 1875. NO. 9.

SABBATH AFTERNOON.—A Story Without Words.

A STORY WITHOUT WORDS.

A little, tired child, worn out with play and the heat of a long August afternoon, has thrown itself upon a rough beuch in a shady corner, and with its playmates, the chickens, the dog and the cat, still at its side, is sleeping through the last sunny hours of the day.

Through the thick leaves which shade the quiet sleeper we see the face of the mother, smiling down upon her little child, as she stands watchful that no harm shall come near, or sudden noise alarm.

The picture tells its own story and a pretty story it is, of peace and rest and love, those blessings which kind Heaven sends to little children as well as wise men, to humble souls as well as great, and he who runs may read.

Southern Workman,

ISSUED MONTHLY.

HAMPTON, SEPTEMBER, 1875.

"'Tis sweet to hear the honest watchdog's bark
Bay deep-mouthed welcome as we draw near home."

If Lord Byron had ever struggled for sleep during the night watches in the town of Hampton, he would certainly have changed his opinion as to the sweetness of the watchdog's bark, and would never have written the above lines. Here we sit at our table, time 2 A. M., having risen from bed after a long and fruitless effort to get a refreshing sleep before the labor of the approaching morning. Fruitless indeed! For several hours have we been compelled to listen to a prolonged canin; concert, which is still in progress, treble and bass, forte, fortissimo, crescendo, until we seek in vain for words to express our feelings. Here begins a fresh passage in the music, Bow-wow, a bass solo; wow-wow-wow, a shrill treble pipes in, and now comes the chorus in full swing from all the canine throats far up and down the length of the street, reinforced by others from the side streets, while afar off on the other side of the creek can be heard individual howls from distant coadjutors trying to catch the tune and take a part in the universal chaos.

What are we to do? Go to sleep? impossible! Get angry? Useless though unavoidable. We stand at the window for a half hour, with an old boot in one hand and a pitcher in the other, fully resolved to crush the first soloist that may chance to pass beneath. That pitcher cost us money at Bickford's, will be a serious loss, but never mind that, if we, by the blessing of a benign Providence, are afforded an opportunity to smash it upon the skull of one of these rest-dispelling tormentors, we will do so with resignation and even pleasure, and feel that we have served our country well and deserved the blessings of this outraged community. Alas! they perversely remain at a respectful distance and the infernal chorus still goes on. What earthly pleasure can they derive from keeping it up at such a rate? Why don't they stop and rest a while? Why should the moon have such an effect upon them, and why don't they wait till morning and bark at the sun, for there is more of it and ought to give them more satisfaction? These conundrums we give up in despair and endeavor to relieve our feelings by putting them on paper, thereby killing two birds with one stone, as there will be something on hand for our next issue.

Incomprehensible sleep-destroyers! Infernal producers of inharmonious discord! bark on if you must, and rejoice in the fact that only laxity on the part of our lately enlarged police force allows you to draw the breath of life to waste in such unseasonable howlings. Rejoice that you are not human, for if a man should make the disturbance you nightly indulge in, he would be placed "in durance vile" immediately. Rejoice that you live in a town where dog licenses are unknown and that your numbers are unthinned by the penalty of death for forgetting to wear your collar. Rejoice that the county cares not for the revenue which might accrue from the license system. Congratulate your masters that they are not liable to a fine for keeping such nuisances, and that they can, without fear of a penalty, allow you to meet each other here in the street to try your voices in the moonlight and to fight. Rejoice! we say, incorrigible abusers of public lenity and self-denying generosity, but at the same time, tremble, for those who should be the guardians of the public peace may be aroused to action at any time, and even now a bloody future may be preparing for you. Let us, your audience, hope so.

At last the noise seems to diminish and as we write these last lines, quiet reigns again in the village. We look at our watch, time 3 A. M. Now we must hurry to bed again and get what rest we can before the loud-voiced fisherman begins to shout, "Jumpin' Mullet," "Yar Spot," at "5 o'clock in the morning."

FOREST TREES.

During the months of June and July last, certain provinces in the south of France were visited by frightful inundations which swept away property and lives, and filled the whole country with grief and terror. The rise in the river Garonne destroyed about $60,000,000 worth of property and in one town alone more than two hundred lives were lost.

This is the more alarming because it is only a repetition on a somewhat larger scale of three previous inundations within fifty years, and also because large districts have been devastated which had heretofore been considered safe and beyond even the chance of such dangers. These latter districts are among the richest and most fertile in France, and the alarm created by this overwhelming misfortune, is causing engineers and men of science all over the world to examine and carefully discuss the cause of river floods and their possible prevention.

That they are in no way accidental is certain, and that they are by no means inevitable seems equally sure. The connection between the clearing away of forests and the overflowing of the rivers which take their rise in the country thus shorn of its natural protection, seems to be very intimate, and claims the attention of farmers and land owners everywhere.

Great plains and valleys which are watered by rivers flowing down from mountain ranges can be protected from the danger of inundations only by preserving or re-planting the thick forests which are the original growth of the mountain sides, and it is the improvidence of the inhabitants of the devastated regions which is the principal cause of the floods which ruin them. The natural growth of trees on mountain slopes being cut down by senseless farmers or greedy speculators, the rain or snow no longer being kept back by the roots of trees, descends rapidly into the valleys, carrying everything with it, and leaving in its tracks bare rock instead of fertile earth. It has been estimated that only six-tenths as much water drops during heavy rain on wooded ground as falls on bare soil, and so much of this is kept back by the roots of the trees and the undergrowth, as to prevent all danger from floods, or the sudden creation of new watercourses. Then this proportion of water reaching the ground as it does very gradually, oozes through the earth carrying fertilizing salts to the roots of the trees, and instead of sweeping away, retains and increases the coat of vegetable earth which covers the barren foundation of rock—in short, the farmer or land owner can commit no greater mistake than the reckless cutting down of trees, or show no greater wisdom than in careful and systematic replanting.

CROPS AT HOME AND ABROAD.

The effect of the disaster to Southern France to which we have alluded in our article on Forest Trees, offers an excellent illustration of the closeness of the commercial tie between nation and nation. Here in America, bread stuffs, as they are technically called, have been until very recently fetching such low prices that a large part of last year's product has been held back, and it was evident that the only thing which could advance prices was a large foreign demand. Within the last few weeks this has come, and our readers may be interested in tracing its causes.

In the first place, then, America's great rivals in the grain market are the Black Sea provinces of Russia, and the excessive heats and swarms of locusts have nearly if not quite ruined the spring and winter wheat, while another important wheat crop, that of Southern Hungary, has also been injured by the heat. Upon this follows the fact that in North Germany, England and some parts of France, heavy rains have beaten the grain down, to its great injury if not destruction, while in a large part of France the ruin has been complete. The result is immediate; American wheat goes up from three to five cents a bushel, the chief demand so far being for French consumption, with a prospect of a steady continuance of good prices. It is gratifying, too, to know that the prospect is, that for the first time, the Southern States will raise more grain than they can consume, while the estimate for the cotton crop is above 4,500,000 bales.

WHAT MOSQUITOES ARE FOR—DISCOVERED AT LAST.

Dr. Saml. W. Francis, N. Y. Academy of Medicine, says: Education teaches us to see beyond the surface. Taking as my standpoint the aphorism, that all things were created for some good purpose, it is my firm conviction that the mosquito was created for the purpose of driving man from malarial districts; for I do not believe that in nature any region where chill and fever prevail can be free from this little animal. Now, if man will not go, after the warning is given in humming accents, then the mosquito injects hypodermically a little liquid which answers two purposes; first, to render the blood thin enough to be drawn through its tube, and secondly, in order to inject that which possesses the principles of quinine. This theory I published in 1871, and it was ridiculed at first by many, but recently some German philosophers have actually obtained the liquid from mosquitoes and by a careful analysis discovered that it contained the "principle of quinine."

IN SYMPATHY WITH ANIMALS.

It is necessary for one having the care and management of farm stock to entertain a kind feeling, a real regard, for the animals in his charge, in order to cause them to thrive and do well in all respects. Two men may take the charge of an equal number of animals under precisely the same circumstances as regards their condition, and the amount and quality of the food alloted to them; and while one of the men will attend to his charges on the principle of duty, performing his work in a mechanical manner, the other keeper will be actuated by the higher principle of regard for the comfort of his beasts. We will soon see that he who is in *sympathy* with his animals will have them in fine condition and good health; while the *duty* man will not keep his in even the same favorable condition as when he took charge of them.

A FEW WORDS ON THE LABOR QUESTION.

"Farming don't pay," has been a cant throughout the South since Lincoln's emancipation proclamation, and almost as universal has been the accusation, "our labor is too unreliable," meaning of course negro labor. Both observation and experience teach me that "white labor" is as unreliable as "negro labor" on the farm.

To labor systematically six days in the week is no luxury, or the curse would not have been imposed on Adam to earn his bread by the sweat of his brow; and the farm employee that does not require watching, stimulating, encouraging, and the force of example, is a treasure too valuable to be utilized simply as a farm hand. And yet most southern farmers, who ought to know the negro's character well enough to control him as a farm laborer, are clamorous for better labor; for the introduction of foreigners to cultivate our crops, a sprig which they have never seen in their lives, believing that white laborers, less treacherous and more reliable than negroes, will renovate matters in a trice, and make the South blossom as the rose under their improved labor.

Never, in my judgment, was a graver mistake entertained. Turn for a single season the tide of immigration from the northern to southern ports, and before a crop could be harvested, we would be afflicted by worse than a Persian famine. A myriad of consumers thrown upon the South would be worse than the grasshopper plague of the Northwest. The South has an abundance of material out of which to make laborers, and needs only the introduction of the power to fashion, shape, and control that material. I have often asserted, the negro is the best farm laborer this generation of farmers will ever see, and it is wrong for us to attempt to introduce a competitive class who know nothing of our crops, our natures or our language.

But what are we to do, asks every one? We can't control the negro; he is naturally lazy, treacherous and faithless, and dependence upon him is worse than idle. I am not the champion of the negro, for in this State, I think, I am regarded by them as their enemy; but I have so far succeeded in ntilizing their labor as to induce the belief they suit me better than any white men could.

Before publishing my plan of management, let me ask, do not southern farmers expect too much of the negro? We say, he wont work unless he is watched and made to work. Have we ever learned that laborers act differently anywhere on earth? I have frequently heard the remark, "Northern men get more work done with fewer hands, than we at the South with more hands." Is there not a reason for this? The northern farmer says, come, let us go do so and so. The southern farmer says, go boys, and do so and so. Reading and driving are too different occupations, and the farmer that leads the negro gets more work out of him for less money than can be got from any other employee. Consequently those men who from childhood have been inured to work, who can hold the plough, or throw the grain cradle, are annually pocketing more net money from their investments in southern farms than any other class of agricultural laborers in this or any other country.

Can the same be said of large landowners, who, because they cannot have work done as of yore, or because they cannot control affairs around and about them just as they wish, are continually abusing the negro, and asserting that farming at the South don't pay? Not at all. Such men deserve our sympathy, for to my mind (to use a vulgarism), the unreconstructed southern farmer is of all men most miserable. He hankers after the flesh pots to no purpose.

What more common than to hear, that in the North lands are worth twenty-five to one hundred dollars per acre, and that farming pays better there than at the South? The whole thing is a delusion. Lands at the North are higher priced because they are in demand, and they are in demand because there is a population able to buy. Let each reader ask himself the question, how many farms do I know that would appear attractive to a purchaser? A monosyllable will answer the question in a majority of cases. No, the high priced lands of the North are no evidence of agricultural thrift. Those farmers live very well it is true, but they work much harder, and are more troubled with unreliable labor than we of the South. I have heard northern farmers say, time and again, that during their busiest season, they have today had all the "help" they wanted, and to-morrow it was gone. In the Northwest labor sets its own price and receives it every night and the teeming hordes of laborers that are constantly migrating westward through the northwestern States, are less reliable than the weather itself; for fervently believing, that just a little further westward is that Eldorado for which they have long sought, and the accounts of which

brought them to this "land of the free," they sojourn and labor here to-day to "raise the wind" to take them yonder to-morrow. Had we to deal with such a people our crops would seldom be planted, much less cultivated and harvested. Far better to depend upon the laborer we have, whose local attachment at least fixes him almost invariably for one year.

But the northern farmer makes more money than we do, say those who know nothing about it; but it is all a mistake. They make less and handle less money than we do, and if they lived the lives we do, they would be far more poverty stricken. The northern farm that will sell for one hundred dollars per acre, will produce, perhaps, an average of thirty bushels of wheat or its marketable equivalent in grass, worth probably thirty dollars. Out of this must come ten dollars for interest on investment, half as much more for taxes and labor, and when the subsistence of the family is deducted, there is precious little left. True, employees are less numerous constantly, but day labor is doubtless valuable, and all northern farms require double the amount of plough stock we do at the South, and everywhere the annual expense of a horse is almost equal to that of an average hand.

The net income from a first-class northern farm is not five per cent., and I consider a similar southern farm as a failure that does not double that income.

I have repeatedly seen farms in South Carolina of from one to five hundred acres, sell from five to twenty-five hundred dollars, and no sooner had they changed hands than they were leased to negro farmers for twenty-five per cent. on the investment. And just here is where we of the South have a great advantage over northern farmers, if we could only so accommodate ourselves to the times as to utilize our advantage. Lands are cheap and labor is abundant, and we must learn to control it. Concessions must be made, and if properly made, will invariably redound to our profit. If, as owners of the soil, possessors of what little capital there is in the South, and with a superior intelligence, we do not control the labor of our land, the fault lies at our own doors. We have no system, no concert of action. To the contrary, we are constantly pulling against each other. We are the employers, but every farmer has his own notion of things, and cares nothing for his neighbor's plans. If I hire hands for wages, one of them may at any time conclude to leave. If so, he only goes across my line fence and my neighbor hires him. If I give my employees a portion of the crop, everybody says they will steal more than their share. You may as well kill a dog as to give him a bad name. So, as a practical farmer, I have never adopted this policy, nor did I hire for wages longer than I found I had to become a day laborer myself to enable me to control the labor to suit me. Hence, since 1869, I have simply tenanted my lands and have yet to see a reason for not doing so.

I allot the land, the laborers furnishes everything else, and pays all expenses except the taxes. If he is unable to carry on the farm alone, I assist him for the year, with the hope he will be able next year. If he makes nothing, and I think he is to blame, I discharge him, and have no difficulty in securing others. My rents are reasonable, and have never failed to be forthcoming, except in two instances, where two men contracted store accounts without my knowledge, and being threatened by the merchant with a law suit, they stole my cotton to pay the account. I blamed the merchant more than I did the negroes. I have never had a hand, but in these two instances, to fail to make more than the rent and the expenses of his portion of the farm.

To my mind no people ever had a fairer opportunity of becoming lordly land owners, or of establishing a system of agricultural tenantry, unsurpassed in the history of the world, than have the southern farmers at this present time. Whether as a race we will ever see it, and practice it, is another thing.—*D. Wyatt Aiken, in South Carolinian.*

AMERICAN ORATORS.

We are a nation of speakers, and have a speech ready for every occasion, whether it be a public dinner, a political mass-meeting, or a Fourth of July celebration. Our English cousins are astonished at the general fluency and confidence we exhibit; for while they possess some of the wittiest and most learned masters of debate living, the gift of public talking is not common among them.

Of course, talking is no more like real oratory than a pot of paint is like art; and a good many Americans have never found out the difference.

The high-flown words of the patriot who declaims to his fellow-countrymen on the Fourth of July are often nonsensical and meaningless. Who, to his mortification, has not heard much rubbish spoken from "the stump" in rural villages? But we have an unusual number of bright, eloquent, sensible speakers withal, and in the hundred years past we have produced some of the greatest orators the world has known,—real orators, mind you, who had a wonderful power of filling multitudes of intelligent men and women with fear, hope, courage, dismay, and horror in turn; orators who could, with passionate words alone, drive a populace to war and restore it to a love of peace in a few brief moments.

It is scarcely necessary for me to tell you who these great orators were. All of you have heard of Patrick Henry, Henry Clay, Daniel Webster, John C. Calhoun, Edward Everett, and Rufus Choate. These are some notable representatives of our orators,—I cannot mention all,—and I have collected a few anecdotes about them, which may, perhaps, interest you at this season.

Boys who do not love study, and would rather fish and swim on a Summer's afternoon than pore over First Lessons in Latin, may find much consolation in the life of Patrick Henry.

He was born on a Virginia farm in 1736, and was as fine a specimen of the ne'er-do-well as could be found in his country. His person was ugly, his manners were awkward, and his dress was slovenly. When the hour for study came he was usually absent, and was to be found in the woods with his gun, or by the river with his fishing-rod. But at the age of fifteen he was installed behind the counter of a merchant, and a year afterward began business for himself in partnership with his brother William. The firm failed in a short time, and Patrick then tried farming, in which he also failed. Opening another store, he again became a bankrupt, and at last sought relief for his disappointment in reading classical books.

With only a smattering of law, he obtained a license to practice in the courts; and one day a case was intrusted to him which was so hopeless that no other lawyer would accept it. As he arose to make the opening address the spectators laughed at him, and his father who presided on the bench, was overcome with confusion.

But before he had spoken many words those who had laughed were struck with amazement at the eloquence he displayed, and listened to him in almost death-like silence. They were fascinated by the spell of his eyes, the majesty of his attitude, the commanding expression of his face, and as he concluded, tears of joy rolled down his father's face. The case was won, and the name of Patrick Henry became known far and wide as that of a great orator.

But he was no more inclined to study after his success than before, and instead of improving his manners and his dress he took great delight in their plainness, and would often come into court attired in a course hunting jacket, greasy leather breeches, and with a pair of saddle-bags under his arm.

While he remained in his seat he was a shuffling, independent-looking farmer, but when he arose and spoke his body seemed to burn with passion.

The intense force of his words is shown by an incident which occurred during a speech describing the effects of the adoption of the present Constitution of the United States, in which he looked "beyond the horizon that binds mortal eyes, to these celestial beings who were hovering over the scene, anxiously waiting for a decision which involved the happiness or misery of the whole human race." To those celestial beings he made an appeal that caused the nerves of all who listened to him to shake with horror, and as his passion was at its height a terrible thunder-storm rumbled without, and the members rushed from the legislative chamber in terror.

Henry Clay was almost worshiped by his adherents. He was born in 1777, and was a very tall man, straight and slim as an arrow. And here you must remember that command of words alone does not make an orator. There are some speakers whose language is carefully chosen and whose thoughts are beautiful; yet these are not orators. They have not the passionate, thrilling voice nor the mastering presence that gave Mr. Clay his great power over an audience. It has been said that, in listening to him, you were reminded of his intellect only, that seemed to shine through his thin flesh. As he spoke every muscle of his face was at work, and his whole body was agitated. He did not use many words, but they were to the point, and spoken grandly.

John Randolph, of Roanoke, spoke scornfully in Congress one day of Mr. Clay's language.

"The gentleman from Virginia," said Mr. Clay in reply, "was pleased to declare that, in one point of my speech, he agreed with me,—in an humble estimate of my command of words. I know my deficiency. I was born to no proud patrimonial estate of my father. I inherited only infancy, iguorance, and indigence. I feel my defects; but so far as my situation in early life is concerned I may, without presumption, say they are more my misfortune than my fault. But, however I may deplore my inability to furnish the gentleman with a better specimen of my powers of verbal criticism, I will venture to say my regret is not greater than the disappointment the members of Congress feel as to the strength of his argument on the question before us."

Thus he managed to vindicate his origin and to turn the laugh against his antagonist in one breath.

Mr. Clay's knowledge of human nature was thorough and profound; and he was able to put it to use at any moment, as the following anecdotes will show:

On a certain occasion he met an old hunter, who had once been his supporter, but who afterward went against him on account of his vote on a certain bill in Congress.

"Have you a good rifle, my friend?" he asked of the hunter.

"Yes."

"Does it ever flash in the pan?"

"It never did so more than once," the hunter answered, proud of his weapon.

"Well, what did you do with it? You didn't throw it away, did you?" continued Mr. Clay.

"No; I picked the flint, tried it again, and it brought down game."

"Have I ever flashed in the pan, except on the Compensation bill?"

"No, I can't say you have."

"Well, will you throw me away?"

"No; I'll pick the flint and try you again." So the hunter grasped Mr. Clay's hand and gave him his vote.

At another time Clay was visiting a backwoods county in Kentucky, where the man who could fire the best shot stood highest in esteem, and the man who couldn't fire at all was looked upon with contempt. He was canvassing for votes, when he was approached by some old hunters, one of whom told him that he would be elected to Congress, but that he must first show how good a shot he was. Clay declared that he never shot with any rifle except his own, which was at home.

"No matter. Here's 'Old Bess,'" answered the hunter, giving him a gun, "and she never fails in the hands of a marksman. She's put a bullet through many a squirrel at a hundred yards, and has let daylight through many a red-skin at twice that distance. If you can shoot with any gun, you can shoot with 'Old Bess.'"

A target was set up, and Mr. Clay aimed "Old Bess" at it. He fired faint-heartedly, but the shot struck the bull's-eye in the center.

"A chance shot! a chance shot!" cried his opponents.

"Never mind," he answered. "You beat it, and then I will."

No one could beat it. Mr. Clay had too much sense to try again.

In appearance and manner, Edward Everett was almost the exact opposite of Patrick Henry, and even more elegant and refined than Henry Clay. He was very polished, and his voice was clear and sweet; but his orations were not so powerful. They were beautiful compositions, that read well in a book, and were not a bit like the wild-fire utterances that burst from the Virginian.

Rufus Choate was also a man of great eloquence, and it is said that he would plead a case with the earnestness of one whose life and character were at stake. He was a lawyer by profession, and at an early age distinguished himself as an advocate.

Mr. Whipple has written of him: "His legal arguments were replete with knowledge, and blazed with the blended fires of imagination and sensibility, which swept along the minds of his hearers on the torrent of his eloquence." He was fanciful and humorous, too.

On one occasion a witness testified that he had seen one of Mr. Choate's clients crying, and that when the witness asked him what was the matter, he answered that he was afraid that he had "struck on a snag." Mr. Choate translated this testimony as follows: "Such were my client's feelings, and such his actions, down to the fatal night, when, at ten o'clock, in that flood of tears his hopes went out like a candle."

In March, 1844, he delivered a famous speech, and thus alluded to a statement that the American people cherished a feeling of deep-rooted hatred to Great Britian.

"No, sir; we are above all this. Let the Highland clansman, half-naked, half-civilized, half-blinded by the peat-smoke of his cavern, have his hereditary enemy, and his hereditary enmity, and keep the keen, deep, and precious hatred alive if he can; let the North American Indian have his, and hand it down from father to son, by Heaven knows what symbol of alligators, rattle-snakes, and war-clubs smeared with vermilion; let such a country as Poland, cloven to the earth, the armed heel on her radient forehead, her body dead, her soul incapable of death,—let her remember her wrongs of the days long past; let the lost and wandering tribes of Israel remember theirs,—the manliness or sympathy of the world may allow or pardon this to them; but shall America, young, free and prosperous, just setting out on the highway of heaven, decorating and cheering the elevated sphere she just begins to move in . . . shall she pollute and corrode her noble and happy heart by moping over old stories of wrongs? . . . No, sir; no, sir; a thousand times no! We are born to happier feelings. We have, we can have no barbarian memory of wrongs for which brave men have made the last expiation to the brave!"

But no extract, nor the oration printed in full, can give an idea of the stirring effect which the music of the living voice gave to the vivid words.

I have left myself so little space that I cannot do more than mention Calhoun, who was born in 1782, and was an exceedingly brilliant speaker. In the same year Daniel Webster was born, and with a few anecdotes about him I must conclude.

In appearance he was tall and ugly. His head was large, and his face set with great black eyes. The words he spoke came up from his broad chest with such emphasis that it has been said that each of them seemed to weigh at least twelve pounds.

Like Henry, he could entrance an audience and hold them spell-bound by his eloquence. "When his speech was over," one writer says, "the tones of the orator still lingered in the ear, and the people, unconscious of its close, retained their positions. The agitated face, the heaving breast, the suffused eye attested its influence. There was not a movement or a whisper for several minutes, when a sharp rap of the chairman's hammer broke the charm that Mr. Webster had wound about them."

One of his best orations was made in answer to a Colonel Hayne, who generously congratulated Webster on his effort.

"And how do you feel this evening, Colonel?" Webster asked.

"None the better for your speech, sir," answered his opponent.

You understand, of course, that a great orator must have a mind quick to seize upon apt similes. Alluding to Alexander Hamilton, Webster said, in an after-dinner speech, "He smote the rock of public credit, and streams of revenue gushed forth." As if to illustrate this, he brought his clenched fist down upon the table, and in doing so he struck a wine-glass, which broke and cut his hand. He slowly covered the wound with his napkin, which suggested a shroud, and then continued: "He touched the dead corpse of public credit, and it rose upon its feet." Thus he made himself master of the situation.—*William H. Rideing in St. Nicholas.*

THE ELIXIR.

HERBERT.

Teach me, my God and King,
In all things thee to see;
And, what I do in anything,
To do it as for thee:

Not rudely, as a beast,
To run into an action;
But still to make thee prepossessed,
And give it his perfection.

A man that looks on glass,
On it may stay his eye;
Or, if he pleaseth, through it pass,
And then the heaven espy.

All may of thee partake:
Nothing can be so mean,
Which with this tincture, *for thy sake*,
Will not grow bright and clean.

A servant, with this clause,
Makes drudgery divine:
Who sweeps a room, as for thy laws,
Makes that, and the action fine.

This is the famous stone
That turneth all to gold;
For that which God doth touch and own
Cannot for less be told.

AFRICA.

The reports which come to us from various quarters in regard to the exploration of Africa are so numerous that it is impossible to give any adequate idea of their importance within the limits of a single article, and the most that we can do for our readers is to furnish them with the principal facts concerning the different expeditions.

The Khedive of Egypt seems to be devoting himself in earnest to the exploration of the interior, and the success of his officers is most encouraging. Colonel Long has returned to Cairo, bringing five natives of different tribes with him, as well as many curious war weapons and implements. Seven steamers are now running between Khartoum and Ragaff, above which the rapids become impassable. From Khartoum to Colonel Gordon's headquarters is more than 1,000 miles, but he has established lines of posts by which he keeps his communications open, and has made peace with the tribes with whom Baker was at war, thus keeping the slave trade effectually in check. Colonel Purdy (an American officer in the Khedive's service) reached Darfur, Colonel Colston (another American) is supposed to be pushing into the interior by another route, and Mitchell (connected with the Gordon expedition) has discovered between the Nile and the Red Sea, two gold mines with shafts still open, one of which, he reports, could be profitably worked with modern appliances.

The German explorer, Dr. Nachtigal, gives a most interesting account of the Kingdom of Wadae, situated on the southern border of the Sahara, to the west of Durfew, which he asserts will in a few years be open to foreign traders, and as the King's rule extends over an area of 3000 square miles with a population of 2,500,000 this is a matter of some importance.

In brief, we find Africa at present encompassed as follows: Germany is working along the western coast; France, starting an expedition from Senegal; Stanley, pushing on from the eastern coast; Portugal, which since 1415 has kept a foothold on the coast, trying to retain it by fresh treaties with the Sultan of Zanzibar; and the various parties already mentioned, striking southward from the valley of the Nile. On the west coast four European powers have successfully established themselves—the Dutch flag waving at Elmina, the English over Sierra Leone, the French tri-color over Senegal, while Portugal still claims Lower Guinea. But rich as the exportation from the gold coast and the contiguous western provinces are, the whole region is so fatally unhealthy that explorers and missionaries are attracted rather toward the Nile basin as the gate by which civilization and Christianity may quickest reach the interior, as that whole region is declared by recent explorers to offer great inducements in respect to climate, fertility, accessibility, etc., thus promising to become the most successful base for operations in the vast unknown provinces of Central Africa.

TO THE STUDENTS OF HAMPTON.

IX.

MINOR MORALS.

The Christian law is, as I have said before, so closely interwoven with the whole fabric of modern civilization that many of our daily habits, and much of our social life, may be said to come properly under the head of minor morals. That is, there are many forms which people of refinement observe in their intercourse with each other, which are not only matters of etiquette, but also come under the jurisdiction of the moral law and are of more importance, both to individuals and to society, than any mere ceremonies can be. It is, of course, often very difficult to decide just when and how our habits or our manners cease to be "right" and "wrong" and begin to be merely "proper" and "improper," and I think it is quite certain that we have all of us much to learn in respect to that morality which is the foundation of society. Therefore, I hope that you will be glad to study a little for yourselves, and to try to gain a clearer comprehension of the value of truth and honor and honesty and purity in the details of life, even when those details are, as is often the case, of the homeliest and roughest description. However unimportant an action may seem to you, however small the thing to be done may be, it is always better to be right than wrong about it; and I want to speak to you now of a few, at least, of these daily habits of yours in which you are especially likely to fall into error.

I have already spoken of the rudeness of mimicking, ridiculing, or in any way "making fun" of people in an unkind spirit, and I want you to understand that it is not only rude but also really wrong, as are all words and actions whereby you unnecessarily wound the feelings of others. Try at all times and in every way to be considerate, remembering that deep injury and grief may be inflicted by what you may only think "a little thoughtlessness;" and to show you how far such thoughtlessness may go, and how serious its results may be, I want you to ask yourselves a few questions about your consideration for the rights of other people in respect to their personal property, which is certainly a serious matter. Do you not frequently borrow from your friends and schoolmates articles of clothing, books, or even money, which you forget to return? Do you not sometimes even take such "little things," as you probably consider them, without asking leave of their owner, and although at the time you undoubtedly mean to return them, do you not sometimes find that you are unable to do so, and thus actually end by committing a dishonesty? This carelessness in regard to other people's property is, I fear, not an uncommon fault among you, and it is only too true that, while you would perhaps never, do deliberately dishonest things, you are, nevertheless, sometimes led into violations of the ninth commandment through simple thoughtlessness or want of consideration for the distinction of mine and thine.

Now, I think that you must see for yourselves that if you do not overcome this fault in early life, it will inevitably grow upon you as you grow older, and cannot be otherwise than harmful in its effects upon your moral nature, so that your duty is to put strict guard upon yourselves in this respect, at once and constantly. Do not take *anything* which belongs to another person, without first asking that person's leave, and not even then unless you are sure of your ability to return it or its equivalent. Do not get into the habit of borrowing, even from members of your own family, for such a habit tends very surely to encourage thriftlessness and imprudence, and you will find that in the end you are very seldom the better for borrowed things, however tempting they may be at the moment. If you make strict honesty the habit of your life, you will soon discover the result to be an independence and self-respect which is of infinite value to the man or woman who has rightfully earned it.

In the preceding chapters upon your behavior in general society, I omitted to speak to you in regard to certain matters of politeness, because they are also, and I think primarily, matters of morality, and one of these omitted subjects is the reading of other people's letters or papers. You know, of course, that few things are meaner or more dishonorable than to open any letter, paper, or package, which is addressed to anybody else; but I am not sure whether you understand that this extends even to communications which have already been opened by the person for whom they are intended. That is, that the fact of letters, etc., being unsealed and open, does not by any means give you the right to read them. Not only must you not take letters from the trunks, desks or boxes of their owners in order to read them, but when you find letters lying open upon a table, for example, or the floor, you must scrupulously avoid satisfying your curiosity as to their contents. If you want to find the owner of a letter thus found, you can generally do so by merely looking at the address or possibly the signature, but beyond that you must never permit yourself to go. This rule applies also to unfinished letters which your companions may have left within your reach, you must on no account read them, and furthermore, you must never look over the shoulder of a person who is writing or reading a letter—this latter, being, to say the least of it, an unpardonable rudeness.

Another most contemptible habit is that of prying about among things of whatever kind, which belong to other people. To open drawers, trunks, boxes, etc.: to search in pockets, private books, or similar receptacles: in short, to take any sly or unfair means to possess yourself of information to which you have no right, is so evidently wrong that I am sure it is only necessary to call your attention to it, for you can see, without any explanation from me, how ignoble such conduct is.

Again, if by any chance you become the possessor of information which was not intended for you, your only proper course is to keep scrupulously silent about it; and in this connection I want to say something to you about the too common practice of reckless gossiping about other people's affairs. I have told you before that it is always best to be careful as to what you say or listen to, about your neighbors, and again I must remind you that scandal (which usually means repeating unpleasant and harmful stories which may or may not be true, about your acquaintances) is always to be avoided, because it is almost inevitably injurious both to the subjects of it and to those who talk it.

Try to think and speak well of your neighbors whenever it is possible, dwelling always rather upon their virtues than their faults, for "charity covereth a multitude of sins," and charity means to love one's neighbor as one's self. Do not gossip or talk carelessly or much about other people's affairs, there are other subjects better worth talking and thinking of, and except in cases where you are able to give advice or assistance, it is best for you to remember that usually it is wise and kind to mind one's own business. You will understand that used in this sense, "minding your own business" does not imply that you are to be selfishly wrapped up in your own affairs, but simply that you are to permit to others the same freedom from interference which you desire for yourself.

Do not help to circulate stories of the entire truth of which you are not certain, a thing which is so frequently done, merely for the sake of excitement, that it and its companion fault of exaggeration, are fixed habits with many people. Try not only to be sure of the truth of any reports which you may desire to repeat, but try also to train yourself to great exactitude of speech. Weigh your words, be sure that you know just what they mean before you use them, and then don't let them be too big or too frequent. State your facts with as much accuracy as you can command, and in order to do this train yourself to observe carefully and to listen attentively, for it is only by doing this that you can protect yourself from constant errors in your descriptions and statements.

If you permit yourself to fall into a habit of using big words simply because you fancy they have a fine sound, you will find them snares and pitfalls, for they will tempt you into exaggerations, into saying more than you mean, and very often into actual mis-statements or falsehoods. As a matter of elegance, too, you should avoid grandiloquence of speech, for nothing is more likely to make you ridiculous in the eyes of sensible, well-bred people, than an attempt to unduly magnify your subject or yourself by the use of unnecessary or exaggerated forms of expression. This and more also applies to all words or expressions which are in the least irreverent or profane, of which I think I may safely tell you, that they are never used by Christians or even by persons who claim nothing more than mere external refinement. If you desire to gain the respect of either of these two classes of people, you must give up absolutely the use of all profanity, irreverence and vulgarity in your language, and I would also once more advise you to guard yourself against the too frequent use of exclamations of any kind, for this latter is very commonly only a form of irreverence.

This whole matter of guarding your speech is an important one, for with the tongue you can commit much folly, injury and sin, and you must remember that words which are, in one point of view only "the breath of your mouths," are, in another, fixed and unalterable facts, potent for good and evil. Of scandal, of profanity, of coarseness, of unkindness, words are the chief vehicle, the tongue the great agent; while of a greater sin than any of these, the burden lies principally upon that "little member" which is too often "a world of iniquity."

I mean the sin of falsehood, a sin which I fear many of you do not sufficiently dread and fight against, but which is too fatal in its consequences to be for a moment trifled with. Do you ever stop to think soberly of the effect upon a person of deliberate or even thoughtless untruthfulness? Do you realize that if you allow yourself to become habitually false in your speech, even in matters of little importance, that you are undermining your whole moral nature and forfeiting the confidence of your fellows, thereby fatally injuring yourself? I cannot and need not speak here of the innumerable varieties of falsehood, nor of the far-spreading evil which a single lie may work,—you must know, from your own experience, that the harm which a liar can do to others is inestimable,—the thing that, perhaps, you do not understand is the harm which a liar does to himself, and the danger of the first steps in the path of deceit.

As a general thing, of course, lies are told for some purpose, to conceal a previous lie, to obtain some advantage, or for some similar end, and in each case are only the beginning of a long course of deceit, for one of the terrible features of falsehood is that one untruth necessitates another, the alternative of confession being so painful that few people have the courage to meet it. Such deliberate falsehood is an alarming symptom of moral disease and the mental state which produces it should no more be permitted to continue, than a fever is allowed to run its course untended, and if you will resist steadfastly the first temptations, you will find each victory easier than the last, for your moral strength like your physical strength increases by use.

Consider well the fact that everything is against the liar; he gains nothing, or at best but a temporary advantage; he loses the confidence of his associates, and with it his best chance of worldly success; he loses his own self-respect, and with it all the best of his power; and he loses altogether and entirely his claim to be a servant of God, the noblest name for which any man can strive. Like all other virtues, truthfulness can be gained only by work and watchfulness, you must never let yourselves grow careless, or permit yourselves to believe that "white lies," or prevarications, or even inaccuracies, do no harm, for they are all false lights which sooner or later lead away from the one pure light of truth. You can win few things for yourselves which are better worth having than a habit of speaking the truth, at all times and seasons and to all people, and if there is one thing more than another which you ought to gain before you go out into the world to meet its temptations, it is a horror of lying and liars. And here, as in so many other respects, you can help yourselves more than anybody else can help you, you can remember how shocking falsehood is in itself and in its consequences, and with God's help, can determine to cast in your lot with His servants, "in whose tongue there is no guile;" for without such resolution the lives upon which you are just entering will be worth little to yourselves or your fellow men.

LOVE ONE ANOTHER.

Only two little neglected-looking children, with no shoes or stockings on their feet; their dresses all ragged, their hats all torn, their faces soiled and their hair snarled and tangled. I don't believe they had anybody to take care of them. Possibly they had a mother who was obliged to go out to work all day, and leave them to care for each other.

It was very certain that they loved each other, and the *big sister*, ten years old, took very tender care of her little sister, four years old.

One day, when riding in the steam cars, I chanced to look out of the window, and I saw these two little girls at play, chatting and laughing together, when all at once four-years-old saw the steam-engine coming. She jumped up and caught hold of sister, who in a laughing and happy way pressed the little one close to her, and then putting her hands tight over the baby eyes, shut out the sight of the frightful engine as it came rushing and glaring toward her. When it had passed, I looked back and saw baby's face turned lovingly up to her sister's, chattering gayly again; and I imagined she was trying to tell her how glad she was that she did not let that dreadful engine look at her as it whistled past.

THE TAJ MAHAL—INDIA.

The cut in this number is a reproduction from the beautiful steel engraving that forms the frontispiece in Dr. William Butler's "Land of the Veda." The Taj is a mausoleum, built by the Great Mogul, Shah Jehan, over the remains of his beautiful empress, a woman of great capacity, to whom he gave the title of Moomtaj-i-Mahal. She died in 1631, and the Taj is supposed to have been built under the direction of a French architect, Austin de Bordeux. Some passages from Dr. Butler's full account of the building and its surroundings will serve to indicate its exceeding beauty and costliness.

"About six miles before the traveler reaches the city of Agra, the dome and minarets of the world-renowned *Taj Mahal* burst upon his view, from behind a grove of fruit trees near the road. The effect is wonderful! The long anticipated pleasure of beholding earth's most beautiful shrine is now within his reach, and the gratified and delighted sight rests upon this first view of its harmony of parts, its faultless congregation of architectural beauties, with a kind of ecstacy. Of the thousands who have traveled far to gaze upon it, it may be safely asserted that not one of the number has been disappointed in the examination of its wondrous beauty.

"It is situated in the midst of a garden of vast extent and beauty, three miles from Agra." The entrance to the garden is through a superb gateway of red sandstone, inlaid with ornaments and with texts from the Koran in white marble, itself a palace, both as regards its magnitude and its decoration.

"The central avenue runs from the gate to the Taj, as shown in the engraving, with a system of fountains, eighty-four in number, the entire length, having a marble reservoir in the middle, about forty feet square, in which are five additional fountains, one in the center, and one at each corner. On either side of this beautiful sheet of water, into which are falling the silvery jets of spray from the fountains, are rows of dark Italian cypress, significant of the great design of the shrine. The river Jumna flows mildly by, as the garden is on its banks; and the birds pour forth their songs, while the odor of roses, and of the orange and lemon and tamarind trees, perfume the air. Amid all this loveliness, the Taj rises before your view, upon an elevated terrace of white and yellow marble, about thirty feet in height, and having a graceful minaret at each corner. On either side are the beautiful mosque and the rest-house, facing inward, and corresponding exactly in size, design, and execution. The mausoleum itself, the terrace upon which it stands, and the minarets, are all formed of the finest white marble, inlaid with precious stones.

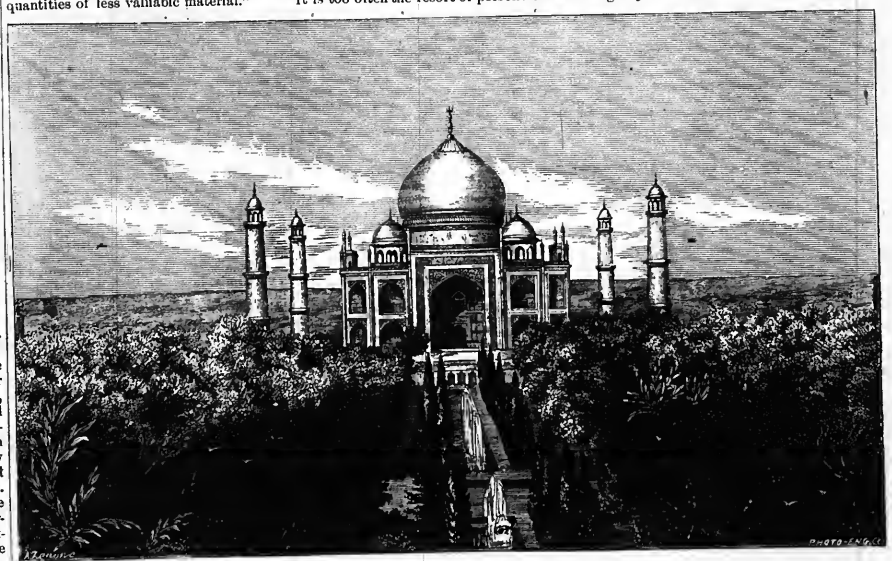
"The dome, 'shining like an enchanted castle of burnished silver,' is seventy feet in diameter, the Taj itself is two hundred and forty-five feet in altitude, and the *cullice*, or golden spire on the summit, is thirty-five feet more, making a height of two hundred and seventy-five from the terrace to the golden cresent.

"It is asserted that the whole of the Koran is inlaid upon the building, in Arabic language, the letters being beautifully formed in black marble on the outside, and in precious stones within. Nearly all the external ornamentations which the reader sees in the engraving are these texts. It is difficult to determine whether the exterior or the interior is the most fascinating; each has its own matchless claim, and each is perfect in its loveliness.

"But the richest work of all is on the cenotaph of the Empress, within the screen. The snow-white marble is inlaid with flowers so delicately formed that they look like embroidery on white satin, so exquisitely is the mosaic executed in carnelian, blood-stone, agates, jasper, turquoise, lapis lazuli, and other precious stones. Thirty-five different specimens of carnelian are employed in forming a single leaf of a carnation; and in one flower, not larger than a silver dollar, as many as twenty-three different stones can be counted. Yet these are but specimens of the beauties that are spread in unparalleled profusion over this entire chamber. Indeed, Long asserts that he found one flower on her tomb to be composed of no less than three hundred stones. Her name and date of death, with her virtuous qualities, are recorded in the same costly manner, in gems of Arabic—the sacred language of the Mohammedans—on the side of her tomb. Over all this richness and beauty rises the magnificent dome, which is so constructed as to contain an *echo* more pure, more prolonged, and harmonious, than any other in the world, so far as known.

"Tavernier, the traveler, who saw this building commenced and finished, tells us that Taj, in its erection, occupied 20,000 men for twenty-two years. Its cost, we are told, was 'threescore, seventeen lacs, forty-eight thousand and twenty-six rupees'; that is £3,174,802 sterling, or, in American money, $15,874,010 gold, of the money of that time; equal to about $60,000,000 of our money now!"

The *Baptist Missionary Magazine* quotes Colonel Anderson as stating that the following precious stones were used in the mosaic work of the Taj: "Opals, 3,870 lbs.; rubies, 4,644 lbs.; emeralds, 8,342 lbs.; sapphires, 12,470 lbs.; carnelian, 77,400 lbs.; turquoise, 20,640 lbs.; lapis lazuli, 37,840 lbs.; coral, 8,600 lbs.; agate and onyx, 43,000 lbs.: besides unlimited quantities of less valuable material."



THE TAJ MAHAL.

SELECTIONS.

THE DRINK PEST.

The venerable Joseph Livesy, in a late issue of The London *Temperance Record*, makes a very earnest appeal to the friends of temperance, from which we quote the following:

"We have never yet taken a sufficiently deep, serious, solemn, comprehensive view of the evils of the drinking system. We skim too much upon the surface, and what we see is so revolting we don't care to go deeper. We recount these evils by saying, "We have 140,000 criminals, 900,000 paupers, 60,000 lunatics, in England and Wales only; that 182,000 persons were charged last year before the magistrates with being drunk and disorderly, nearly double the number of those in 1863; and that our annual expenditure upon intoxicating liquor has now risen to £130,000,000!' But to gain anything approaching to an adequate idea of the whole of the evils of this horrible system, we must go farther. Few conceive or could believe of the sufferings, miseries, discomforts, difficulties, and distresses endured in the domestic circle; and if the matter were fairly investigated, there is nearly as much from moderate drinking as from gross intoxication. There is scarcely a house free from the drink-curse, and which has not to endure some of its afflictions, the teetotaler's excepted. Want of furniture, clothing, bedding, and the decencies of life; hungry children and starving wives; shop debts, rent debts, pawning, and total neglect of the children's education; wife-beatings, broils, kickings, and murders—all of these are the effects of this wicked system. And many of these evils are not confined to the the poor or wage-receiving class, but are endured by trades-people, shop-keepers, commercials, professionals, and those of independent means. Oh! what a tale could broken-hearted mothers reveal belonging to wealthy families, of their sons sent across the sea into exile because of their reckless and profligate conduct, brought on and matured by the drink! The trademen's books show who are the worst customers, for bad debts are generally made with drinkers. No class can reveal the curse of drinking clearer than the employers of labor. Little work, bad work, men idling and drinking when they should be working, are the subject of unerring complaints by masters in every branch of business. Indeed, if we were to begin to enumerate the awful accidents by railways, by sea and land, and of all sorts, produced by the drink pest, we might fill volumes."

THE RAT TRAP.

Boys! never frequent the public house! It is too often the resort of persons of bad character. Shun it as the high road to ruin; it is all down-hill, and difficult to stop when onec you start.

Hear the parable of the rats!

The rats once assembled in a very large cellar, to devise some method of safely getting the bait from a small steel trap which lay near, having seen numbers of their friends and relations snatched from them by its merciless jaws.

After many long speeches, and the proposal of many difficult and fruitless plans, a happy wit among the family, standing erect on his hind legs, said:

"It is my opinion that, if with one paw we can keep down the string, we can safely take the food from the trap with the other."

All the rats present loudly squealed assent, and slapped their tails in applause. The meeting adjourned, and the rats retired to their homes; but the ravages of the trap continuing, they called another meeting.

The elders had just assembled and commenced deliberations, when all were startled by a faint voice, and a poor rat, with only three legs, limping into the ring, stood up to speak.

All were instantly silent, when, stretching out the remains of his leg, he said:

"My friends, I have tried the method you proposed; you see the result. Now let me suggest a plan to escape the trap—*Don't touch it!*"

Boys, think of the rats. Avoid the glittering temptation as you would a spring trap. If once it gets hold of you, you will never get clear of it without losing something. It may not be a leg, but it may be your character, your honor—certainly it will be your money, and with that, perhaps your credit, too.

TEMPTATION.

An old man kept an apple-stall at the corner of a street. He had apples, oranges, cakes &c.; and sold a good deal in pleasant weather. He was a good old man, and people often bought to help him. Sometimes he thought his things went without selling. Every now and then he missed a cake or a great yellow orange. It troubled him. "I'd rather give a boy an orange than have him take it behind my back," said the old apple man; "I can better afford to lose it than he to steal it."

One day he caught a boy in the very act of pocketing two large oranges. A policeman was near, and saw it also; and the policeman was very glad for he had long suspected some bad boys in that neighborhood, and was on the lookout for a chance to catch them. "Now, my boy, I've caught you," cried the policeman, "and shall march you off to the station." Somebody went and told James' mother. She put on her bonnet and ran to see what was the matter. "My James steal! *Never!*" cried the poor mother. She found however, the proof direct, and James himself did not stand out. He confessed taking the oranges. "Jemmy, Jemmy, why did you do so?" cried the mother.

"Oh," cried the boy, the big tears rolling down his checks, "it was because *I kept looking at them.*"

As this was James' first offence, he was not sent to the House of Correction, but he was fined, and his poor mother had to pay the fine out of her small earnings.

"Oh, James, James," she said, "keep watch over your eyes, and never, never look a second time on forbidden things."

HOW TO MAKE LIFE HAPPY.

Every man and every woman has his or her assignment to the duties and responsibilities of daily life. We are in the world to make the world better; to lift it up to higher levels of enjoyment and progress; to make its hearts and homes brighter and happier by devoting to our fellows our best thoughts, activities and influence. It is the motto of every true heart, and the genius of every noble life, that "no man liveth to himself." It is a law of our intellectual and moral being that we promote our own happiness in the exact proportion we contribute to the comfort and enjoyment of others.

THE DEATH OF THE FLOWERS.

W. C. BRYANT.

The melancholy days are come, the saddest of the year,
Of wailing winds, and naked woods, and meadows brown and sere.
Heaped in the hollows of the grove, the withered leaves lie dead:
They rustle to the eddying gust, and to the rabbit's tread.
The robin and the wren are flown, and from the shrube the jay;
And from the wood-top calls the crow, through all the gloomy day.

Where are the flowers, the fair young flowers, that lately sprang and stood
In brighter light and softer airs, a beauteous sisterhood?
Alas! they all are in their graves; the gentle race of flowers
Are lying in their lowly beds, with the fair and good of ours;
The rain is falling where they lie; but the cold November rain
Calls not, from out the gloomy earth, the lovely ones again.

The wind flower and the violet, they perished long ago;
And the brier-rose and the orchis died amid the summer's glow;
But on the hill the golden rod, and the aster in the wood,
And the yellow sunflower by the brook, in autumn's beauty stood,
Till fell the frost from the clear cold heaven, as falls the plague on man,
And the brightness of their smile was gone from upland, glade, and glen

And now when comes the calm, mild day, as still such days will come,
To call the squirrel and the bee from out their winter home;
When the sound of dropping nuts is heard, though all the trees are still,
And twinkle in the smoky light, the waters of the rill,—
The South wind searches for the flowers whose fragrance late he bore,
And sighs to find them in the wood and by the stream no more.

And then I think of one who in her youthful beauty died,
The fair, meek blossom that grew up and faded by my side:
In the cold, moist earth we laid her when the forest cast the leaf,
And we wept that one so lovely should have a life so brief;
Yet not unmeet it was, that one, like that young friend of ours,
So gentle and so beautiful, should perish with the flowers.

The Teachers' Table.

EDUCATION AT THE CENTENNIAL.

The great Centennial exhibition to be held in 1876, at Philadelphia, has made special arrangements for the representation of our century's progress, as will be seen by the following plan:

DEPARTMENT III.—EDUCATION AND SCIENCE.

Educational Systems, Methods and Libraries.

CLASS 300.—Elementary instruction: Infant-schools and Kindergarten, arrangements, furnitures, appliances, and modes of training.

Public schools: Graded schools, buildings and grounds, equipments, courses of study, methods of instruction, text-books, apparatus, including maps, charts, globes, etc.; pupil's work, including drawing and penmanship; provisions for physical training.

CLASS 301.—Higher education: Academies and high schools. Colleges and universities: Buildings and grounds; libraries, museums of zoology, botany, mineralogy, art, and archæology; apparatus for illustration and research; mathematical, physical, chemical, and astronomical courses of study; text-books, catalogues, libraries, and gymnasiums.

CLASS 302.—Professional schools: Theology, law, medicine and surgery, dentistry, pharmacy, mining, engineering, agriculture and mechanical arts; art and design, military schools, naval schools, normal schools, commercial schools, music. Buildings, text-books, libraries, apparatus, methods, and other accessories for professional schools.

CLASS 303.—Institutions for instruction of the blind, the deaf and dumb, and the feeble-minded.

CLASS 304.—Education reports and statistics: National Bureau of Education. State, city, and town systems. College, university, and professional systems.

CLASS 305.—Libraries: History, reports, statistics, and catalogues.

CLASS 306.—School and text-books: Dictionaries, encyclopædias, gazetteers, directories, indexes, volumes, bibliographies, catalogues, almanacs, special treatises, general and miscellaneous literature, newspapers, technical and special newspapers and journals, illustrated papers, periodical literature.

Institutions and Organizations.

CLASS 310.—Institutions founded for the increase and diffusion of knowledge: Such as the Smithsonian Institute, the Royal Institution, the Institute of France, British Association for the Advancement of Science, and the American Association, &c., their organization, history, and results.

CLASS 311.—Learned and scientific associations: Geological and mineralogical societies, etc. Engineering, technical and professional associations. Artistic, biological, zoological, medical societies, astronomical observations.

CLASS 312.—Museums, collections, art-galleries, exhibitions of works of art and industry. Agricultural fairs, state and county exhibitions. National exhibitions. International exhibitions. Scientific museums and art museums. Ethnological and archæological collections.

CLASS 313.—Music and the drama.

RANDOM THOUGHTS.

No doubt this *Journal* will fall into the hands of many young teachers. To such I would offer a few thoughts.

1. If you would have no drones in your school, talk at each recitation to the dullest in the class, and use all your ingenuity in endeavoring to make him comprehend. The others, than, will be sure to understand.

2. Make each exercise as attractive as possible. Think out your methods beforehand, and illustrate freely.

3. Cultivate self-control; never be led into confusion, and above all be in earnest.

4. Be cheerful, and *smile* often. A teacher with a long face casts a gloom over everything, and eventually chills young minds and closes young hearts.

5. Use simple language when you explain lessons. Long words are thrown away in the schoolroom.

8. Thoroughly test each pupil on the lesson, and do not be afraid of repetition. Review *every day* or much time will be lost.

7. Do not try to teach *too much;* better teach a little and teach it *well.*

8. Endeavor to make your pupils understand the *meaning* of what they study. Probe the matter to the bottom, and get at the real knowledge of your scholars.

9. Cultivate the understanding, and do not appeal directly to the memory.

10. Lay the foundation of knowledge firmly and well.

11. Impart right principles and lead your pupils to a higher level, to a nobler range of thought. Endeavor to accomplish all that skill, intelligence, and love can suggest.

"What now you do you know not
But shall hereafter know.
When the seed which you are sowing
To a whitened field shall grow.

"'Tis a rich young soil you're tilling,
Then scatter the good seed well;
Of the wealth of the golden harvest
Eternity will tell."

12. Teach your pupils to fight manfully in the warfare of good against evil, truth against error, and, above all, let the eternal principles of right and wrong govern your own life, and form a part of your own character. If you do this, you will "sow beside all waters, and eventually bring home your sheaves rejoicing."

—*Maine Journal of Education.*

At Home.

A FARMER'S WIFE.

"Flowers spring to blossom where she walks
The careful ways of duty;
Our hard, stiff lines of life with her
Are flowing curves of beauty.

"Our homes are cheerier for her sake,
Our door-yards brighter blooming,
And all about, the social air
Is sweeter for her coming."—*Whittier.*

NOBODY BUT JOHN.

"Some one is coming," said I, as the clack of the shutting gate fell on my ears, and I looked at Maggy's soiled, untidy dress, and tumbled hair.

Maggy started, and glanced hastily from the window; then sat down again in a careless way, remarking as she did so: "It's nobody but John."

Nobody but John! And who do you think that nobody was? Only her husband.

Nobody but John!

A few moments afterward, John Fairburn came into the room where we were sitting, and gave me one of his frank, cordial greetings. I had known him for many years, and long before his marriage. I noticed that he gave an annoyed glance at his wife, but did not speak to her. The meaning of this annoyance and indifference was plain to me; for John had come of a neat and tidy family. His mother's housekeeping had always been notable. She was poor; but as "time and water are to he had for nothing"—this was one of her sayings—she always managed to have things about clean and orderly.

Maggy Lee had a pretty face, bright eyes and charming little ways that were very taking with the young man, and so was quite a belle before she got out of her teens. She had a knack of fixing her ribbons, or tying her scarf or arranging her hair, shawl or dress in a way to give grace and charm to her person. None but her most intimate friends knew of the untidiness that pervaded her room and person when at home and away from common observation.

Poor John Fairburn was taken in when he married Maggy Lee. He thought he was getting the tidiest, neatest, sweetest and most orderly girl in town, but discovered too soon that he was united to a careless slattern. She could dress for other people's eyes, because she had a natural love of admiration; but at home, and for her husband, she put on any old dud, and went looking often "like the old scratch," as the saying is.

On the particular occasion of which I am speaking—it was after she and John had been married over a year—her appearance was almost disgusting. She did not have on even a morning dress; only a faded and tumbled chintz sack above a soiled skirt—no collar—slippers down at the heels, and dirty stockings. Her hair looked like a hurrah's nest, if any one knows what that is—I don't; but suppose it is the perfection of disorder. No one could love such a looking creature. That was simply impossible.

"Nobody but John!" I looked at the bright, handsome young man and wondered. He ate his dinner almost in silence, and then went back to his work. I had never seen him so moody.

"What's come over John?" I asked as he went out.

"Oh, I don't know," his wife answered. "Something wrong at the shop, I suppose. He's had trouble with one of the men. He's foreman, you know."

"Are you sure it's only that?" I asked, looking serious.

"That, or something about his work. There's nothing else to worry him."

I was silent for awhile, debating with myself whether good or harm would come of a little plain talk with John's wife. She was rather quick-tempered, I knew, and easy to take offence. At last I ventured the remark: "Maybe things are not just to his liking at home."

"At home!" Maggy turned on me with a flash of surprise in her face. "What do you mean?"

"Men like beauty, and taste, and neatness in their wives as well as in their sweethearts," I said.

The crimson mounted to her hair. At the same moment I saw her glance at a looking-glass that hung opposite to her on the wall. She sat very still, yet with a startled look in her eyes, until the flush faded and her face became almost pale.

"Maggy," I said, rising and drawing my arm around her, "come up-stairs. I have something very serious to say to you."

We walked from the little dining-room and up to her chamber in silence. I then said: "Maggy, I want to tell you about a dear friend of mine who made shipwreck of happiness and life. It is a sad story; but I am sure it will interest you deeply. She was my cousin; and her name was—

Maggy bent forward, listening attentively. "What?" she asked, as I hesitated on the name.

"Helen."

"Not Helen White, who married John Harding, and was afterward deserted by her husband?"

"Yes; my poor, dear Cousin Helen. It is of her I am going to tell you."

"I never knew why her husband went off as he did," said Maggy. "Some said he was to blame, and some put all the fault on her. How was it?"

"Both were to blame; but she most," I replied. "John Harding was, like your husband, one of the neatest and most orderly of men. Anything untidy in his home, or in the person of his wife, annoyed and often put him out of humor; but he did not, as he should have done, speak plainly to his wife, and let her see exactly how he felt, and in what he would like a change. If he had done so, Helen would have tried—as every good wife should—to conform herself more to his tastes and wishes. But, he was a silent, moody sort of a man when things did not go just to suit him; and instead of speaking out plainly, brooded over Helen's faults, and worried himself into fits of ill humor. And what was worse than all, grew at length indifferent to his home and wife, and sought pleasanter surroundings and more attractive company abroad.

"Every man thus estranged from his home is in danger, and Harding was no exception to the rule. Temptation lay about his feet—and that commonest temptation of all, the elegantly fitted up billiard and drinking saloon.

"They had been married just about as long as you and John have been, when the sad catastrophe of their lives took place. I had called to spend the day with Helen, and found her in her usual condition of personal untidiness and disorder. When her husband came home at dinner time, I noticed with painful concern that he had been drinking—not very freely, but just enough to show itself in captious ill humor. Helen had not dressed for dinner, but presented herself at the table without even a clean collar, and with an old, faded shawl drawn about her shoulders. She looked anything but attractive.

"I saw her husband's eyes glance toward her across the table with an expression that chilled me. It was a hard, angry, determined expression. He was scarcely civil to me, and snapped his wife sharply two or three times during the meal. At its close, he left the table without a word, and went up-stairs.

"'What's the matter with John?' I asked.

"'Dear above knows!' replied Helen. 'He's been acting queer for a good while. I can't imagine what's come over him.'

"'Does he coma home in this way often?' I asked.

"'Yes, he's moody and disagreeable as he can be most of the time. I'm getting dreadfully worried about it.'

"As we talked, we heard John moving about with heavy footfalls in the rooms above. Presently he came down, and stood for a little while in the hall at the foot of the stairs, as if in hesitation. Then he went to the street door, passed out, and shut it hard after him.

"Helen caught her breath with a start, and turned a little pale.

"'What's the matter?' I asked, seeing the strangeness of her look.

"'I don't know,' she replied in a choking voice, laying her hand at the same time on her breast, 'but I feel as if something dreadful were going to happen.'

"She got up from the table, and I drew my arm around her. I too felt a sudden depression of spirits. We went slowly up to her chamber, where we spent the afternoon; and I then took upon myself the office of a friend, and talked seriously to my cousin about her neglect of personal neatness, hinting that the cause of her husband's estrangement from his home, and altered manner toward herself, might all spring from this cause. She was a little angry with me at first; but I pressed the subject home with a tender seriousness that did the work of conviction; and as evening drew on, she dressed herself with care and neatness. With a fresh ribbon tied in her hair, and color a little raised from mental excitement, she looked charming and lovable. I waited with interest to see the impression she would make on her husband. He could not help being charmed back into the lover, I was sure. But he did not come home to tea. We waited for him a whole hour after the usual time, and then sat down to the table alone; but neither of us could do more than sip a little tea.

"I went home soon after, with a pressure of concern at my heart for which I could not account. All night I dreamed uncomfortable dreams. In the morning, soon after breakfast, I ran over to see Helen. I found her in her room, sitting in her night-dress, the picture of despair.

"'What is it?' I asked eagerly. 'What has happened?'

"She looked at me heavily, like one not yet recovered from the shock of a stunning blow.

"'Dear cousin! what is the matter?' I said.

"I now saw, by a motion of her hand, that it held, tightly clutched, a piece of paper. She reached it to me. It was a letter, and read:

"'We cannot live happily together, Helen. You are not what I believed myself getting when we were married—not the sweet, lovely, lovable girl that charmed my fancy and won me from all others. Alas for us both that it is so! There has been a shipwreck of two lives. Farewell! I shall never return.'

"And this was all; but it broke the heart of my poor cousin. To this day, though nearly three years have passed, she has never heard from her husband.

"I saw her last week in the country house to which she has been taken by her friends—a wreck both in mind and body. She was sitting in an upper room, from the windows of which could be seen a beautiful landscape. She was neatly attired, and a locket containing her husband's picture, hung at her throat. Her head was drooped, and her eyes on the floor, when I entered; but she raised herself quickly, and with a kind of start. I saw a momentary, eager flush in her face dying out quickly, and leaving it inexpressibly sad.

"'I thought it was John,' she said mournfully. 'Why don't he come?'

I had to stop here, for Maggy broke out suddenly into a wild fit of sobbing and crying, which lasted for nearly a minute.

"What ails you, dear?" I asked, as she began to be a little more composed.

"Oh! you have frightened me so. If John should—"

She cut short the sentence; but her frightened face left me in no doubt as to what was in her thoughts.

She arose and walked about the room in an uncertain way for some moments, and then sat down again, drawing in her breath heavily.

"If young wives," I remarked—believing that in her present state the truth was the best thing to say—"would take half the pains in making themselves personally attractive to their husbands, that they did to charm their lovers, more of them would find the lover con-

tinned in the husband. Is a man, think you, less an admirer of womanly grace and beauty after he becomes a husband than he was before?"

"Hush! hush!", she said, in a choking voice. "I see it all! I comprehend it all." And she glanced down at herself. "I look hateful and disgusting."

After a plain, earnest talk with Maggy, I went home. I give her own words as to what happened afterward.

"I was wretched all the afternoon. John had acted worse than usual at dinner-time; and what yon told me about poor Helen set my fears in motion and worried me half to death. Long before the time he usually came home, I dressed myself with care, selecting the very things I had heard him admire. As I looked at myself in the glass, I saw that I was attractive; I felt as I had never felt before that there was a bower in dress that no woman can disregard without loss of infinence, no matter what her position or sphere of life.

"Supper-time came. I had made something that I knew John liked, and was waiting for him with a nervous engerness it was impossible to repress. But the hour passed, and his well-known tread along the little garden walk did not reach my anxions ears. Five, ten, twenty minutes beyond his hour for returning, and still I was alone. Oh! I shiver as I recall the wild fears that began to crowd upon me. I was standing at the window, behind the curtain, waiting and watching. All at once I saw him a little distance from the house, but not in the direction from which he usually came. He was walking slowly, and with his eyes upon the ground. His whole manner was that of one depressed or suffering. I dropped the curtain, and went back into our little breakfast-room to see that supper was put quickly on the table. John came in, and went upstairs, as he usually did, to change his coat before tea. In a few minutes I rang the tea-bell, and then seated myself at the table to wait for him. He was longer than usual in making himself ready, and then I heard him coming down slowly and heavily, as if there were no spirit in him.

"My heart beat strongly. But I tried to look bright and smiling. There was, oh! so dreary a look on John's face as I first saw it in the door. He stood still just a moment with his eyes fixed on me; a flash of light passed over it, as he stepped forward quickly, and coming to where I sat, stooped down and kissed me. Never before was his kiss so sweet to my lips.

"'I have found my little wife once more,' he said, softly and tenderly, and with a quiver in his voice.

"I laid my head back upon his bosom, and, looking up into his face, answered; 'And yon shall never lose her again.'"

And I think he will not. The sweetness of that hour, and the lesson it taught, can never be forgotten by my friend Maggy.—*Arthur's Home Magazine.*

A STARTLING IDEA OF FINANCE.

Abont the beginning of the present century, the old bank of Albany (since defunct,) then presided over by thirteen distinguished representatives of fatherland, issued the first circulating notes. Immediately after their receipt from the printer, an application for a loan of a few thousand dollars was made to the bank by a drover, well known in Albany for his ability and financial soundness. The loan was passed by the board, and the cashier was ordered to pay the money, who, like a faithful officer, revolved in his mind as to what kind of money he would pay whether it should be their own currency or gold. The first item puzzled him; it was now. The directors were immediately reconvened, and the subject was laid before them. Chairs were drawn to the great fireplace, thirteen clay pipes were lighted, and discussion ensued upon the proposition to pay out the new currency. No satisfactory conclusion was likely to be arrived at until the following speech was made by one of the number.

"Gentlemen of the board: These bills of ours received to-day, have cost this bank a large sum of money. The engraver, the printer, the paper-maker and incidentals, all have to be paid. The thought of these expenses so justly incurred, does not stagger me in the least, for the bills are very fine and an ornament to the bank. But, gentlemen, when it is proposed to send these new bills into the far West, there to be traded off for cattle—torn, soiled, and perhaps utterly destroyed—I, for one, solemnly protest. I venture this moment, gentlemen, to assert the opinion, that should you be so unwise as to allow these new bills to be sent north and west, broadcast beyond Lansingburgh, Schenectady, and away the other side of Utica, (as I understand this man proposes to take some of them,) you will never see them again, so long as the bank of Albany has an existence or a name."

The motion was lost and the gold was duly paid.—*The Greensboro' Herald.*

THE WITCHERY OF MANNER.

Almost every man can recall scores of cases, within his knowledge, where pleasing manners have made the fortunes of lawyers, doctors, divines, merchants, and in short, men of every walk in life.—Raleigh flung down his laced coat in the mud for Elizabeth to walk on, and got for his reward a proud queen's favor. The politician who has this advantage easily distances all rival candidates, for every voter he speaks with becomes instantly his friend The tones in which he ask for a pinch are often more potent than the logic of a Webster or a Clay. Polished manners have often made scoundrels successful, while the best of men, by their hardness and coldness, have done themselves incalculable injury; the shell being so rough that the world could not believe there was a precious kernel within. Civility is to a man what beauty is to a woman. It creates an instantaneous impression in his behalf, while the opposite quality excites as quick a prejudice against him. It is a real ornament, worth more as a means of winning favor than the finest clothes and jewels ever worn. The gruffest man loves to be appreciated; and it is often the sweet smile of a woman, which we think is intended for us alone, that bewitches our heart, and lays us at the feet of her whom we afterward marry.—*Home Guardian.*

Correspondence.

SNUFF DIPPING.

A writer in one of the Raleigh papers gives what he has seen and known to be true, the manner of making most of the snuff, which so many ladies put in their mouths, in many portions of our southern countries, adding that a superior brand of snuff is made from dried tobacco worms.

In addition to the manufactory of snuff it will be no exaggeration to assert that a large portion of it was always made from refuse tobacco—such as ground and frost-bitten leaves, the sweepings of the floors of large manufactories, and the gleanings from stems and stalks. As these manufactories were in, or near large cities, very early in the history of its preparation, proprietors obtained a large amount of their material from other sources, especially from the pickings of the sweepings of the streets. Afterward when fires were traced to the dropping of lighted cigars in the streets, and it was interdicted by municipal law, reservoirs and depositories were provided in all the hotels, theatres, restaurants, beer and drinking saloons, in the form of tin or sheet iron salvers with wire bottoms, stationed over a marble trough filled with water. In process of time, as the use of tobacco increased and these depositories were understood, the daily accumulation of butt ends of cigars and exhausted rejected quids of tobacco contributed no mean source of revenue to the proprietors—eagerly sought for and readily purchased as they were by the manufacturers of snuff, and in this way was developed a source of supply that at this day constitutes the material from which is made much the larger portion of the snuff found in commerce.

Now these are the facts in history of the kind and character of our snuff material. Let us look at them a moment. Every one who has seen it knows the drinking saloons in cities are infested with a diseased, debauched, mendicant, filthy, brutalized race of semi-barbarian creatures, nine-tenths of whom, perhaps, every time they outer these "hells" drop into these reservoirs a slobbered end of a cigar, or an exhansted quid of tobacco, accompanied generally with an overflowing mouthful of ambier, not only saturated with tobacco, but reeking with the putrid secretions of scurvey, cancum oris, or other diseases of the glands, gums, and teeth, which are prevalent among this class of society, and crawling ten thousand into sin (a species of the maggot tribe) this execrable compound percolates through the pile and serves to highten its aroma.

These reservoirs or salvers are generally filled during the day and night, and are emptied and taken in the morning by snuff grinders, who assort the ends of fine perfumed cigars for the maccoboy or bottle snuff, while from the quids and slobbered ends of common cigars the snuff as found in the stores is made; and this is the material and source of that delectable compound our ladies so liberally and so complacently cram into their months to cleanse(?) their teeth with, or, what is worse, roll under their tongues as a sweet morsal; and that its "linked sweetness may be long drawn out," ever and anon, gulp it down their throat that their poor abused, poisened stomach may receive its share of this delicious compound.

LETTERS FROM GRADUATES.

We can in no way present the lights and shadows of a Hampton graduates life so well as by publishing extracts from their private letters to their teachers. Not designed for publication, they reflect the real thought and a genuine experience and are invaluable to those interested in the problem of negro education, for they place the hopeful class of colored youth in a just light, and give people a chance to judge, upon good evidence, whether it pays to have such scholars at Hampton. The following will, we hope, interest many.

REYNOLDSON, GATES CO.,
July 8th, 1875.

I have just got my mind fully composed to write you what Susie and I are doing—we have been well until now—We have our school affairs settled, and we will begin to teach next Monday morning. We would have begun sooner, but the farmers have been having such a very dry time with their crops that they could not afford to spare their children to go to school; so Susie, Lucy and I, will begin on next Monday the 12th. Susie will be six miles from me, at a place by the name of Middle Swamp, and Lucy about three miles from Susie and four miles from me. Lavinia Green, will also commence to teach school, and Mr. Charles Green, at Gatesville, and Wm. Reid. We had a very nice time visiting around when we were over the river, and singing our plantation melodies for sabbath schools and giving addresses and lectures on education, and other matters. We really find so much work to do, that we do not know where to begin. We were examined at Gatesville last Thursday, a week. Mr. Green, Susie and myself received first grade certificates; Lucy, Lavinia and Wm. Reid second grade certificates. Susie will sturt for her boarding place to-morrow, she says she will be so very glad to hear from you at any time, to receive your advice and instruction. Dear Miss——, I hope you will write often to us for you do not know what a stimulant your letters are; they are so much so that I often wish that I could get a letter every week, but that of course is impossible.

Please write soon for I shall be ever so glad to hear from Susie. All join with me in sending you much love.

I am one of your former students,
T. B.

OLD CHURCH, VA., HANOVER COUNTY,
July 12, 1875.

Dear Teacher,—These are the first lines I have attempted to address you since my class left school, two years ago. I could have written often, but I was sensible of the fact that writing could not ans wer in the least degree the demands of the school upon me, nor at all satisfy the obligations which I owe to the Hampton Institute. No student has ever studied at Hampton who loves the school more than I do, though my means of showing it are very poor.

I have been a constant subscriber to, and reader of, the WORKMAN since I left school; and finding it at all times a most welcome and desirable companion, furnishing me each month with tidings from Hampton, I have been content to go on, patiently and diligently, with my work, hoping that in so doing I should sooner meet my demands in the school than by writing. Few students, I venture to say, has ever gone through Hampton more self-dependent than I, and at the same time under greater pecuniary embarrassments. I was wholly dependent upon the school for its indulgences the greater part of my time there, and was always humbly grateful for its favors. I can say with much truth that during my whole stay at Hampton I tried to be faithful in the discharge of all the duties assigned me, and if I failed at any time to do so, it was not willfully done.

General, I am truly thankful to you and all connected with the school, for the very liberal deduction you have made in my bill. You will please send special directions how to meet my present obligations, when I shall hope to answer you soon in the settlement of my whole bill.

I am, with grateful feelings for good received,
Yours with due respect,
W. P. B.

AN Ohio correspondent of the *Country Gentleman* says: "I am using a remedy for driving away insects and hugs that works tiptop, and if any of your readers have not tried it I advise them to waste no time with soot, ashes, etc., hut ask their drusgist to order them a pound of carbolic acid, N. 5, which will cost seventy-five cents. If air-slaked lime is to be had, use a teaspoonful of acid to a quart of lime; mix well, and dust over the plants. One application is frequently sufficient. The cabbage-flea (jumping Jack) threatened to destroy my plants of cabbage and rutahagas, hut one dose was sufficient to clear the garden of them. If the lime is not slaked, take one teaspoonful of acid to a pint of hot water and slake the lime with the mixture.

HEDGES.—An exchange says: Arbor vitæ and other evergreen hedges which have not already received their annual clipping, should be attended to now, without delay. Keep the top down and induce a thick bottom growth. The wider a hedge is at the bottom, the better light it gets, and the healthier it will be. A pair of shears costing from two to three dollars will be found very convenient both for trimming hedges and for clipping grass borders, hut an old scythe fastened to a short, straight stick for a handle, leaving about half of the cutting edge beyond the stick, will be found not a bad tool for shortening in the tender ends of evergreens. Some gardeners prefer it to the shears, believing they can cut more evenly and much more rapid, bnt a neglected one is a perpetual eyesore.

Sunday-school Lessons on the Life of Christ.

LESSON I.

SEPTEMBER 5, 1875.
HYPOCRISY AND PIETY.

MARK xii: 38–44.

38 And he said unto them in his doctrine, Beware of the scribes, which love to go in long clothing, and *love* salutations in the market-places,
39 And the chief seats in the synagogues, and the uppermost rooms at feasts:
40 Which devour widows' houses, and for a pretence make long prayers: these shall receive greater damnation.
41 And Jesus sat over against the treasury, and beheld how the people cast money into the treasury: and many that were rich cast in much.
42 And there came a certain poor widow, and she threw in two mites, which make a farthing.
43 And he called *unto him* his disciples, and saith unto them, Verily I say unto you, That this poor widow hath cast more in, than all they which have cast into the treasury.
44 For all *they* did cast in of their abundance: but she of her want did cast in all that she had, *even* all her living.

Golden Text.—WHAT DOTH THE LORD REQUIRE OF THEE BUT TO DO JUSTLY, AND TO LOVE MERCY, AND TO WALK HUMBLY WITH THY GOD?—Micah vi: 8.

Do you remembsr the question the young lawyer put to Jesus—tha answer to which was the subject of our last Sabbath's lesson? Jesus answered him so well that the wicked Scribes did not dare to ask him anything more. Tha young lawyer himself was so convinced of ths wisdom of Jesus' reply that he could not help saying to him, "Well, Master thou hast said the truth." He was more frank sud honest than tha rest of tha Scribes, for though his answers silenced them than, thsir after-conduct shows that they did not ropent of their wrong thoughts and feelings toward Christ, but at once began to lay plots to have him delivered into their hands so that he might ba put to death. But "the common people heard him gladly." They could see that Jesus—who is always the friend of the poor and lowly—had more real interest in them than these Scribes who had been their leaders and guides. Jesus was sorry for them that they had no better guides than these wicked men, and he told them to beware of them becausa thay were only pretending to be good while thay were in reality very bad men. This pretending to be what they were not made them hypocrites. Christ himself gave tham this fearful name when he pronounced upon them those fearful woes (Matt. 23: 13–16, 23–33). Our Fathar in Heaven does not love men, woman, or children, who only make a show of being good. I hope that wa may *be* really good and not, like these Scribes, only want to appear so. If we sincerely ask Jesus to help us, and then are willing to do as we are bidden in God's Holy Word, wa shall succeed.

Tha treasury was a room in the temple whera were placed boxes in which tha people could drop their gifts. This money was used in the service of the temple. Jesus was sitting by where he could see them as they brought their offerings, [Can Jesus see what we do now? "The eyes of tha Lord are in every place beholding tha evil and the good" (Prov. 15: 3).] He saw the rich cast in much, and then there came a ceatain poor widow of whom he said, "Verily I say unto you, that this poor widow hath cast more in, than all they which have cast into ths treasury." She gave two mites. A mite was the smallest piece of Jewish money. It would taka three of these to be worth us much as one of our cents. What did Christ mean then by saying she had cast in more thau all? It was because she had given *all* she had. The rich people had given large sums of money, but they did not have to deny themselves anything or to go without anything they really wished to have. Christ by no means condemned the rich men but he showed how pleased he was at the spirit of self-sacrifice which prompted the gift of this poor woman. Then, too, it is a standing encouragement to all who, like her, are abla only to cast mites into the Lord's treasury. Beacuse we can only give a little is no reason that we should not give anything. If we give what we can, be it ever so little, freely, from love to Christ, he will accept and bless the gift. The first gift which Jesus asks of us all is ourselves, "My son, give me thine heart" (Prov. xxiii: 26). If wa give ourselves to Jesus wa shall wish to show that we are his by keeping all his commands and doing good unto all as wa have opportunity, by giving as wall as in other ways. "God loveth a cheerful giver" (2 Cor. ix: 7).

LESSON II.

September 12, 1875.

THE ANOINTING AT BETHANY.

MARK xiv: 3–9

3 And being in Bethany, in ths house of Simon the leper, as he sat at meat, there came a woman having an alabaster-box of ointment of spikenard, very precious; And she brake the box, and poured *it* on his head.
4 And there were some that had indignation within themselves, and said, Why was this waste of the ointment made?
5 For it might have been sold for more than three hundred pence, and have been given to the poor. And they murmured against her.
6 And Jesus said, Let her alone; why trouble ye her? she hath wrought a good work on me.
7 For ye have the poor with you always, and whensoever ye will ye may do them good: but me ye have not always.
8 She hath done what she could: she is come aforehand to anoint my body to the burying.
9 Verily, I say unto you, Wheresoever this gospel shall be preached throughout the whole world, *this* also that she hath done shall be spoken of, for a memorial of her.

Golden Text.—WHERESOEVER THIS GOSPEL SHALL BE PREACHED THROUGHOUT THE WHOLE WORLD, THIS ALSO THAT SHE HATH DONE SHALL BE SPOKEN OF, FOR A MEMORIAL OF HER.—Mark xiv: 9.

Our last lesson records Christ's words of commendation of the woman who so loved the Lord and his cause that she cheerfully cast all she had into his treasury, for which she received a far greater blessing than they who had cast in of their abundance. "If there be first a willing mind, it is accepted according to what a man hath, and not according to what he hath not." (2 Cor. viii: 12)

In our lesson to-day Christ speaks words of praise of another woman who proved herself his friend by doing what *she* could to show her love for him. This woman's name was Mary (John xii: 2, 3). She lived in Bethany with her sister Martha and brother Lszarus, whom Jesus had, not very long before, raised from the dead. This feast was at the house of Simon, the leper. Simon is supposed to have been the father of Mary and Martha and Lszarus, and probably he had himself been cured of leprosy by Jesus. If so, this was another cause for Mary's overflowing gratitude. While Jesus was sitting at the table, Mary brought an alabaster box of ointment which she brake and poured upon his head. The box was of a kind of white marble—very beautiful, and it cost three hundred pence. That, in our money, would be between forty and fifty dollars. As well as being very costly it was very fragrant, for wa read in another place that "the house was filled with the odor of tha ointment." (John xii: 3). It was tha custom in those times to put sweet-smelling oil on the heads of those who were worthy of honor. Kings and priests were anointed in this way (1 Ssml x: 1). Mary wished to show how much she loved and honored the friend who had done so much for her and her family. She was not content to pour it upon his head only but also poured it upon his feet. Some of tha disciples, particularly Judas (John xii: 4, 5), found fault with Msry for what she had done, saying that it might have been sold and given to the poor. Wa have reason to halieve that this was not tha true reason of the complaint of Judas, for we know he was a selfish man and very fond of money, and it was he who carried the bag and took charge of all the monay which belonged to Jasus and the disciples. But Jesus did not find fault with her, for he knaw how full of love to him her heart was. Instead he rebuked the disciples, telling them to "Let her alone"—that she had wrought a good work on him. He would very soon leave the earth and no moro offerings of love could be brought to him as a person; but "ye have the poor with you always," he added, "and whonsoever ye will ya may do them good." *We* cannot do little acts of kindness to Jesus himself, as Mary and Martha could, but we can do good to the poor people whom we know, who need our help. We may be so poor ourselves that we have no monay to give them, but that is not the *only* way, nor is it always tha *best* way of doing good. If we try very hard I think we can each of us find out ways in which we can be *so* helpful to other people that the dear Jesus will say of each of us as he did of Mary, "She hath done what she could."

The last verse of our lesson shows us what value Jesus put upon this loving act of Mary's. The prophecy of Jesus has been and is being continually fulfilled—for wherever the blessed Bible goes, bearing its messages of love from our Father in Heaven and the record of the life of His son and our Saviour, the story of the loving devotion of Mary is recorded, and thus her memory will be dear and fresh as long as time shall last.

LESSON III.

September 19, 1875.

THE BETRAYAL.

MARK xiv: 42–50.

42 Rise up, let us go; lo, he that betrayeth me is at hand.
43 And immediately while he yet spake, cometh Judas, one of the twelve, and with him a great multitude with swords and staves, from the chief priests, and the scribes, and the elders.
44 And he that betrayed him, had given them a token, saying, Whomsoever I shall kiss, that same is he; take him, and lead *him* away safely.
45 And as soon as he was come, he goeth straight-way to him, and saith, Master, Master; and kissed him.
46 And they laid their hands on him, and took him.
47 And one of them that stood by, drew a sword, and smote a servant of the high priest, and cut off his ear.
48 And Jesus answered and said unto them, Are ye come out as against a thief, with swords and *with* staves to take me?
49 I was daily with you in the temple, teaching, and ye took me not; but the scriptures must be fulfilled.
50 And they all forsook him and fled.

We learned in our last lesson that some of the disciples found fault with Mary for anointing Jesus. They called it a waste. Judas was the one who was most displeased about it. This was because he would rather Mary should have given him the money which the ointment cost, for he loved money more than he did his Lord and Master. And now this love of money, which the apostle Paul tells us is "the root of all evil" (1Tim. vi: 10), led him to go directly from Simon's house and do the most wicked thing it was possible for him to do. Judas knew that the chief priests hated Jesus and were very anxious to put him to death, so he went to them and offered to betray him to them if they would give him money for so doing. They agreed to give him thirty pieces of silver. This is only about eighteen dollars in our money.

After Judas went out for this wicked purpose, as Jesus and the rest of the disciples sat together at supper he again explained to them that he was about to die, and told them that hereafter this supper was to be eaten by his followers in remembrance of his death. It is called the Lord's Supper. It is Jesus' wish that all who believe in him aud truly love him should often do this in remembrance of his dying love to them. Then they went out to a garden near by called Gethsemane. Christ left the disciples near the gate to watch, while he himself went further into the garden that he might be alone with His Father. Three times he returned to them, finding them asleep; the last time he came with the first words of our lesson, "Rise up, let us go; lo, he that betrayeth me is at hand." Probably he had caught a glimpse of the party coming from Jerusalem with their "lanterns and torches" (John 18: 3). The sign which Judas was to give in order that they might know which was Jesus, was a kiss. A kiss was a token of affection, and it shows what a thoroughly bad man Judas had become that he could meet Christ with such pretences of love while that very kiss was to be the meaus of giving him into the hands of his bitterest enemies. He told the men to taka him and lead him away safely. In Matthew we read that he said, "Hold him fast." (Matt. xxvi: 48). Perhaps he was afraid that Jesus would escape from them and then he would lose his money. Jesus was not a prisoner because he could not escape, but he was willing to be "led as a lamb to the slaughter" (Isaiah liii: 7) for our sakes. One of the disciples, Peter, (John xviii: 10), drew his sword to defend Jesus, and struck the servant of the high priest, cutting off his ear. But the gentle, forgiving Christ did not approve of Peter's rash act for he rebuked him (John xviii: 11), and Luke tells us he touched the ear of the man and healed it (Luke xxii; 51). In this hour of his great trouble he performed a miracle of mercy and that for one among his enemies. The disciples, when they saw that Jesus was actually taken, were so overcoma by fear that, though only a little while before they had said they would never desert him, "all forsook him and fled." They, like many in our day, little knew the weakness of their own hearts until they were tried.

Would you like to know what became of Judas? When he fully realized what was to be the results of his sin his conscience so smote him that he tried to undo his wretched work by taking back the money and owning that he had betrayed innocent blood. But these wicked men cared nothing for his remorse. He had served their purpose and, they turned away from him with the heartless reply, "What is that to us? See thou to that." His ill-gotten gain could do him no good now, and in despair he threw down the money he had so coveted and went out and hung himself. A wretched end, was it not? Judas began his downward course by breaking God's command, "Thou shalt not covet," and we see to what a fearful end he was brought. May God incline our hearts to keep all his holy commands for in the keeping of them there is great reward. "The wages of sin is death; but the gift of God is eternal life through Jesus Christ, our Lord" (Romans vi: 23).

LESSON IV.

September 26, 1875.

THE DENIAL.

MARK xiv: 66–72,

66 And as Peter was beneath in the palace, there cometh one of the maids of the high priest:
67 And when she saw Peter warming himself, she looked upon him, and said, And thou also wast with Jesus of Nazareth.
68 But he denied, saying, I know not, neither understand I what thou sayest. And he went out into the porch; and the cock crew.
69 And a maid saw him again, and began to say to them that stood by, This is *one* of them.
70 And he denied it again. And a little after, they that stood by said again to Peter, Surely thou art *one* of them: for thou art a Galilean, and thy speech agreeth *thereto*.
71 But he began to curse and swear, *saying*, I know not this man of whom ye speak.
72 And the second time the cock crew. And Peter called to mind the word that Jesus said unto him, Before the cock crow twice, thou shalt deny me thrice. And when he thought thereon, he wept.

Golden Text.—WHEREFORE LET HIM THAT THINKETH HE STANDETH TAKE HEED LEST HE FALL.—1 Cor. x: 12.

When Jesus had been taken by those to whom Judas betrayed him, he was led away to the high priest to be examined. You will remember that tha disciples had forsaken him so that ha went alone among his anamies and there was no one to speak one kind, true word for him. But the disciples did truly love him although they so cruelly left him in this hour of his need. Pater did follow him afar off—doubtless hoping in some way he might hear what was said to him or done about him. From Peter's words Jesus had a right to expect that he of all others would stand by him and be faithful to him, for it was at that last supper that he had made great promises, even declaring "If I should die with thee, I will not deny thee in any wise" (verss 3); yet how soon was he found committing the very sin which shortly before he himself thought the farthest from him. As Peter sat by the fire one of the servants said to him, "And thou also wast with Jesus of Nazareth." "I know not, neither understand I what thou sayest," was his prompt reply. He not only told a lie but he was "ashamed of Jesus," his best friend, and denied that he ever knew him. After awhile another looked at him and said, "This is one of them." Of course it would be harder for him to tell the truth the second time than if he had spoken it at first. It made the lie seem more necessary than ever, "and he denied it again." This is always the way with wrong-doing of any kiud. If we would ha safe we must avoid the first wrong step. But notwithstanding these two denials they were still very suspicious of Peter, and some ona else in the crowd said he was sure Peter must be one of ths followers of Christ because he spoke in the same way that tha people of Galilee did. And now, in additiou to denying again that he knew Christ, ha began to curse and to swear and thus broke another of God's holy commands. Which commandment did he break? Can you repeat it? As soon as he had denied Christ the third time he heard the cock crowing. How do you suppose he felt when he heard it? Of what do you think it reminded him? Wa are told what he did, "He went out and wept bitterly" (Luko xxii: 62). It was a bitter but wholesome lesson for Peter, for he was a true disciple and never could have been happy until he repented of his sin and obtained forgiveness. We sea how, in Peter's case, ona sin led to another. First, he trusted too much in himself—he felt so strong in his own good purposes that ha was sure he could never do so cowardly and wicked a thing as to deny Christ. Then, too, he put himself in had company and forgot to ask God to keep him from being tempted above what ha was able to bear. Besides he had not kept close to Jesus, but had "followed him afar off," and after this his downfall was rapid. Left to himself, ha denied—denied again that ha knew Christ—and then cursed and swore. But Peter was very sorry for his sin and God forgave him. He had no opportunity to tell Jesus before he died how sorry ha was, but Jesus knew that he was ona of his true disciples and after he rose from the dead sent a message assuring him of his love and forgiveness, "Go tell his disciples and *Peter*" (Mark xvi: 7). If, when wa feel that we have done wrong, we go to tha Saviour had tell him and ask his forgiveness, we shall find him as kind and as tender now as he was to Peter, and if we trust ourselves wholly to him he will doliver us from all evil.

THE
FLORENCE
SEWING MACHINE CO.
FLORENCE, MASS.,

Desire to introduce their new and improved Machine into those towns where there is now no agency for their sale. To this end they offer special inducements to clubs or single purchasers. Send to above address for circulars.

The Florence is unequaled for simplicity, beauty, durability and servicealulness. It is the only machine with a reversible feed, and the only one that gives the purchaser the choice of sewing in any direction.

☞ Florence Sewing Machines have been used constantly in families and shops for twelve years without requiring repairs, doing good work all the time. 8-75 31

THE
HOME SAVINGS BANK,
CORNER MAIN AND ATLANTIC STREETS.
Incorporated under State Charter,
1874.

AUTHORIZED CAPITAL	**$ 100 000.**
**SUBSCRIBED " **	**$ 20 000.**

Money in smallest amounts, received on deposit and interest at Six per cent, allowed *from day of deposit.* Deposits repaid *on demand.*

Exchange bought and drafts drawn on the National Shoe and Leather Bank, New York City; capital One Million.

Drafts drawn also on Baltimore, Washington, Richmond, and other cities.

Collections promptly made on all parts of the country. All investments made in this vicinity. Especial advantages given those customers who were depositors in the late FREEDMAN'S SAVINGS BANK.

☞ N. B. We have loaned since last November,—chiefly to colored citizens, and in small amounts—over thirty thousand dollars.

☞ SEND FOR OUR CIRCULAR.

HAMPTON, OCTOBER, 1875.

Died, at the Hampton Normal School, on Saturday, Aug. 14th, of consumption of the bowels, Lucy A. Hays, member of the class of '78, and of class No. 2 of the Hampton Singers.

This is the first break that death has made in the circle of the Hampton Student Singers.

They have traveled thousands of miles and over half of the United States through a period of three years and a half, and have been kept from all accident and danger by the way. Quietly, and among those who loved her best; tenderly cared for and sincerely mourned, the first of the little band has passed from her home on earth to her home in Heaven.

Those who knew her best will mourn her most. In the intimate association of daily travel and work, her cheerful and loving disposition and christian unselfishness of spirit, always prefering others to herself, endeared to her teachers and companions,

Our sweet singer has joined the choir above, but

"With songs on our lips, and with harps in our hand
We shall meet one another again."

To impartial observers it is evident that some colored men whose education has given them prominence in the past, have sadly missed their way to leadership in the future. We have had from them a peevish and passionate declaration of independence of aid from without. They suppose they need their own leaders, in politics and the press, in order to fill such a prominent place in the national affairs as would gratify their pride. It may safely be said, that if the race is really capable of a high civilization, what we now see of it has scarcely a feature of what its maturity will be. For colored men to contemn aid from any friendly hand is simply to supply by conceit their grievous lack of a solid basis for self esteem. Their lot in America is cast among men who have had long experience in the art of taking care of themselves. To compete successfully, the negro must have assistance and instruction. For true progress he needs all the docility which God has given him, and all the humility which common sense would fain teach him. No premature self-confidence can take the place of the slow teaching of life as it is. By this the instinct and power of self help has almost to be yet created, and from the past history of the race and its present overweighted condition it is easy to see that no general competition with the whites will be posisble except by the aid of those friendly white men and women who are now giving to the wards of the nation the spelling book, the idea of social morality, and last but not least, who in business relations are not merely just, but merciful also; it is in response to such generous treatment that the negro, as a rule, does not succumb to the difficulties of his position, and abandon all effort excepting to live from hand to mouth without an earnest thought of the future.

True independence must have a much more solid basis to rest upon, than the resolntions of the Richmond convention. Habits of thrift and foresight, the achievement of a competency, the ownership of lands and houses are essential. When the negro as a class reaches business success the world will begin to think that he is capable of standing without external aid.

Evidences of progress in this, the right path to independence are not want ing to offset the discouraging spectacle of the colored politician. In this connection it gives us great pleasure to record the experience of a gentleman who has been trying the plan of giving the colored people a fair chance to own their own houses. The facts as he states them are as follows:—

Commencing in April 1871, he has built and sold to negroes forty-nine houses, besides selling to them sixteen vacant lots. Only three of the houses were paid for in cash. twenty-four of the remaining houses have been paid for in full, chiefly by monthly installments. The other twenty-two were sold for $10,756, of which $5,650 has been paid. No case has yet occurred, or is likely to occur, in which it has been or will be neccssary to turn out a purchaser for default. First payments of from one tenth to one fifth have always been insisted on, partly as a means of sorting out the better class, and partly because after having paid their fifty to one hundred dollars, they would make great efforts rather than to lose it.

The kind of education required by those poor people in the process of buying a home on such a plan is of the highest value. They have an object before them which they see to be within their reach. They have the strongest motive to struggle in their experience of the tyranny of landlords. And the man who, after three or four years of close economy, has fairly earned the deed to a house and lot, has acquired habits of self-reliance and self-control of which few college graduates can boast. He has encountered practical life and been victorious. He has a solid basis of achievement to be proud of, and of independence for the future. Relieved of rents, which have heretofore absorbed every spare dollar, he can now lay up something for the education of his children and proyide for their rise to a higher social level than he was born to. This may be too slow to suit those who by their lofty ideas, have divorced themselves from real sympathy with the needs of their race, but to us it seems that the success of the gentleman referred to has as much hopeful augury for the future of the colored people in America, as is to be found in any other direction.

HONOR TO WHOM HONOR IS DUE.

Miss Emma J. White of New York City, was, many years ago, wedded to Mr. Ezra R. Johnson of New Bedford, Mass.; both were colored, free born and of most repectable families. Mr. Johnson engaged in sailmaking in Philadelphia; thence he removed to New Bedford and supplied whalemen with their outfit of garments etc., for long cruises in the Pacific and Arctic oceans. He was prosperous, purchased shares in whale ships, and accnmulated about $20,000. In 1850 the gold fever carried him to California, where he wisely foresaw the future of the settlement near the Golden Gate, purchased lots in San Francisco, and patiently held them. He resumed the clothing business for seamen and operated in various ways. He had a taste for medicine, studied and practised homeopathy with some success, and was known and is still remembered as Doctor Johnson.

His education was fair, his mind clear, his judgement excellent, and his character good. He was a member of the Baptist Church.

He returned to New Bedford in 1855 and died there in 1872. His wife survived the family of six children and died July, 1874, aged sixty-one years, leaving most of her property to benevolent institution as follows:—

Union for Good Works, New Bedford, Mass. $5,000; Society for aged Colored Women in Boston $5,000; Society for aged Colored Women in New Bedford, Mass. $5,000; Episcopal Church in New Bedford (white) $2,500; Hampton Normal and Agricultural Institute, Va. $5,000.

Her benefaction to the Hampton School was the result of attending one of the concerts of the Hampton Singers, when she purchased the book "Hampton and its Students" and became deeply interested in the work.

Her works will follow her.

The Commoner is a new weekly paper published in Washington, D. C., in the interest of the colored people; it is edited by a young colored gentleman of fine abilities, and in the language of its editor, Rev. Geo. Williams, "will try to be to the colored people of this country a guide, teacher, defender and mirror. As a guide it will endeavor to lead them from the quagmire of perverted political life to the firm foundations of intelligent citizenship and independent manhood. As a teacher it will strive to present to them everything that is beautiful in character, noble in action, and sublime in living. Will teach them, if not to forget to forgive the past, and press on and upward to the things that are before. As a defender it will protect them from the unmerciful and acrimonious attacks of their enemies; and seek to overthrow every thing that is subversive of their material, educational, and moral welfare. As a mirror it will always aim to reflect their genius, virtue, and thrift, and thereby show the country and the world that the negro under healthful and normal influences, is capable of the highest development."

A journal for the colored people seems to be a necessity, and is a necessity so far as it promotes the ends indicated in the above editorial remarks. The price of this paper is $2.50 per annum, postage prepaid, with liberal terms to agents and discount to clubs. We trust that the *Commoner* will obtain a firm foothold, and that may it long wave the banner of truth and light over a wide range of readers.

LETTER FROM A GRADUATE.

The letter of which a portion is published below, is from an exceedingly intelligent and reliable man in middle life; a graduate of the Hampton Institnte, of high character and good power of observation; originally from Eastern Maryland. We hope as he shall extend his travels he will send brighter pictures of his people for surely there are much more cheering aspects than he presents. The letter is personal and allowance must be made for freedom of expression; he would probably be more guarded in a letter for publication:

TARBORO, EDGECOURT COUNTY, N. C.,
September 12, 1875.

Dear Teacher,—When I left Hampton last June I started out selling books and did very well till I got so bad off that I couldn't travel, and then the doctors and boarding-house keepers took me in hand, and I tell you they soon got me in St. Peter's fix when he saw the lame man. My object in going about selling books was not so much to make money as it was to see those places where the colored people were in the majority and had everything their own way. I did intend to go down in South Carolina and Mississippi, but my health will not permit me to do so at this time. Well, it may be all for the best.

As you know, the blacks are in the majority in Eastern North Carolina, and they have the lion's share of all the offices. Well, I don't have a very high opinion of these officials. The most of them are young men and are pretty well educated, but, as a general thing, are wholly destitute of character. There are very few of them that I'd trust with fifty cents.

There is a very large graded school in this place, and it supplies this and the surrounding counties with teachers—*such as they are.* The principal, a young man, is State Senator and a graduate of Lincoln University. I called upon him recently and found him *dead drunk*—which I found out afterward was nothing strange. I have been in their Justices' Courts several times, and have been disgusted with profanity and drunkenness of those whose duty it was to administer justice. I have spoken to our people several times this summer, but I didn't receive much applause. They would look at me and groan. Sometimes they would ask me if I was a preacher, and when I told them no, they would say that they didn't think that I ought to meddle with "'ligious" matters.

When I used to hear you speak about the students sinking down to the level of those with whom they associate, I didn't fully realize your meaning, but now I see it more clearly.

I thought that I could do a "big thing" getting subscriptions for the Workman this summer, but I found I was mistaken. I literally wore out the samples carrying them in my pockets, and showing them to the people. The colored people down here read nothing but political papers—those that can read at all—and when they found out that the Workman was not political they would have nothing to do with it. If I don't get the school in Charlottsville I shall go to my home in Maryland. I don't feel able to teach just now, but if I get the school I am going to try.

Very respectfully yours,
T. W. C.

HOW TO STOP A PAPER.

Do not take your paper to the postmaster and tell him to send it back; in nine cases out of ten you will fail to stop it in this way. Do not attempt to return it yourself, and write on the wrapper to discontinue; this is against the law, and lays you open to a fine. Before your subscription expires, send to your editor a postal card, saying your subscription expires on such a date, please discontinue at that time. Sign your name, also the town and State where your paper is sent, in full. If the paper has been sent two weeks or more over the time for which it was paid, don't send a postal card; it will do no good; rather write a letter and enclose what is due for arrearages, always allowing that one number will be sent before the letter reaches the publisher and his list is corrected. By observing these simple rules your requests will always be promptly attended to.—*Printer's Circular.*

EDITORIAL MERIT RECOGNIZED.

As many of our readers are aware, France possesses an association of literary and scientific men, known as the Academy. To obtain a seat in this body is the goal of every French writer's ambition, and the crowning hope of every *savan.* Noblemen and archbishops are proud to be members of this institution. The membership is limited; death alone makes vacancies, which are filled by the ballots of the survivors. For the distinction of being elected to this association there is always a struggle, and a keen one, ending inevitably in rendering one man happy and making dozens miserable.

One of the newly chosen members of this erudite congress is John Lemoinne, an editorial writer of Paris, most of whose contributions have been published in the *Journal des Debats;* and outside of newspaper work, M. Lemoinne has written little else. But his editorials were so good, that they have earned for him a reward that hundreds of writers of books have coveted and striven for, though never obtained. Learned and conservative as the French Academy is, it has shown the world that it recognizes the true value of jonrnalism by raising one of its representatives to the highest position of honor attainable by literary men in France.—*Print. Circular.*

Last week the slow and solemn music of the Fort Monroe band was heard in the quiet village of Hampton, while a company of soldiers marched with slow pace, with reversed arms, toward the churchyard of old St. John's Church. After them came a hearse covered with the national flag, and that was followed by a large number of sorrowing friends. The hearse contained the remains of the late Rev. Mark L. Chevers, Post Chaplain, U. S. Army, who had officiated for forty-seven years at Fort Monroe.

Mr. Chevers was born in New York City in 1795, and was consequently eighty years of age. He served as a soldier some time, during the last war with England, acting as sergeant of his company. In early life he became acquainted with Bishop Moore, who was made Bishop of Virginia in 1814, and by him was induced to come to Virginia. He was ordained by Bishop Moore in 1824, and three years afterward came to Fort Monroe and Hampton. Blessed with a strong constitution he was able to undergo great labor without fatigue, and during these many years he has been a faithful minister of the Gospel. It is seldom that a clergyman spends so long a time—forty-seven years—in one place; but at Fort Monroe there is a couple who were married by Mr. Chevers, when young, who are now great grandparents.

The service at his funeral was very impressive. The services were in Centurian Church, Fort Monroe. The chancel was draped with black, as indicatory that the church had lost a worthy minister, while the abundance of flowers placed about the chancel and on the casket, showed the belief in the resurrection. There were seven of his brethren of the clergy present, and the church was filled to its greatest capacity. The services were performed by the Rev. O. E. Herrick, Post Chaplain, U. S. Army, and by the Rev. N. A. Oheson, D. D. of Norfolk. There were also present many members of the Masonic fraternity, of which he had been a member. Having been in the Army so many years he was buried with full military honors.

TO THE STUDENTS OF HAMPTON.

X.

MINOR MORALS (CONTINUED).

Among the innumerable forms of deceitfulness, there is one, viz.: the withholding of the truth, of which I want to speak to you as *students*, and which I want you to consider as it effects you in your relation to each other, to your teachers, and to your school. I am sure that there are few of you who do not grow to have a real and hearty affection for the school to whose influences you owe so much, and who do not feel that in after life you will look back to your school as to a home, with interest, with gratitude, and if all goes well, with honest pride. And yet, I fear that you do not often remember how much the character and success of your school depend upon individual scholars, how much you can help your teachers, how much you can do for your fellow students, how much, in short, the whole tone of the school will depend upon *you*. No school can be very powerful for good unless a majority of its students co-operate with the teachers, and make the honor of their school a real thing, so real that it is a live influence among them, and this can only be done by the best and most intelligent scholars uniting to put down and expel the vices which are constantly creeping in among their younger and weaker schoolmates. You will understand better than I can tell you how much there is which is wrong and foolish going on among you, which your teachers, however deeply it may grieve them, can hardly reach without your assistance, and that therefore your personal responsibility is very great. When you become a member of a school you become responsible, not only for your individual life in it, but for its honor and good name, and there is nothing which a student should feel more keenly than any disgrace befalling his school, above all when it is a disgrace, which, to a greater or less extent, may be chargeable to his own carelessness or wrong doing.

Now while there are many ways in which you can show your allegiance to your school and your determination to make its record honorable and its name respected, there is one in particular which often involves some troublesome questions and requires much consideration. I mean that courageous telling of truths for the good of the school, which you know will bring upon you from some of your companions tha accusation of taletelling, an accusation which must always be very painful to any right-minded boy or girl.

Taletalling is emphatically mean, but there is a wide difference between glibly complaining of some fellow student's mistake or misdemeanor, and conscientiously and soberly reporting to the school officers anything which you are convinced is, unknown to them, injuring or interfering with the work of the school, or poisoning the moral atmosphere. This latter you are bound in honor to do even at the cost of great pain to yourself; it is a duty which you owe to the school as an organization of which you are a responsible member, and in doing it you need to be sure only of two things: first, that your report is accurate; second, that it is made, not for the sake of telling tales, but because you know that in no other way can the evil be remedied.

To take, or attempt to take the law into your own hands on such occasions, is about always worse than useless, for you are not in a position of authority and usually have neither the experience nor the judgment necessary to enable you to deel justly and wisely with the offender. The only honest and courageous course for a student who becomes aware of a serious misdemeanor on the part of a fellow student, is to report at once, without exaggeration or reservation, to the proper authorities, and to be guided as to his own action entirely by their decision.

By this and by a conscientious obedience to the laws of the school, you can vastly strengthen the hands of your teachers, and you can do your share in the honorable and lasting work of building up a Christian college for your people, a work of which your own experience must already have taught you the inestimable importance.

Throughout all your school life you should remember that the time which you spend in study is entirely and simply a time of *preparation*. The great work of life opens before you when the school doors close behind you, and from that day forward you will in all probability have little time or opportunity for merely personal cultivation. You have spent months, possibly years, in sharpening your weapons, and when the day comes for using them, they should be keen and true, or your chance in the crowded field will be small. Remember, then, that your school hours are precious, that the knowledge which you acquire in them is the foundation of all that you will get in after life, and that the habits which you then form will remain always at the base of your character. In your school, under the guiding and protecting influence of your teachers, you have an opportunity to form and strengthen both your moral and intellectual nature, and you cannot too strongly feel the importance of making the best use of your advantages. I believe that most of you understand the value of the education which you get from books, and that upon that point I need say little to you. You know that without such education you can do little or nothing; that with it the world of art, of science, of business is open to you, and you are aware that in order to obtain it you must pay the price of persistent hard work; but in regard to the habits of life which you are forming day by day, I fear your convictions are not so clear.

In respect to these habits, then, I have something to say to you before we part, and although it may seem to you to be to some extent a reiteration of what has been said before, yet I hope to be able to put the facts before you in a new and strange light.

The habit of courtesy, of consideration for others, the habit of truth telling and of fair dealing, the habit of self-control, you can form in yourselves (as soon as you are old enough to appreciate this importance), no matter how great your early disadvantages may have been, provided you can place yourselves for a time under favorable conditions, and nowhere can you find these conditions so well as in a good school. In such a school you are thrown into close contact with a large number of young men and women, under such regulations that courtesy, consideration and self-control, become matters-of-course, while the association with cultivated teachers is of very great personal assistance to you. All the circumstances are helpful, for you have not only individual ambition as a spur, but you have also an ambition to keep up the reputation of the school, and a desire that neither those who have graduated before you nor those who are to come after you shall have reason to be ashamed of your record.

You have, in short, as I have already told you, what is probably the best opportunity you can ever obtain to make yourself strong for good and against evil, and in order to use your opportunity wisely you ought to consider what are your special weaknesses and temptations.

Do you ever stop, for example, to think how frequently idleness ruins man and women, and whether you yourself are doing your best to form a habit of industry? Are you conscientious about your work, filling every hour sot apart for labor with useful employment, or do you shirk and evade, doing only what you are obliged to do and doing that not very energetically or persistently? Do you realize that the command "Whatsoever thine hand findeth to do, do it with thy might," is applicable to all your undertakings, because slip-shod, unregulated work is never good or successful, and you can never do little things well unless you are in earnest about them.

If you have thought much about this matter of industry you must already have learned that it is not only all-essential as regards your worldly success, but that it has also a most important and certain influence upon your character. If you permit yourself to become careless about your work, to fall into irregular, unpunctual habits, you will find that it affects your whole life and injures you seriously in many ways, gradually unfitting you for any kind of persistent labor, and making you finally useless, shiftless, and utterly unsuccessful. Begin, then, in school, where everything is in your favor, to make yourself conscientiously industrious, and do it as a matter of principle, for as the years go on, you will find that there is spiritual as well as material truth in the proverb, "The soul of the sluggard desireth and hath nothing,—but the substance of a diligent man is precious."

Hand in hand with the vice of idleness goes frequently another almost equally dangerous vice, that of waste; and the temptations to it among young people are usually very great. You have not yet learned by experience the danger of wasteful and the value of economical habits, and as a general thing youth has more temptations to spend than incentives to save. Usually you have no one dependent upon you; you are strong and hopeful and not afraid of the "rainy days" against which older people are constantly advising you to provide. You scarcely see why you should trouble yourself now to form a habit of economy, and it seems very hard and unreasonable that you should be told to deny yourself pleasures now in order to prepare for a very uncertain future. But if you are wise you will learn, as wise men since the foundation of the world have learned, "from the ant, which provideth her nest in tha summer, and gathereth her food in the harvest," and will understand that your material prosperity will largely depend upon your thrift. Furthermore, waste is in itself sinful; we have no right to squander and misuse anything, but should honestly economize and make the best use of everything which passes through our hands, whether it be our own or another's.

The food which we waste which might feed the hungry, clothing which we neglect and abuse, which might cover the naked, tools or material of any kind which we wear out and destroy by rough handling or carelessness, money which we spend thoughtlessly,—for all these we are accountable, and neither here nor hereafter can we escape from our responsibility.

Diligence and thrift are at tha foundation of worldly prosperity and are also most emphatically Christian virtues, and neglect of them in your youth will cost you in later life a heavy price, and I am inclined to press upon you their importance, because as a people you have had in the past little opportunity to practice them and are therefore specially likely to undervalue them.

A virtuous life is a many-sided life; if you mean to be good men and women it will not suffice for you to cultivate merely those virtues which are easy and pleasant to you, and growing in one direction only, but your endeavor must be to develop evenly and healthily upon all sides; and now in these years which are set apart as a time of preparation for the work and care and responsibility which will surely be the lot of every one of you, you should constantly and earnestly remember how precious is every hour. All that you learn now is just so much working capital for the rest of your lives, and if properly used, you will find that it will never fail to bring you a heavy interest upon all the time and strength its accumulation may have cost you. All the knowledge you get from books, all the experience you gain of different forms of labor, all the good habits you form, may be considered as permanent investments, which by a little determination on your part may be made continuously and increasingly profitable, and the honorable ambition to elevate yourselves and your people, which I believe most of you feel, ought to help you greatly in overcoming the obstacles which God in his omniscience has seen fit to put in your path.

You know better than I can tell you what those obstacles are, and I believe you are rapidly learning, what I have again and again told you in these pages, that they can only be surmounted or removed by patiant, hard, intellectual work. For such work you have now the opportunity, in it you have the warm sympathy and wise assistance of teachers and friends, to it you have every stimulus human life can offar.

More than all this, and I believe that there are many of you who have a deep and honest sense of the truth of what I am going to say, you have the humble faith that you are the children of an all-wise Father whose will it is honor and gladness to fulfil, in whose justice you can most absolutely trust.

If you can put love for Him at the foundation of your lives, all the details of which I have tried to teach you something, will seem neither trivial nor impossible, you will know the meaning of that beautiful old verse,—

> "A servant, with this clause,
> Makes drudgery divine;
> Who sweeps a room as for Thy laws,
> Makes that and the action fine.

and you can so order your ways that whereaver you may be, or whatever may be your work you can feel and show that you are about your Father's business.

It is to this end that all decency, all courtesy, all honor, all study tend, and this is the conclusion of the whole matter: "Fear God and keep his commandments; for this is the whole duty of men."

LUCK MAY LIE IN A PIN.

BY HANS CHRISTIAN ANDERSEN.

Now I am going to tell a story about Luck. All of us are acquainted with Luck; there are those that see her all tha time, some only at certain seasons of the year, others only one single day,—yes, there are even people that only see Luck once in their life-time; but all of us do see her.

Luck once was placed in an apple; that was for a man whose name was Newton. The apple fell, and thus he found his Luck. If you do not know that story, ask some one to tell it to you. We have another story to tell—a story about a pear.

There once lived a poor man who was horn poor, and had grown up poor, and was poor when he married. He was a turner by trade, and used to turn umbrella-handles, and umbrella-wings, but he only earned enough money by this to live from hand to mouth.

"I shall never find *my* Luck," said he.

Now this is a true story which really happened. I could tell tha name of the country and tha place where the man lived, but that is of no consequence. The red and sour mountain-ash berries blossomed and ripened around his house and in his garden, as if they were the choicest fruit, and in the garden stood also a pear-tree, but it had never borne a pear, and yet, there Luck was placed in an invisible pear.

One night tha wind blew terribly. In Aviza, men said the great Dillig boulder was lifted up from tha side of the road, and thrown down like a lump of clay, and so it was not at all wonderful that a big branch should have been broken from the pear-tree. The branch was taken into tha work-shop, and the man turned out of it, just for fun, a big pear, and another big pear, than a smaller pear, and then several very small pears.

"The tree shall bear pears once at least," he said, and gave them to the children to play with.

There are some things that are necessities in life, and among these, most certainly in wet countries, are umbrellas. Now the whole family had only one for general use. When the wind blew very hard, tha umbralla would turn over, and sometimes it would break; but the man quickly mended it again;—that was in his trade. With the button and string that kept the umbrella together, it went worse; it would always break too soon, just as one was folding the umbrella up.

One day, when the button had broken again, and the man hunted in vain for it on the floor, he happened to get hold of one of the smallest pears which he had turned, and had given to the children to play with.

"I cannot find the button," said he, "but this little thing will answar." He pulled a small cord through it, and the little pear filled the place of the broken button beautifully; it was exactly right, and formed the best of fasteners. The next time that he had to send umbrella-handles and rings to the capital, he added to the number a few of the small wooden pears which he had turned. They were fastened to a few new umbrellas, which were sent with a thousand others to America. They have a quick understanding there of what is of use. The little pear was soon found to hold best, and the umbrella merchant gave orders that all tha umbrellas to be sent to him after that, should be fastened with a little wooden pear. Large orders were to be supplied, thousands of pears to be made; wooden pears on all umbrellas, and our man was kept busy at work. He turned and turned; the whole pear-tree was used for little wooden pears, which brought shillings that grew into dollars.

"In that pear-tree my Luck was placed," said the man; and soon after, he had a great workshop with plenty of woman and boys to help him. Now he was all tha time in good humor, and often used to say,—"Luck may lie in a pin."

So also says the story; and you should know that it is a proverb in Denmark, that if you put a white pin in your mouth, you will be invisible; but it must be of the right sort of a pin; I have had one of tham; and whenavar I come to America, tha land of the New World, which is so far off, and yet so near me, I shall always carry that pin with me. I can send my greeting over in a few minutes; the ocean rolls over to its shores; there the wind blows; any day I can be there when my stories are read, and perhaps see the glittering gold receive the ringing gold,—the gold that is best of all which shines in tha eyes of children, and comes ringing from their lips, and the lips of their parents. I am in the very room with my friends,—and yet I am invisible; I have the white pin in my mouth.

Yes, Luck may lie in a pin.

CO-OPERATIVE HOUSE KEEPING.

BY H. W. L.

"Parry, Farry, Snow-ball and Fluff,
Pray don't you think here is family enough
For one wicker basket?
How can you ask it?
Room for your brood—
Have I quite understood?
For creatures with wings,
Egg-shells and things;—
Feathers that stick up,
Sharp bills that pick up,
Claws without mittens
To tread on my kittens?
Besides, don't you see,
We might not agree—
You and I—My dear madam
You're not of our set,
And it never was yet
Since the days of old Adam,—
No, never was heard
That a cat and a bird
Should keep house together,
Like birds of a feather."

"Coo, coo,
What shall I do?
Dear Mrs. Kitty Puss, listen a minute:
I had a nest, and some babies were in it,
Up in the loft
Four—just as soft,
Beautiful darlings as those taking dinner
By you in the basket, were mine in the hay,
Till one terrible day,
When I'd gone for their breakfast my usual way,
A rat—
Think of that!
The unprincipled sinner!
How I shudder to think of his whiskers so gray!
He killed all my babies and dragged them away!
Ever since, like the dove
Who mourned for her love
At Cock Robin's funeral, I've mourned my woe,
Till a moment ago,
I saw you down here
With your babies so dear,
And I said, she's a mother
We'd feel for each other,
Though I am a pigeon
And she is a cat.
The birds of the air
Have told me a legion
Of things as strange as that;
That the boys and the girls
Are raising an army in jackets and curls,
Protection to swear
To the tribes of the air.
If boys can defend us,
A cat may befriend us;
And I could love cats
For their hatred of rats;
So if you could spare
A corner in there,
For four pretty white eggs
And eight yellow legs
Of my lovies
Of dovies,
I'd fill
Every hill
So they'd do you no ill,
And they'd turn up their toes,
Till you'd really suppose
That each small
Downy ball
Was no bird at all,
But a bit
Of a kit.
Then I could keep house
When you'd gone for a mouse,
And take care of your kitties.
I'd show you a rat,
Oh, so horribly fat!
'Twere a thousand of pities
To lose the occasion
To prove to the nation
That civilization
Means co-operation;
And they'll think the millennium
Not far from any o'em,
When a pigeon may rest
In a pussy-cat's nest."

Mrs. Puss said purr-wow,
Mrs. Pigeon said coo,
And if they are satisfied
We may be too.

HOW THE GRASSHOPPERS CAME.

BY A NEBRASKA WOMAN.

I wish to tell the readers of St. Nicholas a story about the Great American Desert, where the grasshoppers made such a fearful raid last summer.

When you see the little creatures hopping harmlessly about in the grass, you can think of what a power for evil they possess when they gather in such armies as those which overran our part of the country last year.

The weather was intensely warm here all last season, and for thirty days within the space of six weeks the thermometer ranged from one hundred degrees, to one hundred and sixteen degrees.

It was during this heat in the latter part of July that our Swede girl, Selma, said she must go home to care for her aged mother. Pete and Polly, our two mules, were harnessed to the express wagon in the early morning, and a pleasant little company of us started out to take Selma home.

Our road lay up the banks of a clear winding stream, on each side of which our industrious Swede neighbors have settled, and turned over the virgin soil of this "Garden of the Desert," upon which appeared fields of waving grain.

We had not ridden far before Pete and Polly, who had been whisking their long ears very contentedly, began to lay them back and toss their heads into the air. As they tossed them higher and higher, we noticed that a grasshopper came at intervals with a bounce into our laps or hit our hands and faces, and the farther we went north the more frequently their whizz and click assailed our ears, or their sharp wings struck our noses, till we sympathised with our restless mules. Soon we noticed the little brown bodies and gray wings lying in piles along the shady side of our track, and that the green leaves of the corn hung like slit ribbons swaying in the breeze; and farther on there was here and there a field that had been planted on the sod where nothing but the stalk was left, and we said, "See what the grasshoppers have been doing."

We set Selma down at her door, and turned toward home, wondering if the grasshoppers were going to do much harm.

The season had been unusually dry, as well as warm, and for that reason the small grain, though very light, was ready for the reaper, or already cut.

Soon after the harvesters had repaired to the field that afternoon, the cry was heard, "The grasshoppers have fallen upon the corn-fields." Then we knew we had met the scouting party in the morning, and that, by some wonderful insect power, they had telegraphed to the main body the news of our rich fields.

CO-OPERATIVE HOUSE KEEPING.

We had a corn field of twenty acres that was the pride of our foreman, and pronounced the finest luxuriant of any for miles up and down the valley. The destroyers were at work upon it, but the men hoping to save a part, left their harvest and built fires all along the rows. They whipped and switched and smoked, running from one part of the field to the other in the heat, but it was all of no avail. The little invaders ate on, and at night nothing was left of our boasted corn-field but the tall bare stalks, looking like bean-poles.

The Indian women had corn and bean patches near us, and when they came and saw their work all destroyed they wept and moaned, and said, "God is not pleased, or He would not send the grasshoppers to eat what we need."

The next day the raiders came to our gardens and though we covered the plants with barrels and boxes and sheets, though we smoked and whipped and brushed, hoping to save some vegetables, they seemed to laugh at our dismay, and kept steadily at work, even eating our onions and red pepper stalks down to the ground.

They stripped young fruit-trees of their leaves and gnawed our shrubbery and flowers till there was no green thing left to cover the brown earth and then they mounted our shade trees, and the ground was soon covered with falling leaves.

The heat was intensified by the presence of such a mass of animal matter, and our nights usually so cool, were hot and uncomfortable. The unwonted sound of the rustling of millions of wings caused the dogs to howl dolefully, and a vague terror began to steal over our hearts.

Near nightfall of the third day of the presence of the foe, a brisk breeze blew from the north. Our neighbor Keturah came to our door and said, "Do you see how the smoke is rising on every side of us?"

We could see from ten to twenty miles in any direction, and all about us were pyramidal columns of smoke, as we thought, rising toward the heavens. "How is it" we asked, "that these great masses of smoke appear simultaneously at every point?" And as we gazed and saw them slowly grow blacker and rise higher, an indefinable dread of some fearful coming took possession of us.

Two of our number were out taking a gallop on their ponies. On their return they said, "Did you see the grasshoppers rise? We heard a sound like a rushing wind, and thought we were riding into the edge of a whirlwind" (such are often seen here, carrying pyramids of dust and sand many feet from the earth), "but, looking a moment, saw the grasshoppers going up in cloud-like masses, and they passed off south."

"Ah! that was the grasshoppers, and we thought it smoke!" we exclaimed; and immediately the weight was lifted from our hearts. Some grasshoppers were left near our buildings but they were merely going to rest for the night, and by noon next day very few were to be seen. In just one week from the day of their first arrival, a great shower of grasshoppers fell again, and began to devour what the others had left. One corn-field which the others had left in part, and which still promised a small harvest, was attacked by these later marauders, and our last hope for corn that season soon vanished.

Our shade-trees were entirely stripped of their leaves, the netting screens in our doors and windows hung in tatters, and the greedy millions made their way into our houses to devour plants which we thought hidden from their insatiate little jaws. They ate holes in clothing, in curtains, and in pincushions, and I heard of one woman who found the draught of her stove clogged with grasshoppers, they having fallen down the pipe in such numbers as to fill it.

The houses and fences soon were black with the millions of these insects. We could not even see the bark on the trees because of the myriads of wings, and we beheld the result of many hands a blank before us. We sat in awed silence, feeling we were in the presence of that Power which can bar the raging waves of the sea with little grains of sand and send an army of little insects to bring to naught the boasted work of man.

The third day after their arrival, clouds flitted across the sun at intervals, screening us from its intense heat, and toward night a company of us, daughters of these prairies, dragged our really exhausted selves to the river, hoping to find a little refreshment by a bath. We were scarcely in the water before we were startled by a crash, a peal, and then a rushing wind. Peering over the high northern bank, we saw a black cloud driven furiously up toward the zenith, and at the same time the sun burst forth from under a dark veil in the west, revealing to our eyes a scene of wonder. Myriads upon myriads of little wings were flashing like specks of silver in the sunlight, not only as far as the eye could reach, east, west, and south, but as far as we could see into the air above us, and we knew the grasshoppers were driven again before the north wind.

When our bath was finished, very few of them were left to annoy us as we returned home and great was our relief and joy to have them gone. But we did not look forward to the want which has oppressed so many hearts, and to the relief of which so many of the readers of ST. NICHOLAS have, no doubt, contributed.

—*St. Nicholas.*

At Home.

BABY'S SKIES.

"Would you know the baby's skies?
Baby's skies are mamma's eyes,
Mamma's eyes and smile, together,
Make the baby's pleasant weather.

"Mamma, keep your eyes from tears,
Keep your heart from foolish fears,
Keep your lips from dull complaining,
Lest the baby think 'tis raining."

HOW TO KEEP HANDSOME TEETH.—It is a well known fact that the colored people of the South are generally blessed with strong and handsome teeth. It would be a great pity for them to lose this advantage with advancing civilization, but the most scientific writers on the subject agree that "what is usually called 'high civilization' is not favorable to the perfection of the teeth." This sounds strangely, but it only means that simple and even coarse food is better than rich and fine diet for the blood, and therefore for the whole body. By coarse food we do not mean a poor and unnourishing food. But bread is better than pastry, and brown bread—made of the unbolted flour—is far better than the finest and whitest of the wheat.

Let us see what the teeth are made of. Two-thirds of the weight of a tooth are composed of carbonate and phosphate of lime. The other third is animal matter which gives it shape; the lime gives it hardness. To make good teeth the blood must be well supplied with these lime salts, for it is from the blood that all parts of the body are formed. The blood is formed from the food, and if the food is lacking in these lime salts, the blood will be deficient in them, and the teeth, and indeed the whole body will suffer.

Analysis shows that all kinds of grain, vegetables, and meats contain these salts originally, and a pleasant variety of diet is wholesome. But the little kernels of wheat contain these essential properties in just that outer coating which is thrown away in bolting.

In Europe, the black bread, as it is called, is almost exclusively used by the masses of the people. Consequently, America suffers the bad distinction of being the country of the poorest teeth among civilized nations.

An American dentist who visited Germany made an examination of the teeth of two hundred children in a public school, and failed to find one decayed. These children used *black bread.*

Feed the babies on milk—not tea and coffee—and the children and grown people on simple food, with plenty of brown bread, oatmeal, corn bread, and the colored race will still be proud of their handsome teeth.

THE HEALTH OF CHILDREN.

The degeneration of the Manchester factory children, is attributed by Dr. Fergusson to the fact that, instead of being brought up on milk, as formerly, they are now reared on tea and coffee from the time they are weaned, which they imbibe not only in the morning, but often three times a day. Dr. Fergusson has found that when fed on milk twice a day, feeble children between thirteen and fifteen years of age, grow nearly four times as fast as children fed on tea and coffee, whose growth between the years mentioned does not exceed over four pounds a year, whereas the children fed on milk night and morning grow fifteen pounds a year. At least one-half of the boys in the mills, from twelve to twenty years of age, either smoke or chew tobacco, or both; and this operates prejudicially on their growth.

THE HOUSEWIFE'S TABLE.

The following is a very valuable housewife's table, by which persons not having scales and weights at hand, may readily measure the article wanted to form any receipts without the trouble of weighing, allowance to be made for an extraordinary dryness or moisture of the article weighed or measured—"Wheat flour, one pound is one quart; Indian meal, one pound two ounces are one quart; butter, when soft, one pound is one quart; loaf sugar, broken, one pound is one quart; white sugar, powdered, one pound one ounce are 1 quart; best brown sugar, 1 pound two ounces are 1 quart; ten eggs are one pound; flour, four pecks are one bushel; sixteen large teaspoonfuls are one pint; four large tea-spoonfuls are one gill; two large teaspoonfuls are one-half a gill; two gills are one-half of a pint; two pints are one quart; four quarts are one gallon; a common-sized tumbler holds one-half a pint; a common-sized wine-glass is one-half a gill; a teacup is one gill; a large wine-glass is one gill; a tablespoonful is one-half an ounce; forty drops are equal to one teaspoonful; four teaspoonfuls are equal to one tablespoonful.

A NOBLE LIFE.

There has been lately published in England, a book which ought to be read by everybody who is interested in Christian work, and especially by those who are, or are to be, interested in such work as it is done among heathern or semi-civilized people. As this book itself is, however, out of the reach of most of our readers, we trust that the brief sketch of its contents which we are able to give them will be acceptable and possibly of some real use.

John Coleridge Patteson, the story of whose life and work fills the two volumes just given to the American public, was born in England, the heir of a rich family; distinguished for their intellectual power, and occupying a position, the luxuries and and advantages of which were such as to put every worldly temptation in the way of the boy who grew up among them. But, over against this, stood the fact that both his father and mother were true and devoted Christians, who trained their children in the faith, that to leave all and follow Christ should be no hardship, but rather a privilege and a glory. The early death of Mrs. Patteson made the affection between Judge Patteson and his son unusually warm and strong, and through all their lives father and son were each other's best friend.

Coleridge graduated at Oxford, was ordained a minister of the Church of England, and soon afterward, with a deep consciousness of his own weakness, but with an equally deep conviction that his call was from God, asked leave of his father to go out to New Zealand as missionary to the heathen cannibals of the Melanesian Archipelago. The father bade the son Godspeed, and they parted knowing that in this world they should see each other no more, for the young man held back nothing; he gave himself, his fortune, all that the world offered him of comfort and affection and power, asking only that he might be permitted to spend all in the service of an ignorant and dying race.

For four years he worked under the Bishop of New Zealand, and at the end of that time was himself appointed Bishop of Melanesia, and it is of his labors in that position that we desire to give our readers a practical understanding, for the principles upon which he worked are well worth close attention, although in the brief space of a single article it is not possible to give any just idea of the intelligence and energy which he showed in his arrangement and carrying out of the numberless details of missionary work among utterly uncivilized people.

About one half of each year he spent on board his little schooner, the *Southern Cross*, running in and out among the islands, effecting landings whenever possible, and beginning his acquaintance with the people by trading with them, exchanging iron tools, beads, fish-hooks, etc., for fruits and vegetables. At the second or third visit (sometimes at the first) he would succeed in indueing several of the most promising of the young men to return with him, and in this way, usually collected on each voyage some forty or fifty savage lads. These he took back with him to the Central School, first at Aeeehland and later at Norfolk Island, where they were taught something, at least, of christian civilization.

They worked upon the farm, in the printing-office, aa carperters, etc., and whenever they showed themselves sufficiently advanced, were trained as teachers, and finally ordained as clergymen; going back in these two capacities to the islands from whence they had been taken, there to devote themselves to the enlightenment of their own people. The great difficulty in the way was, of course, that the few individual Christians were so isolated from support that it waa difficult for them to make any headway, or indeed for them not to yield to the dangers and temptations of the heathenism which surrounded them. As a safeguard and assistance against this Bishop Patteson soon began to educate native girls in the school, who became the wives of the young men and going back with their husbands founded Christian homes and taught much by the manner of their lives, gradually attracting to themselves the nucleus of a Christian community.

The work has been and still is, most successful, and Bishop Patteson established within his own field, at least, three great truths in regard to mission work—1st, that teachers of the same race as the pupils are the best, when it is possible to obtain them; 2d, that these teachers must be trained to teach all sorts of manual labor, all branches, so to speak, of civilized life as well as ordinary school work, and that in order to do this they themselves must be trained by devoted and intelligent Christian men and women; 3d, that it is by no means necessary and generally is great folly to thrust Anglo Saxon civilization upon tropical barbarians. They are of a totally distinct race, living in a different climate, subjected to different temptations, and civilization must be to a great extent adapted to them, not they to civilization.

Bishop Patteson's life is an example of what intelligence, common sense, and energy, can do when they are consentrated to God's work; his death shows us how a man who for years had held no work too humble for his hands, who had cast in his lot with the lowliest and most debased of earth's children, may die a martyr and a saint; pure, fearless, and triumphant.

During the few last years of his life, an active trade in slaves sprang up between the islands and Queensland, and the traders did not hesitate to kidnap the natives by scores, often depopulating whole islands. The grief and anxiety which this caused Bishop Patteson may be imagined, especially as in many instances his name was used to decoy the unsuspecting natives on board the trading vessels, but not for a moment did he relax in his work, though he knew his danger to be constant.

On the morning of September 20th, the *Southern Cross* neared the island of Nukapu, and one of the Bishop's native scholars wrote afterward this brief description of that last morning: "And as we were going to that island where he died, but were still in the open sea, he schooled us continually upon Luke ii, iii, up to vi, but he left off with us with his death. And he preached continually, at Prayers in the morning every day, and every evening on the Acts of the Apostles, and he spoke as far as to the seventh chapter, and then we reached that island. And he had spoken admirably and very strongly indeed to us, about the death of Stephen, and then he went up ashore on that island Nukapu."

The boat was lowered, and the Bishop with a young English clergyman and three natives entering it, rowed toward the coral reef which encircled the island. They were met by several canoes, into one of which, manned by two of the island chiefs, the Bishop got, knowing that of old this had been one of the safest ways to conciliate the natives. They rowed at once to the beach, the rest of the party remaining in their own boat and quickly losing sight of the Bishop among the dusky crowd upon the shore.

Suddenly a shower of arrows was discharged from the canoes surrounding the boat and of the four men in it, three were wounded, but still were able to pull back to the schooner, where they took in three more men and returned to the reef to wait for the Bishop. For some hours they waited but at last saw two canoes putting out from shore, one of which, apparently unmanned, was permitted to drift toward them, and as it neared them the freight which it bore was seen to be the Bishop, wrapped in matting, with a palm leaf on his breast, and five wounds upon his body.

The next day they buried him in the ocean on which he had sailed so long, and a few days after, his English chaplain and one of the natives who had been wounded, died also, bearing witness, in their death, to the power of the noble life which had been their human example.

THE PLAINS AND MOUNTAINS OF SOUTH INDIA.

Let us suppose ourselves upon the eastern shore of South India. A great plain, a thousand miles long, stretches from us north and south, and rises with an imperceptible slope from the sea toward the interior. From forty to a hundred miles inland you see its western edge bordered by a series of perpendicular cliffs and ragged mountains. Ascend these, 2,000 to 3,000 feet, and you reach the great plateau, occupying all the central part of the peninsula. About three hundred miles north of Cape Comorin—the southernmost point of India—there is a broad break in the mountain ranges and the plateau, as if the sea had once washed across the continent from ocean to ocean, leaving the land which remains, a plain. The riven mountains to the south, as if to guard the breach, have thrust out into the plain, at their northeast angle, a great knot of granite peaks, 8,000 feet in height—the Pulneys; and the northern plateau, at its southernmost point, has piled up the Neilgherries to a greater height.

Madura, the central city of the district and of the mission, is situated midway between the mountains and the sea. A journey of fifty miles in carts brings you to Periakulam, one of the mission stations, at the foot of what appears a perpendicular and well-nigh inaccessible mountain range. Thence a bridle-path, penetrating a mountain gorge, sometimes zigzaging up the precipitous cliffs, after thirteen miles of climbing, brings you to the top. You are standing upon the rim of a basin three hundred feet deep. Its sides are a series of rounded grassy hills, its bottom is a rich meadow and a beautiful lake.

About twenty houses are built upon the spurs of hills running into the valleys, or on the high surrounding ridge. This is Kodi-kânal,—vine-grove,—the hill retreat of Europeans in the extreme south of India, and especially of the American missionaries, and a few English missionaries and civilians, who prefer the quiet of Kodikânal to the gayety of Ootacamund and Bangalore.

Before we step across the valley to the point from which this photograph was taken, turn around and look back upon the plains. You are on a Nebo of observation, for we have our Nebo in India, and all this great plain spread out before you is a promised land. You are upon an almost perpendicular cliff, whose roots reach down among the debris and the foot-hills 7,000 feet below. This perpendicular wall stretches on for miles to the southwest. A stream near by has worn its way through a crevice and falls, one cascade of more than 1,000 feet. Your eye takes in, or might take in, had it the power, more than ten thousand square miles of the plain, peopled thickly with idolaters. The towers of the great Madura temple, fifty miles away in a direct line, are visible, and beyond, the towers of Kâlia Koil, and still further on, the sea, shimmering in the heat. It is a place for Christian inspiration as well as rest. The homes of 2,500,000 heathen and Mohammedans are before you, almost all of them within the field given to this mission to cultivate. While, therefore, the missionary is retiring from the

KODIKANAL, SOUTHERN INDIA.—FROM THE WEST.

prostrating equinoctial heats, he comes to a point of broader observation, and inspiration for new work.

The buildings on the right side of the picture are those of the mission. Still further to the right, above the forest, are the chapel and premises of the Jesuits, and houses of civilians. The mission chapel is in the foreground, and, as everywhere else, the church has its hallowed "God's acre" about it, and is gathering to itself its own among the good, without distinction of race or nation At the southwest corner of the church sleep the remains of Rev. D. C. Scudder, Rev. H. S. Taylor, and Mrs. Sarah Ashley Yorke, and there is scarcely a family in the field that has not set up some stone of memorial here, and left its dead to hallow the ground.

A part of March, April, and May—the period when the sun is vertical—is the season of severest heat. At this time the temperature of the day, here, is from 25° to 30° lower than on the plains, ranging from 60° to 78°; and at this season there is most need of abandoning the plains and resorting to the mountains.

A prosperous native settlement has grown up at Kodi-kânal, and most of the inhabitants are under Protestant Christian influence. A good school exists, and a native church, ministered to by a native pastor of their own choice, who not only attends to this church, but is of great service in carrying on Christian work among the mountain villages.—*Missionary Herald.*

AUTUMN.

A fair picture of peace and plenty is the young girl standing amid the rich, yellow wheat sheaves, bearing in her arms and about her head the ripe grain which is the emblem of bounty and prosperity, the promise of a nation's bread.

The summer's work is ended; the fields reaped clear of the wealth they have borne, and now returns to the hands that sowed it, the Harvest is Home, the laborer has his reward.

In the old days the Harvest Home was, and even now in some parts of Europe is, a season of feasting and rejoicing. A great supper is spread for all the work people, and when the last field is cleared, the last full load safely housed, then with music and dancing and merry games the evening is spent—and the supper gaily eaten. It is a festival of great importance to the families and their laborers, and in our own country the place of it is supplied by the National Thanksgiving which falls in the latter part of November, as the first warnings of the coming winter are upon us, and we can fully realize the blessings which the by-gone summer has brought us.

This day, set apart for the offering of thanks to the Great Giver of the harvest and of all the good the year has brought, ought to be kept in some way by every Christian household, and now, before the festival is here, is the time to prepare for it. There should be services in the churches, gatherings of families, happy Thanksgiving dinners, and above all there should be good deeds to the poor, a generous sharing with those who have less than ourselves of the good God has given us. Each one of us can do something toward making the day what it should be in a Christian Country, and if we have never done it before let us now determine to make this year a beginning.

Antidote to Strychnia.—The Journal of Applied Chemistry says, it is asserted that salad oil, promptly applied, is an antidote to strychnia. The remedy has not been tried on men, but on dogs, a half pint of oil is said to be sufficient to prevent fatal results. The late James F. Reed, Esq., of San Jose, California, some years ago assured us that he relied upon lard as an antidote, and had, by its administration, saved the lives of dogs and other animals on more than one occasion. The people of California employ strychnia to kill the gophers, and thus the dogs and other animals are liable to be poisoned.—*Exchange*

Cure for Snake Bites.—M. E. A. of Manistee Co., Mich., writes the RURAL NEW-Yorker:—"P. HOWER, Esq., of Manistee Mich., says that he has been extremely successful in curing the bite of the copperhead, mas'sager and other poisonous snakes with spirits of turpentine, the wound being thoroughly saturated two or three times. He mentioned several cases where he had tried the experiment on dogs, sheep and calves, and he had never lost a single case during an experience of thirty years."

The Teachers' Table.

"It is reported that there are fifteen colleges and universities in the country in which colored students are receiving instruction."

ALEXANDRIA COUNTY.—(From Superintendent Carnes, July 4th).

"I have just returned from an examination of the schools of this county, and I cannot forbear reporting the great improvement I found, in the colored schools especially. In my earlier examinations I found a few dirty, ragged children to be examined, and occasionally a sleepy-looking man or woman would stroll in and sit a while. This time the children were all clean, most of them well, and some very tastily dressed, while the colored people who attended were evidently those who felt, and wished to testify, a personal interest in the progress of the children. Never have I been so encouraged in my work, nor have I ever before seen such evidence of the effect of our schools upon the material welfare of the country. Thrift has evidently already resulted from education, and results which we could not have reasonably hoped to attain in this generation, seem to have already followed our efforts.

"In this city, too, a great amount of prejudice and opposition seems to have been removed, and I look for a heavy increase of pupils, both white and colored, within the next school year."—*Educational Journal of Va.*

THE *Virginia Educational Monthly* for August conveys a gentle hint to its readers of "the necessity on their part of work to increase its subscription list in order to make it a paying journal."

A good educational magazine is a valuable assistance to any teacher, and sometimes two or three teachers may be near enough to each other to club together for a journal which neither could afford to subscribe for alone. We know of no more ably edited and interesting educational magazine than this. It is published by J. T. Ellyson, Bookseller, Richmond, Va.

LANGUAGE EXERCISES.—Under this heading, Prof. B. J. Northrop, of Connecticut, and one of the trustees of the Hampton Normal School, remarks in the *Virginia Educational Monthly*: "As ordinarily taught to children, English grammar has about as much adaptation to its professed design—teaching to speak and write the language correctly—as the study of physiology and anatomy would have to swimming. Indispensable as is grammar it is above the grasp of children till language exercises have prepared the way for it. The following have outline of such exercises is printed to meet the request of many teachers.

PRIMARY COURSE.

1. Conversation. 2. Printing words on the slate or board. 3. Object lessons. Their linguistic bearing suggests one of their most important results. 4. Applying fit adjectives to nouns. 5 Selecting the most characteristic adjective. Apply, for example, to the fox the one word in our language which most fitly characterizes this animal. 6. Combining all fit adjectives with some noun in a sentence, and yet avoid redundency. 7-9. Mottoes—oral, printed, written. 10. Require all answers given by pupils to be in complete senteuces. 11. Ask no question which can be answered by "yes" or "no." 12-14. Dictation for repetition—oral, the same printed, then written. 15. Description of geometric forms. 16-17. Two or more words given, to form a sentence containing them—oral first, then written. 18-20. The reading lesson—oral, printed, written. 21. pointing out resemblance and difference in things. 22-23. Describing pictures as seen—oral and written. 24-25. Describing pictures as remembered—oral and written. 26-27. Describing pictures as imagined—oral and written. 28. Descriptions of natural scenery. For example, describe the landscape which pleased you most. 29. Description of one's town. Give its location, size, connections by railroads, etc., streets, productions, people, business, etc. 30. Description of one's county. 31. Description of one's State. 32. Questions."

It would seem unnecessary to follow any strict order in this course further than to take the simplest first, or to use one or more of them daily as a pleasant and useful change from other lessons. Prof. Northrop remarks further:

"One fact discovered by a child by his own perception and reflection is worth vastly more to him than many which he is told directly. The object of the exercise of 'Questions' (number 32) is to lead the child to observe carefully, and then describe his perceptions. One question, for example, may be: What is your pet animal? If the child answer, a dog, then would follow others, as: Why do you like him? What kind of a dog is he? and others about his name, coat, color, size, disposition, intelligence, tricks, use, and the ways in which he is useful. What is the strongest animal? How does it use its strength? What is the most useful animal? In what ways is it useful? If the subject be flies—the questions might be: Do they bite or sting? When and where are they most abundant? What do they like best to eat? What is their greatest enemy? What lesson does that enemy teach us? How do they walk on the window or the ceiling? Taking the microscope (which should be on every teacher's desk), as you examine the fly's eyes, how do they compare with yours? Are flies of any use? Of what use? Should you say they are of no use, even if you could discover none? Is anything created in vain? Those examples show what a variety of questions may be put in regard to the most familiar objects; which, while they tell him nothing, lead the child to discover and describe much. Once started thus on lines of observation and reflection, he learns how to question nature and become an independent observor."

HINTS TO STUDENTS.

WHAT TO READ.

The annexed letter was written to a young parishioner of Mr. Frothingham, the eminent radical preacher, whose scholarship and culture entitle his advice on such a subject to great weight.

My Dear Young Friend:—It is not easy to recommend books for general reading to one with whose mental character, tastes and habits you are unacquainted. If you wished to know what were the best books in any special department of knowledge or of literature, it would be no difficult task to name them. Or if I knew what books would give the best nutriment to your growing mind, I could mention those. You will pardon me, therefore, if being obliged to make my suggestions in the dark, I fail to touch precisely the point you wish me to reach.

There is no more profitable or interesting reading for youths of your age—when reading must be interesting in order to be profitable—than books of biography and history. Biography I class first, for it is history in the most attractive form. The lives of Isaac T. Hopper, of Sir Thomas Fowell Buxton, of Palissy the Potter, are at once ennobling and delightful. Talfourd's "Life and Letters of Charles Lamb," and the "Final Memorials of Charles Lamb" are charming books for mind and heart. So is Lockhart's "Life of Sir Walter Scott." The autobiographies of Silvio Pellico and Benvenuto Cellini are as entertaining as they are instructive. Mrs. Lee's "Lives of the Old Painters" you could not fail to enjoy exceedingly.

You are hardly old enough, I should think, to read the best books in history with much satisfaction. You might, however, read with advantage the common histories of America and England, Marshall's "Life of Washington," Spark's "American Biography," Bancroft and Hildreth and Macaulay and Froude will come by and by.

The books of travel are too numerous to mention.

You may read all Sir Walter Scott's romances, all Charles Dickens' novels, all the novels of Charles Reade, "The Newcomes" and "Philip" of Thackeray, and they will not hurt you, while they are vastly more interesting than the cheap trash that floods the market, and which is poured out to meet the demands of coarse and uneducated people who are just able to read, and have no power of fixing their attention on what they read. I will not frighten you by adding my more to my list. These will do for a good while. When you wish for more I shall be happy to give you the benefit of my experience so far as it may be useful to you. Whenever you would like to talk with me about your books and studies I shall be glad to see you, and give you what assistance I may.

Very sincerely yours,
O. B. FROTHINGHAM.

Correspondence.

AN aged lady who, over forty years ago, left her home in the hills of Hampden County, Mass., for the pioneer work in the Pacific Islands, and still labors in the work in which she enlisted for life, writes to her children, who are scattered over two Continents, of her daily life in such a way that fifteen years of absence have not dimmed the recollection of their sweet tropical home, and of the beautiful valleys, majestic mountains, and genial, loving natives among whom their youth was passed. We take our readers a little into confidence, and extract from a recent letter a few word pictures of what is passing in that Paradise of the Pacific, the Hawaiian Islands, the scene of the most wonderful triumphs of missionary effort in the century, but now presenting the sad sight of a race dying in the blaze of Christian truth, with unlimited political and civil and social freedom, because poisoned by foreign diseases, introduced by commerce, and for want of steady habits and wholesome self-restraint. As in the East, sensuality has done its work, and leprosy, unknown fifteen years ago, is sweeping them away.

"Religion and morality are at a low ebb here.

"Intemperance has raged fearfully. Natives make fermented intoxicating drinks of mangoes, melons, pine apples, *ki* root, and molasses. The King is opening his eyes on the subject and has made two or three speeches against intemperance; he was a Good Templar, formerly. It will require great strength for him to stand firm with his surroundings. Most of the government officials worship Bacchus. Last Saturday seven graves were dug at *Kawaiahao*; there are several funerals a day among natives.

"I have again commenced going to the districts in the vicinity of Honolulu to have Bible readings. It is sad to see such a change among the natives. The men and women I used to meet at the same places are gone; only here and there are a few left. The younger natives imitate the worst habits of white people, so there is a combination of ancient and modern which sometimes presents a ludicrous aspect. There are some apparently rather good people among them. Having a nice buggy and gentle horse, I shall enjoy once more being able to go on in the work which I came to do.

"It has become a fixed fact that women can work without being permitted or granted the privilege by men. Missions have received a new impetus since women have entered the field. I do not anticipate much success; all things seem so utterly prostrate—can only try.

"*August 16th.* Weather very warm; thermometer in the shade stands at 87°. After an unusually cool winter (rainy season) the heat is oppressive. Yesterday, kind gentle Bessie helped me to Manoa valley at 4 P. M. We passed Punahou (Oahu College) pasture and the hill on the left which was once owned by N——, now by a Portuguese; then down a rough, stony hill to the old church which your father had erected in days gone by, and where I used to meet natives, some two or three hundred, to read and talk about the Bible and ask the Comforter to descend. As we approached the bell rang loudly, and as we entered a woman called out to the bell ringer, "*kuikuili* (stop your noise). Only a few were there, soon we were seated and an air of gloom seemed to pervade the house. I will be a little particular, as ——— may like to hear of the old familiar place. Several of the old stamp came in and seemed gratified to talk over olden times. There were not many of the younger natives there; gone to ride, perhaps, or too lazy or indifferent to come. Houses are now scarce in the valley and people are nearly gone. The adobe walls of the church are broken in some places; many empty seats, some of which are put up overhead on cross timbers. The roof has been rebuilt and shingled; the windows are time-worn and broken; the old box pulpit, as usual; the same old table in front of pulpit, and on it a time-worn Bible and hymn book. All seemed dingy, worn and gloomy, including the old natives. After waiting, about thirty men women and children had assembled and five dogs. The latter had a little skirmish before we commenced, for what purpose I was not informed by them. After their minds had become settled each one lay down under some bench and behaved tolerably well, tho' rather noisy in scratching themselves. I called for Bibles, as it has been my custom to require different ones to read, and then we could talk about the verses separately, and I could ask them practical questions. Not one had either a Bible or Testament. The old one on the table was all. Formerly each one had a Bible or Testament and took them to my meetings, expecting to be called upon to read. Just so with hymn books; not one there.

"I selected a hymn, and, as books were minus, a woman with a restless baby in her arms sang the air and I the nito of Ortonville. The fifth chapter of Lamentations seemed a most suitable subject, so a few verses were read, beginning at the 18th: For a while we hunted up foxes which walk upon the desolate Mount Zion. They took the idea readily and some talked after they had done reading. One man said he thought Satan was the worst fox and he had many children. They prayed fervently for God to return to this desolate Zion. Meeting was over, then there was a general shaking of hands, when I always keep on gloves for fear of leprosy. Some inquired for ——— and poinfed out the house where you used to stop.

"We looked around on the hills and admired the varied shades of green. Nothing looked bright but foliage and grass. Few *kalo* patches are to be seen. Few people. Desolation reigns as in Palestine.

"I have been to *Waikiki*, where is a new, neat, wooden church, just where that old dilapidated stone one stood.

"Now I must report on Mr. Sic Koon, a Chinaman from California who has been hired to come here and preach a year to his countrymen. I have been to hear him twice in the Bethel on Sabbath eve; could not understand a word, yet it was interesting to see the congregation of attentive, homely faces. He sings a few tunes such as Lenox, &c., and points to characters on a large card and sings. All try to join him; some do well while others croak. It is not like the cat music which you learned of them. Akam (Chinese servant) is not much inclined to church going. I never could persuade him to learn English though I offered to teach him. He speaks the native language well, and improves as years roll away. He is kind to me and prompt in his duties. While cooks often leave, he dislikes changes, tho' he could have better wages elsewhere. He is interested in each member of our family, and always says *maikai* (good) when I show him the photographs. I am truly thankful he is so faithful; he takes good care of my mare Bessie, and is now feeding her with Algeroba or *kiawi* seeds, mangoes and papaias, as grass is scarce.

Aug. 23, '75. Australian steamer is expected to-day and letters must be in readiness. I will tell you of another *kanaka* meeting. At 4 P. M. Bessie and buggy were made ready by Akam, and I set out for Makiki. The old bell was soon clattering, calling people to a meeting which the Rev. H. H. P. had gladly appointed for me. Some twenty-four were gathered, of both sexes and all ages. Dogs of course were there but kept quiet. The same subject we had the Sunday previous at Manoa was taken up: Lamentations 5; 18-21. It is wise to keep a theme before the native mind till well digested. All were very attentive. When I had done talking a few natives took up the subject, having grasped it thoroughly. We had quite a time in exposing foxes and all admitted that the churches were overrun with them. Martha, old and withered, the wife of Kananaa, whom you may remember, expressed her grief at the state of things, talked of the former days when she used to be one of my helpers in meetings, and made a most fervent prayer that God would return here—she appeared almost inspired, and seemed not to be able to stop pleading. The meeting was protracted and most pleasant."

RUNNING A NEWSPAPER.

By some unaccountable misapprehension of facts, says the Memphis *Avalanche*, there is a large class of people in the world who think that it costs little or nothing to run a newspaper; and if they buy a copy from the newsboy, when too far from the office to come and beg one, they are regular patrons and entitled to unlimited favors. Men call every day at newspaper offices to get a copy of the paper for nothing, who would never dream of begging a pocket handkerchief from a dry-goods store, or a piece of candy from a confectioner, even upon the plea of old acquaintance, having bought something once before. One paper is not much, bnt a hundred a day amount to something in the course of time. But this is a small drain compared with the free advertising a newspaper is expected to do. Some men who have paid two dollars at an early period of life for an advertisement worth four or five dollars, appear to think they are stockholders in the establishment for eternity. They demand the publication of all marriage and funeral notices, obituaries, and family episodes, for the next forty years, gratis. Speak of pay and they grow indignant. "Don't I patronize your paper?" "Yes; but you receive the worth of your money for what you pay." "But," says the patron, "it will not cost you anything to put this in;" which is just as ridiculous as to ask a man to grind your axe on his grindstone, and graciously tell him it won't cost him a cent.

The newspaper business is very exacting on all connected with it, and the pay is comparatively small; the proprietors risk more money for smaller profits; and the editors and reporters and printers work harder and cheaper than the same number of men in any profession requiring the given amount of intelligence, training, and drudgery. The life has its charms and pleasant associations, scarcely known to the outside world; but it has its earnest work and anxieties and hours of exhaustion, which also are not known to those who think the business all fun. The idea that newspaperdom is a charmed circle, where the favored members live a life of ease and free from care, and go to the circus at night on a free ticket and to the spring on a free pass in the summer, is an idea which we desire to explode practically and theoretically. Business is business, and the journal that succeeds is the one that is run on a square business footing, the same as banking or building bridges, keeping a hotel or running a livery stable.

LEADING

CLOTHING

HOUSE.

THE

Leading Clothing House

OF THE

UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing

FOR MEN'S WEAR,
FOR YOUTH'S WEAR,
FOR BOY'S WEAR.

Our stock is always

THE NEWEST,
THE LARGEST,
THE FINEST,
THE CHEAPEST.

When visiting New York do not fail to examine our goods.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States*, and *by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent.* Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL OOURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNES' BRIEF U. S. HISTORY.
BARNES' SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.
CHAPMAN'S DRAWING BOOK.
CLEVELAND'S COMPENDIUMS.
NORTHEND'S SPEAKERS.
GRAHAM'S REASONABLE ELOCUTION.
PEABODY'S MORAL PHILOSOPHY.
BOYD'S COMPOSITION, ETC.
CHAMPLIN'S POLITICAL ECONOMY.
BEER'S PROGRESSIVE PENMANSHIP.
PECK'S GANOT'S NATURAL PHILOSOPHY.
PORTER'S CHEMISTRY.
JARVIS' PHYSIOLOGY and LAWS of HEALTH.
WOOD'S AMERICAN BOTANY.
CHAMBER'S ZOOLOGY.
STEELE'S "14 WEEKS" IN EACH SCIENCE.
PUJOL'S FRENCH COURSE.
WORMAN'S GERMAN SERIES.
SEARING'S CLASSICS, ETC., ETC.,

The whole crowned by a unique collection of professional manuals known as

THE TEACHERS' LIBRARY,

In Thirty Volumes.

A Descriptive Catalogue of all A. S. Barnes & Co's publications will be sent free to the address of any Teacher or School Officer applying for it.

The National Teachers' Monthly commands in its editor and contributors the best professional talent the country affords. Subscription, $1 per annum.

Sunday-school Lessons on the Life of Christ.

LESSON I.

OCTOBER 3, 1875.

JESUS LIFTED UP.

JOHN xii: 23–33.

23 And Jesus answered them, saying, The hour is come, that the Son of man should be glorified.
24 Verily, verily, I say unto you, Except a corn of wheat fall into the ground and die, it abideth alone; but if it die, it bringeth forth much fruit.
25 He that loveth his life shall lose it; and he that hateth his life in this world, shall keep it unto life eternal.
26 If any man serve me, let him follow me; and where I am, there also shall my servant be: if any man serve me, him will *my* father honour.
27 Now is my soul troubled; and what shall I say? Father, save me from this hour: but for this cause came I unto this hour.
28 Father, glorify thy name. Then came there a voice from heaven, *saying*, I have both glorified *it*, and will glorify *it* again.
29 The people therefore, that stood by, and heard *it*, said that it thundered. Others said, An angel spake to him.
30 Jesus answered and said, This voice came not because of me, but for your sakes.
31 Now is the judgment of this world: now shall the prince of this world be cast out.
32 And I, if I be lifted up from the earth, will draw all *men* unto me.
33 (This he said, signifying what death he should die.)

Golden Text.—And I, if I be lifted up from the earth, will draw all men unto me.—John xii: 32.

Jesus was now in Jerusalem. Some Greeks who had come up to attend the passover wished to see him, and Andrew and Philip went and told Jesus.

23. The Son of man was to be glorified by dying on the cross and then rising from the dead and ascending into heaven.

24. If a grain of wheat is never planted it will always remain one grain of wheat; but if it is buried in the ground, it will spring up and bear many grains. So Jesus meant to tell us, that, like the wheat, he was to die and be buried, and that when he rose from the dead he would bring all who would love and trust him to his home in heaven. Thus many, through his death, would have eternal life.

25. The life of any one who so loves his life, that is, *himself*, that he only thinks how he can please and benefit himself, will be lost, because it will be of no use to others.

26. God will honor those who follow Christ's example and spend their lives in trying to do good, by giving them a home in heaven.

27. Jesus knew that only by his death could he finish his work of love.

28. He left it all in his Father's hands. He was willing to suffer and die that God's name might be glorified in giving his Son to die for sinners.

30. The voice was that the people might be sure Jesus was indeed God's own Son whom he had sent to earth.

31. When Christ was crucified the power of Satan, the prince of this world, was broken.

32. He draws all men, not only the Jews, but also the Gentiles, by his invitations unto himself and "whomsoever will" may come.

Questions.

To whom was Jesus speaking? verse 22. What had they told Jesus?

23. What answer did Jesus make? How was the Son of man to be glorified? Had that hour now come? The Jews had desired to put Jesus to death before this time. Why had they not done so?

24. What did Jesus say about the wheat? Who was soon to die like the wheat? What may we have because of Christ's death?

25. Who does Jesus tell us shall lose his life? Why is his life lost?

26. Whom will God honor? How will he honor them?

27. For what did Jesus come into the world?

28. What prayer did he offer? How had God's name been glorified? *Ans.* In the life of Christ. John xvii: 4. Was it glorified in his death? Luke xxiii: 47.

29. What did the people say about the voice?

30. Why did the voice come?

31. Who is "the prince of this world?"

32. Whom does Jesus mean by "all men?" How does he draw them? Matt. xi: 28. What is his promise to all who come to him? John 6: 37.

LESSON II.

October 10, 1875.

WASHING THE DISCIPLES' FEET.

JOHN xiii: 1–9.

1 Now before the feast of the passover, when Jesus knew that his hour was come that he should depart out of this world unto the Father, having loved his own which were in the world, he loved them unto the end.
2 And supper being ended, (the devil having now put into the heart of Judas Iscariot, Simon's son, to betray him,)
3 Jesus knowing that the Father had given all things into his hands, and that he was come from God, and went to God;
4 He riseth from supper, and laid aside his garments; and took a towel, and girded himself.
5 After that, he poureth water into a basin, and began to wash his disciples' feet, and to wipe them with the towel wherewith he was girded.
6 Then cometh he to Simon Peter: and Peter saith unto him, Lord, dost thou wash my feet?
7 Jesus answered and said unto him, What I do thou knowest not now; but thou shalt know hereafter.
8 Peter saith unto him, Thou shalt never wash my feet. Jesus answered him, If I wash thee not, thou hast no part with me.
9 Simon Peter saith unto him, Lord, not my feet only, but also *my* hands and *my* head.

Golden Text.—Let this mind be in you, which was also in Christ Jesus.—Phil. ii: 5.

1. Jesus was about to die but he did not forget his disciples. His love for them was so great that he was ready to serve them in any way.

3. Jesus knew that the Father had given all things into his hands, yet knowing that he was so exalted he humbled himself and took a servant's place to his disciples.

4, 5. In that country the people wore only sandals upon their feet, and in order that they might be clean and comfortable it was necessary that the feet should be washed very often. This was usually done by servants.

6. Peter's question shows that he was unwilling Jesus should perform such a lowly service for him.

7. Peter did not know at the time, but soon afterward Christ told all the disciples his reason for doing this. So, if we put our trust in God, many things which we do not now understand, God will make plain to us in His own good time.

8. There is another washing of which Christ was thinking when he spoke these words to Peter—which we all need to cleanse us from sin. Unless Peter received *that* cleansing he would have no part with Christ.

Christ meant to teach them by his own example a lesson of humility. They must be willing to be servants, if need be, if they would follow in his steps.

If we wish to be useful in the world we must not be proud and selfish, but we must be willing to forget ourselves enough to minister to the needs of others. Thus Christ taught them how he would have them treat each other and all men. This is a lesson for each one of us, as well as the disciples, and we can, if we will, practice it in our daily lives.

Questions.

1. Whom did Jesus always love? Did he love them still?

2. Who betrayed Christ? Who put it into his heart? Luke xxii: 3.

3. What did Jesus know about himself? Matt. xxviii: 18. Still, knowing this, what did he do?

4, 5. What did Jesus then do? Was it needful frequently to wash the feet in that country? Why? Who usually did this? 1 Sam. xxv: 41.

6. What does Peter's question show?

7. Did Peter afterward understand why Christ had done this? What lesson may we learn from it?

8. Did Peter still refuse? Of what other washing was this the symbol? 1 John i: 7.

9. Did Peter change his mind? Did the disciples specially need this lesson at this time? Why? Luke xxii: 24. What was the lesson he taught them? Do we need to learn the same lesson? Repeat the Golden Text. What mind was in Christ Jesus? Phil. ii: 5–8.

LESSON III.

October 17, 1875.

MANY MANSIONS.

JOHN xiv: 1–7.

1 Let not your heart be troubled: ye believe in God, believe also in me.
2 In my Father's house are many mansions: if *it were* not so, I would have told you. I go to prepare a place for you.
3 And if I go and prepare a place for you, I will come again and receive you unto myself; that where I am, *there* ye may be also.
4 And whither I go ye know, and the way ye know.
5 Thomas saith unto him, Lord, we know not whither thou goest; and how can we know the way?
6 Jesus saith unto him, I am the way, and the truth, and the life: no man cometh unto the Father, but by me.
7 If ye had known me, ye should have known my Father also: and from henceforth ye know him, and have seen him.

Golden Text.—But now they desire a better country, that is, an heavenly.—Heb. xi: 16

1. Jesus spoke these words of comfort to his disciples because he was so soon to die and leave them. They believed in God; he wished them to believe in him so that they might not be anxious and troubled about his death.

2. He would not forget them but would still be working for them in heaven.

3. When Christ's friends die, he fulfills his promise and comes and takes them to heaven to live with him.

4. He was going to his Father through death on the cross.

5. Thomas was a true disciple and friend of Christ, but he was timid and doubting.

6. In his answer to Thomas, Christ points out the plain and easy way to heaven. A knowledge of Christ himself and a readiness to follow him is all that is needed to bring men to the Father. We know his word and promises. We can walk in this true way by believing in him and obeying his commands. Then Christ will become to each one of us "the way, the truth and the life." In this way only can we come to the Father and have one of those mansions which Christ has gone to prepare for those who love and serve him on earth.

7. The more we learn of Christ, the more we know of our Father in heaven. The same love which made Jesus willing to die for us on the cross made God willing to give his only-begotten Son that whomsoever believed on him might not perish but have everlasting life.

Questions.

1. Why were the disciples troubled? How did Christ comfort them?

2. Where is his Father's house? Would he still be working for them there? What else does Jesus do for his friends in heaven? Heb. vii: 25.

3. What promise did he make? When is this promise fulfilled?

4. Had Jesus spoken before of going away? John x: 36. Whither was he going? By what way?

5. What did Thomas say? Was he a true disciple? What was his character?

6. What did Jesus answer him? To what place is Jesus "the way?" How may we walk in this true way? How only can any one go to the Father?

7. How can we know our Father in heaven better? Had Jesus spoken in this way before? John viii: 19. Did Jesus show men the Father? verse 9. How does the Father appear as we see him in Jesus? John iii: 16. For whom are mansions prepared in heaven? How may we be sure that one of those mansions will be ours? Repeat the Golden Text.

LESSON IV.

October 24, 1875.

THE VINE AND THE BRANCHES.

JOHN xv: 1–8.

1 I am the true vine, and my Father is the husbandman.
2 Every branch in me that beareth not fruit, he taketh away: and every *branch* that beareth fruit, he purgeth it, that it may bring forth more fruit.
3 Now ye are clean through the word which I have spoken unto you.
4 Abide in me, and I in you. As the branch cannot bear fruit of itself, except it abide in the vine; no more can ye, except ye abide in me.
5 I am the vine, ye *are* the branches: He that abideth in me, and I in him, the same bringeth forth much fruit: for without me ye can do nothing.
6 If a man abide not in me, he is cast forth as a branch, and is withered; and men gather them, and cast *them* into the fire, and they are burned.
7 If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you.
8 Herein is my Father glorified, that ye bear much fruit; so shall ye be my disciples.

Golden Text.—By this shall ye know them.—Matt. vii: 20.

1. The vine gives to the branches all their life. Jesus by this parable or story taught the disciples that in like manner their life must come from him.

2. The object of a vine is to bear fruit. All fruitless branches are cut off. Any one who professes to belong to Christ but who does not love and obey him is taken away as a fruitless branch. As the husbandman purges or prunes the fruitful branches, so God, when he finds any one trying to do good, takes away the things that would hinder him and thus helps him to do more good.

3. Christ's word had cleansed them so that they were prepared to hear fruit, that is, they desired to do good in the name of Christ.

4. The branch cannot bear fruit unless it is joined to the vine. This is the picture of what we are by ourselves. There is only one way in which we can become good. The goodness must come from Jesus.

5. The branch which is joined to the vine cannot help bearing fruit, so if we are riveted to Christ by love he gives us of his strength and it is easy for us to be good and do good.

6. If there is none of this good fruit in our daily lives, we are useless in the world and are fit only to be cast out like the withered branch.

7. To have Christ's words abiding in us we must not only remember and think about them but love and obey them. Whatever help we need he has promised to give us if we ask him. We can pray to him for wisdom, that we may know what we can do to bear fruit to his honor and glory.

8. If we try, with God's help, to obey Christ's words and do just as Christ would do if he were in our places we shall be cultivating his loving spirit. Then our friends and companions, as well as our Father in Heaven, will see that we have been with Jesus and learned of him. So shall *we* be his disciples.

Questions.

1. What does Jesus here call himself? What does the vine give to the branches? How does this apply to Jesus?

2. What is done with the fruitless branches? Who are treated like these branches? Why are the other branches pruned? Does God do any thing like this to his true children?

3. By what had the disciples been cleansed?

4. Can the branch bear fruit of itself? How only can we become good?

5. From whom does our strength come?

6. What will become of those who are not united to Christ?

7. How can we have Christ's words abiding in us? Where can we obtain help? For what may we pray?

8. How may we glorify God? How may we lead others to glorify God? Matt. v: 16. How are Christ's disciples known? *Ans.* Golden Text.

LESSON V.

October 31, 1875.

FRIENDS AND FOES OF JESUS.

JOHN xv: 11–19.

11 These things have I spoken unto you, that my joy might remain in you, and *that* your joy might be full.
12 This is my commandment, That ye love one another, as I have loved you.
13 Greater love hath no man than this, that a man lay down his life for his friends.
14 Ye are my friends, if ye do whatsoever I command you.
15 Henceforth I call you not servants; for the servant knoweth not what his lord doeth: but I have called you friends; for all things that I have heard of my Father, I have made known unto you.
16 Ye have not chosen me, but I have chosen you, and ordained you, that ye should go and bring forth fruit, and *that* your fruit should remain: that whatsoever ye should ask of the Father in my name, he may give it you.
17 These things I command you, that ye love one another.
18 If the world hate you, ye know that it hated me before it *hated* you.
19 If ye were of the world, the world would love his own: but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you.

Golden Text.—Whosoever, therefore, will be a friend of the world is the enemy of God.—James iv: 4.

11 Jesus came into the world to bless men, by making them happy. In our last lesson we were told how to become his disciples. How was it? If we remember and do "these things which Jesus spoke, then we shall be full of joy."

12. So loving each other and working together for the Master, whom they all loved, they could not help being joyful in his service.

13. This verse teaches that if we really love our friends, we shall be willing to deny ourselves, that is, to give up our own wishes and pleasure for their good. This would be something like Christ's love.

14. Christ owns as his own friends those who wish and try to obey his commands.

15. We prove ourselves to be the disciples of Christ only by serving him faithfully; but if we thus serve him Christ does not call us servants, but he so loves us that he cares for us and treats us as his friends.

16. It was not alone that they may be blessed themselves that Christ choose them as his friends, but that they might bring forth fruit by telling all men of Him, and His great love to them.

17. Whatever help they needed in this work God would give them, if they prayed for it in Christ's name.

18. Jesus meant by "the world," all those who did not love and serve God, and believe on His son. It would make it easier to bear their ill-treatment when they remembered that Jesus their best friends had borne the same.

19 If the world hated Christ, it, of course, hates all who were trying to follow and be like him.

Questions.

11. What did Jesus mean by "these things?" verses 1–10. How may we be full of joy?

12. Had Jesus given them this command before? Was it enough to *say* they loved each other, not doing anything to show their love? How were they to love each other? 1 Jno. 2: 18?

13. How can we show our love to our friends? What is the greatest proof of friendship? Does God show greater love than this? How? Romans 5: 8.

14. Whom does Christ call his friends?

15. How do we prove that we are Christ's disciples? Why is it proper they should be called friends and not servants?

16. For what had Christ chosen them? How were they to bring forth fruit? What was to be their great work? Mark 16: 15. From whom could they receive help? How were they to obtain it?

17. What command did Jesus repeat?

18. What did Jesus mean by "the world?" What ought they to remember? verse 20.

19. Why would the world hate them? If they suffered for Christ what blessing would be theirs? Matt. 5: 10–12. What will all such find waiting for them in heaven? Rev. 3: 10. Repeat the Golden Text.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., NOVEMBER, 1875. NO. 11.

OH THAT MEN WOULD PRAISE THE LORD FOR HIS GOODNESS, AND FOR HIS WONDERFUL WORKS TO THE CHILDREN OF MEN! AND LET THEM SACRIFICE THE SACRIFICES OF THANKSGIVING, AND DECLARE HIS WORKS WITH REJOICING. PSALM 107: 21, 22.

THANKSGIVING.

The second national festival of the year falls in the present month and an early edition enables us to press, in due time, upon our readers the many and good reasons which exist for keeping Thanksgiving with all the appointed external forms, and with the warmth of thankfulness.

It is surely right and fitting that a Christian nation should set apart one day of the year whereon to make general and solemn acknowledgment of the power and goodness of God in His relations to His children as they are gathered into peoples and states, and unless such acknowledgment goes up willingly and gladly from the whole country, East and West, North and South, it is not what it should be; it is not the grand and honorable festival which our fathers meant to make it. As a people, we ought to open our churches, to hold special Thanksgiving services, to make it by wide-spread observance a national holiday in the highest sense, and to permit no local or sectional prejudice to interfere with its significance. As families, we can make it the occasion of happy reunions, of bringing together scattered relatives and friends, of hearty, simple pleasure, of remembrance of the absent, and kindly renewing and strengthening of all those family ties which time and separation do so much to break and weaken. As individuals, we can recall all the lessons the past year has taught us, we can seek to refresh our sense of gratitude to God and charity to men, and we can be very careful in the midst of our own happiness and comfort to remember those who are poorer than ourselves or to whom the year has brought sorrow and chastening rather than joy and prosperity.

Such a festival may Thanksgiving be made, and surely when so kept it must be of real assistance to us in our relations to the State as citizens, and to each other as fellow-men and fellow-citizens; wherefore, let us each do our best to make this coming Thanksgiving a holy-day worthy of its name.

Southern Workman.

HAMPTON, NOVEMBER, 1875.

THE Hampton Normal School opened at the usual time this year, and already one hundred and fifty boarders and thirty day pupils are in attendance. The boarders will run up to thirty or forty more in the course of two months. It should be remembered that the training received by this class, embracing as it does the whole mode of life, is a very important and expensive part of the institution, requiring a large establishment with all the appliances, for encouragements of decency and right living. Probably no institution in the conntry supplies its students, gratis, with better means of cleanliness. In addition to sea bathing in warm weather, there are comfortable baths for all in cold weather, the use of which is required. This is only one illustration of the system which by great efforts has nearly reached completeness as a civilizer. Instead of from five to twelve students in a room as last year, there are usually from one to three. There are the Seniors' and Middlers' "cottages" which accommodate fifteen and thirty men respectively and are kept in order by the students themselves. The girls' apartments in Virginia Hall are sufficient to meet all their needs for years to come.

The corps of teachers were never better organized, and there is every prospect of a most encouraging year's labor.

The extreme scarcity of money and derth of business in the South has affected the school much less than could have been supposed. An increase of numbers is not expected while so many are kept back by utter inability to make the small cash payments required to meet expenses.

THE Sunday school Edition of the SOUTHERN WORKMAN, which has been a reprint of the main edition, will hereafter be issued two weeks in advance of the regular edition and the lessons will not appear in the latter. In their place and in order to support the baper, advertisements will be inserted on the eighth page.

The Snnday school lessons are now prepared by Miss Susan P. Harrold, one of the most experienced of the Normal School teachers, and coincide with the international series. This edition of the SOUTHERN WORKMAN will be a four page sheet of the size of the New York *Nation*, nine by twelve inches; will contain illustrations and be published in time to reach all parts of the country before the date of the lessons. It has a circulation of 1800 copies monthly.

OF THE many exchanges that come to our table none are more carefully read than the *Virginia Educational Monthly* and the *Southern Planter and Farmer;* both published at Richmond, and devoted to the two greatest interests of the South—edncation and agriculture. They indicate a new and wonderful departure in the ideas of southerners. A certain fresh and vigorous thought that shows that some of the best men and women of this State are devoted to building up her waste places and to a recoustruction far more substantial than *Acts of Congress.*

Northerners who care to know of the real progress of the South cannot do better than subscribe for these well managed journals; they will learn that Teachers' Institutes and Farmers' Clubs are institutions well rooted in Virginia soil; and they will also learn of the tremendous difficulties in the line of educational and agricultural advancement, and of the struggles of a people who do not need to prove that they are heroic.

THE SOUTHERN WORKMAN PREMIUM!.

To every one who shall subscribe one dollar for the SOUTHERN WORKMAN for one year, from and after November 1st, 1875, we will, upon receipt of five cents in stamps for postage, send a neat paper covered book entitled

Cabin and Plantation Songs
as sung by the Hampton Students,

containing eighty-two pages of original negro music, accompanied by the words in dialect.

These songs were arranged by Mr. Thomas P. Fenner, Musical Director of the Hampton Singers, and embrace the peculiar pathetic music which these vocalists have made so popular.

Already over eight thousand copies, bound in "Hampton and its Students," have been sold. The pamphlets are for sale at this office for fifty cents each.

THOSE who desire a winter resort in the South can find no pleasanter town than St. Augustine, Florida; where, among others, a lady from Connecticut, Miss Maria Morgan, is ready to receive boarders at the usual rates. We mention this because of an earnest desire to encourage all who in every way deserve encouragement, and because some of those who see this may have occasion to thank us for the information.

THE many friends of the Hampton Student-Singers and of Mr. Thomas P. Fenner, who has for nearly three years conducted their concerts with the highest success, will be interested to learn that Mr. Fenner has accepted the position of Professor of Vocal Music at the Temple Grove Ladies' Seminary, Saratoga Springs, N. Y., where he has already settled.

The Hampton Singers have either resumed their studies or entered the work of teaching their race, and are not likely for some time to come to make a mnsical campaign.

AGRICULTURE.

The exhansted lands of Virginia and other southern States, are a type of their general condition; only as the soil shall improve and farms thrive can there be a basis of prosperity. Sheep husbandry is attracting great ntention as a means to this end. The climate of Virginia resembles that of England where farming has been revolutionized and farms enriched by flocks of sheep. Seven years of observation and of farming at the Hampton Normal and Agricultural Institute have taught us that the most encouraging field of labor is sheep raising. This country is admirably adapted to it. To maintain a sheep in Virginia agriculture, nothing is so much needed as a suitable dog law, for the protection of sheep, which, however, the legislature refuses to pass. No candidate, it is said, can be elected to the Assembly, generally, who expresses sentiments favoring a dog tax.

We quote from the October number of the *Southern Planter and Farmer.* A correspondent from Culpeper County writes:—

"I think that the right kind of a law taxing dogs can be formed, and that it will receive the approval of a large majority of the voters in the State, which would prove as beneficial to the farmers as one in which the revenue were to be used in remunerating them for the sheep which might be killed by dogs. Suppose our next legislators put a tax of, say two dollars npon each dog, exempting none, and having the revenue placed to the credit of each county, that may have been raised on dogs in that county, for the purposs of carrying on the schools. Now don't yon think that when it comes to be adopted by the vote of the people, the farmers could appeal to the negro to vote for this law with almost certainty of getting his vote, because the money is to be used to educate his child or help to do so. Whereas, if the revenue raised by the tax is to be applied to paying the farmer for his sheep, don't yon think he, the negro, would be justifiable in saying to you, 'No sir, I don't intend to vote a tax on myself for your benefit, when I receive none from it.' Allowing the revenue raised from the dog tax to be used for school purposes, would in the end, yes, and in the beginning too, be beneficial to the farmers, because they would be relieved of the present tax on their property for school purposes, for there would be enough money raised by the dog tax to carry on the schools mors successfully than has been done in ths past."

A South Carolina contributor to the same journal writes on the "*Labor Question*" as follows:

"Cotton requires close, constant labor, and a strike would be fatal to its production. After seeing every class of labor tested, my deliberate opinion is, that the negro is superior to any for a cotton, rice, or tobacco country. We have an abundance of labor for agricultural purposes, rather more than is profitable; still the cry goes up from every quarter, more labor.

"The supply of labor is ample. All that is necessary to relieve our country of many grievous hurdens is to employ one-half of the present supply in producing corn, small grain, clover, grass, and stock. Cover the hills with herds and flocks. Improve ths better lying lands, and substitute machinery and improved implements for labor when we can. This dons, our country will rise up, Phœnix like, and become the admiration of the world. But let our country be overrun by foreigners of a low type, they will not only become a burden, (as they are in many parts of the world), but will endanger the peace of the country.

"The difficulties that lie in the way of procuring the necessities of life, increase with the population. So let us be content with what labor we have, and realize, if possible, that ws have the best average country in the world."

From the wealth of good things in this monthly, *Planter and Farmer*, we make ons more extract from one who is justly called a model correspondent:

PEAS AS A FARM CROP.

"The necessity of some fallow crop that will grow upon poor land, and the production of which will not cost too much, or that will yield an immediate return sufficient to pay the cost of production, has been the want of the Virginia farmers. Yet strange as it may appear, almost every farmer in the State has been growing, year after year, as a table vegetable, a plant that meets this want in every particular; and yet few, very few comparatively, have ever availed themselves of its most valuable qualities.

"If the small farmers of Virginia would with one hundred pounds of superphosphate to the acre, and after maturity, fed down upon ths ground to hogs, the pork realized would more than pay the entire expense of the pea crop, and leave ths land in almost, if not quite, as good condition as if the entire crop had been turned under, for everything would be left upon the land—except that carried away in the form of fat.

"I am satisfied that an acre of good peas will make at least one hundred pounds of pork, which will pay all the expenses attending the crop twice over. A very large portion—I believe fully half—of the farmers of the State buy more or less bacon or lard every year, and any system that would insure an abundance of these commodities produced at home would be a long step in advance of the present. I have raised the black pea for three years; it is an immense grower and yields a good deal of seed, but I don't think it is as good as the Shiney pea, which is more prolific and at least two weeks earlier. I am also growing the Japan pea this year and hope to report result this fall."

SAVINGS BANKS IN THE SOUTH.

The first Savings Bank in America was started in 1816. During fifty-nine years the number has increased to over five hundred. This fact shows that the system is suited to the needs of white laborers. Savings Banks have encouraged such to lay by small amounts instead of wasting them upon things which can be done without. Interest and compound interest have been paid by these banks on sums which would otherwise have lain unused in old stockings or crockery, liable to be destroyed by fire, or found and stolen. In the single State of New York there are half a million depositors, and money enough in their Savings Banks to build and equip 1,400 Virginia Halls.

Nothing can be more evident than that a system whose growth has thus shown it to be necessary to working men and women in New York State, is also essential to the well-being of a similar class in Virginia. It is with this idea that such institutions as the Home Savings Banks of Norfolk and Richmond have been started. As well-wishers to those whose earnings come in small amounts, we cannot but hope that they will soon have as good banking advantages in every southern city as they now have in Norfolk, as their white bretheren and sisters in the nothern States.

The history of the Bank at Norfolk, now commencing its second year, is an illustration of how a really sound idea is sure to make its way, in spite of the most unfavorable circumstances. It has had to deal with an ignorant class who find it hard to believe that where one ship has foundered another may sail with safety. The recklessness of a single set of directors at Washington, has actually caused many colored people to forswear all banks and bankers;—just as if *they* could expect to do business without the aids which *white* men find to be necessary. The directors at Washington were not loaning their own money; they were therefore careless whom they loaned it to. The directors of the Norfolk Bank, and of every other properly constituted concern, are chosen from the stockholders and depositors, loaning their own funds and answerable for what they do to their friends and neighbors among whom they live. Yet the Home Savings Bank of Norfolk has had a hard struggle to convince the people that it has not the slightest connection with the rotten system of the old Freedman's Bank.

The Norfolk Institution has of course had to encounter the usual prejudice of the most influential part of southern communities against that which is liberal. Yet in spite of the injustice of the press, the Bourbons, and the colored people, the list of depositors in the Home Savings Bank has steadily increased until it now amounts to three hundred and nineteen, of whom one hundred and seventy-two are colored, and would have been much larger had it not been for the extreme scarcity of employment for the industrious.

Even in a southern community nothing succeeds like success. The Homs Savings

Bank is steadily increasing its list of white depositors. New customers come especially from those banks which have been broken, though managed by men of narrow race views. No thoughtful person can fail to see that an institution founded on the idea of impartiality to the deserving—no matter what their color,—which, nevertheless, is able to hold its own, attracting all classes, and growing in the confidence of the community, is fighting a good battle in the cause of liberalism. Without political aims it is opening the way for the spirit of toleration. It multiplies business relations, thus enabling good men on both sides of the political barrier to see each other's good qualities. For these reasons and because we have entire confidence in its management, we hid the Home Savings Bank of Norfolk, God speed!

A SPECIMEN OF SOUTHERN FEELING.

We take the liberty of printing entire the following private letter received recently from a southern lady, as a valuable illustration of a kind of southern feeling which we believe to be widely existing in the Old Dominion:—

HARRISONBURG, *September*, 27 1875.

General Armstrong:—In compliance with a request from Lucy, I will introduce and recommend her to you as one who has improved such advantages as have been placed within her reach, and will, I think, still more improve greater opportunities. She, with her mother and several other children, belonged to my father, and we ever-found them honest, faithful and intelligent, and, since the priceless boon of freedom has been theirs, they have shown no bitterness of spirit, but been as humble friends, whose progress and improvement we have watched with thankfulness, thinking that the prayers and religious teachings of our sainted mother, given to her slaves as to her children, were bearing rich fruit in the good citizenship and upright lives of these, her great charge and responsibility.

Lucy's mother, our dear old "Aunt Jenny," is one of the most intelligent and amiable women I ever saw, and I have never been more struck with the amiable temper and sweet disposition peculiar to the negro race than after an hour's conversation with her. She speaks of the enslavement of her race as "God's means of bringing the negroes to this land of light and religion," and not as a cruel injustice; and though her own experience would naturally have led her to feel kindly to her master, if that were possible to one born with the instinct of love of liberty, she of course knew enough of some other and less fortunate ones, not to judge so leniently, if she were not of this forgiving nature.

I have not known Lucy well, personally, for the last five years, but hear her spoken of highly by all those who know her. She has taught at different times in the public schools, but does not feel able to do so in justice to her pupils until she has been further instructed herself. This needed instruction I hope she will gain in your valuable institution and be able to do it and herself credit in future.

Hoping you will not be disappointed in our colored representatives this year, I remain yours respectfully, ——.

THE INHERITANCE OF CRIME.

In the examinations which have been made of late years in almost all civilized countries, in respect to the statistics of crime, some most curious facts have come to light, and these facts are of such importance in their bearing on society, that the press at large has taken them up and is diffusing them through all classes of readers.

By careful comparisons, study of relationships, tracings of pedigrees, etc., it has been established that just as crime begets crime, so criminals beget criminals; that is: that idle, dissolute, hishonest parents will most assuredly burden society with idle, dissolute and dishonest children, and that by the natural law of increase, the evil is magnified in each successive generation.

The authenticated story of a single individual will suffice to explain and illustrate to our readers how criminal tendencies are transmitted from each generation to the next, and such stories demonstrate with startling power the danger of permitting criminals of either sex or any age to pursue, unrestrained, their career of vice.

About the year 1740 there existed in a wild and almost inaccessible part of the State of New York, a colony of rovers and vagrants, who lived, crowded into little stone or log huts, without regard to decency or morality, and without settled occupation of any kind. By fishing, shooting, stealing and begging they gained means of subsistence, and made physically healthy and strong by pure air and free lives, were enabled to resist the weakening influences of their immorality and become in themselves and their descendants an ever-increasing curse. Among these people lived a girl, Margaret, who grew from a neglected child into a wicked woman, and at last died in her sins, after a career of more than half a century of uninterrupted vice. From this girl and her sisters some 1200 men and women have, up to the present time, received the inheritance of crime, and of some seven hundred of these the history is clearly known, and stands as follows: 106 were illegitimate; 164 prostitutes; 17 keepers of houses of ill fame; 142 receiving out-door relief; 64 paupers; 76 criminals; and of the whole seven hundred only 22 ever acquired any property, and of these eight lost what they gained.

The present generation is the sixth in a direct line from Margaret, and in every generation (except the present where none of the children are over seven years old), there has been murder or attempts to murder, and of the sixth or present generation there are already six children in the New York House of Refuge. Theft and licentiousness are the characteristics of all these descendants of one unfortunate and neglected woman, and the lesson of this record is one which he who runs may read. Neglected vice propagates itself with frightful ease and rapidity, and the only safeguard of society lies in the reform of the individual criminal. The outcasts of every kind, the pauper, the vagrant, the homeless orphan, must be taken in early childhood and cared for as the children of the State. They must be removed from the evil influences of their birth, their antecedents, their vagrancy, and must be trained and taught, till habits are formed of sufficient strength to overcome, or at least to counteract the power of the terrible inheritance which in many cases has reached them through generations of criminal progenitors, and in this as in many other things true economy involves large outlay. It is expensive to educate the children of prolific criminals and paupers, but it is less expensive than to permit them to lead lives of idleness and vice whereof the State has eventually to pay the cost, and which naturally and inevitably prepare the way for another generation of crime. Local governments, superintendents of alms-houses, prison officials and all persons in similar positions need to look carefully into this matter of prevention, for it is in our Reform Schools, prisons, poor-houses, etc., that the work must be begun, and each one of us can do something to assist in saving and reforming these children who carry within them the poisonous germs of crime, and furnish the material from which the criminals of the next generation are to be made. In every neighborhood, however high the average morals of the population may be, there are some vagrants and paupers, some neglected children, some offenders still young in crime, and every village in the country ought to make provision for these classes, either officially in connection with the local government, or by the hands of philanthropic individuals. Nothing can be more extravagant, more unwise in all its aspects, than to permit that sure and rapid increase of crime which is the certain result of neglecting criminals, and the question resolves itself into the simplest form: "Is it better to pay for the education and reformation of one girl or boy *now*, with a fair chance of relieving society of all future expense, or to let such individuals pursue their career of vice and idleness, with the certainty that their descendants will inherit all their criminal tendencies and cost the State eventually incalculable sums?" It seems as if there could be but one answer to this, and when we consider that in addition to the argument of economy, there is the fact of our moral responsibility toward these unfortunate fellow creatures of ours, there remains little douht as to the duty of every Christian citizen.

Begin with the little children, reform and educate them, remove them from vile influences, surround them with good, strengthen them with habits of honest industry, and in a single generation society will reap the reward.

NEWS.

THE Public Debt statement shows a reduction in the public debt for the month of September of over three and one-fourth millions dollars, and for the first quarter of the current fiscal year, a reduction of six and one quarter millions.

THE Indian Commission to negotiate for the purchase of the Black Hills is not likely to come to any agreement with the Indian owners. The latest reports of the investigating expedition are considered more favorable as to the amount of gold to be found there.

A PROJECT is undertaken by the U. S. Government to open the great Central Water Route for navigation from the Ohio River to the Atlantic Ocean by way of Richmond. This will cost about $30,000,000, including improvements of the great Kanawha River by locks, and the widening and deepening of the Kanawha Canal. It also includes a tunnel under Kate's Mountain on the summit level near the White Sulphur Springs, eight and two-thirds miles long, and which if ever made will be the longest in the world and the greatest feat in engineering yet undertaken.

CENTENNIAL.

THE Ordnance Officer at Fort Monroe is preparing to ship the 20-inch gun, (which weighs fifty-seven tons,) to the Centennial grounds in Philadelphia, there to be exhibited as a specimen of American industry.

THIRTY-SIX foreign states have accepted the invitation to be represented at the American Centennial exhibitiou in Philadelphia. Among them are England, France, Germany, Switzerland, Russia, Italy, and Egypt.

ST. LOUIS, Mo., Oct. 13:—A section of one of the big trees of California arrived here today en route for Philadelphia, where it will be exhibited at the Ceutennial Expositiou. It is sixteen feet long, with a diameter of twenty feet. It was taken from a tree 276 feet high, with a diameter at the base of twenty-six feet, and, as indicated by the yearly rings, was 2,120 years old. The section here is hollowed out, leaving a cylinder about two feet thick, including the bark, and will be converted into a circular house and elegantly fitted up.

MISS HOSMER, the American sculptor at Rome, will send to the Centennial Exhibition the largest group in marble she has ever undertaken, the subject of which is the "African Sibyl foreshadowing the freedom of her race."

"THE Palmetto Guards of Charleston propose to have a Centennial celebration of the battle of Fort Moultrie, June 28, 1876. They have sent out a circular inviting citizens and organizations of the various States of the Union to join them in the observance. The temper which pervades the circular will be seen by the following extract:

'The differences which threatened the Union are ended—settled, we hope, now and forever. War, we trust, will not divide those whose welfare is to be at peace with each other. The first century of our political existence is near its close. In the glorious reminiscences which usbered it in, let us seek to hury the demon of discord.'".

It is sincerely to be hoped that the North will respond to the southern invitation as cordially as the South participated in the patriotic services at Bunker Hill.

AFRICA.

News has been received of the African explorer, H. N. Stanley, on the shore of the Victoria N'yanza Lake. Mr. Stanley, who will be remembered as the discoverer of Livingstone, is at the head of an expedition sent by the *New York Herald* and the *London Telegraph*. He started November 17, 1874, and accomplished the march of seven hundred and twenty miles in one hundred and three days, through a district that had never been explored where he suffered from hunger and from encounters with treacherous natives. His latest letters report his survey of this great lake, the long unknown source of the Nile, and confirm the explorer Speke's assertion that it is one great lake instead of a chain of small ones as other travellers declared.

THE regular fall expedition to Liberia is to be dispatched this month. Among the emigrants are to be Rev. And'w Cartwright of Elizabeth City, N. C., and Rev. Charles Bryant of New Orleans, with their families and some of their church members. The reports in the *African Repository* are favorable as to the prosperity of the Republic, though there is late intelligence of some battles with the native savage tribes.

RELIGIOUS.

The successful revivalists, Messrs. Moody and Sankey, who have created such great religious interest in Great Britain, commenced their meetings in Brooklyn October 21st, and will go next to Philadelphia.

NEWS OF THE MONTH.

POLITICAL, ETC.

The Ohio state election has gone Republican by a majority of more than 4,000 for Hayes, Governor, and a Republican majority in both houses of the Legislature.

In Iowa the Republican majority will reach 32,000.

AMONG the amendments to the North Carolina constitution passed by the late convention, the 18th forbids the education of white children and black ones at the same school, but provides that no discrimination shall be made to the detriment of either race.

A FRANK ADMISSION.—A correspondent of the *National Republican*, writing from Templeman's Cross Roads, Westmoreland County, October 8th, makes the following frank admission: "The great want of the district is the lack of white men in our ranks and of colored men of sufficient intelligence and experience in political matters to make them capable leaders. In some of the counties containing the largest Republican majorities there is not a capable white or black man as a leader. It is very difficult at this time to find men willing or fit to be the candidate of the party for the Legislature, and in some of the counties, where there would be no doubt of the election of a Republican, no candidate can be found."—*Norfolk Virginian*.

A COLORED convention met in Augusta, Ga., Oct. 7th, for the purpose of refuting the charge that the negroes intended an insurrection, and to determine what course is better for the colored race to pursue. About 50 delegates were in attendance.

A resolution was introduced, thanking Judge Herschel V. Johnson, who tried the Washington County prisoners, for the rigid spirit of fairness and impartiality which he displayed; and the inflexible determination he evinced to accord to the men implicated a full measure of justice.

There was a great deal of discussion on emigration. Mr. Turner recommending Africa, others advocating remaining in the State as all hitterness was dying away, and the rights of the colored man were coming to be respected.

A VETERANS' reunion was held Oct. 19th, at Elizabeth, N. J., under the auspices of the remainiug members of the fourteen companies which were enlisted in that city during the late war. Veterans of both the Union and Confederate armies participated in the celebration.

THE PEABODY FUND. The annual meeting of the trustees of this fund was held in this city October 7th. The total amount expended by them during the year in aiding schools in all the Southern States, excepting South Carolina, was $97,650. Dr. Sears, the Secretary, especially commends the efforts for improving public instruction in Virginia, Alabama, Mississippi, and Tennessee.—*N. Y. Sun*.

MAJOR M. R. DELANY of Charleston, S. C., is preparing a history of the African race in America, from their first importation by the Spaniards till the passage of the Fifteenth Amendment.

FORTRESS MONROE, VA., Oct. 18.—For the past month the Artillery School have been engaged in artillery practice, and the noise has been sometimes intolerable. The practice has been remarkable good. A 12-foot-square target at two miles distance is soon demolished.

Gen. Wm. F. Barry, the commandant of the Artillery School, who has been absent for the past few days, attending the fair at Lynchburg, Va., where he was acting as one of the judges of a competitive military drill, has returned to his post. This is the first time an army officer has been selected for this purpose in the Southern States since the war. The General speaks in the highest praise of his reception by his old antagonists in arms.

There are now five large ships at Norfolk loading with cotton for Liverpool. It is found that cotton can be sent to England from this port better than from any South. They now have two cotton compresses there, and are prepared to load five or six vessels a week. She already does a thriving trade in coaling vessels loading at Gulf ports. These steamers take in about three-quarters of a cargo and then call at Norfolk, where they take in the balance of their cargo and a full supply of coal for the voyage. This they can purchase at Norfolk at greatly reduced rates, and they are always sure of a good freight out.

OUR NEIGHBOR, the Chesapeake "Soldiers' Home" is becoming yearly more attractive under the efficient management of Gov. Woodfin. A fine green-house has recently been erected, and a brilliant array of flowers and foliage-plants makes a drive through the grounds one of the pleasantest that can be chosen in the neighborhood.

The winter series of entertainments which Governor Woodfin spares no pains in arranging for the veterans, was auspiciously begun on the 7th and 8th. The services of Miss Jennie Anderson of Baltimore, and Mrs. F. Barry, the accomplished vocalist and actress from the Boston Theatre, were secured for the evening, and the entertainment was a success.

OUR SHIPS.

Hurrah for our ships! our merchant-ships!
Let's raise for them a song.
Safely they glide o'er the foaming tide,
With timbers stout and strong.
They to and fro on the waters go.
And, borne on the rushing breeze,
Like birds they fly, 'neath every sky,
From north to southern seas!

Hurrah for our ships! our stout steamships!
That float in strength and grace;
By fire and air their course they bear,
As giants in a race.
They bind the hands of kindred lands
In close and friendly grasp:
God grant no feud by death and blood
May e'er unloose the clasp!

Hurrah for them all, both great and small,
That boat our waters free;
May they safely sail in calm or gale,
In home or foreign sea!
Hurrah again for our merchantmen!
For our men-of war hurrah!
Ring out the shout for our steamships stout!
Hurrah for them all! hurrah!

PRAISE TO GOD.

BY MRS. BARBAULD.

Praise to God, immortal praise,
For the love that crowns our days:
Bounteous source of every joy,
Let thy praise our tongues employ;

For the blessings of the field,
For the stores the gardens yield,
For the vines exalted juice,
For the generous olive's use;

Flocks that whiten all the plain,
Yellow sheaves of ripened grain;
Clouds that drop their fattening dews,
Suns that temperate warmth diffuse;

All that Spring with bounteous hand
Scatters o'er the smiling land;
All that liberal Autumn pours
From her rich o'erflowing stores:

These to thee, my God, we owe;
Source whence all our blessings flow;
And for these my soul shall raise
Grateful vows and solemn praise.

Yet should rising whirlwinds tear
From its stem the ripening ear;
Should the figtree's blasted shoot
Drop her green untimely fruit;

Should the vine put forth no more,
Nor the olive yield her store;
Though the sickening flocks should fall
And the herds desert the stall;

Should thine altered hand restrain
The early and the later rain,
Blast each opening bud of joy,
And the rising year destroy:

Yet to thee my soul should raise
Grateful vows and solemn praise;
And when every blessing's flown,
Praise thee for thyself alone.

WHAT A DAY MAY BE.

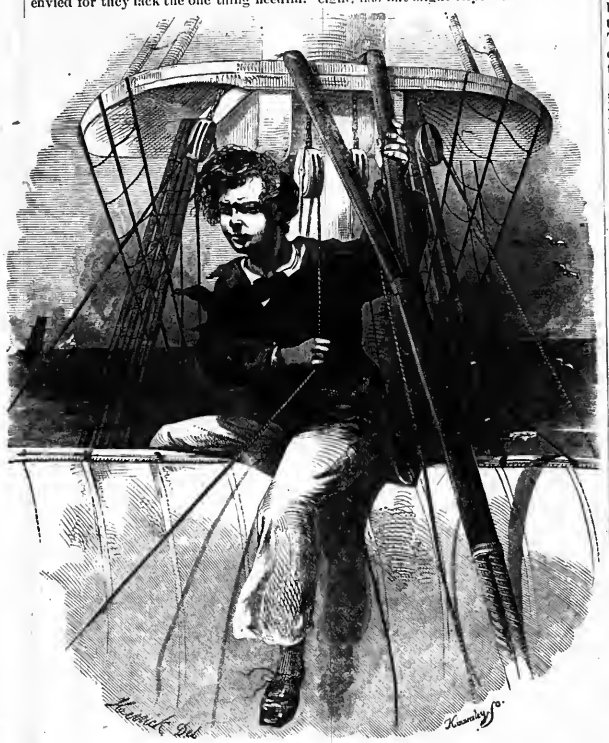
Our picture for this month of November,—last of the autumn months, which has seen the end of the harvest, and has brought the first signs of the coming winter, is a picture which shows us in a little space, something of what a day may be, how much may come within the rising and the setting of a sun.

Here is a merry group, busily gathering the ripened fruit from heavy laden boughs, young and old helping to garner in the store which is to bring food to hungry mouths and wealth to toil-worn hands.

Here is the harvester reaping the rich grain that for centuries has been the type of earthly prosperity, while in the near distance stands the church, before whose altar all Christian men offer their thanksgiving to Him who gives the harvest, who sends the sunshine and the rain, the changing seasons, and the miracle of growth.

Here, too, is the laughing play of children, the noisy, happy game which tells of young life and the strength and freedom of innocent childhood, and close beside it, we see the weary traveller, belated by the cold winter storm, forcing his painful, and it may be dangerous way, through the frozen drifts of the half-buried road. But beyond and waiting for him lies the home, the warm fireside, the happy circle, where, gathered close to one another, sit the three generations of old age, maturity and childhood, and he knows that the welcome ready for him there will soon dispel the memory of those long hours of cold and darkness. How pleasant and cheery that warm fireside is even in a picture; how cosily the children nestle and bask in its warmth; how comfortably has the good old dog curled himself up at the foot of the table; how attractive is the little bookcase in the corner; how fair and peaceful is the whole scene. It is hard to believe that a world which holds such a home can also hold such misery as speaks in the naked figures, the bare floors, the empty dish and fireless hearth which we see so close to it in our picture, but no closer, alas! than these two extremes are to be seen always in the world about us.

As we look the question rises quickly to our lips, "Have these warm, happy, sheltered and protected people upon whom the firelight shines, remembered the shivering, hungry souls so near them?" Have they from their abundance supplied their brother's need; have they put aside something of their plenty to give unto them that want? Unless they have done this they can hardly yet have learned how good a thing a true Thanksgiving is; they have not yet found out what a day may be, and in spite of all their comfort, are not to be envied for they lack the one thing needful.



OUR SHIPS.

A WORD TO YOUNG MEN.

"We have but one life to live, and must enjoy each moment when we have it, or not at all. Let the future care for itself." So say they who live for the present. But even the most improvident do not act wholly on that principle. No man will seize a present good, if he thereby cuts himself off from a far greater good in the immediate future. Only an idiot would harvest his potatoes, when no larger than marbles. Left to themselves they would grow ten times that size, and each bushel so dug means the destruction of ten bushels in the future.

But when long years intervene between the planting and the harvest, this idiotic policy is far from being the exception. We cannot wait till the fruit ripens, but must pluck it now. All men ostensibly aim to lay up money, and gain a competence for their families. This sentiment underlies all of life's activities. But, judged by this standard, very much of human conduct is a dark riddle.

One writer says, "If a man at twenty-one, invests $1,000 where it will double itself in ten years, and lets it accumulate, it will amount to the enormous sum of $30,000, if he lives to the age of seventy. This process, however, may be reversed. A man wastes, or spends a thousand dollars needlessly, by the time he is one and twenty, what is the effect? If he lives till seventy, he will be thirty thousand dollars the poorer for it. The younger a man is, the more valuable money is to him. To a man of twenty-one, a thousand dollars is the making of a fortune, but to a man of fifty, it would be of comparatively small account. We reach the conclusion that every dollar saved in youth is worth thirty dollars in old age; every hundred dollars spent in foolery or finery, before five and twenty, is simply three thousand dollars thrown away, of provision for the time when work must be a burden." How important the hearing, then, of a young man's spendings, on his future destiny. Every cigar, every glass of liquor, every ticket to a circus, becomes fearfully expensive.

The young man from eighteen to twenty-eight, has but slight expenses. The burden of a family does not yet press heavily. Debt casts no baleful shadow across his path. Clamorous creditors are a myth. Circumstances do not force him to economize, and just here lies his danger. Having money on hand, and no use for it, there is but little to restrain him from contracting extravagant habits. And yet, during these ten years he has life's golden opportunity. He can, without sacrifice, save twenty-five cents per day, and at the end of each week place the week's earnings, twelve shillings, at simple interest. At twenty-eight he would have $1,115 laid away. This invested would, at seventy amount to $19,000, and all as the result of twenty-five cents per day saved between the ages of eighteen and twenty-eight.

All this looks simple, and it is not mere theory. Then how does it happen that the laboring men are so poor that a few week's enforced idleness brings starvation to so many of them? In too many cases the blame rests with themselves. Providence, so bitterly cursed by many for their ill luck, does not arbitrarily set up one and pull down another. There is almost invariably, an intimate connection between one's habits and principles, on the one hand, and his condition on the other. Shiftless spendthrifts do not attain affluence, nor do the industrious and economical come to want. As we look upon the young men of to-day and study their habits, we can easily foretell what future awaits them; can confidently say of some, "these will in a few years be the men to need help in every financial crisis. They are getting ready for it now."

Here are two boys of eighteen, working in the same shop. The one pays out no money foolishly, and from time to time puts a little in the Bank. This small pile grows, from year to year, faster and faster. He will be a thriving business man. The other spends his evenings in saloons, hall-rooms, and places of amusement. He believes in enjoying life as he goes along. Though not earning more than five dollars per week he pays out something each day for cigars and beer, and during the summer season he loses many a day from his work, to attend excursions and circuses. He forms no habit of saving. When trade becomes dull, and some of the hands are to be dismissed, he is included *every time*. The employer takes but little time to decide which of the two boys it is for his interest to keep.

The above are extreme cases, but they illustrate important truths. Some people, by spending less than their income, constantly aim to better their conditions. Others are always in debt, and appear content that it is so. They have not that wholesome horror of debt, which would make them shun it as a viper. It winds about them, one by one, its coils, till they are fastened for life in its relentless grasp.

Life is a game of chess. By a wrong move at the outset, the day is at once lost, though the contest be prolonged. Fortunes are gained or lost in youth. By the decisions then made, life's problem is solved, Habits are like streams. The rill may easily be controlled, and turned this way or that. But flowing onward, it enlarges into a mighty river, laughing at every attempt to alter its channel.

Many who save nothing, plead heavy expenses and unsteady employment. But generally, if they are steady and free from bad habits, they can get steady employment. But too often the trouble is, that while they think it impossible to save even two shillings per day, *pay out as much or more* for drink, tobacco, liveries, &c. Whole fortunes leak out through these little wastes. These are the worm holes that sink many a ship.

After all, does he *enjoy* life, who spends all as he goes along, to be forever after harassed by debt? Has he not sacrificed enjoyment, himself, everything?

The young man is master of the situation. His future will be what he makes it. As he sows, so shall he reap.—*Oswego Times.*

SLOW BUT SURE.

A friend who for years has kept a down-town book-store in New York, was asked one day what rent he paid for the large room he occupied, which covered most of the second floor of the building. His answer was, "Five thousand dollars."

"How is it possible for the business to pay such a rent?"

"A continual dropping," replied the old gentleman, with a smile. "Five cents profit on a book does not count much toward it, but that repeated often enough will make up the sum."

Besides the rent, there was the living to make for a large family, and the salaries of three or four clerks to be paid.

It is these small, steady earnings, managed with prudence, that build up the most substantial fortunes. Few suddenly-acquired fortunes are permanent. They often fly away as suddenly and mysteriously. Besides this, "He that hasteth to be rich shall not be innocent." It is a very hard matter to steer straight, morally, when the eyes are dazzled by a sudden blaze of what the world calls prosperity.

Do not sigh for Aladdin's lamp, boys. You have a better talisman in your hands. Steady, persevering labor will win for you far better and more satisfying riches.

WILFUL SUMMER.

BY SUSAN COOLIDGE.

Out in the woods,
A little while ago,
I heard Summer crying
Very soft and low--
Crying and scolding,
Or it sounded so.

"Don't bid me leave yet,"
Said she, whimpering.
"I overslept myself
Somehow in Spring.
Haven't had my time out,
Haven't done a thing.

"Only half my berries
Ripened in the beds;
Only half my roses
Bloomed white and reds;
See the poor, belated things
Hanging down their heads.

"Shall I hurry off, then,
Leaving them to die,
Autumn standing at the door,
With his frosty eye—
Autumn, chuckling as he kills?
No, my sweets, not I.

"I shall stay awhile yet;
Don't tell me nay,
Don't bid me to be good,
Minding what you say.
Mother Nature, two weeks more
I must have my way."

Will she linger, think you,
Keeping thus her word,
Daring frosty Autumn?
Don't be absurd.
How can I tell you, dears?
For no more I heard.

DANIEL O'CONNELL.

Agitation is an old word with a new meaning. Sir Robert Peel, the first English leader who felt he was its tool, defined it to be "the marshalling of the conscience of a nation to mould its laws." O'Connell was the first to show and use its power, to lay down its principles, to analyze its elements, and mark out its metes and bounds. It is voluntary, public and above board; no oath-bound secret societies like those of old time in Ireland and of the continent to-day. Its means are reason and argument, no appeal to arms. Wait patiently for the slow growth of public opinion. The Frenchman is angry with his government—he throws up barricades and shots his guns to the lips. A week's fury drags the nation ahead a hand's breadth; reaction lets it settle half-way back again. As Lord Chesterfield said a hundred years ago: "You Frenchmen erect barricades, but never any barriers." An Englishman is dissatisfied with public affairs. He brings his charges, offers his proof, waits for prejudice to relax, for public opinion to inform itself. Then every step taken is taken forever; an abuse once removed never reappears in history. Where did he learn this method? Practically speaking, from O'Connell. It was he who planted its corner-stone. Argument, no violence! *No political change is worth a drop of human blood.* His other motto was, "Tell the whole truth:" no concealment of half one's convictions to make the other half more acceptable. No denial of one truth to gain hearing for another. No compromise, or, as he phrased it, "nothing is politically, right which is morally wrong." Above all plant yourself on the millions; the sympathy of every human being, no matter how ignorant or how humble, adds weight to public opinion. At the outset of his career the clergy turned a deaf ear to his appeal. They had seen their flocks led up to useless slaughter for centuries, and counselled submission. The nobility repudiated him; they were either traitors or hopeless. Protestants had touched their *ultima Thule* with Grattan, and seemed settling down in despair. English Catholics advised waiting till the tyrant grew merciful. O'Connell, left alone, said, "I will forge these four millions of Irish hearts into a thunderbolt which will suffice to dash this despotism to pieces." And he did it. Living under an aristocratic government, himself of the higher class, he anticipated Lincoln's wisdom, and framed his movement "for the people, of the people, and by the people."

Wendell Phillips.

TALAS—NEAR CESAREA.

Talas is one of the many fine towns lying near the base of Mount Argeas. Were it not near the large city of Cesarea it would itself be called a city. In population it is but little below Yozgat or Marsovan, and its buildings, both public and private, are much more expensive than those of most interior towns of Asia Minor, or of European Turkey. Rev. Dr. Dwight, who visited this region in 1816, was quite surprised to find such towns here, and said that their like was not to be seen in any other part of Turkey, but that they constantly reminded him of the grand old baronial towns along the Rhine.

It will be observed that nearly all the buildings are of hewn stone. The roofs are flat, surrounded by balustrades, and serve much the purpose of the yards surrounding the houses of a New England village. The town is in two parts, Kuchakeoy, or the end village, being on the low land, a few of its houses being seen in the foreground of the picture. Most of the town is built on a very steep side hill. Large gardens, filled with fruit trees and fine old English walnuts, lie between the two parts of the town. Quite a fraction, perhaps one-fourth, does not appear in this view at all, lying farther to the left.

1, 1, is the hired house occupied by the whole missionary circle of the Cesarean station a part of the year, and by two missionary families permanently; the trees conceal a portion of the building. 2, 2, 2, is the large garden alluded to. 3, is the fine new Greek church of "St. Nicholas." 4, 4, is the main street leading from the lower to the upper portion of the town; and 5, 5, the street leading from the town to the city, Cesarea, four miles away to the northwest.

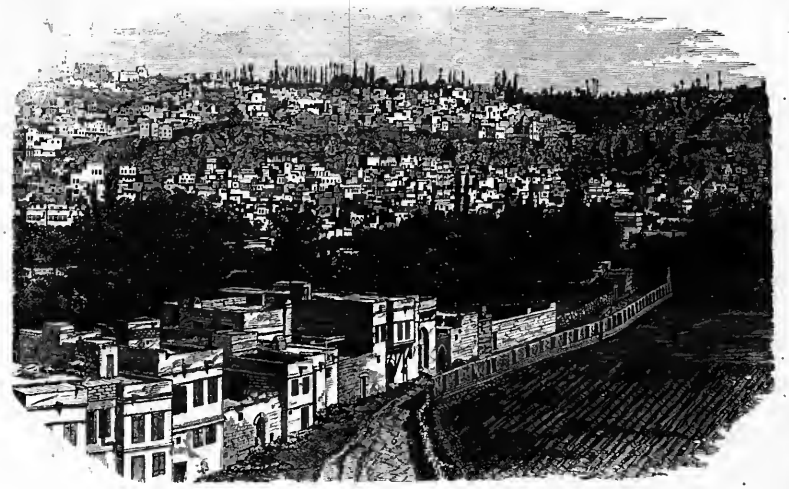
Talas was first occupied by missionaries in the spring of 1868. There were then in the place two families known as Protestants, and the first storm of persecution had spent itself. This place was chosen for the home of the missionaries because of its healthfulness. Cesarea, though so near and not very much lower, being in the middle of a plain which is surrounded on all sides by high lands, is too hot to be occupied safely or comfortably in summer, and from 1854, when the station was formed, till 1868, the missionary families had been under the necessity of moving twice a year. It was especially to avoid this wear and tear of mind, and of *worldly goods* (was it Franklin that said, "three removals are equal to one fire"?), that we took up our home here.

The results of our five years' residence here have been very gratifying. In point of health, the town has fully met our expectation, and the practicability of doing a large portion of our missionary work, and that efficiently, from this place, is demonstrated. In the missionary work in connection with the town, it has been even more satisfactory. The tabular view for 1872 shows that for that year our Sabbath congregation averaged ninety, and our Sunday-school one hundred. The evangelical work is pretty equally divided between Greeks and Armenians.

The station high-school for girls is here; and at a point a few rods to the right of the house of the missionaries, as seen in the photograph, in a garden hidden by the trees, a fine house is now being built for its accommodation. It is to have rooms for the accommodation of girls that come in from the out-stations to enjoy its advantages, and a good schoolroom; and on the second floor there is to be a hall, 44 by 34 feet, which will serve as a place of meeting till the growth of our community renders it necessary to build a church.—*Missionary Herald.*

THE LIGHTNING MAIL.

The new postal lightning train which now carries the mail from New York to Chicago, makes the journey in twenty-six hours, or twelve hours less than the old rate. It averages over forty miles an hour, which seems fast enough for fast America, though in Europe, which we think so slow sometimes, the Scotch mail averages fifty miles an hour between London and Edinburgh. It must be remembered, however, that England has only one quarter the length of railroads to look after that we have, and on her short and carefully constructed roads a higher rate of speed can be maintained with safety.



TALAS, NEAR CESAREA.

The postal car is loaded up at the Grand Central Depot in New York City at two o'clock in the morning, and makes but a few stops on the way to Chicago. It receives and distributes mail, however, at many more stations, but without stopping an instant in its lightning speed. The apparatus for doing this is one of the simplest nature. Affixed across the door of the car is an iron bar on which is fastened a second bar at an acute angle from the first, the two together forming a triangle whose longest side can be turned so as to reach out some little distance from the side of the car. At the mail stations are gallows or iron frames like the one at the side of the train, near the engine tender. On the extreme point of this, just within reach of the triangle on the car, the bag is suspended. As the train passes the bag is caught in the triangle, slipped from its place, and by the rapidity of the movement wedged into the narrow junction of the "catcher." At the same instant the mail clerk, who is standing by the door, pulls the bag into the car, and if it is filled with matter for distribution it is at once opened, or if bound for one of the great cities it is stored away to be hurled out as the city is reached.

The bags for the different way stations hang in rows along the car with mouths wide open to receive the bundles sorted from the distributing bags, and be made ready for the "catcher." The car is, in fact, a post-office on wheels, and is filled with busy post-office clerks. A refreshment saloon is attached to the car, for they must take their meals on board, and their work is most exhausting. Less so, however, than that of the engineer who with every nerve strained to intense action bears the whole responsibility of keeping his engine up to time and looking out for dangers ahead. So great is this strain that on the first trip made by this lightning train, as it stopped at last in the Chicago depot, the engineer fainted away.

THE ABUSE OF MEDICINE.

It may safely be said that the majority of people are either ignorant or indifferent of the proper used of food and drink, but common as mistakes or sin in these respects are, they are hardly more common than the apparently insatiable desire for medicine which has grown to be a serious evil in our modern civilization. Men and women who are ignorant of the first principles of physiology, know nothing of the power and uses of drugs, and nothing of the symptoms of disease, insist upon "doctoring" themselves and their friends, and swallow potions and pills and apply lotions and plasters with strange, and sometimes fatal disregard of consequences. The advertisements of quack medicines are everywhere; no place is sacred; no man secure; and that they are permitted shows only too plainly that they are successful. The truth about such medicines is simply that they are compounds of drugs, generally the cheapest and nastiest to be had, put up by people who have no claim whatever to the name of physician, and are entirely and shamefully ignorant of the effect of their doses.

The truth about the people who take such medicines is simply that they are culpably foolish in trifling with their health by swallowing unknown compounds, and in wasting their money upon irresponsible quacks, and worse than foolish in that they wilfully continue in the ignornnee which permits them to commit such follies. There is but one rule for sensible people in sickness of all kinds, viz.: use such simple remedies as you are sure of, and send for a responsible, educated physician. Leave quacks and their medicines alone both in sickness and health, and body and mind and pocket will be all the better.

Hydrate of Chloral as a stimulant, is taking the place of opium, hasheesh, &c., in England, and to some extent in this country. It kills in about three years, on an average.

A lazy life is a miserable existence.

YOUNG ROBINS.

MRS. CLARA DOTY BATES.

Four little robins just ont of the shell
Lis close in the nest,
'Neath the warm mother-breast,
Hovered and hushed full well.

Mother-bird ponders: "In plenty aro flies,
Bnt a plump lady-bug,
Or a lovely rose-slug
For these babies would be a surprise."

And she thinks to herself (then drops out like a leaf),
"They will lie there asleep,
With not even a peep,
And my marketing I will make brief."

Bnt ehe's no sooner gone than they nestle and stir,
Twitter fise little notes
From tholr weak little throats,
And wonder what *has* 'come of her.

By the time she gets back they are all in a fright,
Every mouth is ontspread
To the back of its head,—
Every pin-feather bristles upright.

And they clamor and shriek, and the mother cries, "Whose
Ie this horrible clotter?
And what is the matter?"
And she hovers them over, and coos.

"O, I saw such a wonderful thing!" tries one,
"Such a marvellons light
Thef it dazzled my sight!"
"Yon simpleton! that was the sun."

"And O," cried another, "I thought I should freeze!
And the house shook and tossed,
And I knew we were lost!"
The mother laughed,—"That was a breeze."

And out moaned a third, with an accent of pain,
"Wet, terrible things
Dropped down on my wings!"
"Ah! those were a few drops of rain."

And the fonrth sobbed aloud, to the mother-bird clinging,—
"Snch a deafening sound
As I heard all aronnd!"
"Why, that was yenr relativee singing!"

"Now hush-a-by babies upon the tree top!"
And she settles to hover
The frightened ones over,
With s sigh for the worm she let drop.

The Teachers' Table.

PRIMARY STUDIES.

An extract from the report of the Bureau on labor and statistics.

Children must, when brought under instruction, be taught those things which will benefit them in the common affeirs of life. But what are they? Clearly these:

1. The use of lengnage, that they may know how to think, and give expression to thonght. Theee they will attain by *reading*, and by exercises in dictation, letter-writing, and compoeition. *Spelling* will come in here.

2. The nse of the eye the ear, and the hand, both as aids in mental operations, and in facilitating the bneiness of life. This use they will acquire by writing, drawing, and music, and most industrial arts.

3. How to observe, to reflect, to reason upon a subject, and to acquire great truths. Here will come in an enlarged system of object-lessons, and the great facts of earth and sky, as illnstrated in topical and physical geography, astronomy, and the elements of natural philosophy.

4. How to transact business. Here will come in mental and written srithmetic, simple methods of keeping accurate accounts, the science of forms, as taught by geometry in the simpler elements.

5. The discipline and formation of character. And here comes in the subject of morality, of duties to God and man, being the great precept of Christian morals;—here the influence of the history of nations and of individuals, as instruction and warning—history in its trne significetion, civil, socinl, indnstrial, rather than warlike and of the hero-worship.

6. The physical discipline of the body. And here comes in a variety of exercises—gymnastics, military and other—aiding physical development, and prepering for industrial, personal labor.

There is nothlog more interesting to the young mind, or easier for it to learn, thnn the leading facts in natural philosophy and science. The boy who eldee down hill can be taught about the inclined plane and other mechanical powers. He can also be taught the chemistry of the snow and of the air he breathes. He can be taught something of the anatomy and physeiogy of his body and the members which he uses. If he can learn the twenty-six letters, and the names of thirty or forty of his fellow-scholars, he can learn the nemes of the eimple substances of which metter is composed. In fact, the knowledge of these things is natural food to the young mind, and this knowledge once gained leads to further inquiries and further acquisitions.

AN OYSTER IN SCHOOL.

How many of onr teachers could give this children an object-lesson like this, which is graphically described in the *American Educational Monthly*?

Near the hinge of an oyster is a cavity which leads to its stomach. It may be called with a little license, its month; not that it has teeth, or that in any way it masticates food, or that it indicates the place of the head, for the oyster belongs to a divieion of the molluske known as *acephalates*, or headless ones. But it is functionally a mouth, and is like months in two important particulars. It is the entrance of the food to eu alimentary canal; and it has certain lip-like organs with which to control the entering food. If, then, the oyster's mouth is thus situated near the hinge, thet part of the creature should be known as its asterior, or forward end. The oponing end, that which the oystermen call the "nib," le therefore really the posterior extremity.

Every one knows that in opening an oyster the knife has to be passed through a stout organ, wrongly called by many the eye; for the oyster is eyeless. Some call it the heart. This, also, is incorrect. It is the great adductor muscle with which the animal draws together its valves. But the oyster has a true heart. It is situated near to and forward of the adductor muscle, that is betwees it and the mouth. If a finger of a glove were cut off and inflated with eir, being closed up et the excised end, and then a thread were tied round so as to constrict it at the middle, we should have something resembling in shape pretty nearly the oyster's heart. This small organ is divided by the constriction into two lesser organs—an auricle and a ventricle; a receiving and a distributing roservoir of the pale, opalescent blood—its true life-current, which animates every part of this complex little being.

If an oyster be opened with sufficient tact and care, the heart can be seen at work, beating much as our hearts beat—a trne rythmical pulsation. Indeed, with wetch in hand, the beats can be counted, as when a physician mekes a diagnosis of one's pulse. As death nears, so slow the throbs of the oyster's heart.

"All this is well enough for the naturalist. Is such a sight attainable by me? Could I open an oyster and see all this with my own eyes?" So querles an earuest teacher. To all this we answer—Yes. Genernlly good eyes are sufficient. At the mest, you would only need a pocket-lens, such as a few shillings would buy, and which, indeed, no teacher should be without. When working lately at a County Teachers' Institute, in South New Jersey, a whole-soaled teacher, whose eyes beamed with intelligence and zeal, accosted me in this wise: "Sir, I was so interested in your description of the anatomy of the oyster, and especially the detail of the place, form, and functions of its heart, that I got some live oysters, and determined to see for myself. I opened several before I got the hang of it. There it was, a real heart! With my pocket-magnifier it was almost painful to see that little thing boeting away, as if for dear life."

This was a great discovery for that teacher. But this was not the end of it. He gave a little lecture to his school on the great mystery of life, even in an oyster. The pupils listened with deep interest. And that interest waxed into a sensation, when the teacher took an oyster and opened it before them, and showed them the oyster's heart. Then he made each one take the magnifier into his own hand and look. There, in an impreseive way, each saw for himself the beating of an oyster's heart.

Having ourselves been moved on several occasions to tears in presence of a newly-seen fact in nature, we asked that teacher how he felt. He acknowledged that the impression made on his mind was profound. "It made me almost sad for several days."

Yes, deep-thinking is this. It is thought upon discovery. It is viewing a new country from a mountain-top. Nay, more—it is the pure light of n peragraph from a page of the great book of God's works, illumining the soul with the august conception of a glorious fact, witnessed, handled, felt, comprehended, absorbed, and so tranemuted, and made for evermors a part of one's own selfhood.

And what about those dear children? More than "it is lawful to utter." That teacher had done for them a grandly good deed by turning their eyee upon the light which had so profoundly affected him. What activities had been set agog in the thinklngs of those children! It was alchemy of the sublimest kind. It tnrned a snpposed little clot of insensate jelly into an animate organized being; for with their own childish eyes they beheld its very heart—yes, and even saw it beating. The oyster will never again be to them a heartless thing. How humanising, expanding, elevating was that vision! To them, this noble teacher was a seer, for he had taught their yonng ideas to shoot far and deep into the hidden mattere of the life-bearing things of God.

HINTS ON SELF-CULTURE.

THE YEARS.

Why do we heap huge mounds of years
Before us and behind,
And ecorn the little days that pass
Like angels on the wind?—

Each, turning round a small, sweet face
An beautiful as near,
Because it is so small a face
We will not see it clear.

And so it turns from us, and goes
Away in sad disdain;
Though we would give our lives for it,
It never comes again. —MISS MULOCH.

INTELLECTUAL CULTURE.

"A cultivated mind may be said to have infinite stories of innocent gratification. Everything may be made interesting to it, by becoming a subject of thought or inquiry. Books, regarded merely as a gratification, are worth more than all the luxuries on earth. A taste for literature securee cheerful occupetion for the unemployed and languid hours of life; and how many persons, in these hours, for went of innocent resources, are now impelled to coarse pleasures! How many young men can be found in this country, who, unaccustomed to find a companion in a book, and strengers to intellectual activity, are almost driven, in the long, dull ovenings of winter, to haants of intemperance and bad society!"

HOW TO READ HISTORY.

"Read history as you would a newspaper and for the samo purpose, nemely: to get the information it contains. Do not attempt siuply to memorize the languege of the writer, iguoring the general knowledge conveyed. Read thoughtfully and understandingly, and you will soon acquire a taste for this most pleasaut of studies, while your ideas will clothe themselves spontaneously in easy, natural and expressive languego."

"It is not what people eet, but what they digest, that mnkes them strong. It is not whet they read, hut whet they remember, that makes them learned. It is not what they profeee, but what they practice, that mekes them holy."

LEARNING LANGUAGES.

"Every reader of the 'Autobiography of John Stuart Mill' has been astonished at the ease with which he acquired languages in boyhood, and meny heve believed that imaginstion in later life exeggerated the feets of childhood. But Dr Schlieman, the explorer of the ruins of Troy, tells a story of himself in manhood almost as wonderful.

"At the age of twenty he began to study languages, chiefly by himself. He read a good deal aloud, without making a translation, devoted one hour a day to writing essays on interesting snbjects, correcting those under a teacher's supervision, and then learned them by heart, repeating in the next lesson what was corrected on the previous day.

"'I never went on any errand, even in the rain, without having my book in my hand, and learning something by heart; and I never waited at the post-office without reading.'

"In half a year he succeeded, though in active business, in acquiring a thorough knowledge of the English lasguege in this way. He then applied the same method to the study of French, and was at home in it in six months. With the facilitise thne acquired he found it easy to learn to speek and to write fluently in Dutch, Italian, Spenieh and Portuguese, by giving six week's study to each. A resolute will and natural capecity surmounted all difficulties, and made progress easy."

"'THE mother tongue is a great educator,' was the motto of Pere Girard of Switzerland."

At Home.

WE make up this column this month entirely from the colums of *The Housekeeper*, a new "Journal of Domestic Economy" lately started in New York City, published and edited by Mr. Charles F. Wingato, heretofore editor of the *Paper Trade Journal*. As may be seen even from so small a sample, the *Housekeeper* is a valuable monthly, full of varied information and practical suggestione nrranged in attractive and telling classification, in which Mr. Wingate is an adept. "Household Humbugs and Dangers; Shopping and Marketing; the Kitchen; the Laundry; the Dining Room; the Parlor; the Library; the Bedroom; the Nursery; the Boys' Department; and What to do for a Living;"—are the principal hends under all of which really useful and lively articles may be found.

GET A PAIR OF SCALES.—Every careful housekeeper should provide herself with accurate and handy scales—so as to be able to test every article which is bought from the market or grocery.

We are fortunate in having a small market basket which holds a certain number of quarts of berries, and it is surprising what a varying portion of its space is occupied by the same number of measures. One dny two quart boxes will fill what will require three boxes the next day, and so on. Such a basket is an effectual check on false measure.

CRACKED WHEAT HOME-MADE AND CHEAP.—This may be easily had by breaking the well-cleaned grain through a common coffee-mill, fine or coarse, as the regulating-screw may be set when you grind. We have a spare domestic coffee-mill which we chanced, once on a time, to try for the purpose, and discovered a ready and economical way of having this most wholesome and palatable article made at home as good in quality as can be bought ready-made, only at much greater cost. A bushel of well-"smutted" (that is perfectly cleaned) wheat of sixty pounds, the standard weight in the produce trade, at $1.50, costs 2½ cents a pound, or at $3 per bushel costs 3½ cents a pound, for which as cracked or crushed wheat we are asked to pay now eight cents a pound. No weight is lost in the cracking or preparing to cook.

WATERPROOF blacking may be made of gum shellac, methylic alcohol, gum camphor, lamp-black, sweet oil, mutton tallow, turpentine, and oil of mirbane. It is applied with a soft camel's-hair brush, and requires no rubbing beyond what is necessary to spread it over the surface to be blacked.

If you are troubled with ants, lay a few fresh bones around their haunts. They will gather on them in large numbers, and can be destroyed by throwing the bones into hot water.

TRUE AND FALSE ECONOMY.

In spite of dull times, savings banks officials report an increase in deposits during the last year, which indicates a greater disposition to save, and less of that reckless expenditure of earnings among the laboring classes, than formerly. In America, where all are free and equal, politically, there is always a striving after social equality as well, therefore the huge hands—all honor to them—that toil through the week, are distressingly squeezed in kids on Sunday, and no matter what the garb on work days, broadcloth it must be for "meetin'." This false idea of "as good as you be" distinguishes our working men and artisans from those of Europe; their garb being as distinctive on Sundays as on the working deye, and the thought of imitating the parson or doctor unknown. There is a class with us, however, who are above false appearances, deeming it better to lay by for the traditional rainy day than to spend their hard-earned money for luxuries beyond their reach; these are generally to be found in the rural districts.

These are the two kindsof economy, false and true. Ecooomy in food is often disastrous in its results; it is more ecouomical to pay thirty cents for good beefsteak than ten for cabbage, and better to buy a good coat than a shoddy suit. No man can save money at the expense of his stomach, and the attempt will be followed by dyspepsia, doctor's bills, and if the victim has been quacked, there will be a cheerful undertaker and eccompanying funeral expenses.

It is not economy to allow fences, barns, factories and houses to get out of repair and go to decay; it is practical extravagance, so if economy must be practiced, begin in another place where mere display is the result. This hint conveys our meaning, so while congratulating our friends on their increasing capital, we earnestly entreat them not to spend a dollar now at the expense of so many dollars in the future.

Correspondence.

WESTWARD.

OAKLAND, CALIFORNIA.

Let me give all who desire a pleasant route of travel, a piece of advice. I shall speak from experience, so my word may be accounted true. If any one desires to see neture in all her untamed grandeur, if any one would travel by a line that feasts the eyes with scenes of beauty ever new, and eo enchants the mind that it cannot know fetigue, then let him *not* journey from Omaha to San Francisco. I can assure him that should he do so, he will feel that all the sins of his past life are amply atoned for before he reaches his destination.

But before I give you the details of my sufferings, let me present a few statements regarding the geography of the western country, hoping at the same time that the minds of all my roaders are better poeted regarding this important subject than my own was before; by a painful experience, the truth was indelibly stamped upon my memory.

By very many persons the words West, end fertility, are considered synonymous. If by West is meant the entire West, stretching as far as the Pacific coast, a graver error could not well be made. The great region of fertility that must give to our country the bulk of its agricultural produce, is the Mississippi valley. On either side of this "Father of Waters"—which, by the way, is no father at all but only a good eized child—a very fertile belt of land with deep, rich, black soil, stretches eastward and westward for some hnndreds of miles. But beyond these tracts the region of extreme fertility ceases, and in the West the country degenerates into a barren desert. I first noticed this exceedingly rich loam in Illinois. It is to be seen throughout the whole length of Iowa, which, quite level in the eastern portion, grows more and more undulating and hilly as one proceeds westward. In Nebraska, too, the same fertility is to be found, and the cornfields of this state surpass those of Illinois, which latter ones I believe are quite famous. But on passing from Nebraska to Wyoming we notice a chnge. The soil, hitherto black, becomes reddish, and the vegetation stunted and poor. But let me panse here, I am again haunted by that spectre of geography. If any one that may chance to read this can name in order the states and territories that lie between the Mississippi and the Pacific, he may account himself one in a thousand. So it may not be out of place for me to etate that the great Union Railway, having for its starting point the city of Omaha in Nebraska, on the Missouri River, runs through Nebraska and then successively through Wyoming, Utah, Nevada and Califor-

To resume, soon after entering Wyoming, whereiu ngriculture is abandoned though grazing is extensively practiced, we come to the region of the Black Hills. Now I had vainly imagined that the Pacific Railway had been constructed at an immense expense over the most stupendous obstacles, but Nature could not offer a fitter plan for such a piece of engineering than the greater part of its route affords. Through Nebraska it skirts the Platte River and mile after mile runs over country that is as level as a floor. And when it enters the country of the Black Hills it has no other difficulties to encounter than those of a steep grade, ascending about eighty feet to the mile. Again, I had supposed that from the beginning to the end of my route through the Rocky Mountains I should be whirled among huge boulders, along the edge of precipices and tha sides of steep ravines, and vallays shut in by the walls of rock rising above them till they reached the regions of perpetual snow; so when I found we were nearing the Black Hills my heart had high with expectation. But slowly and surely we ascended a very gentle slope, seeing all around us much more of Mother Earth than of walls of rock. No ice-crowned peaks rose above us, though occasionally we did pass a crumbling boulder that might have risen three or four feet above the car-tops. But the scenery from the summit of the Black Hills was certainly grand. We were eight thousand feet above the sea-level, and far away on every side extended a view that embraced sloping hill-sides, deep ravines with jutting crags, and here and there a gray peak in the distance mottled with fields of yet unmelted snow. A comrade by my side caught the inspiration of the moment and exclaimed, "It makes a feller feel good up here, anyhow." What a happy thing it is to be able to express in fitting language the feelings of awe which nature inspires. Nor were we called upon to admire the works of nature only. Even in these wild solitudes the art of man shone forth triumphant, and our hearts were stirred within us as from the smooth face of a boulder our eyes were greeted with an St. 1860; x. (Started in 1860 with ten dollars capital).

The soil in this region is very poor—an alkali containing a large proportion of a chalky substance. It is unfit for use upon the engines, as it deposits a sediment upon the sides of the boiler, known as *boiler scales*, which is the cause of many boiler explosions.

Passing on from the Black Hills we found nothing of interest until we reached Green River Canon. The shapes which the running water has cut out of the soft rock through which it has worn its way, are truly wonderful. Huge pillars, domes, and castles arose in almost perfect shape in never-ending succession.

After leaving Green River we met with no fine scenery until we came to the Weber River in Utah. For quite a number of miles the road follows the bed of this river, passing through a deep gorge, the sides of which rise on either hand in solid walls of rock to the height of several hundred feet. Here only were my expectations realized until we reached California. A Mormon village is situated on this river. I eyed the inhabitants closely, but found they looked very much like other human beings. Not so the Indians we met from time to time. My faith in the noble Red Man is now a thing of the past.

And now came the season of our tribulation. The Great American Desert lay before us—an arid waste of lava formation, comprising the whole extent of Nevada. No object of interest could be seen in this region of barrenness—nothing but a waste of burning plains, and peaks scorching in the sun without a particle of vegetation upon them. The occupants of the car were in a state of misery. Some sat gasping in the stifling heat like dogs on a July day; some walked up and down the car in desperation; some spent most of their time at the wash-bowl; and some gave unremitting attention to the tank of ice-water,—all looked as if the joy of life had gone forever. But our trials ended when we entered California. Here we saw much that was grand and well worth seeing, but which I cannot describe now. Sometime I may have something to say about this wonderful state.

LETTERS FROM GRADUATES.

The following extracts from letters received recently from some among the most intelligent and earnest among the Hampton graduates, furnish forcible answers to questions sometimes asked at the North; whether work enough has been done for the Freedman, and whether he appreciates and is grateful for what he has received:

September 23, 1875.

Dear Teacher:—My heart is troubled, and my mind is so full of thought that I wish to make known to you that I know not where to commance. C. and I have tried tha book and paper agency this summar, and we are *surprised.* We did expect to make some money, but have would make alone, but to travel over the South and see how the colored people were getting on. And their actions and condition is what surprised us. We did not travel as far south as we expected, finding the people but little interested in books or literature, and money so scarce we were almost compelled to give it up. But it is not money that my heart is troubled about; but it is my people. In my travels this summer I have been disgusted. When I see so much corruption and unintelligence in churches, and so many unintelligent preachers, and instead of growing better is growing worse; I say when I see it, it makes my heart weep. When I go in a town and see so many colored bars, it troubles me; because I know that the colored are their customers. In many places they are constanily going from the churches to the bar-rooms, on Sunday during services. When I look around and see those things among our people, the one great question presents itself to me, as to what can I do to better it? This question is not decided in my mind; it is so perplexing that I cannot decide, only to go ahead and do all that I can in the way of teaching and example.

I cannot return to Hampton this term; I am not able; I am going to stay out and teach this term and be ready to return next term. I want to open school somewhere about tha first of October if I can get a school. I shall go from this County to teach, for there is no money for this County. If I had taught this summer in this County I would not have any money, for those that have taught cannot get any money; they are paid off in County bonds, and it is so with several of tha surrounding Counties. I never saw such a scarce time for money in my life, and it is not only I that say so, but everybody that I talk with about it. Even money dealers and merchants all over the State cry out, no money. I find your words to be true, that is: "If one seeks money he can get it; but if he seeks other things he must not be troubled because he doesn't get money." I would have made some money this summer, but I have spent my time in trying to do good for others, and find myself lacking. I will now close.

W.

MIDDLE-SWAMP, GATES COUNY, MD., *September* 27, 1875.

Dear Teacher:—I thought I would write you in what way I have employed my time since I have graduated. After spending a short time in visiting around the country, I commenced teaching on the 12th of July. I had quite a large school,—sixty-two scholars. My school was in a very bad condition when I opened it; the children were wild and rude, but I am glad to say that after some hard work on my part—leeturing and talking—I noticed a marked improvement. There has never been a colored teacher in this place before I came. The colored school has always been taught by gentleman teachers who took no interest whatever in the children. My scholars were very anxious to learn and applied their minds very closely to their studies.

The people as a general thing are poor; they are glad to see their children advancing, and are glad to learn also.

I had a very fine Sabbath-school. My scholars found the SOUTHERN WORKMAN very interesting. I have found a large field of labor since I have been in the South. I have just begun to realize what work there is to do in educating the colored youth of the South. I have one scholar that wants to enter Hampton School in October.

With many thanks to you and teachers,
I am one of your former scholars,
SUSAN R. M.

WYTHEVILLE, VA., *September* 22, 1875.

Dear Teacher:—It has been such a long time since you heard directly from me, I know you have thought several times why I did not write. Well, I have thought and wondered, too, how it was, till to-night I was lying down and thought of Hampton and my indebtedness to you and tha many friends at the old home, then I rose at once and began to write.

I left A. rather unexpectedly to myself. The people were not willing to have the school go as it did last year. Last year by paying a small tax the people could secure to themselves a ten months school. This only amounted to seven cents a week for each child, except those who had no parents to look after them, they, of course did not have to pay anything. Now you see why this tax was levied; the County was not able to run a ten months' school without a supplement from the people, which they willingly gave last year. This year they refused to supplement, which, of course, knocked them out of the three hundred dollars which they received from the Peabody fund, and the County not being able to run the school without some help from somewhere, they were only able to employ us for five months. I saw at once that I had better look out for some work that would pay me better. Hence I am here with a very large school, numbering one hundred and sixty scholars; have two assistants, a young lady and gentleman from Richmond, shall like this place as well as I did A. The people seem to be very well pleased with me so far. Had I known that I was not going to have stayed in A., I should have been in Hampton.

Watkins is now in Liberty, and will open school there soon. You see what few of the Hampton boys that are in South-western Virginia have just made a change in their homes. J. M. Ricks is about twenty-five miles above me teaching in Marion. Reese Bowen was in this town last week; he has a school somewhere in the country. He says that he has a very nice school, too. So much for news na to schools.

Now that it is near October, I suppose you are packing or think about it, at least, to start for Hampton to begin your new year's work. I should like much to meet you there. I have begun ten months' work and can sympathize with you in the beginning of yours. I find in this place as I found things in A.; there is a great deal of Christian work to be done in every direction. Here are minds to be cultivated and aspirations to be raised above the common standard that is now prevalent among our people. I tell you I am deeply interested in the cause of my people. I don't do as much in the way of public talking as some of the laborers that are out on the field, but I try to set a good example in everything I go about, which I find has great effect. The most of our people will follow example rather than precept, hence, while that kind of work may be slow, I find it lasting. There are so many incompetent men going around trying to lend by word rather than deed, one has to be very careful as how he walks. It is twelve and I must close.

L.

ELIZABETH CITY, PASQ. CO., N. C., *July.*

Dear Teacher:—As I know you have heard all about the good and grand times that we had on commencement day, I can't tell you anything new.

The people kept the 4th of July here to-day and I was called on to address a large audience on the subject of education and refinement with the two Mr. L's of Howard University. The people received our advice on tha temperance question with great acclamation.

M. and I are much indebted to you for our first grade diplomas. You don't know how much we thank you for the careful, hard and patient teaching that you gave us. I am studying just as hard as ever. *because my eyes are just being opened.*

T.

EASTERN NORTH CAROLINA SABBATH-SCHOOL UNION.

The Sabbath-school organization in the eastern part of North Carolina, known as the Eastern North Carolina Sabbath-school Association, and held in August, 1875, and passed resolutions on Sabbath-schools, Missionary work, and temperance.

On Thursday, the 12th, the house was called to order at 10.30 o'clock by the Assistant Superintendent, W. D. Newcome, who stated the object of the meeting and invited ministers, teachers, and other interested persons to take seats with the delegation. The interested part of the congregation were soon seated together, and the forenoon session was spent in appointing committees, and preparing for the work of the afternoon.

The afternoon was taken up in hearing the reports of the different schools. Twenty-six schools made report, and we give an abstract from the statistics as follows: Number of teachers 108; number of scholars 1777; amount of money $26.75. All the schools were reported in good order. Some were in need of books and papers, and ask for help. The anticipated enjoyment of many was interrupted on the second day by rain. Though, after all, many a heart was made to feel glad by the bright and cheery speeches of the little ones in their exhibition.

After hearing the reports and resolutions of the different committees in the morning, it was proposed in the evening to have a general discussion on the "Value of the Sunday-school to society," "The true Sunday-school teacher," "The method of organizing Sunday-schools," &c.; but when the business of the Association was finished it had not ceased to rain, and the house was so crowded it was impossible to obtain order, hence the idea of so full a discussion was dispensed with.

About 3.30 o'clock P. M., the rain passed over, and the people retired for refreshments in the grove, where an hour was spent; after which the children united in their exhibition which lasted the remainder of the evening. The entertainment was conducted by Miss Katie Smith, student of Howard University, Washington, D. C., who is teaching at the Chapel. The exercise was well conducted, and Miss Smith deserves credit for the well-training of that school.

The Union will next convene at Edenton, N. C., on Thursday before the third Lord's Day in August, 1876. It is hoped that each school will send two or three of their scholars, well trained, to join the exhibition.

REV. L. W. BOONE, *Supt.*
D. D. WEAVER, *Clerk.*

NOTICE TO SCHOOLS.

The next Annual Meeting of the Union will be held at Providence School, Edenton, Chowan County, N. C.; to commance at 9 o'clock on Thursday before tha third Lord's Day in August, 1876. It is hoped that every delegate will be present at that hour. There were some constitutional changes which we do not give in print, but it will be preserved in a written minute for the benefit of tha next meeting.

Tha word Association in tha name was stricken out and *Union* inserted, a word which we like much better.

D. D. WEAVER, *Secretary.*

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

Fortress Monroe, now become classic to Americans generally, is within a minute's walk. Is always open to visitors, and is another grand feature in the pleasure of a visit to this locality; it is the largest in America, and the parade ground within it is delightfully shaded with live oaks. The famed Artillery School has its establishment within the Fortress, and fortress parade with the music of a fine band, morning and evening, with open air concerts, given by the band Monday, Wednesday, and Friday Evenings, gives the visitors pleasure rarely or never found at the seaside or any resort.

In the management of the Hotel every effort will be made to secure the comfort and pleasure of the Guests and to make it in every way worthy their patronage. The table will be furnished in abundance with every delicacy of the season. Bathing, boating, and fishing facilities will also be provided, and those pleasures can have no better locality for their enjoyment.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 60°, 74°, 76°, for Summer; 70°, 58°, 46°, for Autumn; 45°, 44°, 42°, for Winter; and 48°, 52°, 63°, for the Spring months.

TERMS: Transient $3.00 per day, $17.50 per week and upwards, according to location, &c.

For further information, address,

H. PHOEBUS, Proprietor,

11-75, 1y OLD POINT COMFORT, VA.

GREAT INVENTION!

$25 Beckwith $30

PORTABLE

Family Sewing Machine.

Double Thread, with Treadle.

The lightest running machine ever made, and the only one that can be used without injury to the health. Not one-fourth the power needed for this machine that is required by others. Can be used in any position and on any table, treadle having Universal Joint. Can be reversed in an instant, so as to oil, thread and clean as demand without removing any part from the table.

Medal Awarded by the American Institute, 1874.

Retail orders delivered to any part of the United States FREE OF EXPRESS CHARGES.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., DECEMBER, 1875. NO. 12.

FAREWELL AND WELCOME

There 's a New Year coming, coming
Out of some beautiful sphere;
His baby eyes bright
With hope and delight:
We welcome you, Happy New Year!

There 's an Old Year going, going
Away in the winter drear;
His beard is like snow
And his footsteps are slow:
Good-bye to you, weary Old Year!

The New Year comes smiling, smiling,
While the Old Year hastens away,
Unwilling to be
The one sorrow to see
In a world so enchanting and gay.

There is always a New Year coming;
There is always an Old Year to go;
And never a tear
Drops the Happy New Year,
As he scatters his gifts on the snow.

Southern Workman,

Business Manager.

HAMPTON, DECEMBER, 1875.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by that Company in 1873-4-5. The books are sold at fifty cents apiece.

THE SOUTHERN WORKMAN is now entering upon its 11th year. It has a monthly circulation of 1,700 copies, over one-third of which are sent gratis to the graduates, friends and supporters of the Hampton Institute, some of whom, however, are glad to subscribe.

Besides affording to colored youth perhaps the only opportunity in the South for learning the printer's trade (the most rigid exclusiveness keeping them from this and other callings) it has aimed to give an impartial and reliable account of industrial and educational matters at the South, especially among the freedmen, and has observed and encouraged the many and increasing signs of the good feeling between the races that is so essential to the welfare of all.

Being in direct relation with the Public School officers, and many others of the ex-slaveholding class, and with an immense colored population, we are in a favorable position for noticing and promoting the gradual, unobtrusive social movements about us, the formation of a new public sentiment, the genuine revolution in the agricultural and popular educational ideas and practices of Virginians.

The one hundred and fifty teachers (most of whom are graduates) sent out from the Hampton Institute, form an admirable *corps of observation*, whose letters from many parts of the South, published in the WORKMAN, furnish reliable, interesting and picturesque accounts of the real life and condition of their people. These teachers are helping to build up a negro christianity and civilization. As a rule they are of good character, and command respect with all classes; are non-political, are devoted to their people, have an earnest religious purpose, and their experience is one of the most encouraging phases of reconstruction with the friends of progress.

Those interested in practical training, in education through self help, and in an intelligent christian press, are appealed to to commence, and continue, by subscribing, to encourage the SOUTHERN WORKMAN; whose record is a better guarantee of its future than any promises. A dollar a year is little for one, but it *counts up*. It helps not only deserving students; creates opportunities not otherwise within reach; is not likely to die; promises much influence for good over a people mostly beyond the range of newspapers, who greatly need honest advice and just criticism, many of whom are terribly misguided by demagogues, and corrupted by low and semi-heathenish practices.

If four years are long enough time to judge of the demand for and success of a paper, the SOUTHERN WORKMAN is an established fact. Its four years' history has a history of steady progress. A comparison of the first number, of January, '72, with this one, which closes the fourth volume, is very encouraging.

Improvement in form, in type, in press-work, and general make up, improvement also, in material is very marked. There has been, in some degree, at least, corresponding improvement in the subscription list.

There is perhaps but one point where it has not changed—that is its purpose. It was begun, as in closing its first year, it announced: "In the desire to set growing up a spirit of intelligent energy among the working classes of the South," and "claims this desire as the foundation of the undertaking." To foster, and as far as necessary, to create such a spirit, has been its constant and honest aim.

Its field was a new one and had to be ploughed before it was sowed. The freedman did not know that he wanted a newspaper; especially one that discussed crops and housekeeping, social virtues and general intelligence, instead of politics. In this preparatory work, the graduates of the Normal School, scattered through the country as teachers, have done good service and been among our best agents. The slowly growing list of regularly paid subscriptions among the freedmen, though now suffering the arrest of hard times, shows that the paper is taking hold on the class for which it was especially intended.

Our audience had not only to be collected, but studied, and a growing adaptation to its wants, we believe, is an essential element in the paper's growth.

Our illustrations have been an immense help. The friendly publishers in the North who have enabled us by them to get access to the freedmen's cabins, cannot estimate the wealth of sunshine they have sent into these humble homes. Sometimes we find one of the pictures carefully cut out and pinned against the cabin wall, and we do not find fault with the sacrifice of the rest of the paper to admit the spirit of taste and home adornment.

For the 117 plates which have illuminated our paper in these four years, we are indebted to Mr. J. R. Osgood, Mr. J. L. Shorey, and Mr. H. O. Houghton, of Boston; the A. B. C. F. M. Society, through Mr. Charles Hutchins, Boston; the Congregational Publishing Society, through Mr. Moses Sargent, of Boston; the American Tract Society, through Rev. J. D. Stevenson, New York; and Messrs. Harper Bros., New York. To all of these generous friends for the favors already bestowed, and the kind promises of more, we renew our hearty thanks, and the thanks of our readers.

In May 1873, the SOUTHERN WORKMAN took a new departure. Its April number had been printed at the rate of 800 a day, on the second-hand Washington Press, which was the best the office could afford to purchase at the start. The May number was printed at the rate of 800 an hour, on one of Hoe & Co's New Hand Stop Cylinder Presses, presented to the office by that celebrated firm. The value of this noble gift, to which Messrs. Farmer, Little & Co., of New York, added a large quantity of new and handsome type, was not only to the advantage of the paper but of the printing office, enabling it to avail itself of a large amount of job work, which before had to be refused for lack of time.

In January '74, the WORKMAN was changed to quarto form, a decided advantage in appearance and convenience. The latest improvement is a small Baxter steam engine to run the press, employed first for the last (November) number. This secures a much steadier and firmer press-work, and will do better justice to our illustrations.

Among our chief encouragements, is the sympathy of our Northern and Southern friends who become our subscribers for love of the cause,—knowing that every paper they take helps send one into a cabin home. We are also greatly indebted to the editors and proprietors of many of the principal journals and magazines of the country, who, for the same love, put us on their exchange list. These exchanges are not sacrificed by the editorial scissors, but pass from our office to the Reading Room of the 200 students of the Hampton Normal School, and thus the beams of light are shed afar, and find repeated reflection.

Our Hampton neighbors must have a special word of thanks. Not only is our paper taken by many here, both white and colored, but our office is liberally sustained by our friends of opposite politics; members of the legal profession, county officers and business men, who put their work into our hands.

With all this good will in the past, the evidences of progress, and the consciousness of high and honest aims, we have faith in the SOUTHERN WORKMAN'S future.

Some time ago, a Northern friend wrote to us that he had been so struck with its steady progress, and so convinced of its importance that he had placed a full file in the Library of Harvard College for preservation, as possessing historic interest in the records of a new development of civilization. We mean to use every effort to make it worthy such preservation and such work; to push every advantage—not only to hold the ground already gained, but to make this a base for further advance.

In Great Britain and the United States, there is plainly, a growing interest in the redemption of Africa. Attention is invited to an account in another column of the proceedings of the American Missionary Association at their last annual meeting.

Protestants and Catholics have planted their Missionary Stations along the coast, and already about $400,000 are expended annually by the former—$300,000 by English, and $30,000 by American christians.

Unless the negro of America is a failure, he will take an active part in this great movement to regenerate a continent. Africa does not need ship loads of discontented freedmen. She needs ideas; men of faith and purpose; and especially, those who in themselves illustrate what is possible for that race.

Within ten years we expect that a company of our Hampton graduates, not as full-fledged Reverends, but as earnest teachers, will accept an African outpost, imparting not only the higher truths of the Bible, but also, the lessons of practical industry, thrift, and decency, which they have learned here. Mission work is only genuine and thorough as it is civilizing. The customs of savage life are fatal to a growing Christianity. There may be convictions and conversions, but only a weak, backsliding piety unless there is a basis of self respect, an enlightened conscience, a new habit of life. This is of slow growth. The old colored woman who would not believe that stealing a poor old goose should disturb her communion, illustrates the divorce between religion and morals among many heathen converts, who, though faithful in church duties, may live supinely in the ruts of barbarism, and and remain victims of its gross traditions and superstitions.

Hampton teachers, by their peculiar training, would be qualified to inculcate such industrial habits as would lead most surely to reform.

How interesting and dramatic would it be if the churches of Virginia should aid in this work. Many a Southerner would gladly do his part toward the support of a former slave as an African evangelist, were he assured of his qualifications.

It will be said "they are needed at home; charity begins there." Ten out of two hundred going on a distant mission, full of uncertainty, and difficulty, would inspire the whole with such a self-respect, and a zeal for duty, that the expedition would pay from a purely stay-at-home standpoint. The gain in quality would far outweigh the loss in quantity. When a millionaire parts with half of his money in an effort to do good, there is more of him than there was before. When a nation gives up its best youth to save its freedom and its principles it is richer after the sacrifice. The reaction and inspiration of noble deeds is their chief value to the world.

There is some cheap wit and plausible philosophy at the expense of missionaries, often by those who say most about, and do least, to illustrate in their own lives, the universal brotherhood of man.

Charity begins, but it does not end at home. One man may have the strength of ten. Let a dozen of our Hampton boys "burn their ships;" give themselves to the African Crusade, and the residue would fill the gap ten times over by their share of the spirit that led their comrades to a foreign field. "To save one's life is to lose it; to lose it is to save it."

Progress at the South is at a snails pace, corruption is advancing with strides. Ignorance and perverted knowledge are doing their perfect work.

We believe that among the illiterate of all classes the ballot is becoming more and more misused; that they are looking more at its commercial value than at its responsibilities. The freedman have gained about all they can hope for by legislation. Their rights were a personal, tangible, all important issue that sent them in solid phalanxes to the polls, invincible by bribes or threats. This inspiration is nearly gone; the duty of the voter in the abstract is not realized.

The most active wire puller or ring candidate finds it hard to persuade the farmer or mechanic to leave his work and walk two or three miles to the polls. There is a growing indifference among the honest class, partly because they are not thrilled by the issues presented, and partly because they will not take the trouble to vote for such men as present themselves. A student's letter in another column illustrates well the course of the lower class when there is a chance to make something out of the right of suffrage.

The crying need of the colored race is education and Christian morals. Thoroughly equipped institutions which shall train their best youth to become teachers, and examples for the rest are demanded. An efficient common school system which shall gather in the multitudes of children, destitute of every decent influence and means of grace, now ranging the pine barrens and plantations of the South, is the only barrier that can resist the present tendency. There are some few school houses, such as they are, and fewer teachers. The first and last need is *men*. The work that Northern benevolence can and ought to do at the South is to help furnish the educators of this race. These given, the desired result will follow; they will bring the people out right.

Virginia leads, and some of the other Southern States are following in an honest worthy effort for the education of all their children, white and colored. Pinching poverty limits their efforts.

When the good men of the North and South unite in laying the foundations of sound educational work for the freedmen, the result is likely to be great both in the redemption of that race, and for the national welfare.

One T. W. C. a graduate from Hampton, in a recent letter to the SOUTHERN WORKMAN—a journal by the way, that has recently become so conservative that it leans the other way—proves himself to be an adept in showing how worthless he is; that is, in the person of his race. Such truculency is sure of reward. But why did the editors publish it, when they themselves acknowledge it to have been intended only for sewer eyes? We feel sure they would not have done so, had the writer been white. Have Virginia conservatives captured Hampton?—*Philadelphia Christian Recorder.*

In the October number of the SOUTHERN WORKMAN, appeared a letter from a graduate of the Normal School, giving his impressions, from personal observation, of some of the colored people and officials in Eastern North Carolina. Because those impressions were unfavorable, we are censured for publishing them. Neither their general truthfulness, nor the justice of our correspondent's criticisms have been denied. Yet our brethren of the "Philadelphia Christian Recorder" have no better name than "truculency," for this plain unvarnished statement of facts. We confess we do not belong to this numerous class,

Southern Workman,

ISSUED MONTHLY.

J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE.

AGENTS WANTED.

Liberal Terms offered.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office; County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager.

HAMPTON, DECEMBER, 1875.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by that Company in 1873-4-5. The books are sold at fifty cents apiece.

THE SOUTHERN WORKMAN is now entering upon its fifth year. It has a monthly circulation of 1,700 copies, over one-third of which are sent gratis to the graduates, friends and supporters of the Hampton Institute, some of whom, however, are glad to subscribe.

Besides affording to colored youth perhaps the only opportunity in the South for learning the printer's trade (the most rigid exclusiveness keeping them from this and other callings) it has aimed to give an impartial and reliable account of industrial and educational matters at the South, especially among the freedmen, and has observed and encouraged the many and increasing signs of the good feeling between the races that is so essential to the welfare of all.

Being in direct relation with the Public School officers, and many others of the ex-slaveholding class, and with an immense colored population, we are in a favorable position for noticing and promoting the gradual, unobtrusive social movements about us, the formation of a new public sentiment, the genuine revolution in the agricultural and popular educational ideas and practices of Virginians.

The one hundred and fifty teachers (most of whom are graduates) sent out from the Hampton Institute, form an admirable *corps of observation*, whose letters from many parts of the South, published in the WORKMAN, furnish reliable, interesting and picturesque accounts of the real life and condition of their people. These teachers are helping to build up a negro christian.ty and civilization. As a rule they are of good character, and command respect with all classes; are non-political, are devoted to their people, have an earnest religious purpose, and their experience is one of the most encouraging phases of reconstruction with the friends of progress.

Those interested in practical training, in education through self help, and in an intelligent christian press, are appealed to to commence, and continue, by subscribing, to encourage the SOUTHERN WORKMAN; whose record is a better guarantee of its future than any promises. A dollar a year is little for one, but it *counts up*. It helps not only deserving students; creates opportunities not otherwise within reach; is not likely to die; promises much influence for good over a people mostly beyond the range of newspapers, who greatly need honest advice and just criticism, many of whom are terribly misguided by demagogues, and corrupted by low and semi-heathenish practices.

If four years are a long enough time to judge of the demand for and success of a paper, the SOUTHERN WORKMAN is an established fact. Its four years' history is a history of steady progress. A comparison of the first number, of January, '72, with this one, which closes the fourth volume, is very encouraging.

Improvement in form, in type, in press-work, and general make up, improvement also, in material is very marked. There has been, in some degree, at least, corresponding improvement in the subscription list.

There is perhaps but one point where it has not changed—that is its purpose. It was begun, as in closing its first year, it announced: "In the desire to set growing up a spirit of intelligent energy among the working classes of the South," and "claims this desire as the foundation of the undertaking." To foster, and as far as necessary, to create such a spirit, has been its constant and honest aim.

Its field was a new one and had to be ploughed before it was sowed. The freedman did not know that he wanted a newspaper; especially one that discussed crops and housekeeping, social virtues and general intelligence, instead of politics. In this preparatory work, the graduates of the Normal School, scattered through the country as teachers, have done good service and been among our best agents. The slowly growing list of regularly paid subscriptions among the freedmen, though now suffering the arrest of hard times, shows that the paper is taking hold on the class for which it was especially intended.

Our audience had not only to be collected, but studied, and a growing adaptation to its wants, we believe, is an essential element in the paper's growth.

Our illustrations have been an immense help. The friendly publishers in the North who have enabled us by them to get access to the freedmen's cabins, cannot estimate the wealth of sunshine they have sent into these humble homes. Sometimes we find one of the pictures carefully cut out and pinned against the cabin wall, and we do not find fault with the sacrifice of the rest of the paper to admit the spirit of taste and home adornment.

For the 117 plates which have illuminated our paper in these four years, we are indebted to Mr. J. R. Osgood, Mr. J. L. Shorey, and Mr. H. O. Houghton, of Boston; the A. B. C. F. M. Society, through Mr. Charles Hutchins, Boston; the Congregational Publishing Society, through Mr. Moses Sargent, of Boston; the American Tract Society, through Rev. J. D. Stevenson, New York; and Messrs. Harper Bros., New York. To all of these generous friends, for the favors already bestowed, and the kind promises of more, we renew our hearty thanks, and the thanks of our readers.

In May 1873, the SOUTHERN WORKMAN took a new departure. Its April number had been printed at the rate of 800 a day, on the second-hand Washington Press, which was the best the office could afford to purchase at the start. The May number was printed at the rate of 800 an hour, on one of Hoe & Co's New Hand Stop Cylinder Presses, presented to the office by that celebrated firm. The value of this noble gift, to which Messrs. Farmer, Little & Co., of New York, added a large quantity of new and handsome type, was not only to the advantage of the paper but of the printing office, enabling it to avail itself of a large amount of job work, which before had to be refused for lack of time.

In January '74, the WORKMAN was changed to quarto form, a decided advantage in appearance and convenience. The latest improvement is a small Baxter steam engine to run the press, employed first for the last (November) number. This secures a much steadier and firmer press-work, and will do better justice to our illustrations.

Among our chief encouragements, is the sympathy of our Northern and Southern friends who become our subscribers for love of the cause,—knowing that every paper they take helps send one into a cabin home. We are also greatly indebted to the editors and proprietors of many of the principal journals and magazines of the country, who, for the same love, put us on their exchange list. These exchanges are not sacrificed by the editorial scissors, but pass from our office to the Reading Room of the 200 students of the Hampton Normal School, and thus the beams of light are shed afar, and find repeated reflection.

Our Hampton neighbors must have a special word of thanks. Not only is our paper taken by many here, both white and colored, but our office is liberally sustained by our friends of opposite politics; members of the legal profession, county officers and business men, who put their work into our hands.

With all this good will in the past, the evidences of progress, and the consciousness of high and honest aims, we have faith in the SOUTHERN WORKMAN'S future.

Some time ago, a Northern friend wrote to us that he had been so struck with its steady progress, and so convinced of its importance that he had placed a full file in the Library of Harvard College for preservation, as possessing historic interest in the records of a new development of civilization. We mean to use every effort to make it worthy such preservation and such work; to push every advantage—not only to hold the ground already gained, but to make this a base for further advance.

In Great Britain and the United States, there is plainly, a growing interest in the redemption of Africa. Attention is invited to an account in another column of the proceedings of the American Missionary Association at their last annual meeting.

Protestants and Catholics have planted their Missionary Stations along the coast, and already about $400,000 are expended annually by the former—$300,000 by English, and $30,000 by American christians.

Unless the negro of America is a failure, he will take an active part in this great movement to regenerate a continent. Africa does not need ship loads of discontented freedmen. She needs ideas; men of faith and purpose; and especially, those who in themselves illustrate what is possible for that race.

When the good men of the North and South unite in laying the foundations of sound educational work for the freedmen, the result is likely to be great both in the redemption of that race, and for the national welfare.

One T. W. C. a graduate from Hampton, in a recent letter to the SOUTHERN WORKMAN—a journal by the way, that has recently become so conservative that it leans the other way—proves himself to be an adept in showing how worthless he is; that is, in the person of his race. Such truculency is sure of reward. But why did the editors publish it, when they themselves acknowledge it to have been intended only for select eyes? We feel sure they would not have done so, had the writer been white. Have Virginia conservatives captured Hampton?—*Philadelphia Christian Recorder.*

In the October number of the SOUTHERN WORKMAN, appeared a letter from a graduate of the Normal School, giving his impressions, from personal observation, of some of the colored people and officials in Eastern North Carolina. Because those impressions were unfavorable, we are censured for publishing them. Neither their general truthfulness, nor the justice of our correspondent's criticisms have been denied. Yet our brethren of the "Philadelphia Christian Recorder" have no better name than "truculency," for this plain unvarnished statement of facts. We confess we do not belong to that numerous class,

who always raise their hands with a prodigious "hush!" when the truth is in danger of being spoken. We believe that misconception of the colored man's state retards his true progress, and that honesty to him and his friends will wear best in the long run. For years our aim has been to encourage the development in the freedman of a solid basis for self-esteem. We would not wish to see him satisfied with the empty husks of vanity and conceit, and when whole communities are willing to entrust the administration of the law to men who, as our correspondent says are "wholly destitute of character," it is necessary and proper that they should be aided in seeing themselves as others see them. And though the WORKMAN is not a political paper, we are free to say that we have a better opinion of the Republican party than to believe, as our friends of the Recorder seem to do, that telling the truth, unpalatable though it may be, is any indication of an abandonment of that party, or, as he expresses it, of being "captured" by conservatives. No. The best friends of that party are those in its ranks, who have not hesitated to point out and condemn its errors; and the truest friends of the colored race are those who will show them their failings and their dangers, and how alone they may be avoided.

Those who are compelled to seek a warmer climate, and do not care to go to the extreme South, will do well to try a Virginia winter. At Fort Monroe, the Hygeia Hotel, crowded in summer with guests, offers a charming resort, especially for the fall and spring months.

At Hampton good winter board can be obtained at the rate of ten dollars per week at comfortable private houses. There are few days from October till May, when one cannot enjoy rowing on Hampton creek. Riding cannot be much enjoyed in winter weather by reason of the mud. There is deer-hunting in Warwick county, fifteen miles distant, abundance of wild ducks on all the water about here, and it is the Paradise of oysters. The best medical skill can be had by those requiring such attention. The brilliant dress parade and military evolutions at Fort Monroe, experiments to test the strength and accuracy of heavy ordnance by the officers of the Artillery school, the beautiful grounds of the National Soldiers' Home, near Hampton, containing the finest green house in the State, and the many sided Hampton Institute, with its farm, shops, and eager aspirants for academic honors, all give a freshness and variety to a winter here that cannot be found in the usual Southern resorts.

The Hon. Schuyler Colfax and Mrs. Colfax, with a party of ladies and gentlemen from Baltimore, and Fortress Monroe, visited the Hampton Normal and Agricultural Institute on November 10.

After inspecting the various departments, industrial and academic of the school, and listening to some singing by the students, Mr. Colfax addressed them in a speech which was received with much applause. He said that he had been very much impressed, not only in listening to the melody of their voices, but also in the thorough and painstaking manner in which they are instructed. He told them that the reputation of this school has gone all over the land, that all understand its noble aims and objects, and how its students are instructed so that they themselves become teachers, and thus its influence will be felt in tens of thousands of families. After some excellent advice to young teachers, which we record more fully in another column, the "*Teacher's Table*," Mr. Colfax spoke some encouraging words of the condition and progress of the colored race, saying that it has since its emancipation more than realized the expectations of its friends. He then closed with a warm eulogy of President Lincoln, which was met with hearty applause, and lade the school and the students "God speed and good speed."

The speech, notwithstanding a rather rapid delivery, was well reported by Mr. Bodell, of Old Point, correspondent of the Associated Press.

After leaving the school, Mr. Colfax and his party visited the Chesapeake Soldiers' Home, and left the same evening for Richmond.

For our pictures this month we are indebted to three friendly sources. Messrs. Harper Bros., for our beautiful frontispiece; the American Tract Society, for the pictures of Burying Hill and the Standish Monument; and to the American Congregational Publishing Society, a new contributor, for the Dove's return to the Ark.

Mr. George Dixon's establishment at Hampton, Va., on a co-operation basis, furnishes as good oysters as can be found in this region. Those desirous of obtaining kegs of fresh oysters for Christmas, will do well to look at his advertisement.

The Annual Meeting of the American Missionary Association of New York, was held at Middletown, Conn., Thursday, Oct. 23th.

A paper was read by Rev. Leonard Bacon, D. D., of New Haven, on the "Inadequacy of Legislation to the Fundamental Reconstruction of the South." He emphasized it as the reconstruction of society, not of government. Law, he understood, has done about all that it can do in removing legal disabilities. What is needed, is the mutual conciliation of the races. Good legislation should rather be the effect then the cause of the reconstruction we hope for. Legislation exhibits and records progress, but does not inspire it.

Rev. Edward Hawes, of New Haven, read an exhaustive paper on "Slavery and the Slave Trade." After a rapid historical review, showing that slavery is almost as old as the race, and not confined to any zone, not even an European country that has not profited by its traffic, he proved that, while emancipation has been accomplishing rapid and seeming y universal victories, the work yet to be done is immense, millions still being under the hardest yoke of slavery. Multitudes of Chinese emigrants are bought and sold by contract, in the coolie trade, prevailing in Cuba, Australia, the French colonies and Peru, in which latter country it is estimated that 100,000 miserable Coolees have perished under a harder bondage than slavery ever imposed in our South. This forced labor system is carried on in a frightful way in many countries, though of late Japan has abolished it and our own government does not recognize coolie contracts. Brazil has a mill on and a half of slaves, and though the emperor favors emancipation, and has one decreed it, conservatism still frustrates his endeavors. Africa, especially the east coast, is dominated by the slave trade, the Portuguese controlling 900 miles, and the interior is a vast hunting ground. Anywhere from 400,000 to 1,000,000 are annually sacrificed by actual sale into slavery, or by war and disease and broken hearts in the process of getting them to market. At Zanz bar, one of the slave marts, from one to three hundred are daily exposed for sale, and the trade is mainly carried on by emigrants from India, protected by English law. The khedivo of Egypt, though thought to be sincerely opposed to the trade, is practically negatived in all his efforts to suppress it by his Mohamedan executive, and this is one reason why he summons around him such as Baker, Stone, Gordon and Cameron. The Portuguese abolition of slavery is only a pretense, and if the khedivo does anything effectually against the slave trade, it must be by the pressure of foreign sentiment and the aid of foreign intervention. Mohamedanism, wherever it prevails, is the natural ally of slavery.

An important paper was read by the Rev. M. G. Dana, of Norwich, Conn., upon "The Relation of the Freedmen to the Evangelization of Africa," of which we give brief extracts:

A new significance will be given to the work of this society when it is seen to have relations to two continents. The inquiry is a timely and practical one, and to its earnest consideration the public mind of this country needs to be awakened.

1. Let us look at the field in some of its geographical features. Africa, about which so much of late has been written, lies between latitudes 38 deg. north, and 35 deg. south; and is of all continents the most tropical. The Atlantic washes its western coast, the Mediterranean the northern, and the Indian ocean the eastern. Its superficial extent is estimated by the best authority at 9,853,000 square miles, exclusive of the islands. This vast continent, once the emporium of commerce, contending with Rome for the sovereignity of the world, the cradle of the ancient church, and the asylum of the infant Saviour, has remained until recently one of the least known.

The coasts of Egypt, of the Red Sea, and of the Mediterranean were early settled; in these regions christian churches were early founded, and colleges and repositories of science and learning established. When Alexandria was at the height of its fame, christian bishops of apostolic renown and a noble array of martyrs lent to Africa annals an unusual interest, while the labors of St. Mark, Apollos, Clement, and Origen attest how early christianity obtained a foothold on this continent. The interior, however, was practically, and to a very recent date has remained, a *terra incognita*. The uncertainty and confusion that prevailed as to the geography of the country, led in 1788, to the formation in London of a society for promoting the exploration of inner Africa, and under its auspices important information was obtained through such travelers as Houghton, Mungo Park, Hornemun, Brasckhardt, and others.

11. Let us note next, what has been done religiously in this field. One needs to read the story of African missions, so full of pathetic suffering, of incidents the most tragic, to which the saintliest and most gifted of Christ's disciples out of every land have dedicated their lives—for they only can be realized how much the christian heart has felt, how much achieved for this benighted country. There are graves in that sad and suffering land around which in thought one cannot but linger,—while thrilling memories come back to him, recalling the heroic and holy officers of such as Threlfford, who left a home of wealth and the charms of social enjoyment in England, to preach Christ to African heathen; and John Williams, "the martyr of Eromanga," who went out as a companion to the venerable missionary Dr. Moffat; and Joseph Danwell, "the angel of Gola," as the grateful natives at Cape Coast Powa called him; and the devoted Melville Cox, the first missionary of the Methodist Church in this country to Africa, who in the university of this very town (Middletown, Conn.) said, on parting with a friend, "If I die, write as my epitaph, 'Let a thousand fall, before Africa be given up;'" and the earnest Bryant, of the American Board; and the scholarly Vanderkemp, of Rotterdam, a graduate of Leyden University, who gave up honors and the society of the learned to proclaim the gospel to the degraded Hottentots and Kaffres; and Bishop McKenzie, the zealous leader of the universities mission; and last though not least, that intrepid traveler who consecrated his life to making known to the world the wants and woes of Africa, and the possibility of christianizing it—David Livingstone. Nor does this list include the names of holy women not a few, who with rare self-devotion, counted not their lives dear to themselves, if only they could tell to Africa's daughters "The old, old story of Jesus and his love." In Egypt, Abyssinia and Africa, seven societies are at work, eight thousand copies of the Coptic New Testament have recently been sold, and crowds have listened to the preaching of the gospel.

Summary.—For a total exhibit we can report that the Church Missionary Society of England spends about $95,000 annually in Africa, and had last year more than 15,000 children in its schools. The London Missionary Society is at present expending $36,000 yearly. The Wesleyan Society, which is in advance of every other, has now reached the sum of $125,000 as its annual outlay for its African missions, and has 17,000 children under training in its schools. The Baptist Mission Society in 1873, expended $13,000 for its work in that continent. The entire amount spent by the churches of Great Britain for Africa's evangelization is now over $300,000 a year. The Basle Mission, founded in 1816, has sent from its college 99 missionaries to the Gold coast region of Africa, and numbers 2,414 converts. The American missionary societies spend, all told, not far from $80,000 yearly in Africa.

The interest in this work was never greater than at present. The Church Missionary Society has just sent eight laborers to East Africa designing to establish one strong station, with a view to a chain of stations towards the interior. The Church of Scotland is about to establish a mission station at the southern extremity of Lake Nyassa, while the Free Church, together with the Reformed Presbyterian Church, are to memorialize Dr. Livingstone by a new mission called Livingstonia, on the banks of Lake Nyassa.

In conclusion Mr. Dana recommended:—Endue the Africans of this country with the missionary spirit and establish a training school for missionaries in Africa.

THE GENERAL THANKSGIVING DAY has been clouded by the sad intelligence of the death of VICE-PRESIDENT WILSON, who breathed his last on Tuesday, Nov. 22d, at 7-30 A. M., in his room at the capitol, after a short illness, from which he was supposed to be convalescent.

His death is a great national loss, when wise counsels and clear foresight are so much needed for the crisis which is approaching. The Republican party loses in him one of its chief original organizers, and most able and eloquent leaders; the country, a statesman whose honesty and integrity are recognized by all parties. More than a quarter of a century of prominent political life—one of the severest tests to which a man's character can be submitted—has left his record sustained, and growing brighter. It is a significant fact in these days of official corruption, that he leaves the political stage a poor man. He has not speculated in his country's trust.

By the colored people, he will be remembered with Charles Sumner, whose intimate friend he was, and by whose side he worked for twenty years, in the cause of freedom and equal rights. His most eloquent speeches in the United States Senate, his commanding influence as Chairman of the Committee on Military Affairs during the late war, his labors since its close in the work of reconstruction, and the chief of his literary efforts, were devoted to the cause of the colored race. He was one of the original founders of the Freedmen's Bureau. Those who recall his visit to the Hampton Institute three years ago, will remember his delight in the education of the freedmen, and his words of encouragement to the students.

Ardent Abolitionist as he always was, and occupying so prominent a position in Northern politics, his desire to promote good-will between all sections of the country, was known and appreciated in the South as well as the North. During the war he visited Alexander H. Stephens in prison, and General Breckenridge on his death bed. In his tour through the South last winter, he was met with cordiality everywhere. His heart, like President Lincoln's, was full of "charity to all, and malice to none."

As the North has so lately united with the South in tributes of respect to the memory of Stonewall Jackson, the Christian soldier, so may the South join the North in sincere mourning for the Christian statesman, Henry Wilson.

The most valuable lesson of Vice-President Wilson's life, is perhaps this:—He was a "manual laborer, and the son of a manual laborer," with only four week's schooling in a year, till he was twenty-one; yet by that time he had read seven hundred books, chiefly historical and biographical, from the library of a lady who encouraged him. He was a genuine specimen of an American self-made man. "The Natick cobbler" rose to the Vice President's seat by sheer force of character—by virtue of the strength that was in him. He kept his record unspotted from the corrupt world of politics by christian principle. His career says to young men:—You can never be statesmen if you haven't it in you—you can never be pure statesmen, if you are not pure men!

INDELIBLE MARKING PAPER FOR MARKING CLOTHING WITHOUT A PREPARATION.—*Direction*—Lay the indelible Paper upon the article to be marked, and place over it a thin piece of writing paper, upon which write with a common lead pencil, or any smooth point. If the marking is pressed with a hot flat-iron or otherwise heated for a few seconds, it can be washed immediately with hot water and soap as usual. Warrant-ed not to fade or spread in the cloth. A package sent, post-paid, on receipt of thirty-five cents, two for sixty-cents. Address B. ALEXANDER & CO., Sole United States Agt's, Eighth street, opposite Cooper Institute, New York. Agents wanted, send for terms. Please quote this paper. 12-6

Agricultural.

FACTS ABOUT PEA HAY.

After a trial of two months, and seeing the much longer experience of a neighbor, I believe that no better hay for working teams can be gotten, than what is made by cutting cow-peas before they are ripe enough to shell.

On the 24th day of July, four bushels of black cow-peas were sown on about two and a half acres of ground. On the 24th day of October, seven good cartloads of dry hay were housed. Thus as much hay was secured in three months as could have been gotten, in some of our dry seasons, from clover, in fifteen months.

Peas sown in May come off in time for fall seeding. In June or July they are sown after the spring crop is harvested. They are cured with less risk than any other hay crop, because their chief value lies in the stalk and peas, neither of which are easily injured by rain. They dry in the mow, because they will not pack closely. They are a sure crop, in seasons when clover dries to death. The South has no need to trifle with grasses while she has the cow-peas for hay.

A team of horses at constant service on the road, was found to fatten so fast when fed pea hay, instead of baled hay from Maryland, that their supply of grain was reduced from 12 quarts to three quarts each per day, without diminution of their life and vigor.

F. RICHARDSON,
Norfolk, Va.

We have received from Europe a limited quantity of the Bismark, late Cabbage Seed, which produces solid heads of cabbage the size of the mouth of a flour barrel and larger. These enormous cabbages are raised with the most ordinary cultivation, in any climate, and at present prices, double the ordinary profit is realized from their production. In transplanting from these seed, great care should be used to give sufficient space for growth. A package sent to any address, post-paid, on receipt of 50 cents; 3 packages $1 00; 8 for $2 00. A sure cure for cabbage pests and 4 beautiful chromos, The Malden's Dream, full set sent free with each package. Address, B. Alexander & Co., sole U. S. Agents, 8th St., opposite Cooper Institute, New York. Please quote this paper. 12-6

THE LANDING OF THE PILGRIM FATHERS IN NEW ENGLAND.

MRS. HEMANS.

The breaking waves dashed high
On a stern and rockbound coast,
And the woods against the stormy sky
Their giant branches tossed.

And the heavy night hung dark
The hills and waters o'er,
When a band of exiles moored their bark
On a wild New England shore.

Not as the conqueror comes,
They, the true hearted, came;
Not with the roll of stirring drums,
And the trumpet that sings of fame.

Not as the flying come,
In silence and in fear;—
They shook the depths of the desert gloom
With their hymns of lofty cheer.

Amidst the storm they sang,
And the stars heard, and the sea:
And the sounding aisles of the dim woods rang
To the anthem of the free!

The ocean eagle soared
From his nest by the white wave's foam:
And the rocking pines of the forest roared,—
This was their welcome home!

There were men with hoary hair
Amidst that pilgrim band:—
Why had *they* come to wither there,
Away from their childhood's land?

There was woman's fearless eye
Lit by her deep love's truth;
There was manhood's brow serenely high,
And the fiery heart of youth.

What sought they thus afar?
Bright jewels of the mine?
The wealth of seas, the spoils of war?—
They sought a faith's pure shrine!

Ay! call it holy ground,
The soil where first they trod:
They have left unstained what there they found—
Freedom to worship God!

PLYMOUTH ROCK.

"The breaking waves dashed high
On a stern and rock-bound coast"

—*Landing of the Pilgrims.—by Mrs. Hemans.*

Yes; that is the landing of the Pilgrims by Mrs. Hemans; but, fortunately for the Pilgrims, the landing by themselves was not opposed by quite such formidable obstacles. It is only one illustration of the fact that writers who draw upon their own imagination for descriptions of distant scenes are liable to make mistakes.

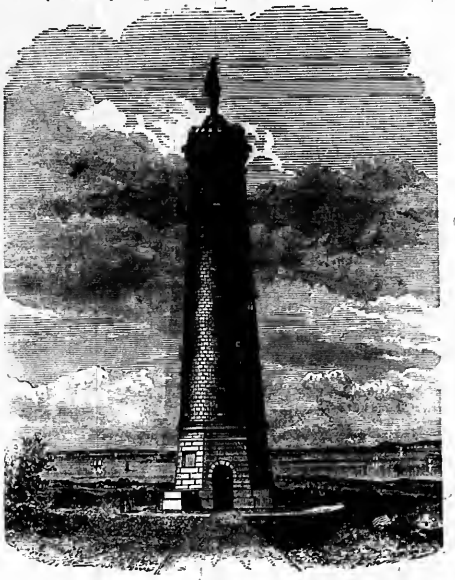
Whoever goes to Plymouth expecting to find the "rock-bound coast" the English poet sings of, will be disappointed. No rugged cliffs and frowning crags with wild surf roaring at their feet, but, as far as the eye can reach in either direction, smooth sweeps of sand-beach, and now and then low rounded hills in the background, on one of which now rises a tall column in honor of one of the bravest of the Pilgrim Fathers, Capt. Miles Standish. As the ancient Pilgrim chronicles wrote it, "A bay greater than Cape Cod, compassed with goodly land, and in the bay, two fine islands uninhabited, whereon are nothing but woods; immense store of fowl and excellent food, and cannot but be of fish in the season—a most hopeful port."

But what is Plymouth Rock, then? It is, curiously enough, the only rock that is to be found on the coast for many miles; a solitary ledge or huge boulder, now nearly buried in the sand; differing in geological structure from any stone in the vicinity. How it came there nobody can tell, but it made a very good stepping-stone from oppression to freedom, a threshold to a new civilization and a new world.

The natural growth of the shore, and the building of wharves have left the Rock so far up the beach now that a giant could not reach it, at one stride, from a boat in the bay; but, fortunately, we need feel no doubts as we stand upon it, that it is the very spot first pressed by Pilgrim feet in Plymouth. There is no possibility of misplaced enthusiasm here. Its story is not one of those that has crept from romance into history, but is as well authenticated as that of George Washington and his little hatchet. In 1741, it formed part of the natural shore where waves flowed at high tide. It was proposed that year to build a wharf which would cover it; but an old man was living in Plymouth, Thomas Faunce, the last ruling elder in the first church there. He was ninety-five years old, and had known some of the Pilgrim Fathers intimately. When he heard of this intended sacrilege, he tottered weeping to the stone, and, in presence of many of the citizens, pointed out the rock made sacred by the Pilgrims' feet. In 1818, a man was living, for fifty-two years town clerk in Plymouth, who was present at this memorable scene. From that day the Rock has been held in reverence.

When the Revolutionary war was impending, the citizens of Plymouth undertook to remove the whole of the Rock to Town Square to make of it a "liberty pulpit" from which to rouse the patriotism of the people. A large piece was split off in the attempt, and they concluded to be satisfied with this. Twenty yoke of oxen dragged it to the Square, where a liberty pole was put up beside it, and many a rousing speech was made from the "liberty pulpit," doubtless.

There it was left until 1834, when it was set up with appropriate ceremonies in front of the Pilgrim Memorial Hall, where it now stands, enclosed with an iron railing. The date 1620 is printed on the stone in large white letters, and all around the railing are inscribed the names of the Pilgrim



STANDISH MONUMENT.

landers.

Within the Memorial Hall are gathered many curious relics of the Pilgrims: the sword of brave Miles Standish; Governor Carver's high backed, magisterial chair; tables and stoves, andirons, money chests, and antique cabinets brought over in the *May-flower*, with Indian tomahawks and arrow heads strangely interspersed among the peaceful relics of the Pilgrims' primitive household furniture!

BURYING HILL.

Until a few years, the original Rock on the shore has been suffered to remain protected from oblivion only by its historical record, and from the depredations of curious visitors who would carry it off bit by bit, only by the drifting sand which has nearly buried it out of sight. Now, a beautiful granite temple stands over it, at once a monument and a defence.

Above the strip of shore on which it stands, rises the low hill or ledge on which the Pilgrims buried their dead through the first terrible year of struggle, when, as Governor Bradford wrote, they "dug seven times as many graves as they built houses." These graves they were obliged to level, and sow the hillside with corn to conceal them from savage attacks. Still above this ledge is "Burying Hill," thickly covered with ancient tombstones, and surmounted by the ruins of the first fort built to protect the little colony from the Indians.

At the foot of the first declivity, stretches the narrow street of the earliest Plymouth, of which not a single house remains, though there are some quite ancient ones in the present town. "We make narrow streets and small lots," says the Pilgrim chronicle, "because we have no strength to take care of more." Here Governor Bradford, and Governor Carver, and Captain Standish, and all the brave leaders, men of rare gifts and cultivation, from the best families of the old world, labored in the field together, built their own houses, planted their own corn, and shared all the toils and dangers of the pilgrim band. They were men of great heart and great genius; genius which sees the end from the beginning, a great state in a savage wilderness, and hopes all things, believes all things, and endures all things to accomplish the vision.

How has it been accomplished? Not one of that struggling band went back in the *May-flower* which brought them over. More and more came out to them, flying from religious persecution in England where the royal commissioners told them "only obey the law and come to the established church, and be a dissembler, hypocrite or devil if you will." They chose the wilderness rather than such a compromise with conscience, until, as Doctor Bacon, in *Harpers' Magazine*, says, "Twenty-one thousand Puritans are supposed to have come over to America. The descendents of Bradford and Robinson, Winthrop, Cotton, and the rest, have increased to *seven millions*, carefully estimated. They have spread from ocean to ocean. Many of the early Puritans were cultivated and accomplished men. Most of them at heart republicans. The compact formed in the cabin of the *May flower* became the model on which every State, from Maine to Oregon, has been founded. Like these early Pilgrims, our people everywhere pledge themselves to obey the laws which they have themselves sanctioned, and which derive all their authority from the consent of the people, but which the people will enforce with their united strength. The moral system of the Puritans has become the foundation of our great prosperity. It was upon knowledge and religion they built their state. Every State has obeyed the precepts of Robinson and Brewster, till Colorado and California founded their prosperity on their public schools."

With this record, we can all claim an interest in Plymouth Rock, "from ocean to ocean," from the Bay to the Gulf. As I stood on the ledge a year ago watching a December sunset over Plymouth Bay, the Pilgrims' nameless graves beneath my feet, and saw a group of Hampton students gathering with enthusiastic shouts around Plymouth Rock, I thought; Who has a better right to stand there, with the children of the Puritans, than this race which has sent as brave a band of Pilgrim Fathers to Africa as those that landed here, and is standing itself on the threshold of a new civilization and a new world of liberty?

H. W. L.

The *Riverside Weekly*, of Louisville, Ky., says—A friend has furnished us a record of the tavern-keepers of Bardstown as recollected by an old and reliable citizen, from 1794 to 1833. He gives their names, habits, and pecuniary results. The number foots up twenty-three. Of them, only four realized any profit out of the business—while sixteen of them became addicted to the use of liquor, and most of them drank hard. This was when liquors were not so adulterated as now, yet the curse of the business was fatal. A record of the liquor venders for the past decade would tell a more appalling story, by far. It seems that God has never forgotten to note out "woe unto him that putteth the bottle to his neighbor's lips."

They have a working men's temperance prayer meeting in Buffalo, New York, inaugurated and sustained by the christian women of the city. One hundred and sixty-six reformed drunkards, during the year, is the work of these meetings.

THE DOVE.

The bird let loose in Eastern Skies
Returning fondly home,
Ne'er stoops to earth her wing nor flies
Where idler warblers roam.

But high she shoots thro' air and light,
Above all low delay;
Where nothing earthly bounds her sight,
Nor shadows dim her way.

So grant me Lord, from every snare
Of sinful passion free,
Aloft thro' faith's serener air
To hold my course to Thee.

No sin to cloud, no lure to stay
My soul, as home she springs;
Thy sunshine on her joyful way,
Thy freedom in her wings.

—*Moore.*

THE CARRIER DOVE.

Well did the patriarch Noah choose, in sending forth this gentle bird as his messenger over the waste of waters. Its wonderful power of flight, and instinct for returning home are, still, often made use of in different countries. Trained to know one home, it is then carried to some distant point with which communication is desired. A tiny letter on thinnest paper is tied under its wing. The moment it is set free, it wheels high into the air, and then—"without compass, chart or quadrant"—starts home with unerring flight, though that home may be hundreds of miles away. It is said to fly, sometimes, at the rate of fifty miles an hour. During the siege of Paris, in the French and German war, in 1870, constant correspondence was held, by means of this aerial post, between the city and its friends outside.

The dove with the olive branch is our fitting emblem of peace, the harbinger of returning prosperity after the wild unrest of war.

THE MOUTH OF THE MISSISSIPPI.

Some of our readers may remember an illustration which appeared not long since in our pages, of the dredging constantly carried on in the South Pass of the Mississippi delta. Since the 14th of June last, a company of engineers have been at work building jetties with a view to permanently deepening the channel of this same South Pass, and the latest reports from them are most encouraging. The jetties on the east and west sides are rapidly progressing, a large part of the mattress foundation has been securely laid, and the channel is cutting out with extraordinary rapidity, having already gained seven feet in depth at the head of the works. The engineer in command does not hesitate to affirm his belief that before the end of the present year, the largest ships will be able to enter the river by the South Pass at any tide, and proceed without delay to New Orleans. If such hopes as these should become certainties the commerce of New Orleans and of the whole surrounding country will receive immense impetus, and that department of the South will have reason to look forward to greater prosperity than of late has fallen to its lot.

AFRICAN EXPLORATION.

The expedition under Mr. H. M. Stanley, (an American) to which we alluded in our September number, left Bagamoyo, a town on the coast of Zanguibar, in the month of November last, and after a perilous journey of one hundred and three days, reached, on the 27th of February, the shore of the Victoria Nyanza Lake. Mr. Stanley's account of the journey has reached us safely and is full of interest, while the results of his exploration promise to be of the first importance. As usual, want of space prevents us from giving our readers anything like a detailed account of the work accomplished or the country traversed, but we cannot refrain from the attempt to condense Mr. Stanley's most interesting letter to the *N. Y. Herald*, taking for granted our readers' desire to know as much as possible in regard to African exploration.

The first great danger of the expedition arose from the desertion of the guides, who left Mr. Stanley to lead his little army of something over three hundred men, with no aid but his compass, through an almost impenetrable jungle. On the fifth day they reached a small village, where the people themselves were half starved and had no food to offer the hungry and exhausted travellers.

A party of twenty of the strongest of these was detailed to go northward in search of supplies, and Mr. Stanley himself struck into the woods in search of game. He returned empty handed, and his own words best tell what followed: "I was so struck with the pinched faces of my poor people, that I could have wept heartily, except for the fear of alarming them, and I resolved to do something at once for their relief. I emptied a sheet-iron trunk of its contents, filled it with water, and put it on the fire; then broke open our medical stores, took five pounds of oat-meal and three tins of revalenta arabica, (prepared food) with which I made gruel to feed two hundred and twenty men. O, it was a rare sight to see these poor famine stricken people assisting me to cook that huge pot of gruel; and it was a still rarer sight to watch the pleasure steal over

THE CARRIER DOVE.

their faces as they drank the generous food. After forty-eight hours' waiting we heard the joyful sounds of musketry announcing the return of the party from Suna, and the food they brought was greedily seized by the hungry people who were so revived by it that one and all clamored to be led away that afternoon. Nowise loth myself to march away from this fatal jungle, I assented, but two more poor fellows breathed their last before we left camp."

On the 21st of January the expedition reached Ituru, a district which came near being fatal to the little band, as the natives were treacherous and cruel, and it was only after three days of hard fighting that Mr. Stanley was able to force his way into a comparatively safe country. They encamped in a broad valley of Ituru, on the day above mentioned, and found themselves at once surrounded by the inhabitants, whom they endeavored to propitiate by gifts, and by great liberality to the doctor, who took the place of a king. Unfortunately, however, Mr. Stanley was obliged to open his bales of goods in order to dry them, and the sight was too much for the greedy natives. Upon a mere pretest war was immediately declared, and the encampment was attacked by an army of natives in full war costume, with bows and arrows in their left hands and spears in their right.

The camp was favorably situated and men were at once set to work to raise a high fence of thorn bushes about it, although Mr. Stanley permitted no active measures of offense until he became quite sure of the intentions of the enemy. On the second day the natives appeared in great force, and four parties were sent out from the camp with orders to burn the villages and seize all the cattle to be found. These attacking parties were in the main successful, toward night returned, bringing cattle and grain, though they reported a loss of twenty-one men. On the third day the natives were completely overcome, and just at daybreak on the fourth day the expedition marched out of the devastated valley, leaving its inhabitants to the fate which they had brought upon themselves by their treachery and greed. Three days later, Mr. Stanley, in halting at Mgongo Tembo, found that he had but one hundred and ninety-four men left, having in less than three months lost by famine, dysentery, heart disease, desertion and war, one hundred and twenty-five men of African birth, and one European.

At last the expedition encamped within one hundred yards of the Victoria Nyanza, and, although Mr. Stanley confesses his ignorance of the actual size and configuration of that great inland sea, he is evidently full of hope that its mysteries are soon to be opened to him. He writes: "As soon as my letters are finished, the sections of the *Lady Alice*" (the boat which he took out with him) "will be screwed together, and the first English boat that ever sailed her mission of thoroughly exploring every nook and cranny of the shores of the Victoria. It is with great pride and pleasure that I think of our success in conveying so large a boat safely through the hundreds of miles of jungle which we traversed, and just now I feel as though the entire wealth of the universe could not tempt me to turn back from my work."

Our readers can now judge for themselves of the importance of this expedition, and of Mr. Stanley's prospect of success in the attempt he is so bravely making to settle the vexed question as to whether the Victoria Nyanza is a simple lake, or a chain of small lakes, and we trust that they will take sufficient interest in this American explorer to look forward with pleasure to the accounts of his work which we hope to offer them in the future numbers of the SOUTHERN WORKMAN.

KAPIOLANI.

In 1825, five years after the first missionaries landed in Hawaii, Kapiolani a woman of high rank, while living at Kaiwaoloa (where Captain Cook was murdered) became a Christian. Grieving for her people, most of whom still feared to anger Pele, she announced that it was her intention to visit Kilauea (the largest known volcano), and dare the fearful goddess to do herworst. Her husband and many others tried to dissuade her, but she was resolute, and taking with her a large retinue, she took a journey of one hundred miles, mostly on foot, over the rugged lava, till she arrived near the crater. There a priestess of Pele met her, threatened her with the displeasure of the goddess if she persisted, and prophesied that she and her followers would perish miserably. Then, as now, *ohelo* berries grew profusely round the terminal wall of Kilauea, and there, as elsewhere, were sacred to Pele, no one daring to eat of them till he had first offered some of them to the divinity. It was usual, on arriving at the crater, to break a branch covered with berries, and, turning the face to the pit of fire, throw half of the branch over the precipice, saying, 'Pele, here are your ohelos. I offer some to you, some I also eat;' after which the natives partook of them freely. Kapiolani gathered and ate them without this formula, after which she and her company of eighty persons decended to the black edge of Halemau-mau. There, in full view of the fiery pit, she thus addressed her followers: 'Jehovah is my God. He kindled these fires. I fear not Pele. If I perish by the anger of Pele, then you may fear the power of Pele; but if I trust in Jehovah, and he should save me from the wrath of Pele, then you must fear and serve the Lord Jehovah. All the gods of Hawaii are vain! Great Is Jehovah's goodness in sending teachers to turn us from these vanities to the living God!' Then they sang a hymn. It was more sublime than Elijah's appeal on the soft green slopes of Carmel."—*The Hawaiian Archipelago, by Isabella Bird.*

HOW TO MEASURE BOYS.

"Would you tell a lie for five cents?" asked a Sabbath-school teacher of one of her boys.

"No, ma'am," answered Henry decidedly.

"For ten cents?"

"No, ma'am."

"For a dollar?"

"No ma'am."

"For a hundred dollars?"

"No, ma'am; not even for a hundred dollars."

"For a thousand dollars?"

Henry hesitated. He could buy so many things with a thousand dollars! Oh! it would buy lots of things. While he was thus thinking and hesitating, another boy answered, "No, ma'am," very positively.

"Why not?" asked the teacher.

"Because," answered Charles, "when the thousand dollars are gone, the *lie* is there just the same."

Which of these boys was the stouter, morally? Charles, of course.

Ten cents would have measured the moral strength of some boys.

—*Children's Advocate.*

NEWS OF THE MONTH. | The apprehended trouble with Spain has | *The Christian Weekly* says: | THE PILGRIMS.

NEWS OF THE MONTH.

MR. THOMAS P. FENNER, for three years in charge of the music department at Hampton Institute, and director of the Hampton singers, until they were disbanded, is now at the head of the department of music at the Temple Grove Seminary, Saratoga, and leader of the Saratoga Musical Association.

DR. HANS VON BULOW, the eminent German pianist, is giving a series of concerts in the principal cities of America.

SENATOR FERRY, of Michigan, President pro tem of the Senate, succeeds Mr. Wilson as Vice President until the next Presidential election, unless the Senate chooses some one else to fill his place.

SENATOR FERRY, of Connecticut, died the day before the Vice President's death. When Mr. Wilson was told of it he spoke feelingly of the loss, and said that Senator Ferry was an active, honorable, and useful man.

A MONUMENT to Edgar Allen Poe, the celebrated author of the "Song of the Bells," and the "Raven," has been erected in Baltimore.

GEORGE BANCROFT, the American historian, announces that he shall continue his history of the United States, in four volumes, from the close of the Revolutionary war to the present time.

THE SLAVE TRADE is very active on the coast of Africa, and the English cruisers have lately made large captures.

THE BROOM MANUFACTURE is one of the important industries of the South. In New Orleans there are already eight factories.

THE STANDARD COTTON COMPRESSES now in use at Norfolk and Portsmouth for reducing the bulk of cotton bales for shipping, are a great improvement on the old hydraulic presses till recently employed, and the most perfect of any of the steam presses. They can be worked at the rate of one hundred bales an hour, and reduce a bale to one-fourth its original size.

DR. GERHARD ROHLFS, the well-known African explorer, has recently arrived in this country, and will spend some months here, and give some lectures on his travels in Africa, which have been very extended and interesting. The American Geographical Society has invited him to speak before its next meeting.

THE JUBILEE SINGERS of Fisk University are enjoying a second tidal wave of prosperity and popularity, in singing before crowded houses in Scotland, and being feted by the Scottish nobility, as they were last year by the English.

AN EFFORT IS BEING MADE to unite all the colored Methodist organizations in the country in one body. This effort is in the direction of the tendency towards union, and the blotting out of ecclesiastical differences now apparent throughout christian churches.

EARTHQUAKES and great showers of volcanic dust and ashes in Iceland, covering the ground to a depth of six inches, destroying pastures, and killing livestock.

THE FRENCH GOVERNMENT is about to send a new exploring expedition to the interior of Africa, from the west coast to the basin of the White Nile.

THE PRINCE OF WALES has gone to visit India.

TRIAL BY JURY has been established in Japan.

AUSTRALIA is to exhibit specimens of products and manufactures at the Centennial.

CHINA has consented to ask England's pardon for the murder of a British traveler, and to open her lines of trade, and treat foreigners on a just and liberal spirit.

THE NEW CONSTITUTION OF ALABAMA has a provision that all banks organized in the State must have a specie basis, and their notes must be redeemed in gold and silver. Suspension of specie payments is forbidden; bank charters are granted only for 20 years, and the loaning of State or municipal credit is prohibited.

THE Episcopal Church has just elected to the African Bishopric of Cape Palmas, the Rev. Dr. Clarke, of Augusta, Ga., a distinguished clergyman. This bishopric includes the Liberian colony of Monrovia. The Boston *Advertiser* remarks:

"It has been urged that a colored man be selected for this field, as the English Church has done in the appointment of one for another district of Africa, and as has recently been done by the Church of Hayti. For some reasons the house of bishops have thought best not to adopt the suggestion now, although it is believed that the true plan for the evangelization of Africa is by means of the colored people themselves, and it is wonderful that our colored brethren in this country are not more interested in the matter than they are. It would seem that a wave of enthusiasm should be rolling through their schools and seminaries, leading many to make their mission the reclaiming of Africa. Perhaps it may so be seen in days to come."

THE apprehended trouble with Spain has been peacefully settled. While she claims the right to maintain Courts Martial in revolutionary Cuba, she will guarantee to American citizens fair defense according to the provisions of the treaty of 1795.

THE present cotton crop is said to be the largest since the war.

MOODY AND SANKEY have concluded their labors in Brooklyn and gone to Philadelphia.

The unveiling of the statue of Stonewall Jackson in Richmond, which took place October 27th—too late for notice in our November number—was the occasion of a brilliant and impressive pageant.

When it was first proposed by some English friends to present this statue to Richmond, some fears were expressed that the gift might wake up old animosities and sectional bitterness which it would be better to let die. On the contrary, the Northern press has vied with the Southern in tributes of honest admiration for the sturdy virtues and military genius of their quondam antagonist. As a Richmond journal observes, "the desire to do him honor was so universal as to be absolutely without distinction of race or condition."

This is as it should be. Stonewall Jackson was an American of whom all Americans may feel proud. His virtues belong to the nation, and the due recognition of heroism is essential to any advanced civilization.

WILLIAM B. ASTOR, of New York, died on Nov. 24th, leaving an estate estimated at $200,000,000. His death occurring so near that of Vice President Wilson, suggests what very different kinds of success there are in life. John Jacob Astor, the father of William, came to this country from Germany, a poor young man with a genius for money-making, and a resolute purpose. The immense fortune which he left for his son to increase, was rolled up by steady devotion to business, and sagacious investment in real estate.

Wilson died poor, but his goal was a different one; and he gained it. Wealth and political power are seldom to be honestly got together, and either one is good if used for God and humanity. An ancient tombstone, somewhere, bears the inscription,

"What I spent, I had; what I gave, I have; what I kept, I've lost."

Even the Astor's huge possessions, time may dissipate, but the Astor Library, with its 150,000 volumes, open to all readers, is a lasting monument of their beneficence.

Four beautiful fine oil chromos 7 x 9 and one 9 x 13 sent for fifty cents, and six size 7 x 9 and six size 9 x 12 sent for $1, and a full family portfolio of 100 oil and gem chromos, *very fine*, all designs, $2. They are scriptural scenes, landscapes, sea views, hunting and fishing scenes, Rocky Mountain scenes, birds, animals, fruit and flower designs. Our chromos are facsimile reproductions of the choicest works of the *great masters*, and pronounced by connoisseurs equal to the original oil paintings. Three hundred Decalcomania pictures sent for 50 cents large mixed, nil kinds, $1; and 1,500, $3. A sample of these goods with full instructions to transfer the same will accompany each of the above orders if desired. Address, enclosing price, and a three cent stamp for return of goods by mail. B. ALEXANDER & Co., wholesale and retail dealers, 8th street, opposite Cooper Institute, New York. Agents and tradesmen are making money selling our goods. Ladies are meeting with great success in this work. A full agent's outfit of 200 fine samples sent on receipt of $5. Please state the name of the paper you saw this in. 12-6

WHAT OUR EXCHANGES SAY.

The *Liberal Christian* says:

"The revival of religion that we need, is a revival of honesty, of purity, of simplicity and frugality; of steady faithfulness, of patience and persistency; of serene behavior under the burden of adversity; of modesty and considerate kindness, in the midst of great prosperity; the revival of greater faith in character—of deeper faith in God.

The Country Gentleman says:

The animal which is of the greatest profit to the owner, which increases most in bulk or flesh, gives the most milk or does the most work, is that one of easy disposition in comfortable circumstances. The profit of all farmers and stock owners would be promoted by promoting the comfort of their stock.

THE WAY WE WASTE.—With an annual expenditure of $600,000,000 (figures based on official statistics) for liquors in the United States, it is not to be wondered at that the times are hard and the people poor. Sixty thousand Americans annually lie down in a drunkard's grave. It were better to bring into the field and shoot down sixty thousand of our young men every year, than to have them go through all the processes of disease, degradation, crime and despair, through which they must inevitably pass. Twenty-five years of absolute abstinence from worse than useless liquors would save to the country fifteen billions of dollars, and make us the richest nation in the world.—*Scribner's Monthly for December.*

The Christian Weekly says:

The Centennial Commission decided some weeks ago that the exhibition shall not be open on Sundays. The earnestness with which the religious press have been discussing this question, long after it had been decided according to their wishes, is one of the amusing curiosities of journalism.

The Christian Recorder (organ of the African M. E. Church) says:

"No greater truth is there, than that expressed in the common adage—'Every tub must stand on its own bottom.' It must be so with us. We must stand upon our own feet. We mean money, education, religion—we mean character. These are the feet that we need, that we must have."

The Friend's Review says:

According to the report of the Freedmen's Committee, "In view of the provisions made by the State of Mississippi for the education of the colored children, and the difficulty of securing the funds necessary for defraying the expenses of our school at Jackson, the Committee are united in judgment that it is not best to attempt to maintain a school there the approaching winter; that the Treasurer be authorized to loan the funds in his hands for the present, and the Committee authorized to rent our school and dwelling houses for the coming winter if opportunity offers."

GAMBLING AT FAIRS.—Several honest farmers in this State say that if gambling is continued another year they shall withdraw from the Society. Better that every agricultural society in the State be discontinued than to have the morals of our young people corrupted, cities and villages disgraced, and so much money carried off in such a bold, dishonest manner.—*Maine Farmer.*

The Golden Rule says:

Prof. Tourjee told us five years ago, "the time would come when men would be sung into heaven! when the power of song would be appreciated in our churches as a means of conversion." The prophecy has its fulfilment in Sankey. We must have consecrated singers and songs, not operatic shriekings. Moody is teaching preachers how to preach; Sankey is teaching singers how to sing. God bless them both!

"OUR DUMB ANIMALS."—The excellent little paper issued by the Massachusetts Society for the Prevention of Cruelty to Animals, says, in a report of an address by Hon. J. H. George, The practice of thrashing the patient ox to increase his speed; of whacking him across the nose when he is desired to stop, is certainly not the characteristic of a good teamster, any more than the habit of yanking, twitching, and whipping the horse is the indication of a good driver. If a man addicted to this method of driving will harness himself to a gig and with his eyes blinded, a harsh bit in his mouth and person with the reins and a raw hide behind him, who when he wishes him to start, simply gives him a cut with the raw hide, when he would have the speed increased gives him several additional cuts, and when he wants him to stop, yanks the reins with force enough to nearly break his jaw, he will appreciate this style of driving, and knowing how it is himself, will doubtless correct his method. A great majority of the sprains, sprains, and ringbones not to speak of the heaves and numerous other horse ailments, are caused by this rough and thoughtless driving.

..."Died, suddenly, near Johnsontown, Va., on Friday, Sept. 17th, Anna E. Pitts Collins, at the residence of her husband, Horace G. Collins. She was one of the first students to enter the Hampton Normal and Agricultural Institute in 1868; was there at its organization, and remained there until the summer of 1872, at which time she left, and has taught school successfully up to the time of her death. She was a consistent member of the A. M. E. Church.

As her nurse approached her bedside to raise her pillow, she said to her, "please let me alone, for I shall be all right directly." In less time than five minutes after, Anna had crossed over the river of death, and, as we think, her spirit had taken up its abode with the pure, and the holy ones. Dear Anna has gone to meet Lucy Hayes, and all her fellow students who have gone before. Farewell, dear Anna! a short farewell,

Till we shall meet again, above,
In the groves where pleasures dwell,
And trees of life bear fruits of love.

—Six kernels of corn were given for planting to each of 252 scholars in a Virginia Sunday-school, last spring. The *Sunday-school companion* reports that five barrels of corn were returned as the result of this operation, and sold for $20, the money going into the missionary fund.

THE PILGRIMS.

This month of December contains one day which ought to be kept upon this continent as the anniversary of the birth of Christian liberty, for the men to whom, under God, we owe our religious freedom, on that day landed on American soil.

Early in the seventeenth century a little colony of English Puritans, driven by persecutions from their native land, established themselves in Holland, hoping to find there the peace denied them at home. But they soon found, that for various reasons, Holland was no resting place for them, and with admirable courage they crossed over from Delft to Plymouth, England, and thence sailed, on the 6th day of September, 1620, for the utterly unknown wilderness of North America. Their little ship of one hundred and eighty tons, the *May Flower*, has become famous in history, for the men and women she bore across the sea laid down their lives for the cause of Christ, and fought unto the end for that principle of liberty which they believed to be at the foundation of Christian civilization.

Before leaving England they made terms in regard to their settlement in America, with the Virginia Company, which at that time possessed important privileges in the newly discovered country, and were, doubtless, full of hope as to the result of their bold enterprise. On the 9th of November they reached Cape Cod, and anchored in the roadstead of the present Provincetown. Here, they, with the sagacity which characterized their work, drew up and signed a solemn compact, binding themselves to be ruled by its terms, and at once elected John Carver to be governor for one year. An exploring party was sent out and spent some days in searching for a favorable spot whereon to begin their little settlement, and finally, in the midst of storms and desolation, they landed at Plymouth, on the 22d of December, 1620.

What stout hearts must have beaten in the bosoms of that brave band; what deep courage must have been theirs, that they did not turn back appalled from the suffering and danger that were visibly awaiting them on that icy shore. In less than four months they lost, by starvation and exposure, more than half their number; in the spring the knot tie which bound them to their homes was broken by the departure of the *May Flower*, and shortly after their governor, John Carver, was added to the long list of their dead. That first winter upon New England soil is one unbroken record of suffering and death; but such men as Bradford, and Allerton, and Miles Standish, were not of the stuff that turns back, and in the face of privations of which in our day we can scarcely form an idea, they organized their government, built up their village, made treaties of peace with the neighboring Indian tribes, and, in short, conquered, one by one, the obstacles which Nature and man put in their way.

Until 1623, when the colonists were able to secure an abundant harvest from the land which they had cleared, they lived in constant fear of starvation; but from that time on, dangers and hardships lessened; their numbers were increased by fresh colonies from England; new settlements were begun at Boston, Charlestown, Dorchester, etc., and the material success of the enterprise was assured.

But this final success, with all its grand results, only throws stronger light upon the sacrifices of that handful of men and women who by their steadfast courage grounded the great nation which was to come after them in the principles of freedom, and by the stern tenacity of their faith taught their descendants the value of religious toleration. We owe so much to them, that, as citizens of the country upon whose bleak shore their work began, we ought to recognize their share in the formation of our national policy, and know them as wise and Christian men, and if in so doing we can catch something of the spirit in which they labored, suffered, and at last triumphed, our lives will surely thereby be made stronger, and more patient.

Correspondence.

WESTWARD AGAIN!

In my last contribution to the WORKMAN, I endeavored to show that the journey by rail to California is not, altogether, a delightful one. Perhaps a brief account of the settlements along the route, the possible future developments of the region through which it passes, and a word of advice to those who contemplate a visit to the Pacific shores, may not be out of place before I pass on to consider this wonderful State, California.

Go into the worst portions of an Eastern city or town, pick out the vilest looking grog-shops and a very limited number of the poorest houses—imagine these collected into a small community, and you have a fair picture of many of the settlements on the Union, and Central Pacific Railroads. In some of the more fertile districts, there are thriving townships of considerable size, but they are not numerous. Most of the way-stations are villages—not always are they worthy of that name, as they sometimes consist of one or two houses only—that have been created by the necessities of the road, not by any attractions of the surrounding country. Their inhabitants are mostly men, rough and uncultivated, and shut off from the elevating influences of civilization. The frequency of the liquor and gambling saloons sometimes led me to wonder whether all made their livelihood through these institutions of our modern civilization, and if so, who were the patrons? They furnished a significant hint as to the moral status of these places. Human nature is the same the world over, and so long as we are "of the earth earthy," we can never quite rise above the sensuous plane. Intellectual celebrities sometimes prefer, to discuss art, literature, and science, over roast turkey and champagne sauce, rather than cold water and a crust. Can we very much blame these wild, headstrong fellows when they try to find the wine of their life in the dance-house and the gin mug?

An old friend, whom I found unexpectedly in San Francisco, and who was obliged through the reduced state of his finances, to make his way here in the emigrant train, pointed to me a slightly unpleasant cul-de-sac which chanced to befall him on the route: Retiring, at one of the stopping-places, to an obscure and half-hidden saloon, he there encountered two gamblers who "kindly" offered to loan him money if he would play. Knowing their game, he consented, borrowed ten dollars, and at the first stake drew out twenty. He concluded this was sufficient, payed back the ten dollars he had borrowed, and was about to walk off with the other ten. The sight of a pistol barrel produced a change in his plan of action, and he departed no richer than he came.

In the earlier days of the road, the dwellers at these way-stations were much more lawless than they now are, and lynch law often dealt out summary justice to offenders. Sometimes the passengers upon the trains were startled by the sight of bodies dangling from the trees or the trestle-work. A stern retribution of their crimes, perhaps, than courts of justice could have afforded.

The splendid soil and glorious cornfields of Nebraska, leave no doubt as to the future of that State. With the westward flow of civilization it will soon become populous and flourishing. Yet I confess I should be but poorly satisfied to live among its flat plains; lacking—at least, in the region through which I passed—not only in grandeur, but even in prettiness of scenery. Its people would hardly be filled, I fancy, with the most lofty thoughts and imaginations, and yet we must not ascribe to the physical features of a country too great an influence upon the mind. In the war through which our nation has just passed, some of the best soldiers came from the farm lands of Iowa; though perhaps it was the grim old Puritan spirit of their New England ancestors that animated them.

The soil of Wyoming, though hardly susceptible of cultivation, is excellent for grazing purposes, and already it begins to abound in vast herds of cattle. From the cars I occasionally saw cows and horses feeding in immense numbers, guarded and protected by their mounted owners. Sometimes in the far distance, a thick cloud hovering near the earth, arrested my attention; nor could I explain the phenomenon until I could easily make out the long line of cattle passing in thousands over the dusty plains.

But can the apparently sterile wastes of Utah and Nevada ever be made of use? The most vivid imagination could hardly picture those burning lava plains, producing not a solitary thing but sage brush, as waving with luxurious fields of grain. And yet, nothing but water is needed to transform this desert into one of the finest wheat countries in the world. Not a drop of rain, however, falls throughout the summer, and not until the richer and more easily cultivated regions are overrun with inhabitants, will these forbidding wastes be reclaimed and populated.

The question may be asked whether this Western tour is an entirely safe one? In reply I would inquire whether pleasure driving is entirely safe in the East? I think the chances of accident or assault are about equal in the two cases. The best time in which to make this journey, is the spring or autumn, and the requisite preparations are just the ones necessary for any long trip, and no more than these. Both the washing and drinking water upon the cars is good, and the meals furnished at the way-stations are very fair along the whole route. To those passing over the road in the summer I would recommend the upper berths, in spite of their unpopularity, as they are cooler and better ventilated than the lower. And to those whose purses have a limited length, I would say that the whole distance from the Atlantic shore to the Pacific, can hardly be accomplished, with first-class accomodations, for less than two hundred dollars in currency.

LETTERS FROM GRADUATES.

November 7, 1875.

Dear Teacher:—I am glad that I have the pleasure and time to write to you, and tell you of my school. I was examined by the County Superintendent, and now I am getting along very nicely. I have forty scholars on the roll, and they tell me I have not more than half. The election stopped my school two days this last week. I must tell you that the colored people in this township are very ignorant. The white man in this place is all the go. If the white men tell the colored pupils that they would like to have votes enough to make a number by offering them a pair of boots or shoes, or a hat, he will vote for him or them, and be glad to do so. I saw eight sell their votes at the polls, and went down to the store about a hundred yards, and some took one thing and some another; such as hats, boots, shoes, and they seemed to be satisfied at doing so. General—the pupils want my assistance in helping them to get up a Sabbath school, they have not had any Sunday school before, and I will ask you if you can tell me how much you think it will cost to get it up. They have not any Bibles, no Testaments nor hymn books. I told them that I would write to you, and see if I could get any instructions about starting it, for I did not know where I could get any books. Please write to me and let me hear where I can get them. They made up the amount of five dollars in get them with, but I told them that would not be enough—for I thought that it would not take less than ten or fifteen dollars. My school will last six months. I commenced my work here as a teacher, on the 18th of October, '75, and the people seem to be very much pleased at present. When I opened my school I had seven scholars the first day, and now I have the number that is named in the first part of my letter. The school house is very poor at present, but the trustees says that they will have it fixed before cold weather, but it is cold. The colored people say that they did promise to fix the house for the white teacher, and they never did do it. And I told the pupils not to keep too much talk about it. But pray, all the more. So they have sent the lumber to fix it with, and I am in hopes that they will fix it.

Respectfully, yours.

VIRGINIA, October 29, 1875.

Dear Teacher:—I have been thinking for some time that I would write and let you hear from me. Since I have been teaching, I think I have done much good in this county. My first school taught in '73, shortly after I left Hampton, whose name is ever dear to me, continued five months and stopped about one year. When I went to make up the school, of course it was a new thing to me as well as children. They gathered around me both parents and children, I told them my plans, and they seemed to like them, and said that they gave their children to me as a father. At the opening of my school the children could not read, and most of them were in their alphabet. I asked them did they like to be whipped? No, sir, was the prompt reply of nearly all who were present. I asked then what must be done in case of misconduct and bad lessons? Here was a pause, they seemed not ready to give as prompt an answer this time as before, I suggested the following one: We punish for misconduct, and a series of bad lessons. Am I right or wrong? Right, sir. How then can you avoid being punished? Get good lessons, and behave ourselves, and not fight. That is very good, said I, I made them no promise, but told them if they wanted to read and write I would teach them if they did what I told them. They promised to obey, and those five months were spent in all possible effort for their success that could be made by me. When the school closed, some of them could read in the fourth reader, first lesson in Maury's Geography and Grammar. The school closed in great honor. Trustees and parents were well pleased, and I myself as a young teacher. My next school was kept in '74, of that you have one of my scholars. That was kept nine months instead of five. I had forty-eight pupils on roll during the session. I now come to '75, in which I have seen a little embarrassment; I have taught nine months in this year; gave great satisfaction to the County Superintendent. Not to confer any honor on myself, but it becomes me to say something about the teachers who have been teaching in this county from Hampton, as I am a teacher of the colored race. Your moral lessons were of much interest to me while at H. I have been better principally by them, and mourn the lost opportunities which I should have had. My school before the present one, was in a church, (colored,) and I took much pains in trying to teach the Bible in the best of my knowledge, but the members of the church are like the most of the colored race, have these strange ideas about Christianity: If you don't make a great noise, they don't enjoy your teaching of the Bible. I long to see the race educated in that respect.

The whiten of this county (those who are of respectable families) are much in favor of the educating of the poor class of children. But the poor, and low classes of whites are not so much in favor of it. They won't let the children cross their lands to go to school; they have to go sometimes miles out of their way. This is not pleasant, certainly, but can't be prevented. Some of my scholers walk as much as sixteen miles per day. Have in my present school forty-four pupils. When I write again I shall try to give you a better account of myself. All of my teaching since I left Hampton has been one year and eleven months. I like it better every year. With much love and many good wishes to the school, and all its teachers, I am very truly, your pupil and well wisher.

To General S. C. ARMSTRONG. E.

The Teachers' Table.

ADVICE FROM HON. SCHUYLER COLFAX.

Address Before Hampton Institute.

1st. At the foundation of all instruction is this principle: "To train up a child in the way he should go, *you must walk in it yourself.*" You must be exemplars as well as teachers. To make others true you must be true yourselves; to make others wise, you must be wise. If you preach temperance and practice drunkenness, no one will heed you.

2d. There are two classes of teachers that I observe: One class is pedantic, pumpous, self-contained, magisterial. When he stands before children he fills them with awe, instead of playing on their heartstrings by the mighty power of love. Such teaching has few results. The child looks up with awe; the little delicate tendrils of his infant mind cannot reach up and grasp instruction from such a teacher.

The second class of teachers bring sunshine into the schoolroom. Children turn to them as flowers to the light. There is an atmosphere of sunshine around such a teacher. His own light attracts all to him for their good and growth.

Above all things, teach children what their life is. It is not breathing, moving, playing, sleeping, simply. Life is a battle. All thoughtful people see it so. A battle between good and evil, from childhood. Good influences, drawing us up, toward the divine; bad influences, drawing us down to the brute. Midway we stand, between the divine and the brute. How to cultivate the good side of the nature is the greatest lesson of life to teach. Teach children that they lead these two lives: The life without, and the life within; and that the inside must be pure in the sight of God, as well as the outside in the sight of men.

There are five means of learning: These are

Observation,
Reading,
Conversation,
Memory.
Reflection.

Educators sometimes, in their anxiety to secure a wide range of studies, don't sufficiently impress upon their scholars the value of memory. Now, our memory is one of the most wonderful gifts God has bestowed upon us; and one of the most mysterious. Take a tumbler and pour water into it; by-and-by you can pour no more; it is full. It is not so with the mind. You cannot fill it full of knowledge in a whole lifetime. Pour in all you please, and it still thirsts for more.

Remember this:

"Knowledge is not what you learn, but what you remember.

It is not what you eat, but what you digest, that makes you grow.

It is not the money you handle, but that you keep, that makes you rich.

It is not what you study, but what you remember and reflect upon, that makes you learned.

One more suggestion:

Above all things else, strive in fit the children in your charge, to be useful men and women; men and women you may be proud of in after life. While they are young, teach them that far above physical courage—which will lead them to face the cannon's mouth—above wealth—which would give them farms, and houses, and bank stocks and gold—is moral courage. That courage by which they will stand fearlessly, frankly, firmly, for the right. Every man or woman who dares to stand for the right when evil has its legions, is the true moral victor in this life, and in the land beyond the stars.

THE FIRST FREE SCHOOL IN AMERICA.

The origin of the free school of America was singular. In the records of Boston, New England, is the following entry: "The 13th of the 2d month, 1635. It was then generally agreed upon that our brother, Philemon Purmount shall be entreated to become schoolmaster for the teaching and nurturing of all children with us." Upon this slight basis the first American common-school was established, for the advantages of which Indians and whites were invited without distinction. The system spread to other towns, and what was at first a local arrangement has become national.

HOW TO INSTRUCT THE CHILDREN.

A writer in *The American Educational Monthly* says: "It is easy to make a child happy and contented; he has an eager appetite for the sulest stories, and you may clinch a moral thus if it be not too long. He will be glad to learn how North America is bounded, aye, and remember it too, if you will associate it in his mind with the icebergs of the north, the roaring surf of the Atlantic, the orange and palm of the south, and the snow-capped mountains and blue sea of the west. Let him handle a yard-stick, a nest of measures, and a grocer's scales, and he will take hold of his tables with a zest. Divide your history class into sections; let one represent the valiant Carthgenians, the other the victorious Romans; let them recount in rivalry the incidents of that ancient struggle, and instead of becoming drowsy, their eyes will flash at the thought of the recitation. Children are very fond of pictures. Events quickly become fixed in a pupil's mind when illustrated in this manner.

FREEDMEN IN GEORGIA.

Charles Nordhoff, in a recent letter written from Atlanta, in Georgia, says that the number of colored polls for that State in 1874 amounted to 83,318; that the number thus returned showed an aggregate value of taxable property equal to $6,157,798, on which $30,788 were paid in taxes; that these colored persons owned in fee simple 338,769 acres of agricultural lands, and that their city and town property amounted to $1 200,115. These figures, in view of the circumstances, are most remarkable. It is scarce ten years since nearly all these persons were slaves, owning nothing, not even the cloths they stood in, or their own bodies, as against the legal rights of their masters. They were ignorant and degraded, acquainted only with the ruder industries of life, and without any habits of economical thrift. And yet under freedom and with its inspiration and motives, they have, besides supporting themselves, achieved these results in the way of accumulated capital in hardly a decade; and that, too, notwithstanding the great disadvantages of their situation. This certainly tells well for the colored people of Georgia; and it shows, moreover, that the State, though for most of the time in Democratic hands, has protected the property rights of the colored people.

—*Independent.*

HAMPTON BAR
OYSTER COMPANY.
(MUTUALLY CO-OPERATIVE)

Open Oysters!

In boxes, containing one dozen quart cans and upward.

Select (largest and finest), per quart can,	35 cts.
Standard (medium size), " " "	25 "
Random (large and small), " " "	25 "

In kegs containing one gallon and upward.

Select per gallon,	$1.20
Standard, " "	1.00
Random, " "	.80

The cans being hermetically sealed can be sent any distance and may be kept for weeks. The kegs are air-tight and will keep for a considerable length of time.

These above are suitable for Christmas presents.

Oysters in the Shell!

In boxes or bags containing one bushel and upward, or in barrels containing three bushels.

Select per bushel,	$1.00
Standard, " "	.75
Random, " "	.50

The freight is paid to Baltimore, Philadelphia, New York, Boston and Providence, and arrangements made to have them forwarded thence to all parts of the Middle, Western, and Northern States.

Orders received by

GEORGE DIXON,
Manager.

HAMPTON, VA., P. O. Box 13.

TERMS: Cash, or good references. Agents wanted.

N. B. This is an effort to assist the freedmen of these parts, and we trust their friends at a distance will give us their patronage. The Oysters are packed with the greatest care, and handled only by persons of steady habits.

THE PRAIRIE FARMER

Was established in 1841, and is now the leading Agricultural and Family Journal in the West. It is devoted to the interests of Agriculture, Horticulture, Stock breeding, the Apiary, Poultry, Household, etc., it has also a literary and young folks' department and gives full markets report, news and topics of the day. It is published weekly by the

PRAIRIE FARMER COMPANY

at Chicago, in a neat quarto form of eight large pages, and is handsomely illustrated from time to time, with portraits of fine stock, buildings, improved farm machinery, etc.

The publishers' aim is to make it indispensable in every household into which it finds its way. Specimen copies will be sent to any address free, subscription price is $2.15 per year, payable in advance.

Liberal cash commissions allowed to agents, and to those who may associate together for subscription purposes.

Consult the National Teachers' Monthly.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears to not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY

THE HYGEIA HOTEL,
OLD POINT COMFORT, VA., H. PHOEBUS, PROPRIETOR.
Terms: Dinner and Bed per day, $17.50 per week and upwards, according to location, &c.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 69°, 74°, 78°, for Summer; 79°, 52°, 46°, for Autumn; 45°, 44°, 42°, for Winter; and 48°, 52°, 63°, for the Spring months. —Open for guests all the year.— 11-75, 1f.

THE COUNTRY GENTLEMAN.

POSTAGE FREE FOR 1876.

THE COUNTRY GENTLEMEN published WEEKLY, is devoted to Agriculture, Horticulture, Stock raising, and every thing interesting and valuable to farmers. ONE COPY, one year, $2.5 ; FOUR COPIES, $10 *and an additional copy for the year free to the sender of the Club.*

THE COUNTRY GENTLEMAN possesses an unequaled Corps of Correspondents, regular and occasional, among the best farmers of All parts of the Country; contains full and trust worthy Market Reports, and devotes special attention to them and to the Prospects of the Crops, as throwing light upon one of the most important of all questions— *When to buy and when to sell.*

☞ SPECIMEN COPIES FREE. Address,

CHRISTMAS GIFTS; or, What we do at our House.

CHRISTMAS GIFTS.

First Girl.—What do you do at your house,
when Christmas eve is nigh?

Second Girl.—We stretch a line at the chimney side,
And mother sees it strongly tied;
Then, hang our stockings, and go to bed.
And just as soon as our prayer is said,
We wonder and guess, till asleep we fall,
What Santa Claus has for one and all.
Then, long before daylight, we haste to pull—
From the line by the chimney our stockings full.
And that's what we do at our house.
And what do you do nt your house when
Christmas eve is nigh?

Third Girl.—We have in the parlor a Christmas tree;
And each has his own little mystery
In hanging upon the branches green
His gifts for the others, by them unseen.
Then mother goes in, the candles to light,
And everything is so gay and bright,
That you ought to be there our joy to see
When we have our gifts from the Christmas tree;
And that's what we do at our house.
What do you do at your house when
Christmas eve is nigh?

Fourth Girl.—We hear in the evening a rousing ring;
We hurry the door to open fling;
And sure as you live, with his long white hair,
And his jolly red face, Santa Claus is there!
He opens his pack, and with laugh and shout,
We take the presents he tosses about.
Then he's off; but just after his visit is o'er,
Uncle John comes in at the other door!
And that s what we do at our house.
What do you do at your house when
Christmas eve is nigh?

First Girl.—We, too, hang our stockings; but mother says,
One thing we must do—all Christmas days—
Just as sure as they come, just as long as we live;
Some gifts to the poor we must always give.
So a basket she fills, on Christmas eve.
And tells us just where our gifts to leave.
Would you know how the best time at Christmas is found?
Help Santa Claus carry his basket around;
For that s what we do at our house.

M. B. C. Slade in New England Journal of Ed.

A CHRISTMAS GREETING.

Once more the SOUTHERN WORKMAN, standing at the door of the new year, stops to offer good wishes and warm Christmas greetings to the readers who have gone with it month by month through the now completed year. The great festival of Christendom, the day which marks the birth of the Saviour of mankind, is so full of meaning, so fraught with associations, human and divine, that the heart must be hard indeed which does not grow tender and kindly under its influences, which does not put aside something of the selfishness of its nature, and for a few hours at least, kindle and burn with love toward God and man. All that is best in humanity clings to the observance of the day whose promises are the heritage of every Christian, and instead of detracting in any way from its importance as a holiday we should rather endeavor to make much of all the privileges and blessings which it brings with it. It is a wise custom which has set apart the few days between Christmas and the beginning of the New Year to be kept as a holiday season, and it is pleasant to find how much kindness and generosity, how many good deeds and how much true happiness can be comprised within the limits of the holiday week. Even the busiest of us can afford to stop for these few days and in the endeavor to make others happy find that our own cares are for the time forgotten, that we have caught something of the Christmas spirit, and in spite of all the weariness and hardness of our daily lives, are happy and hopeful as are the little children to whom Christmas brings long coveted gifts and bright dreams of mysterious joys.

The children's share in Christmas is so important that it deserves and generally obtains special attention, and in regard to it we can perhaps give our readers a few useful suggestions. You can give your children and many of their childcompanions a merry Christmas at a very small cost, if you are only willing to interest yourself in them and their pleasures. You can get a fir-tree from the nearest wood, or buy it for a trifle in the market, dress it with a few bright paper flowers, some strings of popped corn, and here and there a rosy apple or an orange, and then hang from its branches the gifts, whatever they may be, which you are able to give your children,—let it all be done without their knowledge, and you will find in their surprise and delight ample reward for all your trouble. Above all, try to teach your children on this day, at least, that it is better to give than to receive; do not permit their enjoyment to be entirely selfish, but teach them to share it willingly with other children and to find their own happiness in the happiness of others. It does not seem as if it could be a very difficult thing to make a "Merry

Christmas" for one's own household, for a party of children, for a few neighbors, or even one or two families who without help from some kindly hand could know nothing of Christmas cheer, and in one sense it is an easy and a pleasant work, there being commonly but one obstacle in the way of its accomplishment; that obstacle lies always and altogether in ourselves; we cannot make Christmas happy for others, even if they be little ignorant children, unless we carry in our own hearts the warmth and life of the Love which the first Christmas brought into the world. It is that which gives the day all its meaning, and the best wish that we can offer one to another in this season of good wishes is that our hearts may be filled with the true spirit of loving kindness, the Christmas spirit, which brings always the best of blessings in its train.

Southern Workman,

ISSUED MONTHLY.

Business Manager.

HAMPTON, JANUARY, 1876.

PREMIUM.

From and after November, 1875, *on receipt of one dollar, one year's subscription to the* SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing* 82 *pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. *The books are sold at fifty cents apiece.*

WE WOULD call special attention to the very excellent suggestions to be found in our Teachers' Table this month, as to the best method of teaching kindness to animals.

When Mr. Henry Bergh started his "Society for the Prevention of Cruelty to Animals," in New York a few years ago, he was laughed at or regarded as a rather more than usually visionary enthusiast who would soon ride his hobby to death in spite of his principles against fast driving. His wonderful success in gaining the public interest, in securing legislation to support his theories, and, above all, in educating public sentiment till states have similar societies and laws; this success not only proves him to be a man of real strength, but shows that the country is advancing in civilization. It looks toward the millennium.

It is very easy to interest children in the cause. The friskiness, and ignorance of pain which makes them fail to appreciate the suffering they often inflict on animals can very easily be guided and changed into enthusiastic delight in caring for them and watching their habits. The editor of the childrens' magazine, the *St. Nicholas*, a year or so ago started an army of "Bird Defenders" among their readers, which now numbers hundreds if not thousands of children in all parts of the country, and some on the other side of the ocean, pledged to defend the feathered tribes from all enemies. There is no calculating the effect this must have on the morals and manners of the next generation.

And, aside from any higher considerations, when the farmer understands that the cow best cared for gives most milk, and the horse best treated works the best; when he knows that scientific naturalists say that the grasshoppers that whiten his field, but not to the harvest, and the poisonous beetles that destroy his whole potato crop, he owes to his wholesale slaughter of the innocents—of birds, which destroyed more insect larvæ in a day than corn in a season, he will begin to ask himself if kindness to animals does not pay better than cruelty.

THE LATEST letters from Mr. Stanley, whose valuable discoveries in Africa our readers have followed with interest, contain very remarkable reports of an earnest desire for instruction in christianity manifested by an African King on the shores of Lake Niyanza. This king, Mtesa, is the same monarch as described by Speke, the English traveler, as accustomed to order two or three of his wives off to execution every few days. His desire for christian instruction may not be as intelligent or as significant as one's first enthusiasm might interpret it to be; but a very small door suffices for christian truth or a christian missionary. It is a great thing to know that a missionary would be safe and welcome, and if Ethiopia is stretching out her hand to God however feebly, will not one be found to respond? The report is especially remarkable as coming from on who is, as he says, "no missionary." Let us hope that he may indeed "become one" and consecrate his labors as Livingstone did. Mr. Stanley's suggestions as to the kind of missionary needed in Niyanza are full of common sense and equally applicable to any missionary field. Mr. Stanley says:

"Until I arrived at Mtesa's Court, the king delighted in the idea that he was a follower of Islam; but by one conversation I flatter myself that I have turned the newly raised religious fabric to the ground, and if it were only followed by the arrival of a Christian mission here, the conversion of Mtesa and his Court to Christianity would be complete. I have undermined Islamism so much here that Mtesa has determined henceforth, until he is better informed, to observe the Christian Sabbath as well as the Moslem Sabbath, and the great captains have unanimously consented to it. He has caused the Ten Commandments of Moses to be written on a board for his daily perusal, as Mtesa can read Arabic, as well as the Lord's Prayer and the golden commandment of our Saviour, "Thou shalt love thy neighbor as thyself." This is great progress for the few days that I have remained with him, and though I am no missionary, I shall begin to think that I shall become one if such success is so feasible.

"But oh that some pious practical missionary would come here! What a field and a harvest ripe for the sickle of the Gospel! Mtesa would give him anything he desired—houses, lands, cattle, ivory, &c. He might call a province his own in one day. It is not the mere preacher that is wanted here. The bishops of all Great Britain collected, with all the classic youths of Oxford and Cambridge, would effect nothing here, with the intelligent people of Uganda. It is the practical Christian tutor, who can teach the people how to become Christians, cure their diseases, construct dwellings, understands agriculture, and can turn his hand to anything, like a sailor, this is the man that is wanted here. Such a man, if he can be found, would become the savior of Africa. He must be tied to no Church or sect, but profess God and His Son, and live a blameless Christian, be inspired by liberal principles, charity to all men, and devout faith in God. He must belong to no nation in particular, but the entire white race. Such a man or men Mtesa, King of Uganda, Usoga, Unyoro, and Karagwe—a kingdom of three hundred and sixty geographical miles in length by fifty in breadth—invites to come to him. He has begged me to tell the white men that if they will only come to him he will give them all they want.

Now where is there in all the pagan world a more promising field for a mission than Uganda? Colonel Linant de Bellefonds is my witness that I speak the truth, and I know he will corroborate all I say. The Colonel, though a Frenchman, is a Calvinist, and has become an ardent well-wisher for the Waganda, as I am.

Then why further spend needlessly vast sums upon black pagans of Africa, who have no example of their own people becoming Christians before them? I speak to the Universities Mission at Zanzibar and to the Free Methodists at Mombasa, to the leading philanthropists and the pious people of England. Here, gentlemen, is your opportunity—embrace it! The people on the shores of the Nyanza call upon you. Obey your own generous instincts, and listen to them, and I assure you that in one year you will have more converts to Christianity than all other missionaries united can number. The population of Mtesa's kingdom is dense. I estimate the number of his subjects at 2,000,000. You need not fear to spend money upon such a mission, as Mtesa is sole ruler, and will repay its cost ten-fold with ivory, coffee, otter skins of a very fine quality, or in cattle, for the wealth of this country in all these products is immense.

FISH CULTURE.

We have received the First Annual Report of the Fish Commissioners of this state. It is a document full of interest, from which we should like to quote more largely than our limits will permit. The importance of taking proper measures to increase the supply of food fishes can hardly be over estimated, and the wonderful results which have followed the adoption in other states of methods for their artificial propagation are leading to the establishment of fish commissioners and hatching houses all over the country. Streams that had become depopulated, through what the commissioners term "various devices for wholesale murder," are now yielding an abundant supply of the best kinds of fish, through processes as simple as they are beautiful and vastly superior to those of dame Nature. To quote from the report: "The artificial impregnation of fish eggs is no longer an experiment. Improvements may be made in the machinery and manipulations, but enough is known to establish the fact that a new and important branch of industry has been created, which may be made to minister largely to the comfort of the human family. Fish are endowed with a wonderful fecundity; the shad lays 25,000 eggs, the herring 100,000, and many others are still more fruitful. But in the *natural* process of impregnating and hatching, so many enemies assail the spawn that a very small perceatage escapes and survives. It is estimated that of shad eggs, from their mode of spawning and the host of enemies that follow in their wake, not more than one in a hundred becomes an adult. On the other hand by the artificial process ninety-five to ninety-eight per cent. of the eggs may be converted into living fish.

"Russia and Switzerland—favored by the abundance and character of their waters in being admirably adapted to the finest species of fish the salmonidae—have outstripped all other European countries in the progress they have made in the cultivation of this new art. As one of the results common in Switzerland of fish culture, the following statement is given by the secretary of the college of France in his recent report on Swiss pisciculture: "The inhabitants of the village of Nallarbe about twenty years ago, lived from the fisheries in the river Orbe. By exhausting this river which was especially rich in the salmon kind, without ever replenishing it, the fishers and their families were reduced to absolute want. The observations of Perry, confirmed by experiments made at the college of France, reached the ears of the schoolmaster of the village: he first studied pisciculture theoretically, and finally attempted some experiments which were crowned with success. The inhabitants of the village anxiously, but somewhat incredulously, followed the different phases of the artificial hatching of eggs which went on under the most favorable conditions. The village became interested in these experiments, and several hundred francs were annually appropriated for aiding the schoolmaster in his enterprise. At the present day the river swarms with fish, and according to the official report there are eighty families living off the fisheries.'"

If the exhausted rivers of Virginia could be replenished, as we doubt not they will be under the operations of the Fish Commissioners, what a wonderful addition will be thus made to its resources. The commissioners go on to state that,—

"In the United States the subject has been entered upon with the energy and zeal characteristic of the people. In many of the states fish commissioners have been organized, hatching houses on a large scale established, and their operations attended with gratifying results. Connecticut which was the first to begin is the first to exhibit good fruit. A few years ago the Connecticut River was so exhausted of shad that not enough could be found in its waters to replenish it. *Now*, after six years of artificial propagation, shad, which formerly cost twenty dollars a hundred, can be bought for three. Nearly as great a revolution has been wrought in the Hudson. The U. S. Government has taken hold of the subject with vigor, and has established a commission, at the head of which is the eminent Prof. Baird, of the Smithsonian Institute.

The commissioners say:

"The distinguished chief of the commission and the eminent scicutists associated with him will not only stock all our streams of a national or interstate character with every variety of the best of fishes adapted to them, but will sound all the depths and shoals of science, and define and fix the status, the genus and species of every fin that swims." We look to the labors of the commission for the most accurate, unmute, extensive and exhaustive account of the nature and varieties of fishes that the world has seen. And we don't not, it will impart additional interest to pisciculture and greatly enlarge its benefits. We have only room to add that the fish commissioners for Virginia have determined to establish hatching houses at each of the four state institutions, viz: the Agricultural and Mechanical College at Blacksburg, the Military Institute at Lexington, the University at Charlottesville, and the Hampton Normal and Agricultural Institute. The two former are already in running order, and it is expected that the other two houses at Charlottesville and Hamptou will be completed during the coming year.

The names of the Virginia Fish Commissioners are A. Moseley, W. B. Robertson, and M. G. Elizey. The act creating the commission was passed March 25, 1875.

COLORED LODGES.

Until the reproach of being a non-reading people is removed from them, it may be safe to say that in proportion to numbers the colored race will sustain more secret societies than all other nationalities combined. Over three hundred such societies were recorded at Norfolk alone as depositors in the old Freedman's Bank.

At the lodges all sorts of secular information is disseminated. There only, the layman finds himself treated with respect as an officer. Public opinion there, is shaped and brought to bear with a power not inferior to that of the church members. Embracing nearly all the best of the race, the societies reach downward to the poorest and lowest, and enforce their influence by the pecuniary evils of expulsion. The subject is for these reasons an interesting one. The lodges are necessary make-shifts or stepping-stones in the progress of this people from darkness to light, and it is encouraging to learn from the best attainable testimony that the tone of lodge opinion on social and moral questions is decidedly in advance of the average private standard. It is easy to see that no member can help receiving from the association the most practical lessons in punctuality and self-respect. And it seems probable that while retaining their hold on the degraded by the beneficiary features, the societies turn on the light of civilization as the unaccustomed eyes are able to bear it, and succeed in exhibiting duty with an effect which may be more durable, as it is more rationally produced, than the excitement resulting from pulpit oratory. The lodges should also have the credit of being liberalizing in their tendencies, inasmuch as Religion with its diverse forms of belief is studiously excluded from the discussions, in deference to the feelings of individual members who represent

gle with each other on common ground. We have also been assured by members that political discussion is not permitted in their meetings.

The beneficiary feature in these associations is perhaps their best claim to respect. It insures a poverty-stricken people against much misery; for with sickness comes relief from the lodge. The Free Masons give whatever is necessary. Other societies allow five dollars per week for the first four weeks; three dollars per week for the second four weeks; afterward two dollars per week, as long wasted cases make their heavy calls. Decent burial is provided at a cost of not less than fifteen dollars to the lodge. Many colored people belong to several lodges and in time of sickness receive relief from all at the same time.

The fees paid by the members are a serious tax on their prosperity,—would pay for many valuable books and papers,—and are only to be defended by the plea that the sick are aided, and that most of the members could not profit by any vehicle of knowledge excepting oral instruction. The admission fees are usually fifteen dollars, though the Free Masons pay twenty-five dollars. The monthly fees are fifty cents. Three months in arrears cause members to be termed "non financials." The amount spent in regalias which each member is compelled to own is from fifteen to twenty dollars apiece. The lodge furnishes regalias to the chief officers at a cost of about one hundred and fifty dollars. There are no salaried officers, excepting the secretaries who receive from six to fifty dollars per year. These expenses, with the hall rents, are said to be the only outlays. One hundred members is called a strong lodge.

From these figures it appears that a member's regalia costs him as much as it costs the lodge to bury him. That, except in strong lodges, about half the money is spent in display and salary and hall rent. And that unless a man is sick for a month during the first year of membership, he will pay out more than he receives.

In view of these results, and of the fact that a good monthly newspaper can be had for less than nine cents per month, and that the forty-one cents per month and admission and regalia fees might be of material aid in buying for each member a home of his own without rent to pay, we can only hope that advancing intelligence will soon enable the colored people to obtain at a much cheaper rate as much of benefit as the secret societies are now able to furnish.

SCHOOL DEBTS.

It is very gratifying to the officers and teachers of the Normal School to find graduates and students, who left the school in debt, making strenuous efforts to save enough from their earnings to repay what has been loaned them. This should always be so, but we are sorry to say that in some cases, students who have been helped by the school, seem to be indifferent about paying what they owe. These debts are emphatically *debts of honor*, and the utmost economy and self denial should be practiced by those owing them, that the school may be paid what is due, and thereby be enabled to aid other deserving students in obtaining an education. The following quotation from a letter just received from a graduate who enclosed the balance due to the school, has the true ring, and we commend it to the attention of all who are in arrears:—

"You have been very patient and very good to me. You have favored me very greatly. You have given me that which is better than fine gold—an education. So here is your money."

We hope that we shall in no instance have occasion to repent of having trusted to the honor of a student to repay his school debt. J. F. B. M.

WHAT SOME OF OUR FRIENDS SAY.

We have not done much trumpeting for the SOUTHERN WORKMAN. We prefer rather to let it speak for itself and win its own way. But such appreciative and encouraging expressions have come to us at the commencement of its new year from to rejoice with us over the measure of success we have gained in a cause that is good.

REV. G. P. TYLER, of Lansingburg, N. Y., writes:—

"I like the SOUTHERN WORKMAN very much. I think it unusually wise in the character of the articles it inserts,—so well adapted to those for whom it is especially designed, and instructive to the general reader. It is far above the average for any class of readers, I think. I send mine to a young colored man and his wife in Charlo te, S. C."

One of "those for whom it is especially designed" writes us:

"You will please continue your paper to my address. I don't feel as if I shall ever get tired of reading the WORKMAN, except I shall become tired of hearing from Hampton, and while there are so many recollections of the past presenting the scenes of my school-days at Hampton, I can't think that I shall soon become willing to drop the medium which has held me in such pleasant and continual communication with the school since my class graduated. I should be glad to send you other subscribers, but this vicinity, like many others, is one in which the colored people do not use all the means of education to the best advantage. Hence, I am compelled to send on my own, and hope soon to find a few subscribers among my best scholars."

REV. H. T. CHEEVER, of Worcester, Mass., says:—

"The paper is an admirable one—little if any short of the beau-ideal of what such a paper should be. The copy my sister has had has done great good. It seems to us that you work in no way more effectively for the colored race than through such a paper as the WORKMAN. And be sure it is appreciated by many more than you are aware of."

We will close these pleasant quotations with a letter from an octogenarian friend who sends us with it an exceedingly interesting account of the celebration of the sixtieth anniversary of his wedding day. We give some of the particulars of this remarkable occasion in another column. It is an honor to have gained the approbation of such ripened judgment:

LOCKPORT, ILL., *November*, 20, 1875.

Mr. Editor:—Your card notifying me that my subscription had expired was received during my absence from home. I owe you an apology for not knowing that my year was up and thank you for the notice. We like the paper and *all things* that work for the elevation of our downtrodden fellow-men, and we wish you and all your co-workers in this noble cause "God speed" and full and entire success.

We have been friends of the colored race the last fifty years and supporters of this special work for the Freedman from its commencement *in our limited way*, and should rejoice to *help* more if we could. The Lord bless and prosper you and the blessed work in which you are engaged.

You may, if you please, send the songs.

Very truly and fraternally yours,

ISAAC PRESTON.

THREE SCORE YEARS OF MARRIED LIFE.

AN INTERESTING OCCASION IN THE HISTORY OF ISAAC PRESTON, ESQ.

At Lockport, Ill., on Monday, Oct. 4th, 1875, there gathered at the residence of Isaac Preston, Esq., an assemblage on such an occasion as probably does not occur once in the history of ten thousand families. The object of the meeting being the sixtieth anniversary of the marriage of Mr. and Mrs. Isaac Preston.

There were present the three remaining children of the aged couple, viz: Mr. J. W. Preston, Ex-President of the Board of Trade of Chicago; Mrs. Dr. C. M. Daniels of Elgin, and Mrs. Isabel Codding of Normal, Ill.; several grandchildren and three great-grandchildren, besides a large number of nephews, nieces, cousins and very old friends.

The first toast, "The Bride and Groom," was responded to by B. F. T. Bourland of Peoria, a son-in-law of Mr. Preston's. Mr. Eben Beach of Chicago, who was at the the table, was the only one present who witnessed the original marriage ceremony in 1815. Mr. Beach was called upon to give some account of it, when he said as he was only five years old at the time he had but an indistinct recollection of that happy event.

Mr. Isaac Preston was called for. He arose evidently under strong emotion, but after a short pause he said:

Mr. Chairman:—You will pardon my weakness, you know it is once a man and twice a child. But I only got up to thank my old and their unalterable friendship for myself and better half who sits here by me, and I will say further that it is a source of great satisfaction to me to see here at these tables all our own living children and so many of our grandchildren and great-grandchildren to join in this *unusual* celebration. Than I see before and around me a noble band of those tried, true, and steadfast friends, men and women who for near the last half century have labored, toiled and suffered, and *triumphed* with me in our united efforts for the promotion of some of the highest interests in connection with our common humanity, and that too when it was worth near the price of a man's life to be known and recognized as a friend and advocate of human freedom. And here again I see some of our present neighbors, their hair whitened with the frost of seventy to eighty winters like "aged hemlocks" standing with us just at the brink of the "river" ready, perhaps, to take the next ferry over. And now, Mr. Chairman and friends, under these circumstances, in view of all that has been said by our honored friends that have previously spoken, you will pardon my weakness and I will only repeat the expression of our sincere and heartfelt thanks for this new and unmistakable proof of your friendship and confidence.

BIOGRAPHICAL SKETCH.

Mr. and Mrs. Preston were both born in 1793; he, in Fairfield, N. J., and she in Granville, N. Y. They were married in Granville, October 4th, 1815, and first settled in Warren county, New York. They removed to Genesee county in 1817, and emigrated to Illinois in 1836.

They are such in full possession of their mental faculties, and take a lively interest in the events of the day, reading one or more of the Chicago dailies, as well as their religious weeklies and magazines regularly, and discussing the social and political subjects of our time with the earnestness of persons in the prime of life. Their physical health is excellent, and it is wonderful to see this activity with which they move about among their friends, and with what ease they undertake a journey which persons many years younger would consider a great task.

THE CHINESE IN AMERICA.

America seems to be the gathering place of all nations. We have Irish Americans, German Americans, French Americans and Africo-Americans among our voters. The German population of some of our cities is said to be greater than that of any city in Germany. While Rome spread her civilization through the countries she invaded, we teach our free institutions to the nations that come peaceably to us to enjoy them. The latest comer is the most nuclent of all, the Chinese; and it differs from all others in coming with no intention to remain, but only in pursuit of wealth or knowledge.

Of these 60,000 Chinese, by far the larger number remaining upon the Pacific slope—25,000 of them in San Francisco alone are employed as miners, laundrymen and house-servants. They bring with them their household gods and heathen worship, and if they die in this country, their bones are sent back to their "Celestial Empire." While many selected young men of the higher classes are sent here by the government for education, the majority of those shipped as laborers are of the lowest orders, degraded and dirty. The American Missionary Association has established a station among them and is doing much to raise them.

A correspondent of the New York *Tribune* sends from San Francisco an interesting account from which we quote:

Each steamer, once a month (an opposition line now makes the arrivals two a month), brings from 500 to 1,500 steerage passengers, all Chinamen, known here as coolies. Nearly all the Chinamen along the coast arrive here under the consignment of six commercial companies. Few of the natives of China, although they have the desire to come, having heard so much of the milk and honey flowing in the streets, have the means to pay their passage. The commercial companies are very rich and control nearly the entire Chinese labor upon the coast. They have their agents in China, and they regulate the emigration. These companies advance the money to pay the passage of the Chinaman, and he is consigned to them. When he arrives, he is taken to the store, the proprietors of which have paid his passage. The company which has paid his passage controls his labor until he has paid his passage money, and a liberal percentage besides. So these companies lure him out wherever they probability is that he pays his passage by his labor two or three times over. These companies are composed wholly of Chinamen, and they are large importers of tea. The Chinamen, when they arrive, are hired out by these companies, some to miners, others to manufacturers and factories, and some to farmers. The Chinaman are better fitted for the working of machinery than for hard manual labor. They learn to manage machinery very quickly, and in all the branches of light manufacture they are more expert then any American or foreigner. They are exceedingly apt in working light machinery. For hard, manual labor they are not equal to the white man, but at light work they are unexcelled. Before the placer miners were practically exhausted, the Chinaman did very well in mining, but now, when they can scarcely make a "grub stake" at that description of mining, they have gone into factories and other pursuits. The examination of the Chinaman upon his arrival is very interesting. The passengers are divided into squads. Squad No. 1 is the first to march from off the steamer to the wharf. Each man brings his baggage—sometimes more than he can carry at one time. They are checked off by a Customs officer as they pass down the gang-plank. Each one places himself behind his baggage. Some have trunks, some packages wrapped in matting or common duck, and some boxes and parcels tied with ropes. Each trunk, box or parcel is opened, so that the whole contents is exposed. The baggage of each is gone through with in a manner that would shame a New York inspector.

CALIFORNIAN DISLIKE TO THE CHINESE.

As to whether the importation of Chinese to the United States should continue there is a division of opinion, but not so far as California is concerned. If the people in San Francisco had their way to-morrow or the day following there would not be a Chinaman within her borders. The people here employ them because they cannot help it. A good female white servant here costs from thirty to fifty dollars a month, and she wants all her afternoons and her Sundays. A good Chinaman who can speak English and is an excellent house-servant may be had at from eighteen to twenty dollars per month. It is said they steal, but that may be said of the Irish and the negroes also. But who ever knew of a Chinaman's getting drunk? Who ever knew of a Chinaman's asking to go out to see his cousins? He is up in the morning, and has nothing to hope for but hard work during the day. He does not ask for cast-off clothing, and he does not expect half a dollar every time he brings a pitcher of ice-water or posts a letter. Six Chinamen can make their meal on thirty-five cents. They eat at this frugal meal pork, rice and tea, and occasionally bread, although they eat little of the latter. Two meals a day, which are all they eat, cost them not more then six y or seventy cents for six persons, or a little over ten cents each. Where is the American, the Irishman, or the negro who can live so cheaply? The Chinaman in this city pays for his quarters, where he cooks his meals and sleeps, from one dollar and fifty cents to five dollars a month. If they can teach us habits of economy, why not allow them to do it? The great trouble with the Chinamen is that they are too economical. Six or eight of them occupy quarters that would be too small for one person. They sleep underground. They have no fresh air, no ventilation. A white man would die in their quarters in a single night. I have known six and eight of them to sleep in a room not six feet square, without a window except a small aperture leading into even a worse place. Their quarters are generally underground. They seem to like it. They will sleep, cook their rotten fish, smoke opium, and eat in the same den. One dog, if he were a decent dog, would die in such a place. They have taken the healthiest and purest portion of San Francisco and peopled it with thousands where there ought to be hundreds. If I had the power I would prescribe a certain area of cubic feet for each individual, white and black, in San Francisco, and I would make a penalty so heavy that Chinemen would tremble at it.

The wealth of California, Oregon, Colorado, and Nevada is in their mines. The more these are developed the richer the country will be. The Chinaman, driven from his close quarters in San Francisco, would fly to the foot hills and the mountains to seek employment in the mines. There would be no trouble in enforcing a cubic ordinance if the city offers were fit for their places. It would be a contemptible confession of weakness to admit that 25,000 docile Chinamen could set a city of 150,000 inhabitants at defiance. The Chinamen are needed on the plains and in the mines. There is plenty of gold and silver to be dug, for thus far the mines are not half developed. If the entire 800,000,000 of Chinamen in Asia were turned loose within the United States there would still be room enough. We have a place for Put, a place for Sambo, and a place for John. Let John come!

THE BIRDS' CHRISTMAS.

In the far-off land of Norway,
Where the winter lingers late,
And long for the singing birds, and flowers,
The little children wait;

When at last the summer ripens,
And the harvest is gathered in,
And food for the bleak, drear days to come
The toiling people win,—

Through all the land the children
In the golden fields remain,
Till their busy little hands have gleaned
A generous sheaf of grain;

All the stalks by the reapers forgotten
They glean to the very least,
To save till the cold December,
For the sparrows' Christmas feast.

And then through the frost-locked country
There happens a wonderful thing:
The sparrows flock north, south, east, west,
For the children's offering.

Of a sudden, the day before Christmas,
The twittering crowds arrive,
And the bitter, wintry air at once
With their chirping is all alive.

They perch upon roof and gable,
On porch and fence and tree,
They flutter about the windows
And peer in curiously.

And meet the eyes of the children,
Who eagerly look out,
With cheeks that bloom like roses red,
And greet them with welcoming shout.

On the joyous Christmas morning,
In front of every door
A tall pole, crowned with clustering grain,
Is set the birds before.

And which are the happiest, truly
It would be hard to tell;
The sparrows who share in the Christmas cheer
Or the children who love them well!

How sweet that they should remember,
With faith so full and sure,
That the children's bounty awaited them
The whole wide country o'er!

When this pretty story was told me,
By one who had helped to rear
The rustling grain for the merry birds
In Norway, many a year,

I thought that our little children
Would like to know it too,
It seems to me so beautiful,
So blessed a thing to do.

To make God's innocent creatures see
In every child a friend,
And on our faithful kindness
So fearlessly depend.

—*Celia Thaxter in Independent.*

THRIFT.

There is perhaps no temptation so commonly fatal to the worldly interests of dwellers in warm climates as the temptation to become thriftless, to neglect and postpone all labor which is not inevitable, to live from hand to mouth without that care of the future which is essential to success, making present ease the chief, if not the only consideration, and sacrificing for its sake even the most evident advantages. There is no doubt that to a certain extent climate is responsible for this, for the warmth of the air and the frequent fertility of the soil make it possible to live with very little exertion, and human nature is so constituted that in a majority of instances necessity is the only spur which will surely force men to persistent labor. But granting this and giving it due weight in explanation of the undeniable lack of energy among the mass of our Southern population, there still remains much individual responsibility, a burden belonging to each man and woman which cannot honestly be shifted upon climate or soil. It is perhaps a delicate question to put directly, but it can hardly be evaded, and a fair answer to it may be productive of much good, so that we feel that we are showing no discourtesy to our readers when we ask point blank; "Is the want of order and organized, persistent industry, so noticeable in our Southern population, a necessity?" Is it necessary that the work of one hour should be spread over two or three; that there should be no fixed times for, or regular divisions of labor; nothing done today which can be put off till to-morrow; in short, no exertion made for the sake and the love of neatness and order? This may seem an exaggerated characterization of the thriftlessness of which we speak, but in truth it is no more than a fair statement of the results of that indifference to all motives, except the desire for present ease, which leads men and women to refuse to make the continuous, intelligent exertion which constitutes industry and thrift. To put the matter in the plainest light, we ask our readers to look for themselves at one of the tumble-down cabins, which are only too common in our villages, surrounded by broken fences, falling outhouses, dirty yard, neglected garden, and with an interior no whit better than is promised by the first view, and then to seek for the home of some man whose work is regulated, who believes in and obeys Heaven's first law of order, whose house, inside and out, is neat, clean, well-cared for. The contrast between these two dwellings exhibit clearly enough the width of the gulf which lies between thrift and thriftlessness, and the preponderance of the latter in most of our villages is a bitter but undeniable fact. That it need not be so we are all convinced; that it is so is a disgrace in which we must all share, until the motives offered by ambition, pride and duty, become sufficiently strong to induce us to overcome the languor which is our only excuse, and the habit of indifference which weighs so heavily upon us.

THE BIRDS' CHRISTMAS.

HOUSE AND HOME.

The corner stone of all civilization is the Family, the existence of families include the existence of homes, and a home pre-supposes a house, so that we are swiftly and easily led to comprehend the importance to the human race, or at least to all civilized members of it, of the houses which shelter them, and which, furthermore, supply so large a share of the comforts, the charms, the sweet and powerful influences of Home.

The effect of well-built, convenient, attractive houses is hardly to be overrated, they are so supremely civilizing that men and women can hardly fail to be made, in one way or another, the better for living in them; they seem to offer a premium upon neatness and taste, and are a constant stimulant to the desire for comfort and beauty which is common to all people above the level of barbarians. No young man at the outset of his life can have a safer or wiser ambition than that which he gains from his desire to become a house holder; no young woman can go far wrong who believes that to become a housekeeper in the true meaning of the term, is a good and beautiful thing, and neither of these positions are, as a general thing, to be lightly won or easily kept. A man who has only his own labor to depend upon must make up his mind to much hard work and some self-sacrifice before he attains to the undivided ownership of a suitable and comfortable house; and a woman, who in her childhood and youth has known little or nothing of the details of housework, needs to lay up a stock of courage and perseverance when she promises herself to become a true housekeeper.

But both man and woman find themselves amply repaid for all their labor and sacrifice when, the goal being won, the house and home are theirs and they can rest, as did the wise men of old under the safe and beautiful shelter of their own vine and figtree.

Now, taking for granted the desire and resolution to make homes for yourselves which I believe to exist among most of you to whom these chapters are addressed, there follow at once the practical questions: first, "What is the safest and quickest way of becoming the owner of a house, open to a man who works for his daily bread?" and second, "What is the best and most convenient plan for building a suitable house on limited means?"

The answer to the first question will vary to a certain extent with circumstances, but in the main will remain the same, and to show that the principle upon which it is based has already been successfully demonstrated, I quote from an editorial in the SOUTHERN WORKMAN for October, 1875.

"Commencing in April, 1871, a gentleman resident in the South, built and sold to negroes forty-nine houses, besides selling to them sixteen vacant lots. Only three of the houses were paid for in cash. Twenty-four of the remaining houses have been paid for in full, chiefly in monthly instalments. The other twenty-two were sold for $10,756, of which $5,650 has been paid. No case has yet occurred or is likely to occur, in which it has been or will be necessary to turn out a purchaser for default. First payments of from one-tenth to one-fifth have always been insisted on, partly as a means of sorting out the better class, and partly because having paid their fifty or one hundred dollars, they would make great efforts rather than lose it."

The cost of these houses, built as above described, was, as the figures show, about five hundred dollars apiece, and every one of the forty-nine purchasers has found it in his power to pay from fifty to one hundred dollars (or more) down at once, and to continue monthly payments of from five to ten dollars.

The security of the gentleman who thus offers his experience lay in the fact that he withheld the deed of house and lot until the whole price was paid, giving the purchaser a contract to give him the deed when the last payment should be made, and he made his profit, which was very small, by buying a large tract of land and building by wholesale. The interest was included in the instalments, and this served often to hasten payments, the whole arrangement being, in short, exactly similar in its results to a mortgage.

A man buying a single lot and building a single house, could hardly, of course, do it on such advantageous terms as the above; but the difference would not be very great, and in a neighborhood where a number of steady, industrious men were willing to unite, land could be bought and houses put up at the cheapest possible rates, the necessary money being borrowed from a bank or an individual, upon mortgages on each house and lot. In this case the mortgage and the interest thereon would be paid off by instalments exactly as the monthly payments were made to the gentleman from whom I have quoted, and the results in each case would be the same.

The fact that forty-nine men have been found in any locality who could in this manner purchase houses for themselves (and I ask you again to notice that there has not been a single defaulter) establishes a fair precedent, as the circumstances in this instance were not specially favorable and the successful purchasers were simply working men of ordinary honesty and perseverance. Any sober, industrious man with a thrifty wife who is willing to do her share of the work, can, if he is getting average wages, pay in less than three years for a house and lot which will provide for him and his family a comfortable home for a lifetime, and he can do it with very little more exertion than would be required to pay the rent of an inferior house for the same length of time.

The advantages of owning a house in distinction to hiring one, are so great as to need only the briefest mention, and most of you must already have learned that, for many reasons, hired houses make very uncertain and unsatisfactory homes. There is no better investment for a certain proportion of a man's capital than a house and lot, and the earlier in life he makes the investment, the more profitable it will be, not only as a direct saving of money, but also and principally in a higher sense. In the first place, he saves for himself the profit which in paying rent he puts in another man's pocket; he avoids the uncertainty which must always accompany the occupation of another man's house, and the expense, discomfort and loss caused by frequent removals from one place to another; and he secures all the pecuniary advantage which must accrue to any working man who becomes known as a steady, industrious and permanent resident of any one locality.

But perhaps his greatest gain is that which comes secondarily, in the moral stimulus which he and his family receive from living in a house which is their own property, wherein no one has a right but themselves, which they can improve and beautify until it becomes to them as their home, the pleasantest and most attractive spot on earth. When a man and woman actually own the house which is their home, they find themselves, as a rule, quickly filled with an honorable ambition to make house and garden as neat, comfortable and pretty as possible. They take pride and pleasure in working for the improvement of that which is their own, and receive constant gratification from results achieved by their own labor and thrift. They have provided for themselves a tangible object for honest ambition; they have something to work for and be interested in, and have thus secured a strong safeguard against the temptations to idleness, unsteadiness and extravagance which so constantly beset humanity and are so frequent a cause of ruin.

Powerful as all these influences are upon parents, they are, if possible, still more powerful in their effects upon children, to whom the importance of a home with all its strong and sweet associations, its various and lasting ties, is incalculable. There is almost necessarily a certain training, a certain formation of thought and habit received from living in a permanent, orderly and peaceful home which nothing else supplies, and this in itself should be a sufficient reason for parents to do their utmost to become possessors of that which is the first essential of a home, namely: a comfortable, suitable house. That this is the foundation of family life is indisputable, and no one who looks at the matter fairly can fail to be convinced that the wisest thing a working man with a family can do, is to secure, as early in life as possible, a house, which will not only be his house as long as he lives, but will also form a provision for his wife and children in case of his death.

The answer to the first question, "As to how a working man can best and most quickly become the owner of a house," seems to be very simple, and if we can trust the experience of others, is very satisfactory: if he has not ac-

cumulated sufficient money of his own for the purpose, he must buy and build, either alone or in company with others, with money borrowed at a fair rate of interest, giving as security a mortgage upon his house, and paying off such mortgage as rapidly as possible. In no way can a man incur smaller risk, and all that is required of him as essential to success is average industry and economy, so that no able bodied man who is blessed with a helpful wife, need fear to undertake the purchase in this manner of a homestead, which, under ordinary conditions, is certain to pay him heavy interest upon the money invested.

VIEW OF CONSTANTINOPLE.

The beautiful capital of Turkey is now an object of special interest on account of the present state of affairs in that country; the insurrection of its long oppressed western provinces, and the probability that the three great Powers of continental Europe, Russia, Austria, and Germany, will interfere and, wresting his abused power from the Sultan, divide the Ottoman Empire between them. Thus the ancient city of Constantine, capital of the Eastern Roman Empire, will be restored to Christian rule, after having been for four hundred years under the power of the Moslem.

Mr. Henry Day, who has written an interesting book under the title of "A Lawyer Abroad," gives a very graphic description of Constantinople and its aspect from the sea. His sketch, and the fine picture of the scene for which we are indebted to the Foreign Missionary Society, illustrate each other, and are almost as good as seeing with our own eyes. He says:

"We approached Constantinople from the Sea of Marmora just before sunrise, and came abreast the city as the sun was gilding her lofty minarets and domes, shining with dazzling brightness upon a thousand windows. Standing on the deck of our ship, as she came up proudly from the sea around the Point Seraglio, nothing could be more grand than the picture before us. At our left rises Stamboul, on a triangle of land flanked by the Marmora and Golden Horn on two sides, with the green Seraglio Point for its apex, its houses rising by easy ascent from the water on each side, rank above rank, to a gentle eminence surmounted by a hundred domes and minarets; while towering above them all, and crowning the picture, rises the magnificent dome of St Sophia, surrounded by gilded minarets stretching almost into the blue sky.

VIEW OF CONSTANTINOPLE.

"Before us, and across the Golden Horn from Stamboul, stands Pera, another city covering the steep sides and the lofty eminence of another hill. On the Asiatic side lies Scutari, embosomed in green trees; and still further to the east, in lofty grandeur, rise the purple sides of Mount Olympus. To the north, winding up among the wooded hills, is the Bosphorus; while to the west, between Stamboul and Pera, lies the Golden Horn, stretching up to the charming valley of the 'Sweet Water.' All the elements of natural grandeur and of the handiwork of man are before you in one picture.

"Here, in this magnificent harbor, surrounded by cities, float the most stately of ships,—the flags of all nations. The waters are replete with craft of every kind, from the ocean steamer to the frail kiak. Here we see the mountains, the rivers, the cities, all in one glorious setting, such as the world has never seen before.

"But the charm is dispelled the moment you set foot within the city. The streets are narrow, filled with dogs, badly paved, tortuous, often filthy; the buildings generally very common, old, and built of wood, excepting the mosques, which, with the lofty domes and minarets, are externally very magnificent and imposing. Internally, none of them are of any interest, excepting St. Sophia. To see this magnificent structure would repay one for a voyage to Constantinople. Its foundations were laid by Constantine. It is the most perfect structure of its age and size in the world. It covers about two acres of ground, and is nearly square, with a magnificent dome over the center, one hundred and seven feet in diameter and one hundred and eighty feet high, and at the very top is written this verse from the Koran, in golden Arabic letters: 'God is the light of the heavens and the earth.'

"There is one other building in Constantinople which we would not forget to mention. It is the Bible House of the American Bible Society. Modest and unpretending externally, it is the representative of that mighty spiritual power which, without observation, is working the regeneration of the world. While St. Sophia, the representative of the more formal, imposing, and material Christianity of the fourth and fifth centuries, bravely defended by the valor of the Crusaders, is now in the hands of the Moslem, devoted to the worship of the false prophet, this more spiritual Christianity, emanating from the Bible House without waving banner or shining steel, is carrying her peaceful conquests into the very heart of the Ottoman empire."

The American Board of Foreign Missions is doing a great work in Constantinople for the christianizing and civilizing of Turkey. Robert College, under the charge of the venerable Dr. Hamlin, the Theological Seminary, the Home School for girls, formed and conducted by the ladies of the mission and exerting a powerful influence in a sphere to which men would not even be admitted,—all these are mighty levers to raise the nation into the light of truth and freedom.

The Board also publishes three weekly papers in the different languages of Turkey, and four illustrated monthlies for children, the first papers ever printed for children in Turkey, where, indeed, no newspapers of any kind were known forty years ago.

JOHN B. GOUGH ON "BLUNDERS,"

THE BEST OF HIS LECTURES.

This lecture is not intended merely for amusement but for use. It will be useful to parents, children, guardians, and especially to young people. "By the term blunders, I embrace a wide range of meaning—errors, mistakes, bulls, and the like; an error being a departure or deviation from that which is right; a mistake the taking of one thing for another; a blunder a mistake or error of a corresponding kind and generally considered blamable. It usually exposes the person to ridicule, while a bull is simply a verbal blunder containing a laughable incongruity of ideas. One source of blunders is absent-mindedness of the business which is immediately in hand. The mechanic spoils his work by thinking of something else. The cooper puts his son inside a barrel to hold up the head, to find when he has finished that the boy is headed into the barrel with no way of escape but through the bunghole—a foolish blunder. A dentist extracts the wrong tooth—a stupid blunder. A physician prescribes the wrong medicine, or a druggist puts up the wrong prescription—a criminal blunder.

There are also many blunders in orthography and literature; but let us turn our attention to blunders more serious in results and effects upon society. Last year the people of the United States paid to 160,000 retail liquor-dealers $800,000,000, besides $400,000,000 for the crime and poverty and huge machinery required to take care of the results of this traffic. I do not believe in the warfare of labor against capital or of capital against labor; but, with all my heart, might, mind, strength and soul, I advocate a universal unanimous and persistent strike against this liquor business. Strike hard and strike home, warring not with men, but with the demoralizing traffic. Strike at it at home and at party receptions. Strike at the cut-glass of the moderate drinker and rum-jug of the poor man; at the decanters and whisky-flasks; strike in the name of justice, purity and humanity; strike for the love of God and in behalf of the drunkards of the state; strike against it at the ballot-box; strike against it in your churches; strike till you die, and by God's help we shall do something to repair the most awful national blunder of the nineteenth century. [Applause.]

Young men, middle-aged men, old men and women, take a glance back the way you have come. Can you not recall blunders for which you are paying the penalty? Have you never committed blunders that have caused you sleepless nights, sad waking hours, bitter regrets and the pangs of remorse? Will you not repair them? You can if you will. The younger son, when he demanded of his father his portion, made a blunder. When he spent his substance in riotous living he made a blunder. When, continuing in his erratic course he spent all, he made a blunder. But when he determined to return to his father's house he made no blunder. That spirit sees the nature of all temptations and rectifies all blunders. There is no darkness or desolation it cannot brighten, there is no gloom it cannot dispel, and its hands are the keys of the kingdom of heaven.

Take Care of the Cents, and the Dollars will take care of themselves.

Rich Uncle Tom, says the Boston *Cultivator*, offered his baby niece a copper, which baby's mother threw on the floor in a pet, taking it almost as an insult. Uncle Tom only laughed, and quietly picking up the cent, started for home. On his way he exchanged the copper for a nice new-laid egg. He took the egg home and put it under a sitting hen, and in due time out popped a chicken. The chicken grew to be a hen, and the hen proved as great a "layer" as her mother. Some of the eggs Uncle Tom saved to pay him for his trouble and his corn, and sold the rest, or turned them into chickens for the benefit of Aunt Sarah's baby, who kept growing along, first to girl, and then to womanhood, and was still as pretty as ever.

At last Uncle Tom sold some of the hens for a lamb. The lamb became a sheep, and the mother of many sheep, until the sheep were sold for a cow. So, year by year, while Aunt Sarah's baby grew older and prettier, her property grew larger and more valuable, until, on her wedding day, Uncle Tom took home to her in a line, like the procession going into the ark, first a flock of hens, then a drove of sheep, and following after, a herd of cows,—a handsome dowry, and only the rightful income from her first copper.

ONLY A FLOWER TO GIVE.

"Mother," asked little Phœbe Cary, "have you nothing I can carry to poor Aunt Mollie?"

Phœbe's mother was poor, and her cupboard was empty that morning.

"I wish I had, Phœbe," said she, "Can you think of anything?"

Phœbe thought a moment, and then said, "I have only a flower. I will take her a sweet-pea."

Now Phœbe had a sweet-pea, which she had planted under her window, and as it grew and flowered, both mother and daughter enjoyed it. Phœbe picked a fine blossom, and ran down the lane to poor Aunt Molly's cottage. This was a poor old sick woman, who for a whole year had lain on her bed suffering great pain.

In the afternoon a lady called to see Aunt Molly and noticed the sweet-pea in a cracked tumbler near the poor woman's bed.

"That pretty posy," said Aunt Molly, looking up with a grateful smile, "was brought to me this morning by a little girl, who said it was all she had to bring. I am sure it's worth a great deal to know I'm thought of, and as I look at it, it brings up the image of green fields and the posies I used to pick when I was young; yes, and it makes me think what a wonderful God we have! If this little flower is not beneath his making and his care, he won't overlook a poor creature like me."

Tears came into the lady's eyes. And what did she think? She thought, "If you only have a flower to give, give that, and remember, too, the Saviour's words, that even a cup of cold water, given in a Christian spirit, shall not lose its reward."

—*Child's World.*

AFRICA

The expedition under Mr. Stanley, for whose advance into Africa we promised to keep our readers informed, was, according to letters dated *May* 15th, occupied in exploring the great lake of the Victoria Nyanza, having launched upon its waters the first English boat which has ever been sailed upon an African lake. Mr. Stanley reports the lake to contain numerous islands, while the coast is of a very irregular character, sometimes stretching away into vast plains and again rising into rocky and abrupt cliffs. Great care was of course necessary in their intercourse with the natives, but they had been successful in obtaining the requisite supplies of provisions and had not been seriously menaced, though the boat and Mr. Stanley himself were objects of intense interest and no little awe to the savages inhabiting the shores of the lake, to whom white men and sails were utterly unknown.

Hippopotami abounded and were a frequent source of danger, as one of them could easily upset the boat and drown or mutilate its crew.

The King of Nyanza assisted the expedition by lending Mr. Stanley a number of canoes and some five hundred men to accompany him to the Katonga River, but owing to some of the impediments so frequent in African travel Mr. Stanley was obliged to go on with only two canoes, leaving the rest of his party one moon on the lake shore. He was absent fifty-eight days, and in that time surveyed about 1000 miles of the lake coast, but returned to find another of his white companions dead. That this was a great blow to him we can imagine, and he closes his letter with a few lines which we quote entire: "Thus two out of four white men are dead. I wonder who next? Death cries, Who next? and perhaps our several friends are asking, Who next? No matter who it is. We could not better ourselves by attempting to fly from the fatal land, for between us and the sea are seven hundred miles of as sickly a country as any in Africa. The prospect is fairer in front though there are some 3,000 miles more to march. We have new and wonderful lands before us, whose wonders and mysteries shall be a medicine which shall make us laugh at fever and death." Mr. Stanley's proposed course is first to the north, but he hopes to fully explore all the great interior lakes, and to settle the vexed question of their relationship to each other, in which attempt he has the hearty sympathy and encouragement of the civilized world.

We print extracts from a very remarkable and interesting address delivered on the 23d of July last, at Randolph Macon College. Its author, John Hampden Chamberlayne, Esq., is the editor of the *Norfolk Virginian*, a representative paper of Virginian Conservatism. When such men as he talk common sense about Virginia, it cannot possibly be rejected on the ground that it is imported:

Till 1815 Virginia led all the states in power and in influence; from '15 to '25 she stood still, and then for long years she grew weak from day to day.

That whole period from the debate at the Burgesses House to the decision at Yorktown, from the provincial declaration of the Apollo Hall in Raleigh Tavern to the treaty of '83, was instinct with public spirit. In Washington stripping his own Virginia of means and men to seek the common good at Boston and New York. In Henry, straining every nerve as Virginia's Governor, to hold up the hands of Washington. In Nelson, devoting his house to the guns of his countrymen, and giving his estate to the public purse; in that Roman matron who bade her sons come back no more to their Valley homes if on their heels Tarleton should ride; in Henry Lee of the Legion, never losing trust in the great plan and the greater genius of his commander, and with his little troop covering the long, long retreat from middle Georgia to Dan river, to become, at length, part of that great leaguer to which gathered at Yorktown, Lafayette from the Valley, Washington from Long Island, and Rochambeau from the Windward Isles.

These things are an oft told tale, and when war was done and peace came with tasks yet harder, when destruction ended and construction began, when the pullers down were called to be builders up, that same public lived to ends yet greater and on a scale far wider. Then Virginia created the Union despite the loss to her which prophetic Henry saw, then Washington gave eight years of his mature wisdom to his country, and then, likewise, with self-denial almost above the human, laid down a power well nigh absolute, and wisely, as few of the sons of men are wise, warned his countrymen to limit his great office, whether worthily held by statesman or patriot, or, as might be, in other days, made the prize of intrigue or the spoil of some lucky captain. Then Virginia ceded the boundless Northwest, and then she consented to make herself in the Senate small as Rhode Island. Then at one blow she abolished entail, primogeniture and the privileged church. Then Madison taught all the country through the Federalist, Marshall laid the foundations of our jurisprudence, and John Taylor, of Caroline, raised the empirics of the farm to the science of agriculture. On every hand, from 1775 to 1835, we find Virginia full of vigor at home, respected and powerful abroad, because full of public spirit.

With the year 1835 the heroic period of Virginia may be said to end, and a decadence followed which we are apt enough to forget, but which to study is our highest duty, since the lessons it teaches are needful—yesterday, to-day and to-morrow—if our decadence is to be followed by steady and long-continued progress in strength and power.

The decline of Virginia's power is generally acknowledged, but you will often hear men say it was comparative only and not positive, and that whatever its extent it was due to the democratic element of our institutions and sprang from universal suffrage, for, be it known to you, there still lives among us a class of minds to which Democracy is as the red flag to the bull, and whose religion it is to pronounce the ballot-box anathema maranatha.

Now, I am here to preach no politics, but, as observers of affairs and students of history we can see this view is false. The decadence could not be caused by universal suffrage, because the suffrage was not extended till long after the decay was plain. It could not be caused by democracy, because no such effect followed the establishment of extreme democracy and the widest limit of suffrage, both before in New England, and afterward in the new commonwealth of the West.

Leaving these narrow notions, all too straight to fit the facts, let us see when and why this decadence of Virginia took place.

Neither Democracy, then, nor native sloth is the cause we seek, and, leaving the negative for the positive method, I should be false to you as well as to myself if I should shrink from declaring what seems to me the root of the evil.

It is to be found in the repression of free thought and free inquiry, which the institution of slavery thought necessary for its protection.

The leaders in the heroic period were to a man enemies to slavery and incredulous both of its expediency and its rightfulness, and it was they who offered the great free ordinance for the Northwest in 1784. Had natural causes met no hindrance, slavery would doubtless have been gradually abandoned. But the anwise war made on it at the North, begun by Aaron Burr as early as 1800, avowed in New England in 1810, and pushed by John Quincy Adams with ever-increasing bitterness, forced Virginians to identify its protection with there right of self-government. "A poor thing," we cried, with Touchstone, "but mine own," and shall I not do what I will with mine own? The abortive but frightful attempt of the negro Gabriel in 1800, and the Southampton insurrection in 1832, brought terror in to confuse reason, and turned prejudice to passion. Last came the demand for cotton, raising its price from nine cents in 1830 to seventeen cents in 1831, and the corresponding rise in the value of the negro, and a triple band tied us to slavery: first, the just and beneficent theory of State Rights and local self-government; second, the pride of race; and third, the greed of the pocket.

Determined thus to maintain slavery, we had next to justify it. This we did by clinging to one interpretation of the Bible; by triumphantly citing the example of the patriarchs, and by finding all doctrine in the famous case of Onesimus. On such texts as "servants obey your masters," a whole dogmatic theology grew up, fit rival for narrowness and intolerance to that which from such words as, "The powers that be are ordained of God," taught the Jacobites of England the doctrine of Passive Obedience, or that, its antithesis, which the Independents and the fierce Fifth Monarchists invoked when they pulled down the prelates as "troublers of Israel," and smote off Charles' head with the "Sword of the Lord and of Gideon."

Slavery once bound up with the Bible and with fixed belief, inquiry into the one and doubt of the other became a crime; all change was looked on as danger, and every novelty distrusted. Where, as in England and the states north of us, men were free to discuss all things, there they had no slavery. Hence, with us, society sternly repressed individual thought on this institution, and on all the facts and fancies which we believed to support it. The next step was to glorify it, and apology became eulogy. To this, too, a literature was devoted. To belief in this eulogy or to acquiescence in it society gave its smiles; to all question of it, gave frowns, suspicion, and ostracism. And, too, it was glorified here only, by us alone, it followed that the rest of the world and the opinion of other men we ceased first to value, and then to regard at all, and turned to the contemplation solely of ourselves and our virtues.

Now, you cannot limit the mind without dwarfing it, nor shut off all light without weakening the eye; so, when we left our faculties unused we began to lose them, and digging for ourselves a mammoth cave of darkness, we went near to be blind as its fish.

The facts of our science we found in books instead of nature; not a discoverer nor an investigator was left among us; the very spirit of inquiry was gone, and you might hear, as I have heard, an educated country gentlemen gravely maintain that the bird called rail or sora every fall turns into a frog, and spends its winters buried in the mud. Fighting-cocks, hunting-dogs and race-horses we still bred in purity and excellence, but so little was known of the laws of species and the methods of breeding, that for all other domestic animals accidental mixture was the rule and degeneracy the fruit.

Our people poured out in ceaseless streams to create or to enrich a half-score of states. In the forty years from 1820 to 1860 our population increased only fifty per cent., though living was cheap, early marriage universal, and our rate of production above the average. So late as 1830 we had but 35,000 residents of foreign birth, and Richmond, out of fifty chief cities of the country, had the smallest foreign-born population. Our comparative numbers had made us in 1800 and 1812 the first State of the Union; in '20 we were second; in '30 we were third; in '40 fourth, and in 1850 fifth; so severe was the drain of emigration and so strong the wall we built against immigration, whether of men or of ideas. In wealth, too, the same course was seen, for there is reason to believe that our slave-owning agricultural class was bankrupt in 1840, and was saved from utter ruin only by the steady rise in the demand for cotton and the steady increase in the value of slave property—an increase vaguely estimated at four per cent. per annum on the stock of slaves.

Here in Virginia, of labor-saving invention we wanted nothing, for of the labor of slaves we of the governing class had enough, and naturally we had no wish to relieve of drudgery the white man not owning slaves, nor to make him rival the slave in production nor ourselves in leisure.

Here in Virginia, there was no longer room for energy, for we had determined we had all things in having slavery; there was no room for inquiring minds, for we had answered Plato's question. He asked, "What is Truth?" We said, "It is our peculiar institution."

This state of things could not last in the modern world and among our race, and in the decade that began with 1830 signs of reaction appeared.

Before this reaction, however, was more than fairly begun, causes wider than those which governed Virginia's special history, precipitated the war. That it found us unready, you know. But war is the simplest of the arts, and, as all the world knows, we proved such masters of it as that we maintained for four years our lopsided and incomplete civilization against great odds, and upheld our obsolete idea against the thought, the science, and the art of the world.

We failed, of course; but in the failure awoke that Public Spirit which, like the insensible heat of vagrant gases, had lain hidden and latent, but was ready to blaze out when pressure came to make solid their mass and visible its force. Of the war and of what followed it—of its efforts and sacrifice, and of the endurance, the hope, and the common purpose with which we adjusted and must still adjust our society to its new environment—I need not speak, for it is known to you all.

In publishing this lecture the Editor remarks:

Whether we agree with his conclusions or not, we cannot shut our eyes to the facts he presents, and they do not, by any means, flatter us. It is high time that we cease to waste breath over the "glory of the past," and to address ourselves to the urgent demands of the *present*. We have been quite long enough a mutual admiration society; we must realize that we, *even we*, have faults, and some very grievous ones.

A very graceful Centennial gift to the United States has been planned by some distinguished Frenchmen to commemorate the sympathy France gave us in our struggles for freedom a hundred years ago, and cement the present friendship between the nations. The French people are so heartily and universally entering into the spirit of the plan and contributing to the subscription lists, that it will be a truly national gift. It is to consist of a colossal statue of Liberty to be erected on a pedestal on Bedloe's Island, in New York harbor. The statue is to be large enough to serve as a light house, the torch to be held in the hand of the figure which will thus represent "Liberty lighting up the world." An eminent French sculptor will model the statue and it will be no doubt a fitting memorial of noble deeds, and worthy of the two great nations.

THE CENTENNIAL BUILDINGS.

An *Exchange* says: We doubt if a full conception of this gigantic affair entered a single mind of those who were looking on. We confess that we were not near equal to the occasion. The proportions of machinery hall alone—one of the smallest of the buildings—was hardly appreciated; because everything around it was on such a grand scale that it didn't look so large after all. But within this building every living soul in Herrieburg, Carlisle, and Mechanicsburg could be supplied with a comfortable seat, and room for as many more. Every person in Philadelphia could be accommodated with standing room in it at one end the same time, and there would be room enough left for the people of another good-sized city. And this building is not near as large as the mammoth building just east of it, known as the "main building." In this building every living soul in the great State of Pennsylvania could be supplied with standing room, and leave a good-sized corner for the people of another state. Then a person can walk a hundred miles, in machinery hall, without going over the same spot twice. In the main building, he could walk a hundred and fifty miles. Taking all the buildings, a visitor to the exposition can walk over five hundred miles, and not go over any one place twice in the whole distance. So the person who goes to the exposition, expecting to "do" the whole thing in one day, will be wofully disappointed. He couldn't do it traveling at railroad speed.

It is believed that over 100,000 people will be present at the exposition, from Europe alone. Millions of Americans will be there next year. It is safe to say—nothing otherwise occuring—that the exposition next year will be visited by six millions of people, and probably ten millions.

THE CENTENNIAL CALENDAR.

The anniversaries to remember in the Centenial year are,—

March 17th. Evacuation of Boston by the British.
June 28th. Repulse of the British attack on Fort Moultrie; The first victory over the "Mistress of the Seas."
July 4th. Declaration of Independence.
Aug. 27th. Battle of Long Island, and consequent retreat across New Jersey.
Dec. 25th. Washington crossing the Delaware, a brilliant victory at Trenton.

NEWS OF THE MOUTH.

The Crops.—The November and December reports to the department of agriculture indicate that the corn crop of 1875 was one of the largest ever grown, probably equaling the very large crops of 1870 and '73. It is at least a fourth greater than the crop of 1874, and about a third larger than the crop of 1869, reported in the last census. Every section of the Union reports some increase. The condition of the potato crop is also extraordinary in both product and quality. The total yield is fully one-fourth greater than last year. The hay crop in New England, except Maine, and the Middle States is reported large and good quality, compared with last year. Maine reports an advance of ten per cent., but in other states of that section, also Virginia and West Virginia, there is an average falling off of about thirteen per cent., the principle cause being an early drought. The tobacco crop shows an increase of over seventy-five per cent. as compared with last year, when a partial failure was experienced. All the large tobacco states show a marked increase in production, especially Tennessee and Kentucky. The New England crop has increased about ten per cent., in quantity. The year has been mostly one of disaster to fruit growers, though some parts of the country have enjoyed a total or partial exemption from this injury. The returns indicate that the entire buckwheat product equals that of last year. An extraordinary increase in the sorghum crop over last year is indicated in the Southern States and in the Mississippi valley.

Another terrible ocean disaster occured on the 9th of December, the "North German" steamer *Deutschland*, from Bremen to New York, was driven on the sands and wrecked—seventy-lives lost.

The Colored M. E. Church of America has now four bishops, and a membership of 300,000 in the Southern and Western States.—*Golden Rule.*

There are a million of colored Baptists in Georgia.—*Golden Rule.*

Our American Centennial exhibition is already a great success. In spite of the succession of wet sheets thrown over the enterprise in its infancy, by the refusal of congress to adopt it at once as a National affair, then by the consequent alarm and withdrawal of some of the foriegn exhibitors, and chilliest of all, the apparent indifference of the American public, the Centennial commission has gone straight ahead with the vast preparations, in full faith that all would be required, and it has won as it deserved success in all directions —Russia and Italy and the other frightened sheep have come trotting back with all their trains of merchandise and art behind them. The American public has shown that it was only gathering itself for a spring—and finally the commission has achieved its greatest triumph and at one stroke captured the American Government bodily and conveyed it to Philadelphia to look at the large buildings and go home and vote a million and a half to finish them. As the *Tribune* puts it, "The President, the Cabinet, the Supreme Court, and both Houses of Congress left the Capitol in a body for the first time in the history of the Government and came to give their aid and countenance to the undertaking." They came, they saw and were conquered. The appropriation is a foregone conclusion, and one which the nation will approve.

The President's message opens, appropriately in this Centennial year of the Republic, with a brief review of the progress it has made in the last hundred years from a population of 3,000,000 to one of 40,000,000; from a simply agricultural people to a country noted for varied manufactures and commerce; our liberties have been preserved, the bondsmen freed, our thirteen states have become thirty-eight states and eight Territories. The cotton gin, the steamship, the telegraph, sewing machines, and many others are all American investions. The development of our mines has affected the business of the world. We have new the respect if not the friendship of all civilized nations.

Our foreign relations are stated to be mostly satisfactory and friendly, and the President is happy to announce the passage of an act by the Government of Portugal to abolish slavery in her colonies, and expresses the opinion that the United States ought to provide by suitable legislation that no citizen of the United States shall hold slaves as property in any other country or be interested therein. A reciprocity treaty has been concluded with Hawaii and waits the ratification of Congress. Our relations with Spain are considered at length and especially in regard to the Cubsn question. The President concludes that although the conflict in Cuba is disastrous to our commerce and conducted in violation of the laws of civilized warfare, the revolutionists have not established a right to recognition by foreign powers, having failed to maintain any government of their own with which intercourse may be had. He thinks, however, that he may send a special message to Congress during its present session recommending some plan of intervention. Negotiations pending with Spain in reference to proper protection of our citizens he hopes may be satisfactorily settled as other claims have been.

Honorable mention is made of the Centennial exhibition and its management, and strong recommendation of such legislation and appropriations as will ensure its success.

At the close of his Message the President sums up as follows the points which he regards as most needing legislation:

First, that the states shall be required to provide a good common school education for every child within their limits. Second, that no sectarian tenets shall ever be taught in any school supported in whole or in part by the state, nation, or by any tax levied on any community; and that ability to read and write shall be made a condition of the right to vote for all becoming voters after the year 1890.

Third, Declare church and state forever separate, and all church property taxable,

Fourth, Drive out all licensed immorality and polygamy.

Fifth, Enact laws for a speedy return to a sound currency which will command the respect of the world. He recommends a resumption of specie payments by January 1st, 1879, at the furthest.

A Monument to Vice President Wilson is to be erected by the citizens of Natick.

Wm. Lloyd Garrison celebrated his fiftieth anniversary at Newburyport lately by taking up the composing stick again in the *Herald* office where he set type half a century ago. As the *Golden Rule* remarks, "The types have fought a good fight for this pioneer of freedom and humanity in that half century."

One-half the full grown males in southern Illinois cannot read or write.

Congress has given formal notice that after January 1st, 1877, the United States will redeem its notes in coin. The New York *Nation* urges the states to pass laws, as New York has, making taxes, debts and contracts payable in coin or its equivalent after that date unless paper be specified in the contract.

The Horrors of the Coolie trade in Cuba is exciting the indignation of the civilized world. The Coolies, as the Chinese emigrants are called, are induced to embark by false representations, bound by false contracts, shipped like slaves, and when they arrive in Cuba find themselves doomed to a life of slavery from which they often resort to suicide to free themselves. When the time of their contracts expire they are treated like vagrants and put on the public works till they reengage themselves or are sold into service. The depositions of 1200 Coolies were taken before commission sent from China and Spain to investigate their condition, and the greatest atrocities were revealed. Men of literary and official rank were among the number of the kidnapped.

China having in 1872 prohibited emigration to Cuba to protect her citizens, and Spain claiming that this act was a violation of a treaty made in 1864, the committee of investigation above mentioned was sent to Cuba, and the case referred to representatives of the five great Powers, the United States, Great Britain, Russia, France, and Germany. These five great Powers were unable to settle the question.

The Report of the U. S. Commissioner of Education gives the following interesting statistics: There are 10,500,000 children in the country between the ages of six and sixteen; 8,000,000 pupils in the public schools, with an average daily attendance of four million and a half. These are educated at a yearly expense of $74,000,000. The Cherokee Nation pays the highest salaries to teachers, $250 a month to male and $200 to female teachers.

Michael C. Kerr of Indiana is elected Speaker of the House of Representatives by the Democratic majority. He is a staunch hard-money man.

The New York *Tribune* of December 4th, gives a brief sketch of almost every one of the new members of the Forty-fourth Congress. In the Senate there are forty-two Republicans, twenty-nine Democrats, four Independents, and one vacancy for which Pinchback (Republican) and Mc Millan (Democrat) of Louisiana contest. In the House there are one hundred and one Republicans, one hundred and seventy-seven Democrats, five Liberal Republicans, four Independent Republicans, four Independent Reformers, and one vacancy caused by death of two members from one district in Tennessee. The Senate has a Republican majority of eleven; the house a Democratic majority of sixty-three. The last Congress had a Republican majority of twenty-one in the Senate and one hundred and five in the House.

Out of this three hundred and thirty-six members of both Houses one hundred and seventy-six have never been in Congress before, an unusually large proportion. This seventeen new Senators number eleven lawyers, four ex-Governors, three ex-Confederate officers, and one ex-Confederate Senator. The new Representatives number one hundred and twenty-two lawyers, thirty-one merchants, four physicians, two editors, six farmers, and two college professors; twenty-seven are veterans of the Union Army, seven of the Union Navy, and twenty-six served in the Confederate Army; seven are of foreign birth.

Wm. M. Evarts, as orator, and H. W. Longfellow, as poet, have been selected for the opening of the Centennial. A grandson of Richard H. Lee, of Virginia, will read the Declaration of Independence.

There are now seven colored men in Congress. Three of them could not read until the war emancipated them. One, Robert Smalls, served in the army and navy on both sides during the war.

Wm. M. Tweed, who was sent to the Penitentiary two years ago for his share in the enormous frauds of the Tammany Ring, and was released on grounds of a legal error in the decision of the court, only to be arrested on a civil suit by the State of New York to the amount of $6,000,000, has managed without much trouble to escape from Ludlow St. Jail, and is now enjoying the stolen sweets of freedom as best he may with the reflections that must accompany him. A reward of $10,000 has been offered by the sheriff for his recapture, but nobody has got it yet.

The Evangelists, Moody and Sankey, are as successful in Philadelphia as they were in Brooklyn. The meetings are crowded, with no abatement of interest.

Ostrich-farming has become one of the profitable industries of Africa at the Cape of Good Hope. Ostriches are kept and plucked like geese, while the eggs are hatched by artificial incubators.

Agricultural.

Speaking of Peas,—A writer for the *Southern Planter and Farmer*, quotes the opinion of a Mr. Ruffin, in which he agrees, as follows:

The mottled or shinney pea, which has been so much celebrated in latter years, differs in some respects from all others. The seeds are of a light brownish color, thickly streaked or mottled with deeper brown. It is deemed by farmers who have tried it longer and more fully than myself, to be one of the heaviest vine-bearers, and also by far the most productive in grain.

It was also noted, as a peculiar value found in the mottled pea, that the vines were pulled up, still green and full of leaves, after most of the pods were ripe, and were thus cured for hay.

This last peculiarity noticed by Mr. Ruffin is one that recommends it very highly to me. To-day, after three light frosts, the black pea vines are entirely denuded of leaves, and the stalk apparently dried, while the shinney is full of perfectly ripe peas and green, luxuriant leaves, and the stem still green and succulent. I have used an acre or two of peas for feeding my horses and milch cows in the stable, and find them superior to the best clover, with oats as grain feed; while with the pea no grain is required. The peas cut for this purpose were the black, and the ground being in good heart, they ran and intertwined so thickly as to render mowing a difficult task. The shinney pea grows more upright, with very little disposition to run, and I think, without having a great deal of experience, will be far preferable as a crop for feeding green on this account.

Another advantage that it possesses for this purpose is that the peas, when fully ripe, are very difficult to shell out; while the black pea, if ripe, will, if cut, after being exposed to the sun until dry, shatter out very badly.

One and a quarter bushels of the shinney pea or one and and three quarters of the black is about the right quantity for an acre.

SHEEP HUSBANDRY.

The English date their improvement in agriculture from the time of their attention to sheep raising; but they had mutton-sheep only, whose droppings are like guano. They raise immense crops of turnips for their food in winter. And it is this class of sheep my experience is in. Your correspondents seem to consider the value of the wool alone. I consider the carcass the profit; wool pays for the keep—the more the attention and feed, the better the remuneration in both.

You think our farmers are disposed to raise sheep. I have always noticed beginners have strong tendencies to extremes; some think they need no feeding—anything will do them; "they will eat the running brier by the yard." All this is a mistake. They require less than other animals, and they will nibble the tender end of briers; and if the brier was removed frequently, doubtless they would eat the tender shoots as they put out; but this they would do as an alternative, as you see cattle sometimes leave luxurious grass to eat old, dry straw. Another erroneous idea—"sheep will bear crowding." Crowd sheep on the farm and they will skin it into poverty; not one will ever be fit for the butcher or the table; none will sell; consequently it will embarrass the owner to know what to do with them. He will have to adopt the plan I heard of; as winter approaches chase them, all he can catch cut their throats for the felt, as too weak to encounter the winter; and thus end in failure, loss, disgust, abandonment.

Advise farmers entering into sheep husbandry to begin only with as many as they can furnish grass enough for in the summer and a moderate supply of food in the winter, a fair proportion of which should be of turnips or other roots, or cabbage leaves—especially for ewes; beans promote the growth of wool. Increase the number as the means of keeping increases, always bearing in mind sheep of any kind will always do better in small than large flocks.

I have now complied with your request in a very plain way, and short; the latter you editors prefer.

Clarke county, Va. J. W. Ware.

The Teachers' Table.

Method of Teaching Kindness to Animals.

I have always tried in my forty-six years' experience as schoolmaster, to teach children habits of kindness to animals. I well know that early impressions are never forgotten, and that a child who is taught humanity to animals will, in later years, learn to love his fellow-men. I have, therefore, taken pains to develop the affections of the children under my care, and to sow the fruitful seeds of kindness, gentleness, and justice toward domestic animals, which are, and always will be, the farmers chief wealth, and also toward others, which, although in a wild state, are no less useful in agriculture, though ignorantly treated as enemies. In this last category are such as the hedgehog, the shrew-mouse, the bat, the toad, the frog, and the lizard, all of them great destroyers of noxious insects,—the mole, which carries on a continual war with the larvæ of beetles and caterpillars, and which should be allowed to live in peace, if not in the gardens, at least in the meadows, where the light and fertilizing soil of the hillocks that it raises, so far from being injurious to the production of grass, in reality favors its growth in a remarkable manner, provided care is taken to turn over freshly-raised earth with a spade,—the nocturnal birds of prey, for which agriculture cannot be too thankful, which are ten times better than the best cats, for, without stealing the roast or the cheese, they wage a bitter war against rats and mice, and destroy, in the fields, great quantities of various kinds of fieldmice and dormice, which, without these nocturnal hunters, would become an intolerable scourge,—and lastly there are the small birds, those indispensible auxiliaries, which hold a first rank for the services they render; those innocent and charming little creatures, which are the best guardians of our gardens, our orchards, and our fields, by their incessant and fierce warfare with the innumerable legions of destructive insects, which, for the most part, birds alone find out and destroy.

I have long been convinced that kindness to animals is productive of great results, and that it is not only the most powerful cause of material prosperity, but also the beginning of moral perfection. I therefore began my work in 1861, and at the same time introduced agriculture into my school; for I saw the close connection between the doctrine of kindness to animals and the important science of agriculture, since there can be no profitable farming unless animals are well kept, well fed, and well treated. And, besides, how can children better learn the pleasures of country life than by understanding the importance of agriculture, the methods used in their own country, and the profit which may be derived from intelligent farming and kind treatment of animals? Do they not become attached to country life? Do they not feel kindly toward all dumb creatures? Do they not receive ideas of domestic economy? Do they not love Mother Earth, who pays us so freely and so generously for our work? And does not this love tend to check the growing evil of emigration from the country to the city?

My method of teaching kindness to animals has the advantage of in no way interfering with the regular routine of my school. Two days in the week all our lessons are conducted with reference to this subject. For instance, in the reading class, I choose a book upon animals, and always find time for useful instruction and good advice. My "copies" for writing are facts in natural history, and impress upon the pupils ideas of justice and kindness toward useful animals.

In written exercises in spelling and composition, I teach the good care which should be taken of domestic animals, and the kindness which should be shown them. I prove that, by not overworking them, and by keeping them in clean and roomy stables, feeding them well, and treating them kindly and gently, a greater profit and larger crops may be obtained than by abusing them. I also speak, in this connection, of certain small animals which, although in a wild state, are very useful to farmers.

In arithmetic, I give them examples in domestic and rural economy, and thus show the children, in exact figures, the amount which may be made by farming when domestic animals are kindly treated.

Besides all this, we have a practical conversation on two afternoons in the week, when I often explain the law against cruelty to animals.

The results of my instruction have been, and are, exceeding satisfactory. My ideas have deeply impressed my pupils, and have exercised the best influence upon their lives and characters. Ever since I have introduced the subject into my school I have found the children less disorderly, but, instead, more gentle and affectionate toward each other. They feel more and more kindly toward animals, and have entirely given up the cruel practice of robbing nests and killing small birds. They are touched by the suffering and misery of animals, and the pain which they feel when they see them cruelly used has been the means of exciting other persons to pity and compassion.

My lessons reach adults through the example and advice of the children, and also by the following method: My pupils have a book containing "Talks about Useful Animals." By my advice, the book is taken home, and is read with interest in the winter evenings, giving rise to the best effects. In my evening class I also teach adults principles of kindness, in the same manner as in my day-school, and with the same success.

I close this letter with the hope that principles of kindness and compassion to animals will soon be taught in every school.—*Our Dumb Animals.*

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the obstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNES' BRIEF U. S. HISTORY.
BARNES' SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.
CHAPMAN'S DRAWING BOOK.
CLEVELAND'S COMPENDIUMS.
NORTHEND'S SPEAKERS.
GRAHAM'S REASONABLE ELOCUTION.
PEABODY'S MORAL PHILOSOPHY.
BOYD'S COMPOSITION, ETC.
CHAMPLIN'S POLITICAL ECONOMY.
BEER'S PROGRESSIVE PENMANSHIP.
PECK'S GANOT'S NATURAL PHILOSOPHY.
PORTER'S CHEMISTRY.
JARVIS' PHYSIOLOGY and LAWS of HEALTH.
WOOD'S AMERICAN BOTANY.
CHAMBER'S ZOOLOGY.
STEELE'S "14 WEEKS" IN EACH SCIENCE.
PUJOL'S FRENCH COURSE.
WORMAN'S GERMAN SERIES.
SEARING'S CLASSICS, ETC., ETC.,

The whole crowned by a unique collection of professional manuals known as

THE TEACHERS' LIBRARY,

In Thirty Volumes.

A Descriptive Catalogue of all A. S. Barnes & Co's publications will be sent free to the address of any Teacher or School Officer applying for it.

The National Teachers' Monthly commands in its editor and contributors the best professional talent the country affords. Subscription, $1 per annum.

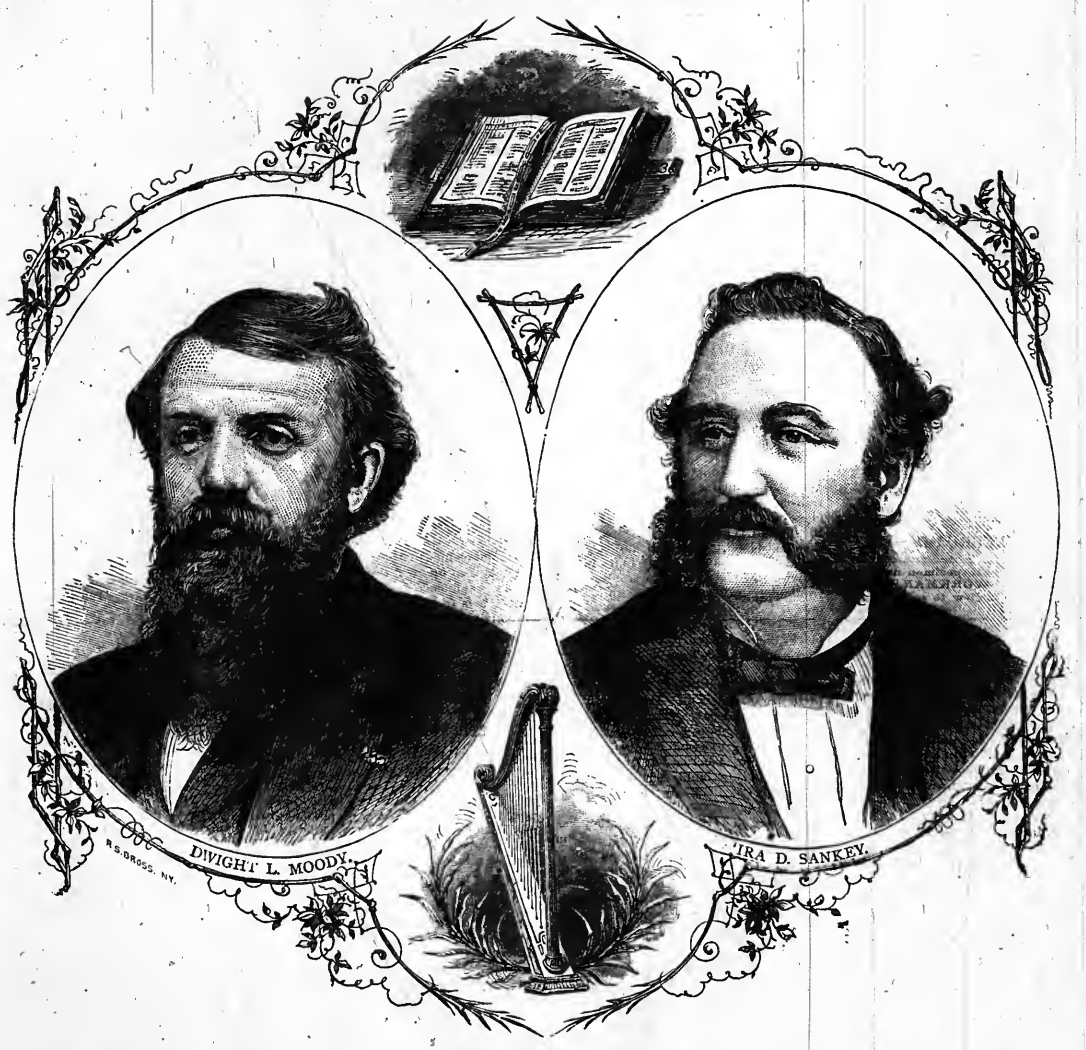
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. V. HAMPTON, VA., FEBRUARY, 1876. NO. 2.



THE AMERICAN EVANGELISTS.

THE AMERICAN EVANGELISTS.

MOODY AND SANKEY.

Our first century has ended, and our new Centennial Year begins in the midst of a religious awakening greater than the world has known since that of the days of Wesley and Whitefield. Like that it has spread to two continents, and more than that has commanded general respect and sympathy. For though there is some difference of opinion as to the wisdom of certain methods and the probable permanency of their effects, there is a general conviction that a true revival of religion is a good and desirable thing in these days of widespread corruption, and that the two men who are giving their whole time to this work are men of honesty and peculiar power.

One of the most remarkable circumstances attending the great revival is the respectful tone taken toward it by the Press; the leading daily newspapers, equally with the religious journals. And if this fact be explained by the demands of public sentiment, the wonder is certainly not lessened.

Who then are Moody and Sankey, and where do they get their power?

For the above excellent likenesses of them, we are indebted to the American Tract Society.

Some twenty years ago, a young shoe-maker of little education, but who had left a good Christian mother in his country home, was converted in the Bible Class of Dr. Kirk's church in Boston. His name was Dwight L. Moody, and he was considered such a doubtful case that he was admitted to the church only after a long probation. Removing to Chicago after a while, he was persuaded to take a class in a mission school, and it was there, working with all his soul for the ragged and wretched, that he felt the mighty call in his heart to preach the gospel to every creature.

During the war, he served in the Christian Commission, and after its close, as a lay preacher in Chicago and sometimes Boston and other places. He was much criticised for his roughness and want of the manners of a good speaker, and was sometimes seriously advised to give up his preaching for awhile and study. But he felt that the spirit of the Lord was upon him, and that he was anointed to preach the good tidings; that there was no time to lose, and he must learn how to preach by preaching. In 1872, he made a visit to Great Britain and preached with some success. On his return, he met a young man in Philadelphia who was devoting himself to Sunday school work, and whose sweet and powerful voice in singing the Sunday-school songs attracted Mr. Moody. This was Ira D. Sankey, and ever since, for the last four years, the two men have worked together in perfect harmony, and with wonderful effect.

In England, Scotland and Ireland, all classes of society have been stirred to their depths by the simple story of the Cross. The aristocracy have been set to street preaching, the Scotch Presbyterians to singing Sunday-school hymns, and everywhere the common people have heard them gladly. Since their return to this country, immense crowds have collected night after night with no abatement of interest, in Brooklyn and Philadelphia, and preparations are made in New York, where they spend this month, for audiances of 12,000 in one building.

We publish below a letter from a lady friend giving an interesting account of one of the Brooklyn meetings which she attended. It will answer well for any of the meetings which are all much alike. The Watch night service in Philadelphia was one of peculiar interest, when ten thousand persons watched together the dawning of the Centennial Year, and many professed to find it the dawning of a new life in their souls. The five minutes of silent prayer at the close were most impressive.

What then is Mr. Moody's power? As far as it can be said to be his power, it is certainly his earnestness.

There is something in the magnetism of great crowds, and the congregational singing of ten thousand people; and one is impressed with the feeling that the people's unfailing interest is not wholly accounted for by anything in the two leaders. It must be that the questions of personal religion are, after all, more deeply interesting to the masses of mankind than we are apt to think; Mr. Moody himself would tell us that the power is all of God.

Mr. Moody has improved as a speaker; his sermons are original and striking. But the great element of his personal power is earnest-

ness. He reads one book—the Bible; he does one work—the preaching of it; he desires one thing—the salvation of souls, and whatever his hand finds to do he does with his might.

The element of his success is the element of all success. It is the hand of the diligent that maketh rich; it is much study that makes one learned; it is a downright purpose and persistence that conquers any position worth having in life. Even "the Kingdom of Heaven suffereth violence and the violent take it by force."

The question is not whether some one else could do a better work than Mr. Moody. No one would be more glad than he to have it done better. But who does do it? If any one can and will not, it is not to his credit or Mr. Moody's blame. It is good to be always zealously affected in a good thing.

Southern Workman,

ISSUED MONTHLY.

Terms: ONE DOLLAR a year IN ADVANCE.

AGENTS WANTED.

Liberal Terms offered.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For farther information, address

J. F. B. MARSHALL,

Business Manager.

HAMPTON, FEBRUARY, 1876.

This is sent out as a specimen number of the "SOUTHERN WORKMAN." Please examine it with a view to subscribing.

We earnestly request its friends to co-operate in building it up. Is there not a great and pressing need of an honest independent journal which has the confidence of the colored people?

PREMIUM.

From and after November, 1875, on *receipt of one dollar, one year's subscription to the* SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at fifty cents apiece.

MANY THANKS

Many thanks for the new and renewed subscriptions for the SOUTHERN WORKMAN, which in these times of business depression flourishes better than ever. We hope it may soon reach the point of self-support and become not only a useful journal, but a pecuniary support of the educational work at Hampton.

AMALGAMATION, which, under the fostering influences of slavery, had nearly done its perfect work, but is now partially arrested, has left in the United States and elsewhere, the legacy of a sadly mixed population and of a once vigorous race devitalized and with elements of confusion and disaster.

While external pressure has kept the freedmen of every shade a solid body, politically and socially, they are inclined, upon slight pretexts, to separate into sets, Office, or wealth, or learning, or advantage of any sort, is apt to create a petty caste feeling and to break the bands of sympathy more readily, perhaps, than in other races. This will change as they shall improve and have a better and more universal basis of self respect.

But there is a sentiment about color, almost suppressed in this country, which elsewhere seriously affects the prospects of the negro race. A well known ex-governor of Massachusetts, one of the trustees of Liberia College, informed us that there was difficulty in managing its affairs because of the superiority assumed by those who have white or "Norman" blood in their veins.

Mr. Edmund S. Morris, resident commissioner for the Centennial for Liberia has recently written as follows:

"A class of men have grown up in Liberia who think they are bound to rule in virtue of a few drops of white blood in their veins. Too lazy and proud to work, they have conspired against others and sought to create a petty class superiority, in virtue of a little more knowledge than their neighbors.

"They have held *aloof* from intercourse with the interior and opposed the amity and brotherhood that should exist. Having visited Liberia and all her settlements I know of what I speak. The native population seek education, aid and instruction."

A published private letter says, that—

"The peace of the Republic is somewhat disturbed by the question of color. President Roberts is much embarrassed on this account, the fact of his not being of pure African blood being objectionable to many. One who is an intelligent negro from the West Indies is the principal agitating spirit, who seeks to establish color a test, taking the side of the blacks against those of a light complexion. The more orderly of the Liberians would rejoice if they could be relieved of the leader in this course of mischief."

In the time of Toussaint L'Ouverture there was a similar difficulty damaging to the cause of Haytian independence.

In St. Domingo there are three classes, the whites, the colored, and the blacks, mutually jealous, especially the two latter.

The unity of the race in the United States is due to their being on the defensive against powerful race and sectional prejudices, and is an element of strength and a ground of hope. Here the "colored" man who is unable to buy a second class railroad ticket because "we sell second class only to niggers," and the blackest of the Congo type mingle as men of one race and blood. There are, however, here and there, traces of color feeling; in some individuals and communities it makes trouble. In the Hampton Institute, where, out of two hundred and forty students about twenty are white and thirty-five are black, the rest colored, but all classed as negroes, there has been scarcely a sign of it.

It may be a question whether the present prejudice of race is not less harmful than would be this caste feeling and petty social wars, far more bitter and tyrannical than anything existing.

We see in America the negroes' best chance; not to build an "*imperium in imperio*," but to attain manhood, moral worth and power for good. If obstacles shall yield in the next ten as they have in the last ten years, and advantages similarly increase, our colored population, if kept free from internal dissension and open to right influences will have little to complain of, and will supply to the South a large and industrious yeomanry and an intelligent voting population. Of course there will be a proportion of lazy and thriftless people—a drag and a reproach to the rest. That proportion will depend upon the efforts put forth to save them.

In the heart of Africa, where the last and highest compliment to a potentate is, "And, O King, you are *black*," there is another hopeful field. The people have pride of race, capacity, and not a touch of the caste that blights their prospects when the races are mixed. To Christianize them is a crusade worthy of all the powers of the educated young colored men of America, and an opportunity for abilities that cannot find full play here.

The success of the negro is possible only through enthusiasm of race; in other words, faith in himself; and of that the spirit of caste is destructive. We advise the colored men of America to forever stand by each other, regardless of complexion not for political supremacy, but, by mutual loyalty and help, to make for themselves an honorable record as citizens, and that in the great structure of civilization they may not be as rejected stones, but have a high place.

OYSTERS are now in perfect condition. We advise those who wish the best bivalves of the Chesapeake Bay to buy direct of Mr. George Dixon; see advertisement in another column. Mr. Dixon's establishment is honestly conducted, and by giving employment to labor is a blessing to this community.

THE MOST perfect climate on the Atlantic coast is that of Virginia.

Its mineral springs and magnificent mountains afford delightful summer resorts. On the tide-water region, winters are usually mild; and, although at times the low country is swept by cold and violent winds, there are, in the months of December, January and February, many lovely days. The climate is favorable for throat and lung troubles. A number of remarkable cures have resulted from a winter's residence near Hampton Roads, where the frequent respite from severe cold makes boating and horseback riding attractive and out door air enjoyable.

Fort Monroe is a good base of operations for the fine duck and brant shooting on Cobb's Island and in the Chesapeake Bay.

The vicinity of Hampton is, we believe, destined to become a favorite resort for those who are compelled to flee from the wrath of northern winters, and who yet wish a stimulating climate and to be able to reach home in from twenty-four to thirty-six hours.

ONLY personal experience of the Moody and Sankey movement can give an adequate impression of its depth and force. Criticism is as an idle wind until one has visited the Inquiry Room and seen the quiet but powerful working of God's spirit; until one has conversed with those who are earnestly seeking the "peace that passeth understanding;" until one has had means of ascertaining its results in the change of purpose and of life of hundreds.

Like a good soldier, Mr. Moody aims low; his point blank words reach everybody; he presents, with terrible earnestness, the claims of the religion for which he has given up everything. He has the secret of influence over men; he leads and urges them to follow. There seems to be in him and his method a reproach to the religious teaching that prevails. People cannot resist a man of such convictions, of such resolve to demolish every excuse of thoughtless or careless men, a man whose works are so consistent with his words.

EDUCATION IN VIRGINIA.

The Hon. W. H. Ruffner, Superintendent of Public Instruction, in his last annual report states, that—

"The year's progress has been satisfactory in all respects." The addition of 10 611 to our Public School attendance, and of two hundred and eighty-three in the number of schools, was something more than we had a right to expect, all things considered.

"As a means of educating the people, the superiority of public over private instruction is sufficiently demonstrated by the recent history of education in Virginia.

"The largest attendance in proportion to population was in the year 1860, but how small was that in comparison with the number in 1875!

In 1860 67,124 pupils (all white).
" 1875 207,771 " (of whom 54,841 were colored).

"In 1860 there were public free schools in but nine counties and cities in Virginia, but the Literary Society of the state paid the tuition of 31 516 children whose parents were too poor to pay anything.

"We have as the net result of private school instruction in the best year of our history 3350S pupils.

"It is not pretended that our Public School system has reached any high degree of efficiency; but we now see more than three times as many children going to school in Virginia as were ever seen going before. And if this gain can be made in the first five years, what may we not hope for by the end of the next five."

"The tuition of the 184,436 children which were in the Public School last year, cost, in the aggregate only $726,300; but at private rates it would have amounted to $1 898,836. If the people groan at the cost of public education, they would howl with rage and despair if required to educate at private rates."

The report shows that the total school population of Virginia in 1875 was as follows:

Whites	280149	
Colored	202640	
		482789

The school age is between five and twenty-one years.

Number white male teachers	2360	
" " female "	1363	
		3723
Number colored male teachers	351	
" " female "	188	
		539

It should be remarked that many of the colored schools are taught by white teachers.

Number white schools	3121	
" colored "	1064	4185
Number white pupils enrolled	129545	
Number colored pupils enrolled	54941	
		184486
Average daily attendance of whites	74056	
Average daily attendance of colored	29871	
		103927
The average of months taught is		5.59
Percentage of white population enrolled		46.2
Percentage of colored population enrolled		27.2
Percentage of white in average daily attendance		26.5
Percentage of colored in average daily attendance		14.7
Whole cost of public edu ation *per month* per pupil in average attendance		$1.58
Average monthly salary of teachers; males	$33.52	
females	28.71	
		$30.48

SCHOOL PROPERTY.

Number of log houses	2101	
" " frame "	1617	
" " brick "	129	
" " stone "	38

" Peabody Fund and donations	77232	13
	$1021396	68

These wonderful results are chiefly due to the great force and personal influence of the Superintendent of Public Instruction, Dr. W. H. Ruffner. While supported by many men of all classes he has had to encounter a prejudice that has dubbed his great system of schools a "Yankee notion." But the Bourbons of the state have slowly yielded to his energy and enthusiasm, and to public sentiment that every year is growing stronger through the success and palpable advantages of free schools. Virginia, to-day, in her school system, affords perhaps the most extraordinary instance in history of a commonwealth's accepting so speedily and so thoroughly a system of ideas contrary to its cherished traditions, forced upon it originally, but, under the influence of wise and powerful leaders, adopted as best for its welfare, and as certain in time to regain a lost prestige and to achieve future greatness.

DR. HATFIELD said that there was much trouble in the school to find out what was talent for the Sunday-school. When we had a mission school in South street, we had a little boy who had ridden a pony in Dan Rice's circus, and whose mother kept a peanut stand at the Arch Street Theatre. He was the wildest boy in the school, and nothing could be done with him; but at last he got with an educated teacher who led him to Christ. About a year after he left. He turned up in a Hospital as a wounded drummer boy, and sent the dying message to his teacher that to her he owed his salvation. Don't any one say they don't know enough to take a class in Sunday-school.

CORRESPONDENCE FROM THE PACIFIC.

From the "Central Blue of the Great Tranquil Sea" have again come long, quaint letters full of interesting details about Hawaiian life, such as we published two months ago, and from which we extract as follows:

"The dreary, desolate plains over which you so often passed in childhood's days have changed their sombre hue to a somewhat cheerful brightness. King Street, which passes through the mission, or what Commissioner B. used to call 'Mount Zion,' extends from the plains as far as the rocky grounds beyond the the Waikiki road on toward Ewa; it is smooth and hard and affords a pleasant drive. From the bridge where the very first missionaries landed in 1819, or some two or three miles, the road is macadamized, and is shaded in some places with algeroba and samany trees. The samany answers quite well to the description in Thompson's 'Land and Book' of the tree in Palestine which bears 'the husks which the swine did eat.' It grows tall, and, with its broad spreading branches, covered with never-failing foliage of a dark, handsome green, is beautiful to the eye and affords a most refreshing shade from the sun. The flowers are pink and flock the green, glossy leaves, all of which form a robe of beauty for the smooth barked trunk and numerous branches. The pod, or pericarp, grows from four to eight inches in length, contains seeds like large flat beans, and, when fully ripe, a honey like substance surrounds them. This gelatinous substance will probably never be used here, as in Syria, for making sweetmeats, as we have very nice sugar from cane juice. The pod is altogether unlike what I supposed the poor prodigal was forced by hunger to eat. When a child my sympathies were moved for the naughty boy by thinking his food consisted of what in America is called corn husks. In a few years, if cared for, these trees will become numerous; they might as well be called the rhubarb tree, as in Syria, but somehow they are dubbed with the name of 'monkey pod.'

"We have prodigal sons here, some of whom were born in and came from Christian countries, whose example and influence do not tend to aid in elevating the natives. Evil example has had more to do to counteract the influence of Christianity here than heathenism itself.

"The algeroba, which flourishes in Peru and elsewhere, is a most valuable tree, as it will grow in dry, barren soil. It is tall and the foliage is of a light, bright green color; the leaves are small, yet its numerous branches afford a nice shade. It is excellent firewood; the timber is brittle, so that branches are often broken by a strong wind, and trees blown over. But the scattered seeds spring up readily and grow quickly; the seeds are used for horse feed, and are considered equal to grain for horses; the pod is long and thin; the seed resembles that of an apple, and the whole has a sweetish taste. Horses devour them greedily, and native children like to chew them. Natives make quite a trade in them in their season. Coarse grain bags which are brought from California, are filled with the seeds and sold by the natives for twenty-five cents. Horses are not allowed to run loose much in town, but the poor gaunt creatures owned by some natives can have them for dessert, in their season, from the trees which grow on the plains. King Street with its pretty houses and gardens on either side, and the shade of the beautiful algeroba, is a delightful drive. The flowers are of various hues and from different parts of the world. The 'four-o-clock,' formerly quite a prominent flower, is now entirely ignored.

Thatched houses are rare in and around Honolulu; some few miserable wood shanties are to be seen here and there. Beritania Street, which runs from Kaumakapili, passes our house and terminates on toward Moilili. Nice houses with gardens and shade trees on either side make it a very pleasant street. On the plains are fenced off many building lots. One lot of about two acres is fenced, planted with trees, and named *Thomas Square* to commemorate an act of justice done by the English Admiral, Lord George Thomas. He came from the coast, having heard that some blustering John Bull (Lord George Paulet) on some false pretext had pulled down the Hawaiian flag and raised the English flag instead. This was about 1842. Prison doors were thrown open, and a stream of immorality was set flowing over the land which has swept off many by its strong current into an abyss of ruin and death. The Admiral inform d himself of the various acts, and the causes given, and ordered the same crew from the same ship to go out on the plains and, in his presence, restore the flag of the nation that they had hauled down. This is why it is called Thomas Square.

"On our street any day may be met the King, driving a fine horse and buggy, or with a driver. Then, perhaps, a native in a slouched hat with pants and shirt to correspond, sitting on a mule, within a few inches of his tail, trotting along briskly with two or three dogs scampering along behind. Then, may be, a woman astride a decent looking horse, with bright calico of large figure concealing her limbs and trailing to the ground; a jaunty hat with feathers and flowers on her head; a wreath of natural flowers around her neck, or one made of bright colored worsted. Then follows an express wagon, owned by a native, and drawn by a hungry looking horse, with as many natives of both sexes crowded in as can possibly find room, without regard to the ability of horse, wagon or harness, gaily clad and chatting vigorously. Then a man or woman riding on horseback, with a dog squatting on behind, as composed and dignified as his master. Many are the rides I have had over the hills about Blandford behind my father or mother, but I never saw dogs ride in that way until it came in vogue among the Kanakas. Then, perhaps, a woman walking, with bare feet and meagre clothing, with a little dog fobbed in her arms. Then a white lady with her children in a nice carriage, or some gentleman with his wife taking the fresh air. Young people ride on horseback here; indeed everybody rides when he can get a chance; it is often amusing to see the various vehicles, horses, costumes, etc.

Some benevolent person, well paid no doubt, has erected a long wooden seat under an algeroba tree out on the plains, to be occupied by pedestrians. An old man may be seen with shirt hanging outside of pants, with his two bundles of *pai ai*, or two calabashes of poi, or two large bundles of fresh grass tied up nicely for horse feed, resting his tired limbs. Then a woman in *aholoku*, with a large bundle of dry rubbish which she has gleaned, tied to her back, and, not being easily removed, she rests a while and then trudges on to her home, leading a little dog by a string which seems to be strips of calico from some old garment; three other dogs trot along evidently with affinity for her. A large sized boy passes by with shirt and pants of faded denim, collar and wristbands not fastened, maybe with a black coat which was evidently made for a being of larger dimensions than himself. If the trade wind happens to be strong, the coat-tails fly and one sleeve is half off from the shoulder. He strides along complacently, not seeming to notice the poor old woman struggling with her bulky burden against the strong wind. Passing these on a gallop may be seen a native, portly, dressed like a wealthy white man, including gold chain, gloves, &c., on a well caparisoned steed. His haughty bearing seems to elicit admiration. I could go on and describe indefinitely a variety of costumes and scenes, but enough has been said for you to peep through the mind's eye into some scenes in your native land. * * *

"Have just been out to move the garden hose near the front fence. On each side of the gate are two royal palms which thrive well. The tamarind on the right, not far from the gate, is a tall, spreading, beautiful tree. It is a memorial of ——. As I returned to the house I stopped under the shade of a ceba tree which grows on the east of the path, to admire the charming bright green leaved vine which curtains the verandah. Each morning, for a few weeks, the vine has been flecked with delicate white flowers which grow in clusters, and in form like the morning glory; its odor is charming. On the right of the steps is a flourishing plumbago whose flowers resemble snow-flakes on evergreens; they are small and delicate; it has been in bloom since June. Its branches spread and encircle a tall cypress tree, one of my sentinels. Then close by the steps is a scarlet arbutolon whose bright flowers are mingled with the green leaves; on the left is a cypress taller than the house. A trumpet vine has been growing and climbing around it for some three years; the flower is white, rather small and delicate, and is ever in bloom. The whole forms a pyramid with a tree growing up from its top—the vine does not injure the tree. I thought how beautiful are the works of God.

> "'The world is full of beauty
> Like the angel hands above,
> And if all but did their duty
> It might be full of love.'

I love these charming trees, shrubs, and flowers, but will gladly leave them for the land of 'everlasting spring and never fading flowers.'

"My reverie was disturbed by a sudden shower."

Agricultural.

TREES.

OZG. B. EMERSON.

The destruction of the forests of the United States is going on at a rapidity sad to contemplate. Unless within fifteen years something be done to stop this destruction, or to provide for renewing our forests, our country will be comparatively treeless. No one has yet been appointed or chosen to have the whole care of the forests, but each individual can do something on his own domain. Trees planted and well cared for will make our homes more beautiful, and at the same time more valuable, and in no way can farmers so easily and rapidly increase the value of their waste lands as by planting them to forest trees.

The sugar maple we place at the head of the list of shade and ornamental trees. It is beautiful while young, and its beauty increases with age. It is also valuable for its sugar production, and on this account, if for no other, should be planted largely by farmers and others throughout the State. It should not, however, be set to near the dwelling house, but by the roadside and by fence corners. Next to the sugar maple in beauty and worth stands beech, with its green foliage, and smooth handsome bark. Next comes the birches, of which the black birch, the yellow birch, and the red birch have remarkable beauty.

Even a single tree adds to the appearance of a home, but the dwelling house should not be too much shadowed by trees. Pines should be planted on the northerly and westerly sides of buildings, but not too near. Let the sun come in to the living rooms to give health and good cheer to dwellers within. Trees do better in groups, planting several kinds together.

Trees should also be planted all over our farms wherever there are spots that are not worth cultivating. We have found very few farms in Massachusetts where there were not one or more acres on which it is extravagant to cultivate the usual farm crops. These spots, whether on the rocky hill tops or on the steep banks of the streams, should all be planted with such trees as are adapted to the soils and situations. Many soils now covered by inferior varieties of trees might just as well be producing those which are of more value. Wherever the common pitch pine thrives, other and better pines would always flourish, if the seeds were sown, or the young trees planted. Every one may increase the real value of his farm by encouraging the growth of forest trees in all appropriate places. The hickory is a beautiful and valuable tree, and wherever the inferior sorts are found more valuable shagbark will flourish if planted. By planting your own farm with trees and shrubs, either fruit or ornamental, you make the country more healthy, as every leaf helps to purify the atmosphere and render it fit for breathing by man and animals.

We have received from Europe a limited quantity of the Bismark, late Cabbage Seed, which produces solid heads of cabbage the size of the mouth of a flour barrel and larger. These enormous cabbages are raised with the most ordinary cultivation, in any climate, and at present prices, double the ordinary profit is realized from their production. In transplanting from these seed, great care should be used to give sufficient space for growth. A package sent to any address, postpaid, on receipt of 50 cents; 3 packages $1 00; 8 for $2 00. A sure cure for cabbage pests and 4 beautiful chromos, The Maiden's Dream, full set sent free with each package. Address, B. Alexander & Co., sole U. S. Agents, 8th St., opposite Cooper Institute, New York. Please quote this paper. 12-6

FEEDING HOGS.

The most common practice, both in Virginia and Northward, is to put hogs to fatten in a small, dry pen, and then feed them the most concentrated food. This I cannot think is the best method, and repeated experiment has proven to me that it is not the most economical.

Hogs should be put to fatten when they come off the stubble fields, that they may not lose the impetus of growth and improvement that they have acquired in gleaning the fields. I have found a small field of rye sown for the purpose excellent to give hogs a start, as it sheds them off nicely, and starts them to growing finely. When taken off of rye, they should be put on clover, and fed on corn moderately until green corn is a little past the proper condition for roasting ears. The corn should then be cut up and fed to them stalk and all as long as the stalk is green, after which it should be shucked and given to them in the field. I know that many will say that the hogs will run all the fat off of them if allowed so much range; but a hog that has enough to eat will not travel any more than just enough to obtain clover and grass sufficient to preserve his health. Of course, if any one has a pea field, that will answer very well in the place both of clover and corn, though I prefer feeding corn all the time. Pumpkins are an excellent substitute for grass, and turnips will answer, though not so well. Hogs should at all times, and especially when fattening, have a supply of charcoal by them. It is astonishing how much they will eat. Every one has observed that hogs that are full fed on corn and closely confined will lie and pant, even in cold weather. This is caused by the heating effects of the corn, and arises from a feeling really similar to the *heart-burn* in the human subject. The free use of charcoal neutralizes all acids in the stomach, and hogs that have it to go to at all times will never suffer in this way. It is much more economical to fatten hogs in warm than in cold weather, and they will then consume much in the way of green food that the frost will destroy. All things considered, I think a hundred pounds of meat can be made in August, September and October for about one half what it costs to make it in November, December or January.

CHESTER.

INDELIBLE MARKING PAPER FOR MARKING CLOTHING WITHOUT A PREPARATION.—*Direction*—Lay the Indelible Paper upon the article to be marked, and place over it a thin piece of writing paper, upon which write with a common lead pencil, or any smooth point. If the marking is pressed with a hot flat-iron or otherwise heated for a few seconds, it can be washed immediately with hot water and soap as usual. Warrant d not to fade or spread in the cloth. A package sent, post-paid, on receipt of thirty-five cents, two for sixty cents. Address B. ALEXANDER & CO., Sole United States Agt's, Eighth street, opposite Cooper Institute, New York. Agents wanted, send for terms. Please quote this paper. 12-6

Four beautiful fine oil chromos 7 x 9 and one 9 x 13 sent for fifty cents, and six size 7 x 9 and six size 9 x 12 sent for $1, and a full family portfolio of 100 oil and gem chromos, *very fine*, all designs, $2. They are scriptural scenes, landscapes, sea views, hunting and fishing scenes, Rocky Mountain scenes, birds, animals, fruit and flower designs. Our chromos are facsimile reproductions of the choicest works of the *great masters*, and pronounced by connoisseurs equal to the original oil paintings. Three hundred Decalcomania pictures sent for 50 cents large mixed, all kinds, $1; and 1,500, $3. A sample of these goods with full instructions to transfer the same will accompany each of the above orders if desired. Address, enclosing price, and a three cent stamp for return of goods by mail. B. ALEXANDER & Co., wholesale and retail dealers, 8th street, opposite Cooper Institute, New York. Agents and tradesmen are making money selling our goods. Ladies are meeting with great success in this work. A full agent's outfit of 200 fine samples sent on receipt of $5. Please state the name of the paper you saw this in. 12-6

EXTRACT FROM LOWELL'S TRIBUTE TO WASHINGTON.

Virginia gave us this imperial man
Cast in the mighty mould
Of those high-statured ages old
Which into grander forms our mortal metal ran;
She gave this unblemished gentleman:
What shall we give her back but love and praise
As in the dear old unestranged days
Before the inevitable wrong began?
Mother of States and undiminished men,
Thou gavest us a country, giving him,
And we owe always what we owed thee then:
The boon thou wouldst have snatched from us again
Shines as before with no abatement dim.
A great man's memory is the only thing
With influence to outlast the present whim,
And blind us as when here he knit our golden ring.
All of him that was subject to the hours
Lies in thy soil, and makes it part of ours:
Across more recent graves,
Where unresentful nature waves
Her pennons o'er the shot-ploughed sod,
Proclaiming the sweet Terms of God,
We from this consecrated plain stretch out
Our hands as free from afterthought or doubt
As here the united North
Poured her embrowned manhood forth
In welcome of our saviour and her son.
Through battle we have better learned thy worth,
The deep-set courage and undaunted will,
Which, like his own, the day's disaster done,
Could, safe in manhood, suffer and be still.
Both thine and ours the victory hardly won;
If ever with distempered voice or pen
We have misdeemed thee, here we take it back—
And for the dead of both don common black.
Be to us evermore as thou wast then,
As we forget thou hast not always been,
Mother of States and unpolluted men,
Virginia, fitly named from England's manly queen!

HOW BIG DOES THE MOON LOOK?

BY AUTHOR OF THE JOHNNY STORIES.

I heard the children disputing the other evening. I was sitting at the parlor window, enjoying the quiet summer twilight. The children had been playing on the piazza in perfect harmony, until one of them caught sight of the moon rising over a distant hill, and said, as one is very apt to say at such a time, "How bright the moon looks!"

To this they all assented; but as they stood watching the moon's bright face, Harry unluckily added, "as big as a cart-wheel."

"A toy cart, you mean," said Mary.

"No, I *don't* mean a toy cart," Harry replied, stoutly; "I mean a real cart, a big ox-cart, if you will."

"Nonsense!" said Mary. "It isn't bigger than a dinner plate."

"That's just like a girl!" cried Harry, derisively. "It might do for a giant's dinner plate, perhaps."

"I think it looks a great deal bigger than a cart-wheel," said Willie. "Just notice that house on the hill right under it. The moon is as broad as the house."

"That's because the house is so far off," said Mary.

"To me it doesn't look any bigger than a teacup," modestly observed the youngest of the party, little Kate.

At this they all laughed; and Willie, with the patronizing wisdom of a dozen years, looked down upon her, and said,—

"A teacup looks very big to your little eyes, my dear."

Kitty made no reply. How could she under the circumstances? But I could see her straining her eyes to see the moon as big as a cart wheel, or, at least, as large as a dinner plate.

"I tell you it's *bigger* than a cart wheel," Harry began again.

"Why don't you measure it?" I asked, seeing that, like older people, they were likely to go on forever disputing, without taking any steps to have the matter positively determined.

"Come, Harry! You're the champion jumper," said Willie, "jump up now, and settle the question with your tape-line."

"Thank you, not to-night," Harry responded; "'fraid I shouldn't get back by bedtime. But I'll speak to the man in the moon about it the next time he comes down to inquire the way to Norridge."

"Seriously, now," said Mary, "it does look about the size of an ordinary dinner plate—doesn't it?"

"Just about," said I.

"There!" said Mary, triumphantly. "Harry said it looked as big as a cart-wheel."

"So it does," I replied.

This time Harry crowed.

"Or a teacup," I added.

"Why, uncle Adam!" cried the two together.

"Or a huckleberry."

"Oh! Oh! Oh!" all in chorus.

"You're just making fun of us," Mary cried.

"No," said Willie. "He means that it looks the size of anything a fellow happens to think of."

"Not exactly," I replied. "Everything depends on how far off the object of comparison may be."

"How so?" Harry asked.

"Put your cart wheel far enough away, and it will look no bigger than a dinner plate nearer by; if you hold a huckleberry close to the eye it will hide a cart wheel."

"That's plain enough," said Willie; "but what has that to do with the apparent size of the moon?"

"Just this," I replied; "to compare the apparent size of the moon—that is, how big it looks—with that of any near object, you have to take account of the distance of the near object. For instance: I hold my lead pencil close to my eye, and it more than hides the moon; at arm's length, the diameter of the pencil exactly measures the diameter of the moon's face; in other words, the moon looks just as big as the top of my pencil three feet from my eye. At six feet from the eye, the pencil top would look only a quarter the size of the moon. How far off do you think your cart wheel would have to be, Harry, to just cover the moon?"

Harry shook his head doubtfully.

"I should have said the moon looked as big as a cart wheel close by a moment ago; but I don't believe I know anything about it now, not if your eyes are like mine."

"You must try for yourself," I said. "Here's a silver three-cent piece. It's a little bigger than the top of the pencil. I'll stick it against the window-pane, then you may see how far you will have to go from it to make the coin just hide the moon."

"Stand still! This isn't a dancing-school," said Mary, as Harry balanced back and forth, trying to get the coin and the moon in range.

"I never saw anything like it," cried Harry, paying no attention to Mary's remark. "When I look at the three-cent piece, I see two moons; and when I look at the moon, I see two three-cent pieces."

"That's because you look cross-eyed," said Mary.

"No, I don't! Try it yourself, if you don't believe me."

"Shut one eye, my boy; don't you know that you can't sight with both eyes?" I said.

Harry put his hand over his left eye, then got the range without any trouble.

"Now I have it," he said. "The coin just covers the moon."

"Hold still, then, while I measure," I said. There! "It's four feet to an inch, from the coin to your eye. That is, the moon looks to you just as large as a three-cent piece four feet off."

"Whew!" cried Harry. "Rather small cart wheel, I should say!"

One by one they all surprised themselves, by seeing a three-cent piece cover the moon; not all at the same distance exactly, for eyes differ a trifle, but about the same. Then I set up a five-cent piece, and they had to go a little farther away; with a two-cent piece still further. Then I hung my watch against the glass, high up, and they found that the room wasn't wide enough to make it look as wide as the moon.

"I never saw anything so deceptive," said Mary.

"It's a regular cheat," said Harry.

"Could you tell how far off a cart wheel would have to be to look as small as the moon?" Willie asked.

"Very easily. You can do that yourself."

"How?" inquired Harry, eagerly.

"This would be a simple, and sufficiently exact way," I replied. "Take a straight rod four feet long, and stick a pin in one end, so," I said, making with my pencil a mark like this ——·. "Let the pin stand up as high as the diameter of a three-cent piece; that, you will remember, is the apparent diameter of the moon four feet off: eyes differ somewhat, as we saw, but that will be exact enough for your purpose. Then take another rod that will reach across the cart wheel, with a little to spare to stick in the ground. Set up the rod, and go from it so far that the pin in the sight-stick will just cover the rod when the other end of the sight-stick is held to your eye. Then you will have the distance at which a cart wheel will look as big, or as small, as the moon."

"That's easy enough," said Harry, "Let's try it to-morrow."

This to Willie: but all insisted on taking part in the experiment. Katy said she had an old umbrella-stick that would make a good sight-stick; and Mary suggested that her gymnastic wand would answer for the fixed rod.

"May be we could measure the sun too," she added.

"So you could," said I.

"Twould hurt our eyes," objected Harry.

"Not if you used smoked glass to look through."

"I've a sheet of blue glass," said Willie.

"That would be better," said I. "You can stick a penny, or any other small coin to the glass, then see how far off you will have to hold it to just eclipse the sun.

"After that, you could measure the distance at which a teacup, or a dinner plate, or a wagon wheel, or any other object, will appear to have the same size the sun seems to have in the sky."

"I don't believe I should know how to do that," said Harry.

"Nor I," said Mary.

"I think I could," said Willie. "Anyhow, we'll try it to-morrow."—*Wide Awake.*

THE HAY-STACK MONUMENT.

THE HAY-STACK MONUMENT.

The engraving presented in this article will be of special interest to many, because of associations connected with it. The prayer-meeting under the hay-stack—at which the special subject of conversation and intercession was the duty of the Christian church, without delay, to give the gospel to the heathen—is often referred to. It was held by Samuel J. Mills, James Richards, Francis L. Robbins, Harvey Loomis, and Byram Green, in 1806, in a field near Williams College,—at first in a maple-grove then under the hay-stack, because of rain,—and the suggestions made, and the emotions awakened or deepened then, had much to do with the formation of the American Board of Commissioners for Foreign Missions a few years later, and so with all the work which that Board and other like Boards in America have done and are yet to do. Those suggestions were as the "handful of corn in the earth upon the top of the mountains," the fruit whereof, even now, does "shake like Lebanon."

The precise spot where this meeting was held having been identified in 1854 by Hon. Byram Green, then the only survivor of the "men of the hay-stack," at the Commencement in August of that year the Alumni voted, that the grounds where Mills and his associates used to meet for prayer, and where the first American missions were projected, be purchased by the Alumni of the College, and be called "the Mission Park and grounds." Accordingly ten acres of ground were purchased, including the place of the hay-stack, and the grove where the prayer-meetings where usually held; and in 1856, fifty years after the meeting by which that ground was specially hallowed, a grand Missionary Jubilee was held at Williamstown—designed to be in that Park, though a severe storm rendered it needful to take shelter in the church.

The monument represented in the engraving has been recently erected, upon the spot where the hay-stack stood, at the expense of Harvey Rice, Esq., of Cleveland, Ohio, a graduate of Williams College. It was dedicated with appropriate and very impressive services on the 28th of July last. Addresses were made by Mr. Rice, the President, and Vice-President of the Board, Dr. Booth, one of the Prudential Committee, and Mr. Sanders, of the Ceylon mission. One of the speakers described it as follows: "As a specimen of fine material and artistic sculpture, it is strictly a Berkshire production, composed of Berkshire marble quarried at Alford, and wrought in the workshops of 'The Berkshire Marble Company.' Its shaft, cap, and base are square, its surface polished, its color a silver blue. It is surmounted with a globe, three feet in diameter, traced in map lines. The entire height is twelve feet. On its eastern face, and immediately below the globe, are inscribed these words: 'The Field is the World.' Then follows a similitude of the hay-stack, sculptured in bold relief, and encircled with the words: 'The Birthplace of American Foreign Missions, 1806.' Beneath this appear the names of the five young men who held the prayer meeting under the shelter of the hay stack." The friends of missions will pray that, in accordance with a prediction uttered on that occasion, this hallowed spot may "become a place of delightful resort, full of sacred memories, which will accumulate and grow in interest with the lapse of time;" that every year may "bring within its inviting precincts hundreds of pilgrims, and every college commencement its missionary jubilee.

ABOU BEN ADHEM.

LEIGH HUNT.

Abou Ben Adhem, (may his tribe increase!)
Awoke one night from a deep dream of peace,
And saw within the moonlight in his room,
Making it rich like a lily in bloom,
An angel writing in a book of gold:
Exceeding peace had made Ben Adhem bold,
And to the Presence in the room he said,
"What writest thou?" The vision raised its head,
And with a look made all of sweet accord,
Answered, "The names of those who love the Lord."
"And is mine one?" said Adhem. "Nay, not so,"
Replied the angel. Adhem spoke more low,
But cheerily still, and said, "I pray thee, then,
Write me as one who loves his fellow-men."
The angel wrote and vanished; the next night
He came again with a great wakening light,
And showed their names whom love of God had blest,
And lo! Ben Adhem's name led all the rest.

impetus to the growth of the state, and in point of fact, as they identify themselves with the land of their adoption, are transforming it from an uncultivated wilderness into one of the strongest and most fruitful of the Southern states. The fact that Florida is more nearly tropical than any other part of the Union accounts largely for the attractiveness to business men of which her present prosperity is to a great extent the result, and in this respect she must of course remain without a rival. Nowhere else in the United States can tropical fruits and vegetables be raised in such perfection as in the southern part of Florida peninsula, and as Northern markets can be quickly and cheaply reached, the business of fruit growing is likely to remain steadily profitable. Even yet comparatively little is know of the possibilities of the Floridinn soil and climate, and there is a great field open, south of Jacksonville, for experimental farming; a field, which even at that end they must work as the white colonists work, with whom they are put into competition, or otherwise must submit to the humiliation of seeing their natural inheritance pass swiftly into the hands of strangers.

FOOD.

That the food of a family should be nourishing, well prepared and appetizing is of such importance that every women who is the head of the family should be able with her own hands to prepare all the articles of food which are required to furnish a comfortable and wholesome table, and should not be ashamed to make an actual study of the properties of the various kinds of food and their different modes of preparation. It is hardly too much to say that the peace, the health and the happiness of a family (especially of children) depend as much upon the quality and preparation of their food as upon any other one thing, and no mother or housekeeper can safely neglect her duty in this respect. In some of our large cities cooking-schools have lately been established, and although they may not be immediately successful they are evidently an attempt to supply a want which is keenly felt among all classes of society. To be a really good cook is to be a valuable member of any civilized society, and among people who are obliged to do most of their own household work, it is to be invaluable. A good cook is one who knows how to select food, to vary it by preparation, to make it pleasant to the palate and easy of digestion; who can be liberal but not wasteful, economical but not stinted; who, in short, can provide clean, healthful and grateful food in proper quantities and at reasonable cost. That there are not many such among the laboring classes makes it all the more desirable that the young women of the present generation should be trained to understand how important to them and to their families, it is, that they should study cooking; not theoretically or from books, but practically, with the intention of making themselves intelligent, and thorough cooks, with the consciousness that to be a "good cook," is something of which any woman may be proud.

AFRICA.

A few weeks ago the American Geographical Society held a meeting in New York, for the purpose as advertised, of discussing Mr. Stanley's exploration in Equatorial Africa. The audience upon this occasion was so large, so enthusiastic, so attentive as to prove beyond question that the interest of the general public in the continuance of African exploration is constantly and steadily increasing. The gentlemen who spoke occupied most of the time in describing the growth and character of African travel from the days of Ptolemy to those of Stanley, and maps and charts were exhibited which showed all the

FLORIDA: SHOOTING ALLIGATORS ON THE UPPER ST. JOHNS.

FLORIDA.

In connection with our illustration, "Shooting Alligators on the upper St. Johns," we have on hand so much interesting matter concerning the State of Florida, that we are convinced our readers will forgive us if we enlarge upon our text and devote a little space to that most beautiful state which is fast becoming one of the most productive and promising sections of the South. Since the war, Florida has come rapidly into notice as affording a safe refuge against the severity of northern winters, and from November until May every village and town, and indeed one may almost say every house, within her borders, is filled with invalids or pleasure seekers from New England and the Middle states. This rush of travel increases yearly and is of course of immense importance to the state, especially as every year a certain population of their visitors are tempted by the climate and soil into becoming permanent residents, who bring with them usually either capital which they immediately devote to local improvements, or those habits of industry and thrift, which are only capital in another form. Of course such colonists as these give a steady and strong impetus to the growth of the state, and in point of fact, as they identify themselves with the land of their adoption, are transforming it from an uncultivated wilderness into one of the strongest and most fruitful of the Southern states. The fact that Florida is more nearly tropical than any other part of the Union accounts largely for the attractiveness to business men of which her present prosperity is to a great extent the result, and in this respect she must of course remain without a rival. Nowhere else in the United States can tropical fruits and vegetables be raised in such perfection as in the southern part of Florida peninsula, and as Northern markets can be quickly and cheaply reached, the business of fruit growing is likely to remain steadily profitable. Even yet comparatively little is know of the possibilities of the Floridinn soil and climate, and there is a great field open, south of Jacksonville, for experimental farming; a field, which even at that end they must work as the white colonists work, with whom they are put into competition, or otherwise must submit to the humiliation of seeing their natural inheritance pass swiftly into the hands of strangers.

the present rate of emigration, will not soon be filled, and must always be rich in opportunities. The colored people of the state share of course in the general advantage, but in Florida, as everywhere else, their primary need is education, and their chief disadvantage is that they do not sufficiently understand that as a race they can never elevate themselves except through the channels of trained labor. They must teach themselves, or more truly, must punish themselves to be taught, the hard lessons of industry, economy, honesty, sobriety, and must learn that there is but one road to success all the world over, that is, the road which lies through the gate of personal effort. It would be hard indeed if all the material prosperity of which Florida has so fair a promise should be let to fall exclusively into the hands of her white population, and yet it is too evident that such must be the case unless the colored people of the State are ready for strong and earnest effort, that is, are ready to work intelligently and persistently. They can till the land; they can gather in the harvest of the sea; they can support and fill schools and churches; they can earn and own their share of the beautiful country of their birth, but in order to reach

numerous theories that have been held in regard to the rise and course of the River Nile. It was generally admitted that Mr. Stanley by his late most successful exploration of the Victoria Nyanza, has established the fact that that lake is fed by tributaries from the great mountain range which lies to the west of Zanguebar, and which includes no less than four peaks, rising from 18,000 to 22,000 feet above the sea, and that it (the Victoria Nyanza), is the true source of the Nile. Of course further and more complete exploration is necessary before these discoveries can be considered beyond doubt, but Mr. Stanley has at present so much in his favor that we have every reason to hope that he has solved the vexing problem and that when the civilized world next hears from his expedition, America will have no reason to be ashamed of her contribution to the record of African exploration. There is something grand in the thought that earth's youngest and oldest countries are to be thus connected; that it has been reserved for a child of America to unfold the secret so long buried in Africa's heart, and it is with deep and strong feeling that we all await the final news from Victoria Nyanza and the Nile.

NEWS OF THE MONTH.

The cause of the recent war in Liberia between the Liberian colonists and the native tribes is stated by Rev. John Orcutt, general secretary of the American Colonization Society, to have been that the natives claimed that the county of Maryland in Liberia belonged to them and that they had a right to trade with foreigners independently of Liberian laws and Custom House restrictions.

As the American Government ordered the war steamer *Alaska* of the European squadron to go at once to protect the Liberians, Dr. Orcutt thinks it reasonable to suppose that the war has ended, at least for the present.

Over 3000 Afric-Americans have emigrated to the Republic of Liberia, five hundred of whom were from the state of Alabama.

The Centennial Year was welcomed with great enthusiasm throughout the country. Bell ringing, flag raising, illuminations, fireworks, and parades, with graver observances of prayer and song in the churches,—all manifesting and strengthening a general feeling that this Centennial Year must be kept sacred to "peace on earth, good will to men."

Philadelphia naturally considered herself the Head Centre of the Nation's Jubilee. The Quaker City broke all bonds of silence. The magnitude of the occasion went to her head. Public buildings and private dwellings were generally illuminated. Independence Hall and the statue of Washington were brilliantly lighted up by calcium lights, and, after a prayer and a speech, at two minutes of twelve, amid the shouts of the people the Mayor raised over the old state-house—the birthplace of our Liberty if Faneuil was its cradle—a flag which was an exact copy of one that Washington raised there on the first of January, just one hundred years ago. This flag, then the flag of the British East India Company, had the British stripes with the English Union-Jack in place of the stars. The Philadelphia papers say:

"The scene was a wild one and beggars description. As the flag reached the top of the flag-staff, the people appeared wild in their enthusiasm and shouted themselves hoarse. As the flag neared the summit, a calcium light from the American Hotel was thrown upon it and it looked grandly as it waved to the breeze. The clock now pealed forth the hour of twelve and ushered in the new year amidst another wild scene. The people actually appeared crazy. After the flag had been unfurled there was a brilliant display of fountains of colored fireworks. After the clock had struck twelve, Michael V. Donelly, the bell-ringer, began the jubilee. He first struck 1, then 7, then 7 again and then 6; indicating 1776. Then he rang 1876 in the same way, and then one hundred rapid strokes. The scene will long be remembered by all who witnessed it."

The End of Mormon polygamy seems to be at hand. In the case of the United States against George Reynolds tried in Salt Lake City for bigamy, Chief Justice Waite charged the jury that freedom of religious faith never implies freedom to violate law. The Reynolds case was appealed to the Supreme Court, and as the N. Y. *Evening Post* says, if this court confirms the judgment as there is no doubt it will do, the Mormons may henceforth believe in polygamy all they like, as they might in murder, but they may not practice it.

The Emperor of Brazil will visit the Centennial Exhibition and travel over the United States.

There seems to be a trace of Tweed in Canada.

Two severe earthquake shocks were felt at Richmond, Va., December 23d.

In the famous Lowell (Mass.) factories there are 10,500 female and 7,000 male operatives.

The Lincoln Tower has just been completed in London, and the top stone laid with appropriate ceremonies. This tower has been erected by voluntary contributions from the people of American and England in commemoration of the abolition of slavery under President Lincoln, and as a token of International good will. The tower is one hundred and ten feet high. The two lower stories are to be used as schoolrooms for poor boys, above is a belfry, and then rises a spire of ninety feet, built of Portland stone and effectively ornamented with the stars and stripes. The stripes represented by reddish stone and the stars cut in deeply. Great enthusiasm attended the occasion of the dedication.

Mr. Longfellow has declined the appointment as Centennial poet.

Africa will be extensively represented at the Centennial. Algeria, Morocco, Zanzibar, the East Coast, the Cape and Liberia will be there. Egypt will be the most extensive exhibitor, and besides a great display of her antiquities and modern manufactures and productions, two hundred persons will be sent representing every class. Dancing girls to show the recreations of the harems, genuine Bedouins from Arabia, Petraea musicians to show the national style of the art. Water will be transported from the Red Sea and the Tiber.

The Slave Trade at the present time extends over a portion of Africa nearly equal in area to the whole of Europe.

One more Centenarian has gone before the Centennial. Father Boehm, the oldest preacher in this country, a pastor in the Methodist Church, died at his granddaughter's home in Staten Island, December 25th. His one hundredth birthday was celebrated at Jersey City the 8th of last June.

Centenarians still live, however, and among them, in Montgomery Co., Indiana, are a couple by the name of Fruits who are respectively one hundred and thirteen, and one hundred and eleven years old, and have been married eighty-five years.

Centennial Peaks.—The *Prairie Farmer* says that Robert Manning, of Salem, Mass., exhibited at the Chicago meeting, four varieties of the pears, all of which grew on trees over two centuries old. The oldest was the Endicott, planted in 1630; the Orange from a tree ten years younger; both continuing to bear well, and have been doing so through the whole period of American history.

The New York State Census for 1875 gives one hundred and nine persons of one hundred years and upwards. Twelve colored persons are in the list.

Rev. Dr. Clark declines the Episcopal bishopric in Africa.

Several Scotch missionaries on the west African coast have made considerable journeys into the interior, and find the people anxious for commerce and Christian instruction.

It is reported that an English gentleman has given $35,000 to establish a bishopric at the capital of Mtesa, King of Uganda, Africa.

A Centennial Legion, composed of a single man and from each of the original thirteen states, and including some who fought on different sides during the war, is to have a reunion at the Philadelphia Centennial.

The noted flag that waved over Fort McHenry, at Baltimore, in September, 1814, during the British bombardment, and which suggested to Key the composition of "The Star Spangled Banner," is now on board the Tallapoosa, which has been lying at Portsmouth. It is badly torn, and has thirteen stars, and is owned by Mrs. Georgianna Armistead Appleton, of Boston, daughter of Colonel Armistead, who commanded the Fort at that time. It is to be exhibited at the Centennial.

Miss Mary Carpenter, the English philanthropist, who visited Humpton three years ago, is in India, engaged in establishing schools for women.

China has appointed two ministers to the United States.

Mt. Vesuvius is in eruption.

John Hons, a young man in Detroit, has saved over one hundred lives from drowning.

A Great Statue of Christopher Columbus is to be set up in the City of Mexico. It is too large to pass through the railroad tunnels, and is to be dragged over the mountains in an ox-cart between Vera Cruz and Mexico.

The intercollegiate contest for prizes for oratory, essays and examinations has been held this year in New York. Eleven colleges took part. The prize for Greek was given to a young lady from Cornell University.

Dr. Samuel G. Howe, the well known philanthropist, died at his residence in South Boston, January 9th, aged seventy-five years. His whole life has been devoted to enthusiastic labors for the suffering and oppressed. As a young man, he forsook everything to join the brave struggle of the Greeks for independence, and when famine broke out in the land he roused this country to send supplies to the sufferers. He was imprisoned in Paris for his efforts for the relief of the Polish patriots. He was one of the organizers of the Republican party in America, and his ardent anti-slavery sentiments caused him to be charged with complicity in the John Brown raid, a charge he publicly denied as "an undeserved honor."

When he was sixty-six years old, he went to Greece at his own expense, to carry supplies raised in Boston for the relief of the refugees from Crete which was trying to throw off the Turkish yoke. His philanthropic labors were not confirmed to political sufferers. He was chairman of the Massachusetts State Board of Charities from 1865 to 1874, by constant re-election as long as he was able to serve—and founded various State Asylums, especially the Asylum for the Blind in South Boston, which bears his name, and which he presided over for many years. Dr. Howe was, indeed, the first to originate in this country any extended and systematic instruction of the blind, and his efforts have done incalculable good. The famous case of Laura Bridgeman, a deaf, dumb and blind girl, was one of his greatest successes, and she is still living to lament him.

Dr. Howe's widow is Mrs. Julia Ward Howe, a gifted woman who will perhaps be remembered chiefly and longest as the author of the Battle Hymn of the Republic.

A New York correspondent of the *Boston Journal* says that the New York young gentlemen very generally agreed by a sort of concert to abstain from drinking when making New Year calls this year. When offered wine they would reply, "Not a drop; this is Centennial Year."

A Centennial Year Temperance Pledge from all our young men would be a bright promise for the country's next Centennial.

Norfolk was visited on the 18th of January by a committee of ladies and gentlemen, delegated as Peace Messengers by the ladies of Boston, to present souvenirs of the Bunker Hill Centennial to the regiment of "Norfolk Light Artillery Blues," which participated in that celebration last June. The committee was handsomely received by the Blues and the City, and entertained at a handsome dinner at which speeches and sentiments were exchanged expressive of mutual friendship and esteem. The interesting ceremonials of the presentation were witnessed by a large number of the citizens. The gifts from the ladies of Boston to the Blues consist of a "White Banner of Peace," a beautiful banner of white silk four by five feet, with the inscription "Souvenir of the Banker Hill Centennial, June 17, 1875," and a centre piece representing Banker Hill Monument, with the pine and palmetto placed beside it, the coats of arms of Virginia and Massachusetts on each side, while below is the inscription, "Presented by the Ladies of Boston to the Norfolk Light Artillery Blues." The staff is surmounted by a dove carrying the olive branch, and a streamer inscribed "Liberty of Conscience, Faith, Hope and Charity." Silver badges were presented to each soldier, and gifts to all their families; those to the children consisting of miniature tea-chests containing the famous dispatch from Governor Gadsden of Virginia to the City of Boston, "Don't pay for an ounce of that tea. We'll stand by you."

The committee visited the Navy Yard and Fortress Monroe, and a grand promenade concert was given in their honor at Jackson's Hall, Norfolk, by the Artillery School Band from the Fortress.

From Norfolk the committee have proceeded to Richmond to present the Richmond Commandery the peace banner and souvenirs, and will then go to Charleston on the same errand. God speed the Messengers of Peace!

The Centennial Bill for the appropriation of $10,000 to represent the State in the Centennial Exhibition has been defeated in the Virginia Legislature. The Richmond *Enquirer*, while expressing a disappointment which is generally felt, says: "The debate was profitable, as it gave members on both sides an opportunity to avow political sentiments of a most conciliatory character, thereby showing that there is little if any hostility to the National Government among the people or representative men of Virginia."

The next Union Republican national convention for the nomination of candidates for president and vice-president of the United States will be held in the city of Cincinnati, on Wednesday, the 14th day of June, 1876, at 12 o'clock noon, and will consist of delegates from each state equal to twice the number of its senators and representatives in congress, and of two delegates from each organized territory and the District of Columbia.

The Teachers' Table.

SCHOOL RECITATION FOR WASHINGTON'S BIRTHDAY.

BIRTHDAY BELLS.

Single Recitation.—When the white-sailed ships are going
Downward to the bay,
Where Potomac's stream is flowing
On its seaward way,
By Mount Vernon's willows, telling
Of our hero's grave,
Bell-tones, morn and night are swelling
O'er Potomac's wave.

In Concert.—Tolling! tolling! with a sweet, sad knell;
Ever, going by Mount Veroon,
Rings the passing bell!

Single Recitation.—But to-day, our Country's Father,
On the land or sea,
Where thy sons and daughters gather,
Glad we think of thee!
Joyful songs this hour are ringing,
Day when thou wast born,—
Songs of grateful children singing
Of thy birthday morn!

In Concert.—Ringing! ringing! let glad echoes tell
Ships that this day pass Mount Vernon,
Ring the Birthday bell!
—*New-England Journal of Education.*

At Home.

LITTLE BROWN HANDS.

They drive home the cows from the pasture,
Up through the long shady lane,
Where the quail whistles long in the wheat field
That is yellow with ripening grain.
They find, in the thick waving grasses,
Where the scarlet-lipped strawberry grows;
They gather the earliest snow-drops,
And the first crimson bud of the rose.

They toss the hay in the meadow,
They gather the elder bloom white,
They find where the dusky grapes purple
In the soft tinted October light.
They know where the apples hang ripest,
And are sweeter than lady's wines;
They know where the fruit hangs the thickest,
On the long, thorny blackberry vines.

They gather the delicate seaweeds,
And build tiny castles of sand;
They pick up the beautiful sea shells—
Fairy barks that have drifted to land.
They weave from the tall, rocking treetops,
Where the oriole's hammock nest swings,
And at night time are folded in slumber,
By a song that a fond mother sings.

Those who toil bravely are strongest;
The humble and poor become great;
And from those brown handed children,
Shall grow mighty rulers of state.
The pen of the author and statesman,
The noble and wise of the land,
The sword, and chisel, and palette,
Shall be held in the little brown hand.

WHAT FOUR LITTLE BROWN HANDS DID.

An *Exchange* says: Two Miami schoolboys have embarked in business. One has saved one hundred dollars during the past year by selling fruit, confectionery, &c., on the street at odd hours, and, it being vacation, is now clearing one dollar and fifty cents a day. The other boy, who has sold fruit, &c., on the Maine Central Railroad for five or six years, owns several small houses in Bath, and is said to be worth from $7,000 to $8,000. "Where there's a will there's a way."

A CENTENNIAL ROSE.

Montague's Directory, &c., of Randolph county, published in 1859, says of Mrs. Maxwell, the daughter of Col. Pierre Meoard, our former lieutenant governor, she has in her possession a damask rose-bush, which was brought from New Orleans more than a century since. It is the first rose-bush that ever bloomed in Illinois; and though it has been swept over by the floods of the last hundred years, it still retains its vigor and bloom, putting forth its sprouts upon the annual recurrence of spring-time."

GLUE AS A HEALING REMEDY.

"For the last twelve or fourteen years," says a correspondent of the Scientific American, "I have been employed in a shop where there are over three hundred men at work; and, as it is the case in all shops of this kind, hardly a day passes but one or more of us cut or bruise our limbs. At first there were but few that found their way to my department to have their wounds bound up; but after a while it became generally known that a rag glued on a flesh wound was not only a speedy curative, but a formidable protection against further injury. I was obliged to keep a supply of rags on hand, to be ready for any emergency. I will here cite one of the many cases cured with glue. A man was running a boring Machine, with an inch and a quarter auger attached; by some means, the sleeve of his shirt caught in the auger, bringing his wrist in contact with the bit, tearing the flesh in a frightful manner. He was conducted to my department (the pattern shop) and I washed the wound in warm water, and glued around it a cloth, which, when dry, shrank into a rounded shape, holding the wound tight and firm. Once or twice a week, for three or four weeks, I dressed the wound afresh, till it was well. The man never lost an hour's time in consequence. The truth of this statement hundreds can testify to. I use of course the best glue.

A Tin-shop in the Kitchen.—All housekeepers may not know of what they are capable in the line of keeping their tinware in order. For the benefit of such we will say that it is easier to solder such things than to pay a traveling tinker two prices for mending them. Take a sharp knife and scrape the tin around the leak until it is bright, so that the solder will stick. Then sprinkle on a little powdered resin (they have a liquid solder to sell but resin will do as well); lay your solder on the hole and with your soldering iron melt it on. Do not have the iron too hot or the solder will not adhere to it at first. After two or three trials you can do a job that you will be proud of. If you do not own a soldering iron, procure one by all means; but, when hard pressed, I have used the knob on the end of the fire-shovel, or a smooth piece of iron, or held a candle under the spot to be mended. Anything is better than stopping leaking pans with beeswax or rags. Try it, young housekeepers, and see how independent you will feel. Your pans should be dry when you take them in hand.—*Housekeeper.*

BROOKLYN, N. Y., *November* 15, 1875.

Not many months since, the word came to our country from over the broad Atlantic, that the two Evangelists, Mr. Moody and Mr. Sankey, had ridden farewell to the scene of their labors in Great Britain, and had set sail for America. Many persons reading that paragraph in the newspapers questioned within themselves whether the same gracious results would follow the work of these Evangelists in their own country, whether our people would hear them with the same eager interest and sympathy, and whether they would have the same power in their own land, and we fear many a doubting heart said, "We cannot believe it."

But God's Holy Spirit is with these two men, and is blessing their labor and crowning their work with most wonderful success. It has been my privilege within the last few weeks to attend several of the meetings that are now being held in the city of Brooklyn, and they will long be held in remembrance. The city seems safe, the Christians are aroused, and many of those who are not yet Christians are asking in earnest, "What must we do?"

Mr. Moody holds every evening a preaching service at the Rink, a large building capable of holding between 6000 and 7000 people; at 4, P. M., a Bible reading at Dr. Talmage's church; and every morning at 8, A. M., a prayer-meeting in the same place. At every service numbers are unable to gain entrance, and "overflow meetings" are held in the adjoining churches.

As we entered the Rink on the first evening, the sight was strange, yet solemn and inspiring. The building was entirely filled—the central aisles were kept open, but every other available place was occupied. On the platform, on the right, was seated the choir—composed of two hundred and fifty ladies and gentlemen, selected from the city churches, and only professing Christians were allowed to join this choir. On the left were the clergymen of Brooklyn and the vicinity, with their wives and friends. In the center of this platform was the small stand prepared for the speaker, and at his right stood the Cabinet organ ready for Mr. Sankey's use.

Just at the appointed hour the two Evangelists entered; Mr. Moody stepped to the desk and bowed his head, for a moment in silent prayer. The most intense stillness pervaded the vast audience, every eye was turned toward the platform—and looking down into that sea of up-turned, eager faces, it did truly seem as if the Spirit of the Lord was in that place.

Mr. Moody's voice broke the silence as he announced the opening hymn, reading the first verse:

> "I need Thee every hour,
> Most gracious Lord;
> No tender voice like Thine,
> Can peace afford;"

And then we listened to the sweetest music we have ever heard. Mr. Sankey led the choir with his wonderful voice, and in the refrain all the congregation joined. But there was a softness and a beauty quite indescribable in the effect of the music; it gave us a new idea of religious melody—soft, yet strong, powerful and yet exceeding sweet, it filled the entire building with a richness of harmony and adepth of expression, wonderful and beautiful in the extreme.

After a brief, earnest prayer, Mr. Moody said, "Mr. Sankey will now sing to us the hymn, 'Jesus of Nazareth passeth by,'" and there was a hush of expectation as Mr. Sankey, after a few simple chords on the organ, sang this wonderful hymn. We had heard it said that Mr. Sankey "sang the gospel," but we did not all realize what it meant until we listened with wonder and delight. His voice is rich and strong, a baritone, in good control, very flexible and full of expression. His utterance is distinct, every letter, almost, reaching your ear, and every word comes to you freighted with meaning. As you listen, you forget the man, criticism is disarmed and you wait for each word with breathless interest. It has a meaning, it is not only a beautiful song, it is the gospel message, salvation for lost souls.

During the progress of the service—which was conducted as a regular church service—the utmost quiet and attention prevailed. There were many in the audience evidently strangers in a church building, drawn by curiosity or interest in this "newest sensation," but every eye was fixed on the speaker, as, in earnest, plain, searching words he preached the gospel to dying men.

Standing near us was a fine looking man, of middle age, evidently a man of education and good position in society; he appeared interested in the beginning of the service, and when Mr. Moody announced his text, "What think ye of Jesus?" and proceeded to explain and apply the truth to the hearts of his hearers, this man listened as if for his life, bending forward and straining every nerve that not one word might be lost, and at the close the strong man was weeping like a child—and when Mr. Moody asked the inquirers to meet him in an adjoining church, he left the building evidently "seeking Jesus."

As we passed out of the Rink at the close of the service, we went to a neighboring church where Mr. Charles Morton was holding a service for young men. Although the church was a large one, it was filled almost entirely with young men, and during the progress of the meeting, and at its close, very many rose to ask prayer.

On Sabbath afternoon a service was held at the Rink for women, and the building was crowded. There were women of all ranks and conditions, and they met there on common ground, "for there is no difference." Directly in front of us sat a young girl laughing and chatting with a friend, both drawn there, probably, to see and hear. Their manner was frivolous and giddy, but as the sermon progressed they became more attentive; one of them listened at first curiously, then with interest and quiet attention, and at the close, in deep anxiety and distress, retired to the Inquiry-room to ask, "What shall I do to be saved?"

One marked peculiarity in this work is the prominence given to the pure word of God. Direct reference is constantly made to the Bible. Mr. Moody always preaches with his hand. His arguments, appeals, incidents and illustrations are derived chiefly from the arguments, promises, histories, biographies, of Holy Writ. Like Apollos of old, he is "mighty in the Scriptures," and like Apollos, "with power he shows by the Scriptures that Jesus is the Christ." One of the most delightful and stimulating of all the kinds of meetings held, is the Bible Reading in the afternoon of each week day. Mr Sankey sings, both alone and as a leader of the great congregation of 4000 people, at the opening. Then, after a brief prayer, Mr. Moody takes his Bible (of a size to be open conveniently on his hand) and explains the Scriptures. He takes some one subject, as, for instance, God's Free Grace, and throws upon it the light of one passage after another—now from an epistle, then from a Psalm, or from one of the Historical Books of the Old Testament. It is like opening one window after another till there is a blaze of light. The words, "Grace means a free gift" are the focus of the rays of a burning glass. Mr. Moody is above all other things a Bible man. The pure word of God is his meat and drink, fountain of his zeal and source of his power.

And in this wonderful work these two men labor with the utmost faith and diligence, but with humility and an ever increasing sense of their own powerlessness without the abiding presence of the Holy Spirit.

A friend who has been associated intimately with them said to me, "It is beautiful to see two men so unlike in disposition working so harmoniously together for the one great end, the salvation of souls. Mr. Moody reminds me of Peter, impetuous, full of zeal, ardent, enthusiastic; while Mr. Sankey is like John the Beloved, loving, gentle, patient, prayerful, —and they work as one man, balancing each other."

The same friend tells the following incident:

"I went one morning to call on Mr. Moody to ask him if he would go with me to visit a very aged Christian lady who especially desired to see him and converse with him, as she was despondent under the seeming withdrawal of the light of God's countenance.

"After asking my case with as much earnestness as I could, I waited for his answer. But he said, 'No, much as I would like to go, I *must not;* for if I should go once to call at a private house, others would come with the same request, and I *cannot.*' So I went to my friend and told her it was as I had feared, Mr. Moody could not come to see her; but her distress and disappointment were so great—for she could not leave her room and was unable to go to hear the Evangelists—and this was her only hope, that they would come to her, that hoping against hope, I said I would ask once more.

"So again I called on Mr. Moody and talked with him, but he said, 'No, *I* cannot; but there is Mr. Sankey, ask him.' Presenting the case to his fellow-worker, I asked, 'Will you go?' and he expressed instant readiness. We started for my friend's house, and as we went I expected to tell Mr. Sankey a little of the lady's history, that he might not be at a loss when he met her; but other friends joined us and I had not a moment with him alone.

"But I need not have feared. Sending himself by the bedside, Mr Sankey seemed to realize the circumstances at once, and in the most gentle and loving way, talked and then prayed with my friend. He seemed to bring help and strength to her mind and joy and peace to her heart, and before bidding her goodbye, sang to her three of his sweet hymns. I shall never forget that interview, we all felt that 'it was good to be there.'"

We might go on still longer with incident and illustration of this wonderful work—the work of God among the people, but neither time or space will permit.

Let every one with prayer and supplication ask God's blessing on this work in our land—that the seed sown may spring up to bring forth fruit an hundred fold. "And God, even our own God shall bless us; God shall bless us and all the ends of the earth shall fear him."

CALIFORNIA.

I.

ASPECT OF THE COUNTRY.

What is there on a mountain, after all, that should so impress the human mind with awe and admiring wonder! It's nothing but an immense dirt-heap, nothing but the tiniest wrinkle in the vast covering of the earth! And yet we are never more exalted in soul than when among the mountain solitudes; we never appreciate better the sublime and grand than when we gaze from some vast height into the depths below. The view of the American River among the Sierras is unspeakably fine. The railroad skirts along the very edge of a precipice that runs down sheer for two thousand feet. Though the valley far below runs the stream, looking almost like a silver thread, while the bridge that spans it seems nothing more than a rod laid across. The road at this point was built with great difficulty, and is, perhaps, the finest piece of engineering along the entire overland route. So steep was the mountain-side that the workmen could find no foothold upon it, and had to be lowered in baskets from above.

The Sierras abound in grand and picturesque scenery, and some day I hope to climb their summits and view the wonders of the prospect that there unfolds itself. The sides of the range when viewed from above present four different belts of color, purple, blue, red and white, the first three being due to differences of soil and vegetation, the last to the snow that perpetually covers the summits of the range. But the scenery grows tame and poor as the Sierras are left behind. Gradually we descend into the fertile plains, whose rich soil presents almost the only thing that calls for admiration. The region is mostly level and presents but little variety of prospect. Streams are seldom seen, and groves and forests are almost wholly wanting. Wheat-fields, nothing but wheat-fields whichever way we turn! One coming into the state from the East in the summer time might almost be alarmed at the aspect of the country. Not a sign of green except the foliage of the trees is to be seen anywhere. The dust lies in the road inches deep, and the parched and yellow grass and brown hillsides present to Eastern eyes a strange and most unattractive appearance. One would fancy that no soil would produce anything while subject to such droughts, and yet there is in all the country no more productive soil than that of the best lands of California.

But more regarding the agriculture of the state at some future time; at present we will consider only the outward appearance of the country. As all the rain falls in the winter months, from the beginning of November until March or April, the streams are either low in the summer or altogether dry. The two largest rivers are the Sacramento and San Joaquin (Wawkeen), neither of which is a beautiful stream. The waters are turbid and the banks, in the summer time at least, anything but lovely. But as we journey onward across the plains, new peaks arise in the distance which prove to belong to the coast range —a line of hills skirting the coast from north to south along its entire length. In some one or two places their summits tower into the regions of eternal snow, but generally they average from five hundred to one thousand feet in height. Quite a lovely picture they present in the dim distance, their outlines softened by that purple haze so often seen upon California mountains. But as we draw near much of their charm vanishes. The purple tint disappears, and we see instead that everlasting brown which tires the eye and almost persuades one that the land has received some terrible visitation of fire or insects. How seldom the real answers to the ideal in this world! This, then, is that beautiful California which the imagination had pictured as the paradise of lands—a vast area of plain and hillside yellow with dry weed and withered grass. And even Oakland falls far short of our anticipations. We had fancied it to be some quiet little village, adorned with beautiful avenues winding through pleasant groves, and commanding from some eminence a glorious view of the bay beneath and the surrounding country. We find instead a large city of some thirty thousand people, low, flat and dusty, and the live-oaks that are scattered here and there dingy from the dust-clouds that have settled upon them.

Notwithstanding all its wealth and gorgeousness of scenery, California does not impress us as being a beautiful country. It lacks diversity of scenery—diversity, that is to say, in any particular part, for of course the summits of the Sierras are in strong contrast with the Sacramento valley. We miss the picturesque woodlands, sunny hillsides, running rills and green meadows that constitute the charm of the New England landscape, and make the old Puritan country far sweeter and dearer than this new-found land of wonders. And yet there is to be seen here splendor of scenery which New England cannot match. The effects of clouds and sky are glorious and beautiful beyond description in this sea-coast region. Already now the homely dress of summer has disappeared, and plain and hill are bright with "living green." The grass grows wonderfully fast and in the spring will appear rank and luxurious, while on every side wild-flowers of the brightest hues will be found in rich profusion.

LETTERS FROM GRADUATES.

NORTH CAROLINA.

Dear Teacher:—I can't keep silent any longer. I must write a line or two in way of inquiring for you. You see I have been busy with my Fall work again. I like this place so much and the children seem to like me. I have had several offers to teach for higher wages this Fall, but thought I had better let well enough do. I want to live comfortably, but after that, money ceases to be an object with me. I have thirty-five as well behaved and good looking children as you might wish to see. I can't think of any place where my services are greater needed and more appreciated than here. We were pleased to have Mr. J. M. W. visit our school first of last week. His visit is among our pleasantest recollections. He lectured beautifully to the Greenlawn Sunday-school, and came to H. and instructed my children some in singing—so he got his name away up. I see on slater Marin's bill there is a deduction of $2.0 by the Peabody fund; I was glad to see it. I am going to close school now for two weeks. Remember me kindly to any who may inquire for me.

Yours, lovingly, G.

VIRGINIA.

Dear Teacher:—G. C. and I am teaching the same school I had last term. We commenced the first of September, with quite a large number of pupils, and have had some to come in since. I have applications to join the school most every day but as I have so many pupils I shall be oblige to turn some of them off. It is always with reluctance that I turn any away from the school who seem really anxious to come in and share in its advantages. We have one hundred and five pupils, so you can imagine how much we have to do. The County Superintendent and a School Trustee, came in yesterday to visit our school, it being the first time they had been in since we commenced; they spent some considerable time with us, and said they were quite pleased with our manner of teaching. After the County Superintendent gave the school a short lecture on punctuality they left, assuring us that as they considered themselves so amply rewarded for their visit, we might expect them again soon.

The American Educational Cyclopædia,

A REFERENCE BOOK FOR ALL MATTERS OF EDUCATION IN THE UNITED STATES AND IN THE WORLD.

It is valuable for Teachers, School Officers, Clergymen, Lawyers, Editors, Politicians, and Parents with children to educate. It is endorsed by the highest authorities in the land, among which are 47 out of 48 State and Territorial Superintendents. It contains 800 pp., bound in cloth, $2; in manilla covers, $1.50. J. W. SCHERMERHORN & CO., Publishers, 14 Bond Street, New York. 2-12

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded to its broadest scope, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY

HAMPTON, MARCH, 1876.

PREMIUM.

From and after November, 1875, *on receipt of one dollar, one year's subscription to the* SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. *The books are sold at fifty cents apiece.*

THE PROMINENCE of the negro as a voter, as a subject of philanthropy, and as a victim of prejndice, has created among many a desire to know his real condition more fully. People are not satisfied with reports colored by hostile feeling, by zealous interest, or by partisan passions.

We publish this month several letters from graduates of the Hampton Institute who are engaged as teachers of colored schools, who have entered the field after three years of special training and are devoting their best energies to the work of elevating their people. These writers know their people; their aim is to do good; their concern is for knowledge and morals rather than personal profit; they are known to us as capable, reliable, devoted to their race, and their statements are an inside view of the condition of certain localities.

Written to their teachers and not intended for publication there is a freedom of expression for which allowance should be made; they simply tell what they see; the language and style are their own, and are worthy of attention as the reenlt of a short course of instruction.

In portions of the Sonth there seems to be a relapse into barbarism. What else can be expected when the people are, in some places, in mental darkness and moral deadness, left to the guidance of demagogues, of preachers who are blind leaders of the blind, victims of whatever is low and base in themselves, nnable to read, destitnte of schools, cast by emancipation npon an impoverished and ill-feeling connty, to pass through the fiery furnace of reconstruction, and to care for themselves, after six generations of absolnte dependence, in the midst of a people taught to regard them as fit only for bondage. The freedom that seemed, afar off, like the delectable mountains, has been to many a disappointing reality. They have had to begin at the bottom, with nothing, in the midst of a tremendous social and political ruin.

The wonder is that they have done so well. This is generally admitted by Southerners. Immediate emancipation has not wrought the propbesied mischief, because the negro was better fitted for freedom than was expected. Contact with educated people had set them many examples of noble character; had taught them the methods and restraints of civilized life; they had absorbed knowledge by living in an atmosphere of ideas, and earnest thought busied the brains that had been dormant for ages. The pressure that was meant to smother thinking only stimulated it. Book knowledge became a *terra incognita* of wonderful fascination. No other race could have, in like circumstances, adapted so much of good and so little of the evil of modern civilization. Only the black race survives such contact; it is fatal to the red—the Indian, the Malay and Polynesian races.

A stream of Anglo Saxon blood was poured into African veins, unchecked by social or other law, carrying with it qualities that modified and assimilated the latter to the dominant race.

The Israelites and the Africans were, we believe, alike stimulated and disciplined by slavery for future achievements. In this view a future crisis was inevitable, and it came.

The negro needed it as a pupil needs a new lesson to learn; the South needed it qnite as mucb, to rid herself of a labor system that was ruinous to her lands, to develop her hidden resonrces, and to relieve her wretched poor whites who were the worst sufferers from slavery.

Should a uniform dark shade represent the old *regime* in the Sonth, the present would be illustrated by a mottled surface of deep darkness and bright lights. Perhaps one third of the freedmen are industrious and improving, another third at a stand still, and the remainder retrograding.

Intemperance is making sad ravages. Common drunkards are rarely seen, but frequent indulgence absorbs the earnings that should be put into land and education. Politics has, in some quarters, worked a fearful demoralization. There is no negro 'society" with tone and influence; no general public sentiment. Religion and morals are divorced. The Church, while doing great good, often tolerates gross misconduct in its members. Educational effort is utterly inadequate; illiteracy is boundless. Hence the dark pictures drawn in the letters of our graduates.

But there is a bright side. Widespread violence is over; Kuklux have subsided. Disorders and murders are due to a bad state of society rather than to race feeling.

The black man can learn. Deficiency of character and not lack of brains is his difficulty. The negro question is one of morals and hard work, and he is answering it by an enormous annual production of cotton, corn and tobacco; over forty million dollars of his savings passed through the Freedman's Bank; he is becoming a land holder; over six millions of property in Georgia are owned by freedmen. As a property holder he becomes a conservative force in society and a safe voter. Negro youth are answering it by making as great efforts and sacrifices for edncation as any class in any land. The clear-headed, candid, capable writers whose letters we publish are answering it, and they are fair samples of the two or three thousand who, in different institutions of a high order through the South, are fitting themselves for the new life providentially opened to them, and whose labors will, under God, lead their race to a noble use of their freedom and their rights.

OWING to exhaustion of funds the public schools of Elizabeth City County, Va., of which Hampton is the principal town, are closing after a session of but five months.

Rather than that the "Butler" and "Lincoln" (colored) schools should empty their five hundred and fifty children upon the streets for a period of seven months, their teachers have offered to work for a pittance, and parents are paying a small tnition fee of ten cents a week. It is cheering to see the entbusiasm of some of the little children to raise the ten cents without which they cannot enter school Monday morning. The Farm Manager of the Normal School buys, for his lime kiln, at three cents a bushel, all the oyster shells that are brought, and many little fellows have collected their pile of ten or fifteen bushels for tuition.

On Monday, February 9th, the *Hampton Singers* gave a concert in aid of these two schools, which was well attended by all classes, and eighty-five dollars were realized.

THE Hampton Singers, after many months of study, have not lost their power to interest or please, judging from the last performances at Hampton and Fort Monroe. On the first of March they will give a concert in the Opera House at Norfolk; they sing on the second in Petersburg, and on the third and fourth of March in the Richmond Theatre.

Several of the Singers have graduated and are teaching school with excellent success. The present company is composed of the two Classes who made the two and a half years' campaign.

THE official department of the *Educational Journal* of Virginia informs us that Ex-Governor Walker, of Virginia, Chairman of the Committee on Education and Labor, has revived the bill to set apart the public lands for educational purposes, to be divided on the basis of illiteracy. Congress could not do a better thing than this.

A Republican House seemed to care most for the negro's vote, and, ignoring his greatest needs, and of late years blind to his real situation, failed to legislate to his advantage, but strengthened, in some states, the worst influences that could surround him, and insured his political overthrow.

It will be singular if ex-slaveholders, when in power, should be the first to recognize the vital interests of the nation by helping to remove the cloud of ignorance that rests like a pall over the South.

Dr. Ruffner also informs us that a "colored educational association for this state has been formed and so far seems to have been conducted wisely. In August last it was organized. It could not be expected that everybody would exhibit sound and enlightened views, but the tenor of the views was good."

THE Norfolk *Landmark* publishes in full the speech of the Hon. R. M. Smith, colored delegate from the County of Elizabeth City, and a resident of Hampton, proposing state aid to this Institution. We quote from the introductory remarks:

"Mr. Smith, who is a very respectable and intelligent man, spoke briefly, but earnestly and well in behalf of his amendment, and he was heard with great attention by all parts of the House. There was no vote or any other expression of opinion taken upon the amendment, the hill being immediately passed by and other business gone into. However, the demand made in behalf of his race, as represented in Hampton Institute, by Mr. Smith is not unreasonable; and as his remarks were in very good taste, exhibiting not only good temper but good sense, they deserve to be laid before the public."

The following is a portion of his speech:

"I know very well, Mr. Speaker, that the taxable property of the colored citizens of Virginia bears but a small proportion to that of the whites. So much the greater pity for the colored people, and so much the more generosity required of the whites. Even in the matter of the capitation tax I find, by reference to the report of the Auditor of Public Accounts, that the amount paid by the whites is $163,020, while that paid by the colored is only $101,186—making an excess for the whites of $61,834. These are, indeed, considerations why we should not expect so much for the education of the colored race as the Legislature may choose to contribute to the education of the white race; but surely they are not reasons why we should have nothing.

"For my part, Mr. Speaker, I am not here to oppose every motion that may be made on the other side of the House, but I am here to aid everything that is for the good of the State and which is not detrimental to the good of my constituents, and I trust that gentlemen of the other side may meet my amendment in this liberal spirit and help the Hampton Normal and Agricultural Institute. That institute is the great light of the eastern portion of Virginia, and should not be allowed to grow dim through enmity or indifference.

"We have not here to back those humble claims such honorable gentlemen as Gen. Francis H. Smith, of Lexington, and Col. Walter H. Taylor, of Norfolk; but I am persuaded that these claims are recognized by gentlemen of fairness and ability on the other side of this House, and that these gentlemen will not permit them unchampioned to be trampled under foot. The sum asked is small, and I sincerely hope that it may be granted."

Mr. Smith is a blacksmith of this town, a most industrious and excellent workman as well as a good citizen, and is entitled to the respect which he receives.

IN THE December, January and February numbers of the *Southern Planter and Farmer*, published in Richmond, Va., is a series of articles by "Civis," said to be a gentleman of high culture and educational position, who denounces the education of the negro in public schools, because:

1st. "It asserts the hideous doctrine of negro equality. How this blasphemous heresy seeks the amalgamation of the races as its culmination was clearly shown in the last article. I cannot dwell upon this topic; it is too revolting; it is too disgusting for contemplation."

2d. "Its policy is cruelty in the extreme to the negro himself."

3d. "Because it brings paralysis to our industrial pursuits."

Each of these points is fully commented on. There are about thirty pages of writing in the above spirit and style, with frequent reference to the Divine Will in reinforcement of views advanced.

The crack of the whip would, we think, in the author's opinion, prevent the paralysis so imminent from an intelligent laboring class.

The civilized and Christian world recognizes the humanity of popular education and considers as cruelty the enforced ignorance and subjection which "Civis" advocates as ordained of God. He forgets the Golden Rule, and the command "*Go teach all nations.*"

The "hideous doctrine" referred to (of giving a lower race education and opportunity because it is lower and needs improvement) has many enemies in the South, especially among the old aristocracy, to some of whom it is "hideous" indeed not to keep a man down because he is black; "hideous" to teach a man to read his Bible understandingly.

But Virginia and the South are to-day filled with noble men, to the manor born, who are not afraid of the social consequences of education, and who dare trust the innate superiority of the Anglo Saxon to hold its own, as it does, all over the world, and will so long as it *is* superior.

"How this blasphemous heresy seeks the amalgamation of the races was" *not* "clearly shown in the last article." In it he says wisely, "Beware how you subject human nature to temptation," and because of this reckless subjection in slavery we have before us the spectacle of a race devitalized by mixture, with, we believe, more people of mixed than of pure blood. Such a stream of white blood as has been poured into colored veins will no longer flow. The legal protection of negro women and the universal tendency of the freedman to make no social advances whatever are checking this great evil. A little more "superiority" on the part of some of the whites would be a great help. Civis points his guns the wrong way. He might well say in another sense "I cannot dwell upon this topic."

What is "too disgusting, too revolting for contemplation" is the thought of the frightful destiny to which many of the fair, right minded, improving and Christian girls studying at Hampton and at similar institutes would be subjected were it not for their great release and new light. These higher schools and the common schools are interdependent and make up one system.

We have given only a few of "Civis's" statements, but the pith of them as nearly as possible. The dishonesty of paying large sums for education and ignoring the public creditors is forcibly presented and worthy of an able article in reply.

Virginia in her pinching poverty has resolved to educate *all* her children. This fact in connection with her great resources of material wealth and manly worth will in time give her back a leading place in the nation's councils. She will find that good morals and intelligence usually go together, that the negro will gradually separate into classes of which the better will become desirable citizens, and aid in elevating and restraining the lower; that immigration will be attracted to intelligent labor, and that as in every settlement of Anglo Saxons on either continent the race will hold its own and will be, as it always has been, able to choose its own distance, socially, from those that surround it.

INSTRUCTION in the art of cooking is now given to the girls of the Senior Class at the Hampton Institute. Every Saturday a detail prepares a dinner; they do this with zest and consider it a privilege to have such useful training, though part are already skilled in the culinary art.

The desire and demand for labor by students was never so eager as now. As it becomes a fixed fact in our system it is regarded less as drudgery and more as means of help. Eight years of experience in the "blasphemous heresy" of educating blacks has proved most satisfactory, as a stimulus to good habits, a means of great mental improvement and of Christian growth, through which our pupils, and in some measure the thousands whom they teach will be lifted up to the kingdoms of manhood and womanhood, heretofore almost inaccessible to them, not by God's decree, but by man's wickedness.

LETTERS FROM HAMPTON GRADUATES.

EVERY-DAY EXPERIENCES OF TEACHERS: WHAT THEY SEE AND THINK; THE CONDITION OF THE NEGRO RACE AS DESCRIBED BY INTELLIGENT COLORED MEN AND WOMEN; A DARK PICTURE WITH A BRIGHT SIDE; A GREAT AND PRESSING NEED FOR LEADERS IN EDUCATION, TEMPERANCE AND MORAL REFORM; THE RESULTS OF THE HAMPTON INSTITUTE.

One of the brightest of Hampton's alumni writes from a mountain town of Virginia as follows:

January, 1876.

Dear Teacher:—While my scholars are singing Johnny Smoker (a kind of gymnastic exercise that my friend Mrs. Dixon taught me when I went to school to her) I thought I would write, or rether commence a letter to you. I have a school of seventy-six pupils, some of which are very apt and learn ever so fast, while some are slow and dull; but I try to do my duty by them all. I find the gymnastics we had to be so prompt about at Hampton are very useful. I've taught them to my scholars and they are delighted with the exercise. The scholars are never weary of them, and it is real refreshing to me after a hard day's teaching to go through them with the scholars.

Our schoolhouse is very cold and open. I have been trying to get the parents to fix it, but they do not seem to care anything about it; so I tell the children they must trust in' the Lord. Perhaps we will get it fixed before the severest part of the winter.

I had a Christmas tree for my school—a concert with it. It was the first one that was ever in the neighborhood for the colored people. Everybody was pleased with the performance. They say they never saw such doings in their life. I have the praise of both white and colored that I have done more for the school in my five months of teaching than was ever done before. But I owe all of it to the training I received at my old home, Hampton. I am simply carrying what I've learned into effect in my school.

I have a very nice Sunday-school; but the people are so full of superstition that they say they don't believe in this Bible religion, as they call it. I try to explain the Bible lessons the best I can to my scholars. Sometimes the parents do not agree about or with my explanations. I do hope to live to see my race educated and more enlightened. I am going to take the school for five months more and do all I can for the advancement of it. I am so thankful when I think about Mrs. Dixon helping me to an education.

I hardly know which I enjoyed the most, those Christmas days spent at Hampton or the one at home; but I shall always prize Hampton, for it seem so much like home. How can I but love it,—for it was there I said I would try and lead a better life, which I am still trying to do, though with many trials and difficulties, but with the help of God I'll try to hold out to the end. Give my love to all the teachers and scholars.

One who was not spoiled by a two years' musical campaign as a member of the Hampton Student-singers, is teaching in a county where he is the first and only negro schoolmaster employed in the colored free school. We extract from his last letter. It is gratifying to record such encouraging work:

January 29, '76.

Dear Teacher:—I find among my pleasantest friends and well-wishers, the white people of this vicinity. No man has asked my political views, as has been the case heretofore with other teachers. You were told by the County Superintendent that there had not been a successful colored school here or in the county since the days of blood and war. That is even so, and my work being the first, every one waits with open eyes and eager ears to see all that is done.

The number of children here is about sixty; some of them walk nearly ten miles a day. They are not dilatory about coming in on time; tho' I open at 9 o'clock every morning, there's hardly two at any time who come late. I must say that the most of 'em make great effort to get their studies as told to do. Some have indulged in the idea that the negroes will not be led by their own people. I deny that, and say in its stead that if a good, brave, honest colored man or woman go among the negroes, he or she is sure of success. In the above case I can't blame the colored people for not wanting to catch up a colored man and put him in their bosoms any more than I would blame the white race for not wanting to associate with strange white men, whether they are carpetbaggers or not. These questions begin to settle themselves without further legislation. The next thing that becomes very important to the colored people is: that they have got to educate themselves, that is, thro' their own teachers.

A man is stimulated to success by what has been done in the past by mankind, also by what may be done in future by himself. But he would never be thus driven on if he were taught from his very earliest existence that he belongs to a race that could n't get beyond a certain low standard, and that in fact he is inferior and was from the first beginning. We must have teachers of our own race who do like teachers have done for other races—find out where it started from, know every step toward civilization, every war that they have fought and conquered in, every invention made, able to show to his or her scholars that *man is man if treated decently*, no matter who he is or where he came from.

My school is a success in all that I can ask. (The cry is more teachers). J. M. W.

We believe that there is not a more honest and reliable or a more competent observer of his race than the author of the following.

The "remedy" for the terrible state of things of which he writes is, first of all, in a clear apprehension of them. We publish this letter as the dark side of negro life in the South, feeling it will do good by bringing a great evil to the attention of Christian philanthropy, and knowing that telling the whole truth is essential to wise and successful efforts for the redemption of this unfortunate race:

On my way home I stopped in at my school-house where there is being a (so called) "feast," held for the benefit of an order that holds forth there, and I was surprised to see that it had turned to a drunken frolic. I don't know what else to say it is, and I fear it will last till Sunday morning. While I looked on at some that I have been teaching for so long, now more than twelve months, my attention was called back to my labors, and I came off, downcast and sad, asking, have I accomplished anything in my work here? and I could scarcely say yes. Truly I have taught some to read and write, with some other primary branches added; but all of this, in my estimation, without morality is nothing.

The General has several times asked me to write letters for publication, of the condition and habits of the people here, but (I hate the word) I *can't* write a letter of that kind, for when I write I am apt to say that which rests most strongly upon my mind. I aim at the moral qualities. Now I have seen from the SOUTHERN WORKMAN that everybody does not approve of J. W. C.'s letter, but I can state facts that can nearly equal it. Of course it will not apply to all, but it will be more than I dare say.

I can write encouragingly of my school as a school. Inside of the schoolhouse I have bright and obedient scholars, some that would be prominent men and women, had they the right training at home. I fear it will do but little good for me to tell them about the horrors and wickedness of drinking when they go home at night to a father who has it setting on the table awaiting their arrival. One more week will make fourteen months that I have taught at this place, and I have a class of about twenty, when they are altogether, whom I taught the alphabet. It will soon be the first class of my school, and I enjoy teaching them, and I do believe they all love me and will try to do anything I ask them. Now this is a class of children from nine to fifteen years old, none over fifteen. I simply ask, as I have asked myself more than a hundred times: How can these children be what I try to teach them to be when they are surrounded with all kinds of low habits? not being taught to tell the truth, to work, nor even take care of a book. Miss M., this is horrible for me to think of, and yet I am one of that race, but I hope not of that class. I sometimes shed tears, as I have to-night, with these thoughts. The prospects may look bright to you, while you are teaching an intelligent school, but here I pant for light, while my only social entertainment is my correspondence. We had better not go to Africa to find work.

Now I fear that this letter will cause sad reflections upon your mind, because I know you are interested in these things, too; but you must not think too much about it. I take it all to myself and do what I can. While thinking of my friends to-day I thought of you, and intended to write to-night as I have, but did not intend writing such a letter as I have. I am glad I have one to whom I can express my feelings and who will sympathize. When I meet with my old schoolmates I talk freely of these very features of our race and ask a remedy.

We are glad to add a cheerful letter from a different section of the South. With such workers a better state of things is sure to come. Honest, earnest efforts for the freedmen command, every where in Virginia, the cordial approval and moral support of the whites:

I am sorry to say that the preachers up here do not amount to very much. There are but two or three of them that can read a whole chapter in the Bible. And the people, as a whole, are a great ways behind the times. I have very hard work to get them to buy school books for their children; so you may know by that they will not buy a paper. I have had a new schoolhouse put up since Christmas. I had to go to work and help them finish it; they got it all done but making the seats and building the chimney. I put my school in charge of one of the large scholars and went to work with the men. They said they should not like to work under me very long for I would work them too hard. My school will be out by the 1st of March; don't know whether it will go on any longer or not. Hope it will continue, for I have a very good Sunday-school going, too.

I—— and I are the only colored teachers in the county. They have had all white teachers here before. They like us very well, and say they would like four or five more of the Hampton boys next fall. I like teaching very well indeed, it does me good to see how fast some of my scholars learn. Nothing more this time.

Here is another refreshing letter, published, as is our rule with all these communications, without changing style or adding any merit to the composition. It tells of a little supply of books, etc., sent from the North.

He writes from the eastern portion of North Carolina, where he is doing an excellent missionary work, and where ten men like him would do more for the colored race than a thousand office-holders or soldiers. Help us, ye who read this, to supply more such men:

My school closes the 19th of March. Miss L. sent me a box containing books; papers and cards; the cards were very beautifully colored with various hues. I presented each scholar with a little handle, and if you could have seen the eagerness and joy with which they grasped them, you would have felt that that dear woman was repaid for the interest she has manifested in me and them. I had an exhibition also, which consisted of dialogues, poetry and prose. A great many of the people came to the exercise and repeatedly expressed their delight and pleasure by their smiling faces and words of commendation. A few old Christian ladies remained after the audience was dismissed and spoke words of Christian sympathy and advice, which I valued more than all the praise I received from the crowd generally. I felt a pleasure and delight no words can express. Those simple but earnest and industrious people exhibited a desire for knowledge and general information almost wonderful. Whenever I spoke or explained their lessons to them, they paid the best of attention to what was said, and showed a deep interest. There are a great many unpleasant features in the work, of which we teachers never speak because we feel there is no true glory in any work like ours, unless some sacrifice and self-denial is made in performing it. I must say I feel thoroughly repaid for my efforts for them.

Lamentations like those of Isaiah might be poured out by reason of the condition of the colored population in some parts of the South.

This letter from North Carolina tells what is true of the lowest white as well of the lowest colored population; there is no more important missionary field in the world than among these classes. Many colored communities are comparatively free from the evils described. The writer is fully capable of doing her share of the needed work:

I must tell you a little about my new home. To begin, I must say that it is decidedly the worst place that ever I was in. I have been asked to be an agent for the SOUTHERN WORKMAN in this vicinity. Had he asked me to be an agent for whisky, tobacco and snuff, I could do good business. It is one of the most disgraceful sights that your eyes ever beheld to see a young girl with her mouth stuffed full of tobacco, her lips all stained with tobacco juice, and her teeth all ruined by tobacco; for such is the condition of nearly every young girl's mouth in this place. They will sit in your presence and dip snuff and smoke the pipe all day without feeling the least embarrassed by your lectures. I asked a young girl yesterday (just seventeen years old) was n't she ashamed to use tobacco? she said "no," she could "not do without tobacco and snuff." I then told her all the sin and folly in using whisky, tobacco and snuff. She laughed, as if to say that is all nonsensical talk.

Perhaps you don't know what I mean by dipping snuff. I didn't know until I came to this place and was told by a young girl who used it. They chew a piece of stick until it comes something like a brush, and then they dip the brush in a lot of snuff and put it in their mouths. This they do until their mouths are quite full, then sit and keep the brush moving around in their mouths all the time. You can hardly meet a woman who has not a brush of this kind in her mouth. Besides they may have a baby in their arms and one by the hand. This is the case with the largest number of the girls in this place. You teachers cannot impress it upon the minds of the scholars too strongly how very important it is to go out from that school *real men* and *women*. I have often wondered since I've been out teaching, how those scholars who come to the Hampton Institution see their weak points so quickly and are willing to reform. Some of them come from such miserable homes. Just what the colored race is to be in the future depends entirely upon the Hampton and like Institutions. If they fail to send out good teachers the colored race will certainly fail to be anything. I didn't mean particularly those who can explain arithmetic, teach grammar, and spell well. The colored race wants to be taught the real, true worth of intelligence and character. I used to think when I was at school that the General's lectures were too severe before the boys and girls; but now I don't think so at all. I wish he would make them stronger and oftener.

Miss. H., talk to the girls in prayer meeting about character. Tell them about the sin and misery women bring upon themselves by their brutish actions. The reason I ask you to talk to them in prayer meeting is because their religion does not seem to hinder them from doing any mean, low, disgraceful thing.

I must stop and ask you some advice. I have a very large Sunday school, and you don't know how much I enjoy teaching it. The children like to come to Sunday school, and I try to make it as interesting as I can. I have as many young men and women in my Sunday-school as I have children. I take up a penny collection in Sabbath school every Sunday morning, with which I am going to send off and get them some nice little books and papers. I want you to tell me where to write for them and what kind to get. I am so sorry that my scholars haven't any Bibles. I have only seen two since my own since I came here. About one-fourth of my Sunday school have Testaments.

The disposition evinced in Virginia to give the colored teacher a fair chance is shown by a graduate who writes: "In many places the Hampton students have been and are supplanting a number of poor white teachers who are not allowed to teach in the white schools, and who are constantly before the Board of Trustees and the Superintendent, begging for employment in our schools as their only chance of support."

The hope of the colored race lies in sufficient and proper instruction. Its friends may be assured that there is plenty of material for good teachers. We say to the North, "Assist all the southern schools whose object is to supply teachers for the negro race, and a great work will be accomplished," and we would urge the cause of the poor whites as strongly as that of the blacks. This is the real reconstruction—here all good men of both sections and all classes are in sympathy.

That our graduates are, as a class, inspired by Christian zeal we well know. The following illustrates their spirit in this respect:—

I heard of the new professions in Christ among the scholars, and also of the baptising; it was quite charming news to me. I hope they may all prove faithful Christians and be good and useful, for their labors are needed very much, and I am sure they will find it much more pleasant when they go out to teach. After an introduction, among the first questions I am asked this, "Are you a member of the church?" It is a joy to me that I can answer, I am—not only to tell them I am, but to labor in that direction. Though I feel that I am the least among God's people, especially when I go to the church and see others shout and hear them talk,—but when I come to think about it to myself, it seems to me that they are not "meek and lowly in spirit," but they are boasting too much and need what I may call Christian civilization. I know I am not to "judge," but I think there are a great many meaningless words and actions among the colored people in time of worship, and for a short time afterward. I have nothing to say about it in public at church, but I speak against it in my school, and also to the Christian parents when in private conversation. I pray that I may live to see it all done away, and we shall all be pious Christians. I don't think these have any impression on the world, or make the actors any more acceptable with God, though they may know better what they are doing than I.

THE SONG OF 1876.

A Festival Poem written for the German Centennial Singers' Union of New York.

BY BAYARD TAYLOR.

I.

Waken, voice of the Land's Devotion!
Spirit of freedom, awaken all!
Ring, ye shores, to song of Ocean,
Rivers answer, and mountains call!
The golden day has come,
Let every tongue be dumb,
That sounded its malice or murmered its fears;
She hath won her story,
She wears her glory.
We crown her the Land of a Hundred Years!

II.

Out of darkness, and toil, and danger,
Into the light of Victory's day,
Help to the weak, and home to the stranger,
Freedom to all, she hath held har way.
Now Europe's orphans rest
Upon her mother-breast:
The voices of Nations are heard in the cheers
That shall cast upon har
New love and honor;
And crown har the Queen of a Hundred Years!

III.

North and South, we meet as brothers;
East and West, we are wedded as one!
Right of each shall secure our mothers;
Child of each is her faithful son!
We give Thee heart and hand,
Our glorious native Land.
For battle has tried thee, and time endears;
We will write thy story,
And keep thy glory
As pure as of old for a Thousand Years!

BABY SYLVESTER.

BY BRET HARTE.

It was at a little mining camp in the California Sierras that he first dawned upon me in all his grotesque sweetness.

I had arrived early in the morning, but not in time to intercept the friend who was the object of my visit. He had gone "prospecting," so they told me, on the river, and would not return until late in the afternoon. They could not say what direction he had taken; they could not suggest that I would not be likely to find him if I followed. But it was the general opinion that I had better wait.

I looked around me. I was standing upon the bank of the river, and, apparently, the only other human beings in the world were my interlocutors, who were even then just disappearing from my horizon down the steep bank of the river's dry bed. I approached the edge of the bank.

Where could I wait?

O, anywhere; down with them on the river-bar, where they were working, if I liked! Or I could make myself at home in any of those cabins that I found lying round loose. Or, perhaps it would be cooler and pleasanter for me in my friends cabin on the hill. Did I see those three large sugar-pines? And, a little to the right, a canvas roof and chimney over the bushes? Well, that was my friend's—that was Dick Sylvester's cabin. I could take my horse in that little hollow, and just hang round there till he came. I would find some books in the shanty; I could amuse myself with them. Or I could play with the baby.

Do what?

But they had already gone. I leaned over the bank, and called after their vanishing figures:

"What did you say?"

The answer floated up slowly on the hot, sluggish air:

"Pla-a-y with the ba-by."

The lazy echoes took it up, and tossed it languidly from hill to hill, until Bald Mountain opposite made some incoherent remark about the baby, and then all was still.

I must have been mistaken. My friend was not a man of family; there was not a woman within forty miles of the river camp; he never was so passionately devoted to children as to import a luxury so expensive. I must have been mistaken.

Unsaddling my horse in the little hollow, I tethered him to a young sapling, and turned toward the cabin. But I had gone only a few steps when I heard a quick trot behind me, and poor Pomposo, with every fibre tingling with fear, was at my heels. I looked hurriedly around. There was Pomposo shivering from his arched neck to his sensitive haunches, his very flanks pulsating with terror. I soothed him as well as I could, and then walked to the edge of the wood and peered into its dark recesses. The bright flush of a bird's wing, or the quick dart of a squirrel, was all I saw. I confess it was with something of superstitious expectation that I again turned toward the cabin.

I threw myself on a couch and tried to read. But I soon exhausted my interest in my friend's library, and lay there staring through the open door on the green hillside beyond. The breeze again sprang up, and a delicious coolness, mixed with the rare incense of the woods, stole through the cabin. The slumbrous droning of bumble-bees outside the canvas roof, the faint cawing of rooks on the opposite mountain, and the fatigue of my morning ride, began to droop my eyelids. I pulled the *serape** over me, as a precaution against the freshening mountain breeze, and in a few moments was asleep.

I do not remember how long I slept. I must have been conscious, however, during my slumber, of my inability to keep myself covered by the *serape*, for I awoke once or twice, clutching it with a despairing hand as it was disappearing over the foot of the couch. Then I became suddenly aroused to the fact that my efforts to retain it were resisted by some equally persistent force, and, letting it go, I was horrified at seeing it swiftly drawn under the couch. At this point I sat up completely awake; for immediately after, what seemed to be an exaggerated muff began to emerge from under the couch. Presently it appeared fully, dragging the *serape* after it. There was no mistaking it now—it was a baby bear. A mere suckling it was true,—a helpless roll of fat and fur,—but, unmistakably, a grizzly cub.

BABY SYLVESTER AT HOME.

I cannot recall anything more irresistibly ludicrous than its aspect as it slowly raised its small wondering eyes to mine. It was so much taller on its haunches than its shoulders,—its fore-legs were so disproportionately small,—that in walking, its hind-feet invariably took precedence. It was perpetually pitching forward over its pointed, inoffensive nose, and recovering itself always, after these involuntary somersaults, with the gravest astonishment. To add to its preposterous appearance, one of its hind-feet was adorned by a shoe of Sylvester's, into which it had accidentally and inextricably stepped. As this somewhat impeded its first impulse to fly, it turned to me; and then, possibly recognizing in the stranger the same species as its master, it paused. Presently, it slowly raised itself on its hind-legs, and vaguely and depreciatingly waved a baby paw, fringed with little hooks of steel. I took the paw and shook it gravely. From that moment we were friends. The little affair of the *serape* was forgotten.

Nevertheless, I was wise enough to cement our friendship by an act of delicate courtesy. Following the direction of his eyes, I had no difficulty in finding, on a shelf near the ridge-pole, the sugar-box and the square lumps of white sugar that even the poorest miner is never without. While he was eating them I had time to examine him more closely. His body was a silky, dark, but exquisitely modulated gray, deepening to black in his paws and muzzle. His fur was excessively long, thick, and soft as cider down; the cushions of flesh beneath, perfectly infantine in their texture and contour. He was so very young that the palms of his half-human feet were still tender as a baby's. Except for the bright blue, steely hooks, half-sheathed in his little toes, there was not a single harsh outline or detail in his plump figure. He was as free from angles as one of Leda's offspring. Your caressing hand sank away in his fur with dreamy languor. To look at him long was an intoxication of the senses; to pat him was a wild delirium; to embrace him, an utter demoralization of the intellectual faculties.

When he had finished the sugar, he rolled out of the door with a half-diffident, half-inviting look in his eye, as if he expected me to follow. I did so, but the sniffing and snorting of the keen-scented Pomposo in the hollow, not only revealed the cause of his former terror, but decided me to take another direction. After a moment's hesitation, he concluded to go with me, although I am satisfied, from a certain impish look in his eye, that he fully understood and rather enjoyed the fright of Pomposo. As he rolled along at my side, with a gait not unlike a drunken sailor, I discovered that his long hair concealed a leather collar around his neck, which bore for its legend the single word, "Baby!" I recalled the mysterious suggestion of the two miners. This, then, was the "baby" with whom I was to "play."

How we "played;" how Baby allowed me to roll him down hill, crawling and puffing up again each time, with perfect good humor; how he climbed a young sapling after my Panama hat, which I had "shied" into one of the topmost branches; how after getting it he refused to descend until it suited his pleasure; how when he did come down he persisted in walking about on three legs, carrying my hat, a crushed and shapeless mass, clasped to his breast with the remaining one; how I missed him at last, and finally discovered him seated on a table in one of the tenantless cabins, with a bottle of syrup between his paws, vainly endeavoring to extract its contents—these and other details of that eventful day I shall not weary the reader with now. Enough that when Dick Sylvester returned, I was pretty well fagged out, and the baby was rolled up, an immense bolster at the foot of the couch, asleep. Sylvester's first words after our greeting were:

"Is n't he delicious?"

"Perfectly. Where did you get him?"

"Lying under his dead mother, five miles from here," said Dick, lighting his pipe. "Knocked her over at fifty yards; perfectly clean shot—never moved afterward! Baby crawled out, scared but unhurt. She must have been carrying him in her mouth, and dropped him when she faced me, for he was n't more than three days old, and not steady on his pins. He takes the only milk that comes to the settlement—brought up by Adams Express at seven o'clock every morning. They say he looks like me. Do you think so?" asked Dick, with perfect gravity, stroking his bay-colored moustachios, and evidently assuming his best expression.

I took leave of the baby early the next morning in Sylvester's cabin, and out of respect to Pomposo's feelings, rode by without any postscript of expression. But the night before I had made Sylvester solemnly swear, that in the event of any separation between himself and Baby, it should revert to me. "At the same time," he had added, "it 's only fair to say that I don't think of dying just yet, old fellow, and I don't know of anything else that would part the cub and me."—*St. Nicholas.*

* A fine Mexican blanket, used as an outer garment for riding.

SAFEETA.

On the lower spurs of the mountain chain which rises from the great plain of Akkar, north of Tripoli, on the northern coast of Africa, and runs northward along the Syrian coast as far as Antioch, lies the picturesque village and castle of Safeeta, of which a view is given in the accompanying sketch.

This castle, which, with the famous fortress of El Huan, four hours to the eastward, was one of the northernmost bulwarks of Crusaders' power, is built on the site of very ancient substructions of beveled stones, indicating that the site was used in times earlier than that of the Greeks, for a fortified military post—one of the "fenced cities" of the Hebrew period. Nothing now remains of the ancient buildings at Safecta except the moat and foundation-stones of the fort. These are, however, very extensive, covering the top of the central hill of the three hills on which the modern village is built. The stones are are large, beveled, and admirably laid, and will doubtless stand for centuries more without exhibiting a trace of the march of time, save in the piles of ruins of more modern structures, which are crumbling into the moat, and heaped above the vaults and cisterns.

The present tower, which is built in the center of the now ruined fortification, is about one hundred feet high, and the walls of all three stories are pierced with slits for the discharge of arrows.

The view from this lofty castle is grand in the extreme. Lebanon, with its snowy summits, towers magnificently to the southwest. To the westward, the blue Mediterranean stretches away to the horizon, while toward the south lies the rich plain of Akkar and Tripoli in the distance, and behind it the cape of the "Divine Countenance," shutting out the view in the direction of Beirut.

Under this tower are immense cisterns, perforating the sides and summit of the hill. The fortress, as seen in the drawing, is in ruins, only a few of its many picturesque arches and walls being yet erect. The miserable government of the district has repaired a very small portion of the ruins with an insignificant structure, which may be seen to the left of the wall, and which is occupied by the executive of the county.

The village is built on three conical hills, of which the tower occupies the central one. The houses are low. They are built of large cobble-stones, laid up without mortar—precisely as we lay up a stone wall in America; have no windows and only one low door. The roofs are of great beams, overlaid with hewn boards and covered with earth. The floor is of mud, beaten flat. They repair it when broken by pouring fresh deposits of liquid mud over it, and suffering it to dry. The houses have but one room, in which the wretched people store their grain and straw, and house their cattle, sheep, goats, and chickens, and live themselves. There is no chimney, nor any fire-place, and the smoke is permitted to find its way out from a small hole in the roof, and through the cracks in the door.

SAFEETA — SYRIA.

The sides of the hills are covered with olive and fig-trees, and with low trimmed groves of mulberry-trees, the leaf of which is employed in raising the silk-worm.

The history of the introduction of the Protestant doctrines into Safeeta is briefly this. The members of the house of Beahshoor, a race of scribes of the government tax bureau, genuine descendents of the publicans of ancient times, had by fraudulent means obtained possession of the lands of a large number of the villagers. They had appealed in vain to the government, and to consuls, for aid; but finally it was suggested to them, without the knowledge of the missionaries, that if they turned Protestants they would come under the protection of the English government, and realize their possessions again. They accordingly, about three years ago, to the number of four hundred or four hundred and fifty, enrolled their names at Tripoli as Protestants, and applied to the missionaries to aid them in their temporal affairs. This being beyond the province of the missionaries, they were referred to the foreign consuls and local government, but active measures were at once set on foot to evangelize them, and confirm them in their newly-assumed principles. A native evangelist was sent to their village, missionaries visited them, schools were opened both for boys and girls, and in a short time many, who had had no conception of our faith before, became enlightened, and some, as we trust, renewed by the Holy Spirit. The schools were eminently successful, and more than half of those who first declared themselves Protestants remain true to their adopted faith. Large numbers of copies of the Bible have been circulated, several of the youth of both sexes have been sent to the training-schools at Abeih, Beirut, and Sidon, and we have now a prospect of soon ordaining a native pastor, and settling him over a church to be organized in that region.

From the first this community has been subjected to a fire of persecution, more severe than is usually employed by Divine Providence, to burn off the dross of worldliness and error. They have been imprisoned, beaten, robbed, cursed, oppressed by unjust taxation and falsely-charged debts, at times driven from their homes, and yet have stood firm. When they have been at Damascus, and Tripoli, and Beirut, at different times, in search of help from the unjust judges of the land, or in prison on false charges, they have ever displayed an eagerness for evangelical instruction, and an avidity in the reading and study of the Word, (which they always carry with them in their journeys,) which is quite remarkable.

Many of the children are shepherds, and cannot attend the schools, yet they carry with them Primers and Testaments, and study in the fields, and on the rugged sides of the mountains; and many of the girls as well as the boys have learned to read well, and have committed large portions of the Word of God.—*Missionary Herald.*

HOUSE AND HOME.

When a man finds himself the possessor of a piece of land with money sufficient to put up a small house, i. e., about four hundred dollars, our second question at once presents itself: "How can such a house be built to properly accommodate a family of six or seven members?" Now of course in answering this question there are many things to be taken into consideration, and more ways than one of reaching the desired result. In the first place, climate must be consulted, and as the majority of our readers live where warm weather is to be provided for rather than cold, the suggestions which we have to offer will be especially for their benefit. Location, also, must affect the decision, as, of course, houses in the country and in the city require in many respects different management; while the size of the family, their prospects for the future, and last, but not least, individual taste, must each and all have their weight in influencing the plans of the architect.

It will be understood that where the conditions are so various it is impossible to lay down any rule or rules for the building of a house, and I do not hesitate to confess that the most I can do for my readers is to offer a few general principles, and some personal suggestions, assuring them at the outset that it is upon their own intelligence and experience that they must principally depend. There are a few points, however, which are unalterable, that is, there are a few principles which apply to house-building all the world over, and it is of these that I would first speak, and can confidently say that they will fully repay the careful consideration of any one of you who may be about to build a house. To begin with, however small a house may be, the work on it should be well and thoroughly done; you should select good, well-seasoned material, get trust-worthy workman, deprive yourself if necessary of all ornamentation, but permit no shams, no imitations, and be sure that from top to bottom your house is honestly built. The very greatest fault in the ordinary architecture of the day is its flimsiness and want of honesty, and for this no amount of stucco, or cheap carving, or sham ornament of any kind, can atone. If you are limited as to the amount of money which you can put into a house (which I am taking for granted to be the case) than your first care must be to see that you get something real and permanently valuable in return for your money. Be sure that your foundations are sound, your walls substantial, your roof tight, your windows and doors well-fitting, and that you begin with one thorough coat of paint, outside and in; after which if you have any money left, you can afford to take a little time to consider what is the best use for it.

The point to be next considered, as affecting both comfort and utility, is the internal division and arrangement of the house, and this demands some thought, for the arrangement of the rooms of a house affords a very delicate and valuable test of the amount of civilization and refinement possessed by its inhabitants. In the dwellings of the very poor and ignorant we find human beings of all ages and both sexes crowded together to one room, forming a hot-bed from which springs a frightful crop of indecency, immorality and vice, and to no lower depths than this can human beings sink, for it pre-supposes the absence of even the instincts of modesty and decency. Now the first step on the upward road is the separation of the sexes, then the prevention of overcrowding, finally the separation of individuals, and the setting apart of certain rooms for special purposes, as kitchen, dining, sitting, sleeping rooms, etc.; and this is what we reach in the *home*, and it is an approximation to this which should be attempted even in the smallest house which is inhabited by men and women claiming to be civilized. "Can this be done," you ask, "upon small means, and in cases where the mistress has the work of the family to do single handed?" I believe it can, and furthermore, I believe that you will find the attempt to do it in itself civilizing and enlightening. You may think it a trivial matter, but I assure you that the mere fact that you determine not to eat your meals in the kitchen where they are cooked, but in another room which can easily be kept free from the disorder, heat and smell attendant upon cookery, wherein you can sit down to a clean and properly arranged table, will make better men and women of you, will give you an impetus in the right direction and assist you materially in your efforts to rise to a higher plane of thought and life.

Therefore in building your house it is well worth your while to try for such arrangement of it as shall give you two or three separate rooms on each of the two floors. If your means do not permit you to cover a space sufficiently large to be divided into three rooms, you must be content with two rooms on each floor in the body of the house and a small out building for a kitchen, which would give you a dining and sitting room down-stairs and two bedrooms above. For a six roomed house the best division is kitchen, dining and sitting rooms down-stairs and three bedrooms above; for an eight-roomed house, kitchen, dining, sitting room, and parlor or one bedroom down-stairs and four bedrooms above, but this last is of sufficient size to accommodate a more than usually large family, and is commonly beyond the means or the needs of a working man. In any of these houses a small entrance hall opening from the front door is desirable, a back door is indispensable, while a piazza or porch and a garret each adds greatly to the general convenience and comfort. The minor details must of course depend chiefly upon the wants and taste of the family: but the points which I insist upon as of unvarying importance are: 1st, that the house should be properly divided; 2d, that the rooms should be set apart for special uses; 3d, that great effort should be made to prevent over-crowding, especially in the sleeping rooms. This last is a matter of both decency and hygiene, and it may be considered certain that a room of ordinary size should never be inhabited by more than three people, while in most cases it is desirable that the number should be limited to two, it being always understood that ventilation should always be most carefully attended to. I dwell strongly upon the points just mentioned because, as I have said before, I believe that a properly arranged and well ordered house is an important educational agent, that it has real and great power to civilize and elevate, and that finally its refining influences depend more than is commonly supposed upon these particulars of internal arrangement.

In regard to externals the first great consideration should be the drainage, for nothing so nearly affects the inhabitants of a house as the local drainage and the quality and quantity of the water supply. In city houses these matters are usually under the control of officials, the individual having no direct power or responsibility, but in most country neighborhoods each man has to attend personally to the details of drainage, etc., and consequently it is every man's duty to inform himself as to the best means of obtaining efficient local drainage and a pure water supply. Where there is any general system of drainage for a town or village all that is necessary is to properly connect each newly built house with the main drain, and this can be done by means of a single small pipe, into which the whole house-drainage, from water-closet, sinks, etc., must pass, and which must be filled with traps and properly jointed. The latest experiments prove that brick sewers are almost always failures, both on account of the material and the size, for a sewer should never be of more than sufficient capacity, because, as we all know, a current of water spread over a large surface flows with much less force than when it is confined within a smaller space, and the effect of this in a sewer is to permit the deposit of all heavy substances which may have entered the drain and which lie there choking up the passage, when in a sewer of smaller capacity they would quickly be carried down by the force of the flow. A smooth two-inch pipe of some hard, vitreous material, which cannot absorb sewer filth, will carry off all the drainage from an ordinary house, is the best possible sewer and is comparatively inexpensive. Where there is no public system and the drainage is purely local it is best to raise the foundation of the house a little above the general level of the ground by filling in so that there be a natural drainage of all moisture away from the house, while all the house slops should be disposed of in ways to be presently described. If pigs or cattle of any kind are kept, their pens and yards should be as far as possible from the house, and should be kept clean by being frequently emptied of the manure and filth which should always be utilized at once upon farm or garden. The water-closet should be, if possible, an earth closet, as earth is the most effectual and cheapest disinfectant and deodorizer at present known to science. A cheap and cleanly out-of-door earth closet can be made by simply digging a vault in the ground and keeping in the building above it (which is merely an ordinary privy) a box of thoroughly dry earth and a scoop. Each person after using the closet should be required to empty into it a couple of scoopfuls of the dry earth, and as often as once a month the contents of the vault should be removed and used at once as manure, for they are almost completely deodorized and therefore inoffensive which makes the frequent cleaning a comparatively easy matter. Chamber slops can of course be emptied into the same receptacle, but it is much better to dispose of them in some other way as they largely neutralize the effect of the earth. They can be emptied into pig-sty or cow-yard, where they do their part in making fertilizing material, (but this should never be done except when the yard or sty is cleaned regularly and frequently), or they can be thrown upon the ground at a safe distance from the house, (this again should never be done when a house stands in close neighborhood to other houses), or, and this is probably the best way, they can be emptied into a hole dug in the ground as far from the house as possible and boarded over, the cover being lifted only when the slops are emptied. By emptying occasionally a little dry earth into the hole and once or twice a year filling it up entirely and digging a fresh hole, the slops of a large house may be disposed of with ease and safety. Kitchen slops and swill should all be carefully kept for pig feed, for if the

family do not keep a pig, some neighbors can always be found who will take away swill for the sake of having it, and to waste such material is one of the numerous forms of extravagance which keeps poor people poor forever.

After the drainage of a house and the cleanliness of yard and outhouses have been carefully provided for, I believe that next in order comes the question of the water supply, and while a few of you, as residents of large cities, are not obliged to think much about the matter, being supplied by the city or by companies, yet I suppose a majority of my readers are dependent solely upon wells or springs and can therefore drink pure or impure water, according as they themselves are intelligent and energetic, or ignorant and lazy. It is not, I confess, always easy for an uneducated person to detect the impurity of water, because while pure water is always clear and tasteless, water which is clear and tasteless is not always pure; but there are a few simple rules which he who runs may read, and which will, in most cases, afford effectual protection. For example, it is evident to any one that to use water from a river below a point where the refuse of a factory or the drainage of a town empties into it, must be harmful; that, again, it must be equally so to use water from a stagnant pond, or from a brook which drains marshy land rich in decomposing vegetation, and yet it is but too common to find whole communities using such water and dying like sheep with dysenteries and fevers, merely because they are too thoughtless or too lazy to make the effort to obtain a pure water supply.

Water should never be taken from a river or brook which is contaminated by filth of any kind, and this danger can usually be avoided, for there are few localities in which it is not possible to obtain a plentiful supply of wholesome water from wells or springs. If there is a good unfailing spring within convenient distance of a house, water should be drawn from it in preference to any other source, and sometimes by means of a few yards of pipe, spring water can be brought to the very door of the house, which, although it costs something at the outset, is in the end a real economy. But, as in a large majority of cases, wells and wells only, form the source of the water supply, it is to them that your attention must chiefly be directed, and in building a house, I would advise you to make, if necessary, many sacrifices, in order to secure a well of good water. In the first place, a well should never be dug in a place where there is any danger of its receiving the drainage, from house, water-closet, barn-yard, pig-sty, or any similar source of contamination; it should not be in the near neighborhood of large trees whose roots are likely to grow into the water and make it dirty and unwholesome; it should be so covered that not even leaves can fall into it, and should occasionally, in a dry season, be thoroughly cleaned. There is really nothing so safe and certain as an artesian well, which consists of an iron pipe sunk perpendicularly into the ground until its lower end strikes a supply of pure, sweet water; and these wells are coming gradually into use, their advantage over the ordinary wells being that they can be sunk to any distance necessary to obtain really pure water, and that they are beyond the possibility of contamination, either from drainage or any other source. But from common wells, which are at present, as I have already said, by far the most frequent source of supply, the precautions already mentioned will usually secure water sufficiently pure not to affect the health of those who drink it.

Even in these days of comparative enlightenment in regard to matters of drainage, water, etc., there are many people who cling to the ignorance which for the moment is so easy, regardless of the fact that in the end it costs them the heavy price of health and life. They say that they are willing to "take their chances" as their fathers did, and it is difficult to prove to them that they are morally responsible for the results of their own wilful ignorance and carelessness.

It is true that it is only by close and intelligent attention and constant labor that the immediate neighborhood of the dwellings of human beings can be kept clean and wholesome, but it is also true, to quote the words of an eminent authority, that "all filth is absolute poison," and undoubtedly the terrible punishment of uncleanliness is the weapon used by an all-wise Creator to force his ignorent and wilful creatures into the cleanliness which involves so much exertion of mind and body. Surely I need not here reiterate how fatal is the effect of all filth and especially of human filth; surely I need not tell you how fever and cholera and dysentery follow uncleanliness as certainly as night follows day, and that therefore it lies with us to choose whether or no we take the risk of diseases whose prevention lies commonly in our own hands. I could fill page upon page of written warning in respect to defective drainage, impure water, filthy water-closets and outhouses, but it would all be useless unless your own intelligence and moral sense came to the rescue and induced you to act resolutely and as becomes rational beings.

Therefore, I can only beg those of you who are house-holders or who are in any way responsible for the health of others, to study carefully the facts in regard to this comprehensive subject of cleanliness in its relation to house building and keeping, and to judge for yourselves whether it is not well worth while to build and keep a cleanly house.

NEWS OF THE MONTH.

Hon. Reverdy Johnson, the distinguished Senator and jurist, died suddenly at the executive mansion of the Governor of Maryland in Annapolis on the 10th of February. He was found dead, having probably fallen in a sudden attack of apoplexy. Mr. Johnson was nearly eighty years old, and has had a long and conspicuous public life.

John Forster, the English biographer of Dickens, is dead.

The New England Conservatory of Music last month entered upon its tenth year, though it is eighteen years since Dr. Tourjee inaugurated the first conservatory in this country. More than 1600 pupils have attended the classes, and it is now the largest music school in the world.

Our green winter does not reach round the world. The streets of Madrid, the capital of Spain, have lain a foot under snow, and travel has been obstructed by it in Italy and France, while Russia has had more of it than usual even for her.

The Centennial Appropriation bill having passed both Houses of Congress, the Centennial Commission can pocket its million and a half and go ahead rejoicing with its preparations.

Thirty-six nations are now on the list of Centennial exhibitors.

The Egyptian, Swiss and Spanish commissioners to the Centennial have arrived with their contributions to the exhibition. Egypt was the first on the ground, with over six thousand articles—specimens of agricultural products, arts and manufactures.

Liberia has been obliged to withdraw from the Centennial Exposition, the $10,000 she appropriated for the purpose having been used up in carrying on the war with the savage tribes. Mr. Edward S. Morris, resident Liberian commissioner in Philadelphia, has proposed to the President of Liberia to appropriate $500,000 to the purchase of articles for the exhibition, offering to sell the articles at the close of the exposition and return the proceeds, which may be expected to more than cover expenses, to the Liberian Government.

Memorial Hall has been found too small for Centennial purposes and will be enlarged.

A Shaft of coal one hundred feet in length will be exhibited by Tennessee.

Nevada will send the product of her "Consolidated Virginia and California Mines" for the month of May. It will take fifteen cars bearing ten tons each to transport the silver bars.

An International Congress and Exhibition of means and instruments for saving life and preserving health is to be held in Brussels, the capital of Belgium, from June to October. The exhibition will include life boats, life preservers, danger signals, fire engines, alarms and escapes, medical and surgical discoveries and inventions, and methods of drainage and water supply etc.

A Southern States Agricultural and Industrial Exhibition is to be held at New Orleans, for ten days, opening February 28th.

A National Convention of colored men has been called to meet at Nashville, Tennessee, on the 14th of April next, to adopt the line of policy that they intend to pursue in the coming Presidential election.

A Company of twenty-one freedmen, from North Carolina and Louisiana, sailed in January in the bark *Liberia* for Monrovia, under the care of the American Colonization Society. Two preachers, Rev. A. Cartwright, of Plymouth, N. C., and Rev. Charles Bryant, were of the number. A farm of twenty-five acres is given to each family.

Of an appropriation made by the last Congress for the payment of bounties to colored soldiers there has already been expended $64,144, leaving a balance of $20,855. The Adjutant General of the Army reports that this balance will cover all bounties to colored soldiers not already paid.

A Bill has been introduced in the lower House by Mr. Springer of Illinois (Dem.), providing that Americans residing abroad shall be forbidden to hold or employ slaves on pain of forfeiting the protection of the Government. This will reach some residents of Cuba.

Mrs. Amanda Smith, a colored Evangelist, has been adressing large congregations in the St. Paul's Methodist, Episcopal Church, Wilmington, Del. She was formerly a slave in Harford County, Md., is about forty years of age, and shows a great familiarity with Scripture. After leaving St. Paul's, which is a congregation of whites, she commenced a series of services in one of the colored churches of Wilmington. Four or five of the churches of that city are open for meetings every night.

At the dedication of Jubilee Hall, Dr. J. B. McFerrin of the M. E. Church South, addressing General Fisk, said,—"I want you, General Fisk, to understand, and all others, that the Southern people * * * rejoice in the education and elevation of the colored people, and fully appreciate the grand work you are doing for them."

Lieutenant Cameron, the English explorer of Africa has crossed the Continent and and traversed 1,200 miles of entirely new country, and established a sound geographical basis for future explorations in Central Africa.

The Zambesi Mission has succeeded in placing a steamer on Lake Niyanza. Seven hundred natives were employed to carry her past the Murchison Cataracts.

Portugal has voted the abolition of slavery in St. Thomas and the Gulf of Guinea.

South Carolina reports 110,416 children—about half the number in the state—in actual attendance on the free schools. An effort will be made in the Legislature to extend the school session from four and a half to six months in the year.

Spelling Bees are the fashion in England.

The Moody and Sankey meetings in New York city are crowded as in Philadelphia.

E. D. Winslow, formerly a minister and state Senator, and proprietor of the Boston *News and Post*, who recently astounded Boston with the discovery that he had committed forgeries to the amount of $700,000, and then disappeared with his family, has been arrested in London. He went first to Holland where he would have been safe from pursuit, as we have no extradition treaty with that country providing for the surrender of criminals, but, as is usually the case with evil doers, he blundered in his plans and leaving his wife in Rotterdam, ventured to London "for letters he was expecting," and found detectives whom he was not expecting. His sad fall in making haste to be rich, has a moral which somebody finds in his very name—Win-slow.

The Congressional Temperence Society held its forty-third anniversary at the Congregational Church in Washington, on February 20th. Hon. Julius H. Seelye delivered the address. Hon. T. W. Ferry, President *pro tem.* of the Senate, is president of the society for the coming year.

The death in January last of Rev. Edmund H. Sears, D.D., of Boston, Mass., is deeply felt in the denomination in which he was an eminent and beloved minister, and by all of every faith who have come within the sphere of his personal influence, or are familiar with his very spiritual sermons and beautiful hymns. To his son, last year one of the teachers at the Hampton Institute, and now Professor in a California college, it must be a consolation to read in that distant state, such tender testimonials to his father's place in many hearts as these which we copy from the *Liberal Christian*. It is evidently Dr. Bellows who says: "Such losses are great gains. It was difficult to tell Brother Sears how much his brethereu revered, loved and honored him. We can now tell each other freely and take the chances—which his writings did something to increase our faith in—that he overhears our grateful words."

OUR NAVY YARDS.

The United States has nine Navy Yards whose names, locations and areas are as follows:

1.	Portsmouth, at Kittery, Me.,	144 acres.
2.	Boston, at Charlestown, Mass.,	84 "
3.	New York, at Brooklyn, L. I.,	193 "
4.	New London, at New London, Conn.,	71 "
5.	League Island, Penn..	916 "
6.	Washington, Washington, D. C.,	42 "
7.	Norfolk, Portsmouth, Va.,	109 "
8.	Pensacola, Warrington, Fla.,	83 "
9.	Mare Island, Mare I., Cal.,	900 "

The Philadelphia Navy Yard, containing twenty acres, was sold last December.

Washington, D. C., *Feb.* 3, 1876.

To Editors "S. W.":

Dear Sirs and Brn.:

I am glad to send my "mite" for your good paper, though while here—now for the sixth winter,—with my son, who is a Professor still in the Nat'l Deaf-mute College, I am too busy with the "Congressional Temperance Society" to do more than *look* at many good papers.

I am deeply interested in all that is done,—and the *more* that *ought* to be done,—for the "four millions," for their sakes and our own; and hope again, though probably not this spring, to visit the "Queen of Institutes," sitting by the sea.

I shall *try* to send some items of interest in the line of Southern education, gathered hereabouts. Meantime I remain,

Cordially yours,
John W. Chickering.

For the beautiful pictures we give our readers this month we are indebted to several good friends; to Messrs. Harper & Bros. for our first page picture, to the publishers of the New York *Illustrated Christian Weekly* for the view of home life among the Grizzlies, and to the publishers of the *Missionary Herald* for our missionary picture. The likeness of Bishop Holly was furnished by the American Missionary Association.

Indelible Marking Paper for Marking Clothing without a Preparation.—*Direction*—Lay the Indelible Paper upon the article to be marked, and place over it a thin piece of writing paper, upon which write with a common lead pencil, or any smooth point. If the marking is pressed with a hot flat-iron or otherwise heated for a few seconds, it can be washed immediately with hot water and soap as usual. Warranted not to fade or spread in the cloth. A package sent, post-paid, on receipt of thirty-five cents, two for sixty cents, Address B. Alexander & Co., Sole United States Agt's, Eighth street, opposite Cooper Institute, New York. Agents wanted, send for terms. Please quote this paper. 12-6

Four beautiful fine oil chromos 7 x 9 and one 9 x 12 sent for fifty cents, and six size 7 x 9 and six size 9 x 12 sent for $1, and a full famlly portfolio of 100 oil and gem chromos, *very fine*, all designs, $3. They are scriptural scenes, landscapes, sea views, hunting and fishing scenes, Rocky Mountain scenes, birds, animal, fruits and flower designs. Our chromos are facismile reproductions of the choicest works of the *great masters*, and pronounced by connoisseurs equal to the original oil paintings. Three hundred Decalcomania pictures sent for 50 cents, large mixed, all kinds, $1; and 1,500, $3. A sample of these goods with full instructions to transfer the same will accompany each of the above orders if desired. Address, enclosing price, and a three cent stamp for return of goods by mail. B. Alexander & Co., wholesale and retail dealers, 8th street, opposite Cooper Institute, New York. Agents and tradesmen are making money selling our goods. Ladies are meeting with great success in this work. A full agent's outfit of 200 fine samples sent on receipt of $5. Please state the name of the paper you saw this in. 12-6.

Agricultural.

DIVERSIFIED FARMING.

All experience points to a diversified system as the really successful way of farming. Our Southern brethren have seen the folly of the one crop system, and are now raising their own grain, and it will not be long before they will be entirely independent. They will not rely on "King Cotton" any more. We have but little hope of the farmer who adheres, with such a tenacity to the one crop plan, never realizing that good time coming. Furthermore, we think the risk too great for a farmer to have all his capital in a crop of corn, wheat, oats, flax or grass, but should, as far as practicable, have a portion of his farm devoted to each. Then, should one crop fail, or the price thereof be low, he would not be among the sufferers from "hard times." These are hard times; and times were hard last year, and the year before that, and before the panic, and even before the war. There never was a time when times were not hard. There never was a time when the mass of men did not have to struggle with circumstances for a living. Never a time when it was easy to make money, easy to save it and have a large net balance at the end of the year. Money making, except with dishonest persons and unscrupulous speculators, is a progress, not only slow, but it is laborious, and beset with difficulties innumerable. Under favorable circumstances, even, it generally takes a lifetime to accumulate a fortune, whether we are business men, professional men, or farmers.

There is no necessity for so much gloom and despondency on account of the universal financial depression. There are many failures in business circles at the present time, but there were always failures, even in the best days of the country. On the other hand, there are successes now in business, as there have always been. The bold, prudent, industrious man, whether on a farm or in the counting-house, has ten chances to one in favor of success. To the lack of one or more of these qualities may be attributed the cause of all failures.

A prosperous farming community is made up of men who ply their vocation fearlessly, raise a variety of crops, breed and keep the choicest kinds of stock, encourage the mechanical arts and industries, live within their income, read good works on agriculture, horticulture, &c., labor heartily six days, worship God on the seventh, live in love and charity with their neighbors, and whose transactions are all established on the firm, true basis of honesty. In this community, (and there are, we are happy to observe, many of them,) the cries of "hard times" and "my crops have all failed" are never heard.—*Prairie Farmer.*

We have received from Europe a limited quantity of the Bismark, late Cabbage Seed, which produces solid heads of cabbage the size of the mouth of a flour barrel and larger. These enormous cabbages are raised with the most ordinary cultivation, in any climate, and at present prices, double the ordinary profit is realized from their production. In transplanting from these seed, great care should be used to give sufficient space for growth. A package sent to any address, postpaid, on receipt of 50 cents; 3 packages $1 00; 6 for $2 00. A sure cure for cabbage pests and 4 beautiful chromos, The Maiden's Dream, full set sent free with each package. Address, B. Alexander & Co., sole U. S. Agents, 8th St., opposite Cooper Institute, New York. Please quote this paper. 12-6

A GOOD DURABLE WHITEWASH.—In answer to a correspondent who asks for a whitewash that will stand exposure to the weather, we give the following, which we know to be good: Take half a bushel of freshly-burned lime, slake it with boiling water; cover it during the process, to keep in the steam. Strain the liquid through a fine seive and add to it seven ponnds of salt previously well dissolved in warm water; three pounds of grounnd rice boiled to a thin paste and stirred in boiling hot; one-half pound of powdered Spanish whiting, one pound of clean glue which has been previously dissolved by soaking it well and then hanging it over a slow fire in a small kettle within a large one filled with water. Add five gallons of hot water to the mixture, stir it well, and let it stand a few days covered from dirt. It must be put on quite hot. For this purpose it can be kept in a kettle on a portable furnace. About a pint of this mixture will cover a square yard.—*Lancaster Farmer.*

PINES.

Our greatest regret regarding pines is, that we cannot get enough of them, or set them fast enough. We would have a line of them on the northerly side of every orchard we cared to cultivate, and on every barren or unsightly knoll, and in every spot on the farm where they would protect the fields from the fierce winds and storms of winter. There is scarcely a farm on any sandy plain, or exposed hillside, that could not be made to produce more and better crops if one-eighth of the land now cultivated were judiciously set to evergreen trees. They break the force of violent winds in summer, when the tender crops are growing, and in winter, when the fields are bare. Growing around farm buildings, they afford a welcome shelter for poultry, and other animals, and scattered over a farm, in the right places, they add a charm to the scenery which nothing else can.

Pines *seem* to increase the temperature of the surrounding atmosphere. Let one try the experiment some cold, windy day, of standing for a short time on the northern, and then on the southern side of a pine grove. The difference in the climate is often as great as between March and May. The north winds as they come down over the snow covered hills, are checked in their course by the millions of fine, narrow leaves which hold the air stationary, like the double walls of an icechest. It is not always the coldest air that is the hardest to bear. We all know how much colder it seems to ride against, than with the wind, in a cold day. Cold air in motion, takes the heat rapidly from every thing with which it comes in contact.

Dry still air or as it is sometimes called dead air, is an excellent non-conductor of heat. Dead air keeps ice from melting in the ice-house and refrigerator. Dead air in the walls of stables keeps the cattle warm, and the manure from freezing. Dead air around our own bodies affords excellent protection from the cold air outside; and dead air, held comparatively stationary among the fine, needle-like leaves which cover our pine trees, affords an excellent protection from the cold to whatever comes within its influence. Our own senses are very poor indicators of the temperature of the air or surrounding objects. Inexperienced persons often suppose that a thermometer will show a lower point of mercury on the windy side of a building than on the opposite, even when not affected by the sun, because it seems so much colder where the wind blows. Mercury carried from a warm room would contract and run down the glass faster in wind than in still air, just as our fingers will freeze sooner in the wind than if protected from its power of rapidly absorbing heat. The heat our animals and our plants thrive in so well comes from the sun, and we would endeavor to save it as much as is within our power by protecting our stables and our fields from the fierce winds which, when unobstructed, carry away this heat and disperse it so rapidly.

To this end, pines or other evergreen trees may be planted on the exposed sides of fields or buildings with marked effect and great advantage. Besides their use in tempering the climate, they are, when well grown, a beautiful addition to any landscape, either in summer or winter.

New England Farmer.

THE LOVE OF ANIMALS.

One of the difficult lessons which parents are called upon to teach their children, is the lesson of consideration for all helpless things, of gentleness toward all creatures that are weaker that themselves by reason of physical or mental inferiority, and no ignorance or thoughtlessness can be made a valid excuse for the neglect of this duty which is unfortunately so common. It is so shameful and so contemptible to maltrest or neglect any helpless and dependent being that it seems as if our merely human instincts should sufficiently protect us against this sin, but it is but too true that in this case, as in many others, our unassisted humanity is very weak and most easily tempted by opportunity into the commission of absolute cruelties when we are conscious that such cruelties will not, in this world at least, be avenged by any power stronger than ourselves. There is something startling in the fact that in this age of civilization and refinement, it is necessary for the best men and women from the most intelligent class of society to form themselves into associations in order to protect the animal world from the unbridled passions of human beings to whom the Creator has given power which is only limited and controlled by the strongest forces. It shows beyond question that the majority of mankind have not yet learned that in the very weakness and dependence of animals lies their claim upon our kindness, and that just in proportion to our power over them is our responsibility to their Maker and ours.

The associatione of which we speak make it their object to prevent all unnecessary cruelty to animals, and their experience during the few years which have elapsed since their foundation shows that thay have opened the door into a wide field.

In the treatment of domestic animals, even among educated people, there is an amount of ignorance and carelessness so great as in many instances to constitute actual crime, while it is always productive of great suffering and danger to the helpless and unreasoning creatures who are its victime. Any thoughtful person who has had experience in the care of animals knows that cruelty or unkindness to them always deserve punishment, because animals which are properly treated never require either the one or the other, and both are invariably hurtful. Then, too, there is no more direct loss to the owner of an animal than that which results from a want of care, for the value of an animal decreases in an exact proportion to the neglect and ill usage which it receives. A horse which is improperly fed and carelessly groomed, which is kept in a dirty stable and accustomed to blows and loud, rough speech, is worth a good deal less than the same horse under kind and carefull treatment; and this holds good of all domestic animals, in regard to the care of which there are a few fundamental rules which every one who has anything to do with animals ought thoroughly to understand. In the first place, (and this is seldom appreciated), animals suffer from uncleanliness almost as much as human beings, and it is of great importance that the stables, out-houses, yards, etc., in which they live, should be really clean, that they should have pure water and clean food, and that their own bodies should be kept clean. It may sound like a contradiction to say that even a pigpen, with proper drains, troughs, floor, etc., can be easily kept clean, and the pigs will be all the better for it. Again, the filthy condition common to many cowyards, where we see manure rotting and wasting in the sun, troughs thick with foulness, so that pure water or food is impossible, and in the midst of all, cattle whose sides are black and heavy with dirt, is always unnecessary and is the worst kind of extravagance.

In short, cleanliness is absolntely essential to the health of all animals, and is always in the end economical, as is also good and carefully prepared food in quantities proportioned to the condition of the animal. Nor is this all, for nothing is of greater importance than kind usage, gentleness of manner and voice, and carefulness as regards the comfort of animals in what are often considered unimportant matters. It is wrong and foolish to beat, roughly use, or abusively speak to any animal; they can always be managed without blows or rough words, and are usually intelligent enough to feel the difference between the two systeme.

It commonly depends upon the parents to form in their children the habits in repect to the treatment of animals which will cling to them for life, and we appeal to those of our readers who have children to educate to train them early in the habit of kindness to all dumb créatures. Give your little children pets in the shape of cats, dogs or birds; be sure that they take care of and are gentle with them; as the children grow older, let them help in the care of cattle and horses; teach them that even brutes have rights, and that cruelty to animals is always a disgrace to human beings, and be sure that in after life they will thank you for the valuable lesson.

NATIONAL PROSPERITY.

A valuable test of a nation's prosperity is to be found in the condition of its commercial relations with other nations, and we therefore take for granted that our readers will be interested in a brief statement of the amount of business which has been transacted between our own and other countries, during the year which is just ended. For the eleven months ending December 1st, 1875, we find that the value of the articles exported from the United States to other countries exceeds the imports by $35,858,793, while in the year 1873 the imports exceeded the exports by something like $22,000,000. The exports of cereals, which are of course among our most important products, have been for the last months of the past year much smaller than was expected, having been affected by the rush into grain speculatione produced by the very favorable prospects of the autumn. As soon, however, as a decline of prices takes place here, or a rise in prices takes place in the English market, the demand will begin and large exportations may be looked for during the late winter and spring, which will of course affect business here at once, and favorably. The general hope is that we, as a nation, have seen the worst of the financial storm which ever since the war, has more or less clouded our skies, and that the year 1876 is to establish ns once more upon a substantial business basis, the poorer but possibly the wiser for our losses. The comparison between the year 1875 and the two or three years immediately preceding it ehows a marked improvement, and the general good sense and solid intelligence of the American people ought to prevent any serious mistakes on the part of the government in dealing with financial questions, which at present are our greatest danger. If we cease to delnde ourselves with the "paper money" and resolve to keep onr national honor unspotted, we have now little to fear, and every reason to hope for a speedy and material change in the prosperity of the country.

AFRICA.

When the Sultan of Zanzibar made his recent visit to Europe he was accompanied by the missionary Dr. Badger, who acted as interpreter for, and general adviser to the Snltan, and undoubtedly had much to do with the establishment of friendly relations between his Highness and the English government.

In November last Dr. Badger telegraphed to England that an Egyptian naval expedition had seized and occupied two important towns on the coast of Zanzibar, having disarmed the Sultan's troops and raised the Turkish flag. It is most unfortunate that one of the greatest, if not the greatest obstacle to the civilization of Africa should be found in the bitter hatred existing between the different nations and tribes which make up the native population, and the numberless wars and petty struggles which result from that hatred. Nothing blocks the missionary's way more effectually than this spirit of enmity which seems to be always active among the native Africans, for one of its worst effects is to make a religion of peace synonymous to them with a religion of weakness. A missionary who goes out to confront this difficulty among so many others, needs indeed to be a strong man, bearing no evidence of weakness in his character or life. He must have a practical understanding of human natnre and a courageous soul; he must not be a learned man, bnt must know a little of many things, and should be clear-headed and cool of judgment.

The spirit of missions is the spirit of Christ; that which Christ was among the ignorant men of Judea, is the perfect realization of missionary life in all places and all ages, and though such perfection is beyond human reach yet the work is waiting and in the power of Christ's name, must be done.

DURING the past month Professor S. H. Owens, just elected Professor of the Normal Department in the University of West Virginia, spent two weeks at the Hampton Institnte, lecturing on educational topics, explaining Leigh's method of teaching to read, and giving the senior class lessons in logic.

He held a two days Institute at the Hampton Academy, of which Mr. Turpin is Principal, the public school teachers of the county composing his audience. Colored and white both took part, and it was felt that a fresh impulse had been given to the cause of popular education among us.

Professor Owens is a graduate of the State University and by his Institntes has done a good work in Virginia. Hie appointment will be a serious loss to this Commonwealth, for there are very few men so qualified for the task of stimulating educational interest and of bnilding up a public sentiment favorable to thorough and scientific teaching.

TWO MONTHS FREE!

NEW YORK TRIBUNE,

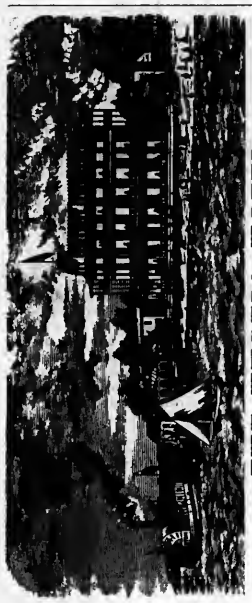
"The Leading American Newspaper."

On receipt of $1 and this advertisement, THE WEEKLY TRIBUNE will be sent, postage paid, to any address until December 31, 1876, or for $1.50, six copies; for $2, eleven; for $3, thirty-one.

5-75, 1y Address, THE TRIBUNE, NEW YORK.

ADVERTISING: CHEAP; GOOD: *Systematic.*—All persons who contemplate making contracts with newspapers for the insertion of advertisements, should send 25 cents to Geo. P. Rowell & Co. 41 Park Row, New York, for their PAMPHLET-BOOK (*ninety-seventh edition*), containing lists of over 2000 newspapers and estimates, showing the cost. Advertisements taken for leading papers in many States at a tremendous reduction from publisher's rates. GET THE BOOK.

$5 TO $20 per day. Agents wanted. All classes of working people of both sexes, young and old, make more money at work for us, in their own localities, during their spare moments or all the time, than at anything else. We offer employment that will pay handsomely for every hour's work. Full particulars, terms, etc., sent free. Send us your address at once. Don't delay. Now is the time. Do not look for work or business elsewhere, until you have learned what we offer. G. STINSON & Co., Portland, Maine. 5-75, 1y



THE HYGEIA HOTEL,
OLD POINT COMFORT, VA.
H. PHOEBUS, PROPRIETOR.
TERMS: Transient $4.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 80°, 74°, 70°, for Summer; 70°, 59°, 46°, for Autumn; 45°, 44°, 42°, for Winter; and 48°, 59°, 63°, for the Spring months. —Open for guests all the year.— 11-75, tf.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BAENES' BRIEF U. S. HISTORY.
BAENES' SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.
CHAPMAN'S DRAWING BOOK.
CLEVELAND'S COMPENDIUMS.
NOETHEND'S SPEAKERS.
GRAHAM'S REASONABLE ELOCUTION.
PEABODY'S MORAL PHILOSOPHY.
BOYD'S COMPOSITION, ETC.
CHAMPLIN'S POLITICAL ECONOMY.
BREE'S PROGRESSIVE PENMANSHIP.
PECK'S GANOT'S NATURAL PHILOSOPHY.
POETEE'S CHEMISTRY.
JARVIS'S PHYSIOLOGY and LAWS of HEALTH.
WOOD'S AMERICAN BOTANY.
CHAMBER'S ZOOLOGY.
STEELE'S "14 WEEKS" IN EACH SCIENCE.
PUJOL'S FRENCH COURSE.
WORMAN'S GERMAN SERIES.
SEAEING'S CLASSICS, ETC., ETC.,

The whole crowned by a unique collection of professional manuals known as

THE TEACHERS' LIBRARY,

In Thirty Volumes.

A Descriptive Catalogue of all A. S. Barnes & Co's publications will be sent free to the address of any Teacher or School Officer applying for it.

The National Teachers' Monthly commands in its editor and contributors the best professional talent the country affords. Subscription, $1 per annum.

HAMPTON, APRIL, 1876.

PREMIUM.

From and after November, 1875, *on receipt of one dollar, one year's subscription to the* SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at fifty cents apiece.

IN THE old regime in the South there were three classes, whose fortunes have somewhat changed. The aristocracy or gentry being generally bankrupt, and without adaptation to the new order of things, are struggling against a tide of troubles. But some of this class have met the change with wisdom and energy, and by making the best of things are improving their fortunes and have become rallying points of new efforts and hopes. The poor whites and the negroes were the other two classes. The experiences of slavery were not without a stimulating effect upon the latter, who daily harvested ideas from their contact with educated men, as well as learned many of the practical lessons of civilization—not always, however, to their advantage.

While emancipation was to the negro as a sun in the midnight heavens, and produced a wonderful demonstration toward education, it came to the poorer class of whites rather as a blessing in disguise, who could not see any signs of hope in the tremendous ruin about them. We believe from what we have seen and heard during the past five years, that there has been much improvement in their condition. The negro is not in their path as formerly; their chances in the world are fairer than before. The small cotton and tobacco planters who raise all they need and do their own work, the thrifty farmers who pay out no wages, whose growing crops and stock carry them over hard times, and who now have free schools for their children, are the basis of a robust, intelligent, industrial class—the backbone of southern prosperity.

But along the sea shore and in the mountains there are thousands of wretched looking creatures styled poor whites, to whom it is Paradise on earth to sit in a canoe all day with a bob and sinker, or to luxuriate over their pipes and snuff and clay, and "cuss" the negro.

The census of 1870 showed that there were over 1,500,000 illiterates in the South over ten years of age, and illiteracy is the exponent of poverty and degredation. Popular education only can reduce this terrible ignorance; as light and ideas reach this class they will have new wants, make fresh efforts, become consumers and producers, and manufacture at home the articles now brought from Connecticut.

We are told that the Agricultural Warehouses in southern cities have a new class of customers—the small independent farmers who purchase the best tools to make their labor go as far as possible. These men don't complain of hard times; they are on "hard pan" and cannot fall.

We know of no better illustration of the effect of good teaching upon poor whites than that of Miss Amy Bradley at Wilmington, N. C., whose labors in a few years resulted not only in a remarkable improvement of their mental and physical condition, but in a change of public sentiment and an acknowledgment of the great good accomplished by the "Tileston School."

THE two hundred students in this institution are nearly all compelled to work during the summer in order to meet school expenses.

There are a number of young men and women from eighteen to twenty-two years of age who desire employment during the vacation, from June 10th till Oct. 1st. The girls can do general housework and are willing and capable. While not experienced cooks, most of them could, under direction, do plain cooking. Paying their own traveling expenses, they should receive not less than three dollars per week in order to make a satisfactory saving.

The young men can serve as waiters or do farm and general work.

It is hoped that among our readers there are those who will be glad to employ the services above offered.

FEW of the friends of the Hampton Normal and Agricultural Institute realize the difficulty, the necessary expense, and the skill required in the combination of work and study which is its distinctive feature. Students pay their expenses, ten dollars per month, half in cash and half in labor. The cash is earned by summer work in hotels, by teaching or farming, or is paid by parents or friends. About seven thousand dollars are annually allowed for students' labor, of which not over one-half is actually remunerative, through supplies to the school or sales in the market. Of the remainder, one-half would otherwise be expended for hired labor. About $2,000 would be saved yearly were the work done by ordinary workmen solely for profit; but instruction being our object rather than production some labor is given out at a pecuniary disadvantage, and is paid for when of only nominal value.

We invite attention to the need of new industries for the want of which the growth of this institution is retarded—those already in operation being overcrowded by the needs of one hundred and eighty students who *must have work* in order to pay their school bills, forty pupils being day scholars and sufficiently employed at home. For the increased demand for labor next year there is no provision unless to give out more work at a loss.

Are there not men at the North doing a moderate business in light manufactured articles who for the sake, not only of a more genial climate, but to give employment as a means of education, would avail themselves of the advantages of Hampton?

These advantages consist, first, of cheap labor both in and out of the institution: students are paid from six to ten cents per hour. Secondly, the supply of native wood out of which articles can be made: the gum, holly, cypress, pine, oak and other trees abound in this vicinity. Thirdly, the cheapness of fuel: good oak or pine wood can be bought by the single cord at $4.00 or $4.25, and by the quantity for $3.50. Anthracite coal costs by the cargo $5.75 per ton of 2250 lbs. It could be purchased in connection with the Normal School order at about this rate.

The neighboring saw-mills offer lumber at low prices. Carpenters work for from $1.50 to $2.50 per day; masons for $3.00 per day.

There is water communication with Baltimore, Philadelphia, New York and Boston.

The situation and climate are delightful. A large summer hotel two miles distant is crowded during the hot months, while northern people find at Hampton, relief from the severities of winter. It is very favorable for bronchitis and all throat troubles.

The Hampton Institute has abundant land for building sites; it has an eight horse power engine with power to spare. Arrangements could be made for the protection of any who should bring capital for manufacturing purposes.

In illustration of information we desire and of the projects that might be successfully carried out, we quote from a private letter of Mr. M. Denman Ross of Boston, to the Treasurer:

I don't see why the shoe business would not be just the thing for your people, and I should think tanning leather might be done also to advantage. You would, as a matter of course, need to begin in a very small way and grow gradually. If you could come here and investigate the subject in person I think a correct estimate could be made of the prospects of the shoe business, &c.

I have an impression that if you would go to Philadelphia where there is a great deal done in the way of knitting stockings &c., you may find a business well suited to your people. This I think would be a very simple business to start; you could begin with a single knitting machine. The yarn can be purchased all ready for the machine, and then I imagine the finishing and putting the stockings into condition for the market is *hand labor*, which is cheap with you. In Ireland you know the famous Balbriggan hosiery has a world-wide reputation. If you could get the art of making such goods as these with your cheap labor I don't see why there is not a great margin for a profit. When you consider the tariff duty which we pay in this country on foreign stockings, I don't see why we can't spin cotton as cheap as they do in Europe, and as we raise the raw cotton and have cheap labor it would seem as though we should make our own stockings.

I presume the laboring class of people in the South would buy these stockings of you if you would organize some plan to have traveling agents to go from house to house and supply both shoes and stockings,—this, too, would give some of your people employment. Then why not take up the subject of *shoes* and *stockings*, with reference to *home industry* supplying *home consumption?*

THE NEGRO IN TEXAS.

Mr. John G. Fee, a well-known and reliable teacher in the employ of the A. M. A., writes thus from San. Antonio, Texas:

You will ask "what about the negro?" Well, he is "always in the wood pile" somewhere—let us bring him out and look at him.

1st—He is loyal to the core.

2d—He is quiet, law abiding, a lover of order and peace.

3d—And though Mr. Kingsbury, and others, in their publications seek to make the impression that the "negro is played out" "the work done by white men," this is not my observation. A large share of the cotton and corn raised in this State is raised by the negro. (I cannot say colored man, for the Mexican is colored as well as the negro).

Let me take a single fact, under my own observation. Here in San Antonio, where there are between one and two thousand negroes, colored people of African descent, there is not one in suffering circumstances. There were two old, infirm people, who were provided for in the "poor" or "alms-house," and here in the poor-house the colored and whites are together—not so fastidious as you Kentuckians are. My informant, an intelligent man, who was formerly a teacher in one of the colored schools, said to me, "there is plenty of work in this place, and the colored people take hold of it, and are doing well."

Though the negro has been free but ten years, every negro man here who is head of a family has a home, a house to live in; many owning their little properties, which are homes of neatness and comfort, whilst most of the Mexicans, who have been here generation after generation, are still living in mere "hackein," pole shanties, wigwams. The negro is a hundred fold more hopeful, more industrious, more intelligent and far more receptive and truthful. As far as I can learn the negroes in this State are generally undistarbed, and are making hopeful progress. I have found the whole people in Texas far more hospitable, law abiding and orderly than I had expected.

Each branch of the Ohio Legislature has chosen a colored man as assistant clerk.

A WELL educated colored man, whom we know to be remarkably capable, and well qualified to give a just opinion on topics connected with his race, writes, apropos of the editorial article of our January number in reference to the color feeling among negroes of different shades,—"As I am not a mulatto, neither a full negro, I have good opportunities for knowing the real sentiments of both classes—the pure blacks and those of mixed blood. There is a deep suppressed feeling among colored people both in regard to *color* and being '*freeborn*.'"

LETTERS FROM HAMPTON GRADUATES.

The picture of life among the Southern freedmen, presented by the letters of Hampton graduates, is of necessity often darkly shaded. It has its bright aspects, however, and we are always glad to recognize them in such encouraging and hopeful accounts as the following letters give:

Dear Teacher:—I am ashamed of having kept your letter so long unanswered, but I hope and believe you will pardon me this time. My school opened September 13, so you see I have been teaching a little more than two weeks. During the first week I was so unwell I did not enjoy it very much. I was always glad when half-past three came, but ever since you cannot imagine the delight I take in being in school, and the pleasure it gives me to be able to instruct those who come to me. You know that I am teaching with a white man, you heard me speak of him last term; I am his assistant. Some of my schoolmates do not like the idea of being an assistant, and I would much rather had a school all to myself, and could have had one from the same superintendent, but after weighing all things I found it better by far to take the school here. Now I will tell you the circumstances: Here I have made my board free; I am with my mother, and can help her, and she can help me; I have my machine, and I run it night and morning, early and late. My salary is $30 per month, so you see I can save ths most of it. Mother says my help to her, and being with her all the while is worth more to her than if she charged some one else $10 per month for board. Ann and Amy get the same, but pay $8 or $10 board, I have not heard which yet. Thirty dollars is all they pay in this country. Miss Mackie wrote me about two schools; one in West Virginia that paid $45, but it costs so much to get there, and I did not have the money to go on. Then that is five months school, and this is ten. Don't you think it was advisable to remain here and teach? Let me know what you think of it please. You must excuse me for telling you so much about our school, but you know this is my first and I want you to know all about it. It is a very large, and a nice school-house; has only two rooms yet. I have between thirty-five and forty scholars. My highest class is studying Arithmetic in short division, third-reader, writing, spelling, &c. I have six different classes. I imagine you are tired of hearing and reading such short sentences, so I will not tell you any more now, but hy the time I write again I may have something worth telling you. My brother has been sick a week and I fear will be a little late at school, but father says he shall go as soon as he is able. I feel sad whenever I think of you, and all my loved friends being at Hampton this term, and I far away. I hope I may not be forgotten, I mean to come back some day and visit my alma mater.

I hope to hear from you soon all ths school news.

Yonr sincere friend, S.

Dear Teacher:—I received your most welcome letter a few days ago, which was quite reviving. I had quite a nice vacation. I took a trip to Petersburg, Va., in August—very pleasant. A few days after my return, I came back to my school and began teaching the first Monday in September; I have a good school and am getting along very well.

The people all seem to have the same interest in the school. They rely upon anything I tell them, they are getting along very well in this neighborhood, everybody has a good *crop* on hand. I guess that you will be pleased to hear that Inge is teaching near me; and Dyson, likewise. I have not seen them yet, but I have heard from them, I expect them down to my school Sunday, then there is a lady from Petersburg, Va., teaching about five miles from me. So you see I have a little help this year. I am getting along very well with my Temperance Society. I find that more good has been done by *its* meetings towards reforming the people ths anything else for this reason: They will go to the temperance meeting when they won't go to church. The change is the neighborhood talk. Young men who were always drunk before, are now *sober* and fit to go in company—they act like perfect *gentlemen*, I feel proud of them, because I feel that I have done them good in teaching them to respect themselves. We meet again the 2nd Sunday in Novsmber, I shall try to get Inge and Dyson to coms down and help me. If yon have any tracts or Sunday-school papers, which you think will aid me, please send some. I need all ths help that I can get.

Yon said that you had taken up the book of John again; my Bible-class is reading it too.

I should like to be there some Sunday evening to recite a lesson.

Y.

Dear Teacher:—I left store business Monday morning. Will commence teaching next week. Will walk six miles a day, that is three miles to my school in the morning and back at night. My school house is a very rough one, but it is the best that could be built at present. The people had to build it themselves and at their own expense, so we could not expect a very good ons. The people are very glad that they are going to have a school in their neighborhood, and are working very earnest on the house. I went ont to see how they were getting on Monday, and found everything going on nicely. I think I am going to have some tronble with some of the parents, because I do not belong to the Baptist church.

It is well known that, if a man or boy go in a neighborhood to teach school, the first question that he is asked is, Are you a Baptist? and if you say yes, you are all right and will find plenty of friends, who will do all they can to get you to stay among them. But if you say, I am a Methodist, or a Congregationalist or some other denomination, you stand a very poor chance for a school. I have been home nearly a month, doing nothing, you may say, and I am so tired I don't know what to do. And I can't see how so many young boys, and young men can stand on the streets for weeks and months, you may say, doing nothing but smoking segars and chewing tobacco. It was one blessed thing my father met with such good luck with his five children, for I suppose if we had stayed here we would have been just like the boys whom I mention above. Please let me hear from you soon.

Yours, truly, F.

The *Jeffersonian*, a prominent journal of Albemarle County, Va., publishes the proceedings of the *Piedmont Ministerial Union*, held at Charlottesville, January 21st. The presiding officer was the Rev. J. Hernden. It embraces forty-six colored Baptist Churches and appears to have done much good in improving the ministry. Sermons were preached by Elders T. C. Leitch and M. T. Lewis.

The following officers were elected for the ensuing year: Elder J. Hernden, President; M. Wales, Vice-President; Secrctaries, W. J. Barnett, F. L. Gibson and Jackson Willis.

We are glad to learn that the American Missionary Association of New York will make, at the Centennial, some showing of its great work during the past twenty years among the Africans, Anglo Africans, Chinese and Indians. Within the past hundred years the foreign and home mission societies have become enterprises of vast proportions and importance. Should not they all be represented upon an occasion which professes to illustrate the leading facts in our national character and progress? Progress toward a genuine sense of human brotherhood and in fulfilling our highest duty to the world, is the test of individuel and national character and the most hopeful sign of a permenent civilization. Whatever illustrates their vital points or tendencies should, as far as practicable, appear at our national celebration.

FRIDAY.

Some people will persist in denominating Friday as "unlucky," notwithstanding that it is the date of some of the most important and "lucky" occurrences on the record of human transactions. Let us see: On Friday, August 21, 1492., Columbus sailed on his great voyage of discovery; on Friday, October 12, 1492, he first discovered land; on Friday, January 4, 1493, he sailed on his return to Spain, which if he had not reached in safety, the happy result would never have been known which led to the settlement of this vast continent. On Friday, March 15, 1493, he arrived at Palos in safety; on Friday, November 22, 1493, he arrived at Hispaniola, on his second voyage to America; on Friday, June 13, 1494, he, though unknown to himself, discovered the continent of America. On Friday, March 5, 1496, Henry VIII of England, gave to John Cabot his Commission, which led to the discovery of North America. This is the first American state paper in England. On Friday, September 7, 1565, was founded St. Augustine, Florida, the oldest town in the United States, by more than forty years. On Friday, November 10, 1620, the *May Flower*, with the Pilgrims, made the harbor of Princetown; and on the same day they signed that august compact, the forerunner of our glorious constitution. On Friday, December 22, 1620, the Pilgrims made their final landing at Plymouth Rock. On Friday, February 22, 1732, George Washington, the father of American freedom, was born. On Friday, June 16, 1775, Booker Hill was seized and fortified. On Friday, October 6, 1777, the surrender of Saratoga was made, which had much power and influence in indocing France to declare for our cause. On Friday, September 22, 1780, the treason of Arnold was laid bare, which saved us from destruction. On Friday, October 19, 1781, the surrender of Yorktown, the crowning glory of the American arms, occured. On Friday, June 7, 1771, the motion in Congress was made by John Adams, seconded by Richard Henry Lee, that the United Colonies were, and of right ought to be, free and independent. Thos we see that Friday is not so bad, after all.

"MAY I BE SURE?"

"May I be sure, mamma," said Kitty, as the good news of God's free love was read to her, and she was told there was forgiveness for her.

"Yes, dear one, you may."

"But how, mamma?"

"Simply in believing what God has said; for God tells no lies, and breaks no promises."

"And what has God said?"

"'He that believeth hath everlasting life.'"

NEWS OF THE MONTH.

The conviction—by his own confession—of Secretary of War Belknap, of selling posttraderships in the West, and his consequent resignation and impeachment by the Senate, have fallen upon the country like a thunderclap—the climax (let us hope) of the sad series of falls from high places which have astounded and disgraced our nation. The effect most to be dreaded of such falls is not the criticism of other nations, but the undermining of our own respect for the most dignified offices of our own government. It is fortunate that an occasion is approaching which turns our eyes to the heroes whose incorruptible fame adds a lustre to the ermine they wore.

Judge Taft, of Ohio, appointed to fill Secretary Belknap's vacant place, is a well-known and irreproachable Republican. The appointment is universally approved.

The appointment of Mr. Richard H. Dana, Jr., as United States Minister to England in place of Genoral Schenck, whose return and resignation was necessitated by his disgraceful connection with the Emma Mine scandal, meets with very general favor, but is not yet approved by the Senate Committee.

Evacuation Day, the one hundredth anniversary of the departure of the British from Boston, was celebrated with great rejoicing in that city. As St. Patriok's Day it was observed as usual by the Irish.

The war in Liberia is about ended. The United States frigate *Alaska* arrived off Cape Palmas the last of February, and the captain was instructed to arbitrate between the Liberians and Grebos. There was to be a meeting on the 26th when it was thought a treaty would be signed. In the last fight the Grebos were repulsed with heavy loss.

Ex-President Roberts of Liberia, died at Monrovia, February 24th. In 1847 when the people formed a regular government, he was elected President for the term of two years. He was re-elected three successive times, his administration lasting from 1848 to 1856, when he retired and became President of the college at Monrovia. In 1871 he was recalled to the seat of government, President Roye having been deposed for embezzling the proceeds of a government loan. President Roberts was an able and enlightened rulor, encouraging agriculture, general education and immigration, and elevating his country in the respect of Europe. He was buried with military honors.

Pinchback's claim to a seet in the Senate, that body has finally refused to recognize, by a vote of thirty-two to twenty-nine.

Colorado will be admitted as a State next Fourth of July.

A bill has passed the Senate, which, if its conditions are accepted, will admit New Mexico as a State next December. It will be entitled to two Senators and one Representative till the next general census. Provision is made by the bill that the constitution of the new state shall be republican in form and not repugnant to the Constitution of the United States.

The American Board of Foreign Missions reports the whole number of missions supported as eighteen, with three hundred and ninety-three missionaries sent from America, and 1,057 native helpers; two hundred and twenty-three churches with a membership of 11,546, the year's increase being 1,500. It has six hundred and twenty-two schools, with 22,523 pupils.

The oldest inhabitant of Boston is dead—aged about two hundred years.

The "Great Boston Elm," the pride of Boston Common, was blown down in the gale of February 15th. Its exact age is uncertain, but it is represented on a map of the town engraved in 1722, and was then supposed to be a hundred years old. One hundred and ninety rings were counted on a branch which was blown off in 1860. Four branches blown off in 1832 were bolted into their places and grew fast again. A great hollow in the trunk was filled with fifteen barrels of clay, but the tree was growing in 1860 when an off-shoot was discovered. In Revolutionary times the old tree was a gathering place of the "Sons of Liberty." The fallen tree was taken possession of by the authorities, and some of its relics will doubtless appear at the Centennial.

A bill was recently introduced into the Massachusetts Legislature, to grant the right of suffrage to women in municipal elections. Had it passed the Senate, 34,000 women, paying $2,000,000 of taxes to the State, would have become voters.

The Carlist war in Spain is at last ended, Don Carlos having abandoned the cause and fled to France.

Prof. Webster, Principal of the Norfolk High School, visited the Hampton Normal Agricultural Institute on Wednesday, March 22d, and for the greater part of the school session, and an hour in the evening, held the teachers and students in delightful attention by a series of lectures, or "talks" as he prefers to call them, on History, Natural Philosophy and Chemistry. Much of his effort was very profitably spent in showing the students how to illustrate some of the greatest truths of nature by apparatus so simple that they could make it themselves. The Professor succeeded in striking at once the responsive cord in his audience, and the enjoyment of the occasion was mutual.

A formidable revolt in Hayti.

A bill reducing the President's salary to $25,000, has passed the Senate twenty-six to twenty.

Daniel Drew, the great "operator" in Wall St., has failed at last for over a million dollars. It is said that his large endowments of Methodist institutions are not secured.

A very disastrous fire occured in Charleston, S. C., March 14th. A large part of the city was destroyed.

Secretary Bristow of the Treasury has been fully acquitted of all charges against him, by the Clymer Investigating Committee.

The New Hampshire State election has resulted in a victory for the Republicans of unexpected magnitude. Governor Cheney was re-elected by over 3,000 majority, and the Republicans secure the Senate, the House and the Council.

The California Senate has passed a bill to punish wife beating with flogging. One good turn deserves another.

Recent telegraphic dispatches report a great battle in Abyssinia between the Abyssinian and Egyptian forces, resulting in a great victory for the latter. The Egyptian army was commanded by an American, General Loring, an ex-Confederate officer. The Khedive has shown great sagacity in surrounding himself with military talent from abroad, and many of the officers of the American war, both Federal and Confederate, are now in his service.

On Tuesday, the 14th of March, the "Hampton Singers" gladly accepted the kind invitation of Rear Admiral Le Roy, commanding the North Atlantic Squadron, to visit his flag ship, the *Hartford*, lying in Hampton Roads. After inspecting this famous ship, on which more men were killed in the late war than on any other vessel in the Navy, they sang to the officers and sailors who assembled on the gun deck to hear them. The officers were thoroughly appreciative and made the visit a delightful one to the Students and the party. Several hundred sailors who were massed in among the heavy guns that had delivered many a telling shot for freedom, listened with rapt attention to the "Gospel Train," "Swing low sweet chariot," "Nobody knows the trouble I've seen." "Jack" enjoys good music, and their pleased and sometimes tearful faces were an abundant recompense. Never were these old songs better enjoyed than on the *Hartford* that day.

Agricultural.

FARM TOPICS FOR SPRING.

Everything in the shape of manure should be saved. Take the hen manure from the hen house and compost it very early in the spring, with an equal bulk of swamp mud or loam, with a sprinkling of plaster, and give it sufficient time to heat slightly, and pitch it over as often as needful to keep it from burning, giving it sufficient time to become mellowed before it is used in spring.

As stock raising has not yet depreciated as most all other farm interests have, it should be the care of the farmer to raise what fodder he can for that purpose. Turn over in the spring all the dry, poor land that you have in your fields that will not produce a ton of grass to an acre, and plant to fodder corn, in furrows, three feet apart. The cultivator run between the rows a few times is all the cultivation necessary. Cut up when sufficiently matured, hind in bundles and shock in the field to remain till duly cured for the barn. Also, for this purpose the great Detroit seedsmen, D. M. Ferry & Co., recommend the Liberian Sugar Cane, the seed for sale by them at one dollar a ponnd—one pound for an acre of land—an incredible amount raised from an acre, according to their recommendation; (I have forgotten how much, not having their seed catslogue at hand); also, said to be superior to all other kinds for our cold northern climate, as the seed will ripen. The expense of seed is but little, and it may pay to try it.

As the potato takes little else from the soil hut potash, I consider it not so exhausting to the soil as a crop of oats or wheat. Of late years I have followed the corn crop, where the land has been well manured, broadcast, with early rose potatoes, realizing twice the profit therefrom, when potatoes are only fifty cents per hushel, than can be gained from oats or wheat, with far less depreciation of soil. Sow down to grass seed at early digging time, or the following spring with grass seed and oats, to be cut green for fodder, as oats cut in that state are said to take less from the soil.

Don't give over housing cattle every night, after pasturing time arrives, where it can be done. Spread under them loam, swamp mud, or forest leaves, and let it go down into the barn cellar to the hogs, and you will be surprised to see, next Fall, what an amount of good mannre you will have, instead of a small moiety of leached, sun-dried yard manure that you have usually had.

A moderately wet hog yard or barn cellar is best for making manure with hogs, and where you can get forest leaves enough, although they may be nothing but pine leaves, raked up with the scurf of the ground, to soak up the liquid of the hogs or cattle, never haul in heavy loam having no vegetable matter and being of no benefit to the soil besides its absorbing capacity to the liquid mannre; besides, it is too heavy to haul out again to apply to the soil.—*New England Farmer.*

We have received from Europe a limited quantity of the Bismarck, late Cabbage Seed, which produces solid heads of cabbage the size of the mouth of a flour barrel and larger. These enormous cabbages are raised with the most ordinary cultivation, in any climate, and at present prices, double the ordinary profit is realized from their production. In transplanting from these seed, great care should be used to give sufficient space for growth. A package sent to any address, postpaid, on receipt of 50 cents; 3 packages $1.00; 8 for $2.00. A sure cure for cabbage pests and 4 beautiful chromos, The Maiden's Dream, full set sent free with each package. Address, B. Alexander & Co., sole U. S. Agents, 8th st., opposite Cooper Institute, New York. Please quote this paper. 12-6

SWEET POTATOES AS HOG FEED.

There is no better hog feed than sweet potatoes, either raw or cooked. Hogs will fatten rapidly on them raw, and dig them themselves, but will do much better on them if cooked. In this part of Illinois, where the corn crop is uncertain, many farmers fatten their own pork on sweet potatoes. Quite a number have planted them the past season, and turned their hogs into the patch, and they will not touch an ear of corn while the potatoes last. But that is not the best plan, as the hogs will waste them more or less. It pays to dig the potatoes and cook them in a large kettle, and when nearly done mix in a small quantity of corn meal or ship-stuff; mash and stir well and let them cook awhile longer, to cook the meal. Feed cool, in troughs, and, my word for it, you will see hogs grow. It is the best feed for sows and young pigs that can be given them.

I have never tested the relative value of corn and sweet potatoes as a hog feed, hut here, in the Fall of the year, we often have sweet potatoes too large for sale and feed them to the hogs, as we always do with the very small ones.

Some may think it is costly feed, hut taking into consideration the yield of sweet potatoes and corn, corn yielding 30 bushels per acre, sweet potatoes 150 to 200 hnshels per acre, and corn sometimes worth twice as much per hushel as potatoes. However, all are not alike situated. Some can grow corn and sweet potatoes. Where potatoes do well they make a good substitnte for corn.—*Exchange.*

Indelible Marking Paper for Marking Clothing without a Preparation.—*Direction*—Lay the Indelible Paper upon the article to be marked, and place over it a thin piece of writing paper, upon which write with a common lead pencil, or any smooth point. If the marking is pressed with a hot flat-iron or otherwise heated for a few seconds, it can be washed immediately with hot water and soap as usual. Warranted not to fade or spread in the cloth. A package sent, post-paid, on receipt of thirty-five cents, two for sixty cents. Address B. Alexander & Co., Sole United States Agt's, Eighth street, opposite Cooper Institute, New York. Agents wanted, send for terms. Please quote this paper. 12-6

BURIAL OF MOSES.

MRS. ALEXANDER.

"And he buried him in a valley in the land of Moab, over against Beth-peor: but no man knoweth of his sepulchre unto this day." Deut. xxxiv: 6.

By Nebo's lonely mountain,
On this side Jordan's wave,
In a vale in the land of Moab,
There lies a lonely grave;
But no man built that sepulchre,
And no man saw it ever;
For the angels of God upturned the sod,
And laid the dead man there.

That was the grandest funeral
That ever passed on earth;
Yet no man heard the trampling,
Or saw the train go forth:
Noiselessly as the daylight
Comes when the night is done,
And the crimson streak on ocean's cheek
Grows into the great sun;

Noiselessly as the springtime
Her crown of verdure weaves,
And all the trees on all the hills
Unfold their thousand leaves:
So without sound of music
Or voice of them that wept,
Silently down from the mountain's crown
The great procession swept.

Perchance the bald old eagle
On gray Beth-peor's height,
Out of his rocky eyry
Looked on the wondrous sight;
Perchance the lion stalking
Still shuns that hallowed spot;
For beast and bird have seen and heard
That which man knoweth not.

But when the warrior dieth,
His comrades of the war,
With arms reversed and muffled drums,
Follow the funeral car;
They show the banners taken;
They tell his battles won,
And after him lead his masterless steed,
While peals the minute gun.

Amid the noblest of the land
Men lay the sage to rest,
And give the bard an honored place,
With costly marbles drest,
In the great minster transept
Where lights like glories fall,
And the sweet choir sings, and the organ rings
Along the emblazoned hall.

This was the bravest warrior
That ever buckled sword;
This the most gifted poet
That ever breathed a word;
And never earth's philosopher
Traced with his golden pen,
On the deathless page, truths half so sage
As he wrote down for men.

And had he not high honor?
The hillside for his pall!
To lie in state while angels wait
With stars for tapers tall!
And the dark rock-pines like tossing plumes
Over his bier to wave,
And God's own hand, in that lonely land,
To lay him in his grave!—

In that deep grave without a name,
Whence his uncoffined clay
Shall break again,—O wondrous thought!
Before the judgment-day,
And stand, with glory wrapped around,
On the hills he never trod,
And speak of the strife that won our life
With the Incarnate Son of God.

O lonely tomb in Moab's land!
O dark Beth-peor's hill!
Speak to these curious hearts of ours,
And teach them to be still:
God hath his mysteries of grace,
Ways that we cannot tell,
He hides them deep, like the secret sleep
Of him he loved so well.

THE SPRING.

The picture which our readers find this month upon our first page, would furnish a text, if one were needed, from which to write a discourse upon the value and beauty of pure water; for the scene which it represents is not only fair to the eye, but also is full of suggestions. A great poet has told us of the lessons in brooks and sermons in stones which are written in eternal letters for the eyes that choose to read, and to refuse to receive this unspoken teaching is willful blindness and ignorance which, sooner or later, brings its own punishment.

The little cottage in the background of the picture has, in the bright spring under the trees, a most valuable possession, for the pure water which it unfailingly supplies is an important auxiliary to human health and happiness, while its beauty and freshness are a constant delight to minds which are open to the sweet influences of Nature.

The child who is waiting to fill her pitcher can hardly fail to feel something of the loveliness of the spot in which she stands, and all her life long she may remember those pleasant hours beside the little, sparkling spring, where the warm summer sun was shining, and happy birds were singing in the green trees over her head.

POOR PIERROT.

BY ARSENE HOUSSAYE.

And now my dear readers, let me tell you a story of friend of mine, who wes an ass but not a philosopher. His name was Pierrot.

The frost was silvering the trees of the Park Monceau with dull, white powder, like the head of a marquis of the old regime. It was in front of the rotunda and 9 o'clock in the morning. The sun hung in the fog like a globe of fire, but cast forth no beams. The wind was cruel to the poor world. People walked rapidly along the Boulevard de Courcelles; women veiled their faces and men drew their heads inside their collars. It was a day when a lover's sigh would have frozen the air.

I was hurrying by like everybody else. A female ragpicker, pale and famished, led by the bridle a poor little donkey, which seemed a hundred years old, and which dragged a poor little

POOR PIERROT.

cart full of the rubbish of the street: rags, broken bottles, torn papers, worn-out skillets, the crusts of bread, the thousand nothings which are the fortune of ragpickers. The woman had done good work since midnight but the ass was ready to drop. He stopped short, as if he had made up his mind to go no further. His legs trembled and threatened to fall. He hung his head with resignation as if awaiting the stroke of death.

The sight touched and arrested me. A man would have cursed and beaten the poor beast to rouse him; the women looked at him with an eye of motherly pity. The donkey returned her look as if saying, "You see it is all over. I have done my best for you night after night, because I saw your misery was greater than mine. You have treated me well, sharing your bread with me, and your neighbor's oats when you could steal any; but I am dying at last."

The women looked at him and said gently, "Come, come, dear Pierrot, do not leave me here." She lighted the load by taking out a basket of broken bottles. "Come, now," she said, as if talking to a child. "You can get along nicely now." She put her shoulder to the wheel, but the donkey did not move. He knew he had not the strength to walk on to St. Ouen, his wretched home. She still coaxed him. "How do you think we can get on this way, Pierrot? To be sure I could drag the cart. But I can't put you in it, and you would be ashamed to be dragged after it." The donkey raised his ear, but not a move.

I was going to speak to her, when she ran to the nearest wine-shop. The ass followed her with anxious eyes; he seemed fearful that he would die without his mistress. He was so little you would have taken him at a distance for a Pyrenean dog. He had grown gray in the harness. A few tufts of gray hair remained here and there on his emaciated body. He looked like a mountain burned bare in many places. His resigned air showed a mind free from worldly vanities. He was far past the age where one strikes attitudes. He was almost transparent in his leanness. But his face was all the more expressive. It had something almost human in its intelligence and goodness. Why had he been condemned to such suffering: was it the expiation of a former life passed in luxurious orgies?

The ragpicker soon returned, bringing a piece of bread and a piece of sugar. The ass turned and showed his teeth, like old piano keys. But although it was his breakfast time, he had no more strength in his mouth than in his legs. She gave him the sugar. He took it as if to oblige her, but dropped it again, and the same with the bread.

"Ah! What shall I do?" said the ragpicker. She thought no more of her cart. She was full of anxiety for her friend Pierrot. "Pierrot!" she cried again. Two great tears came to her eyes. She took his head in her arms and kissed him like a child. The caress did what nothing else could do. The ass roused himself and brayed as in his best days. I feared it was only his swan-song. I approached and said to the woman,

"You appear to be in trouble."

"Oh," she said, crying, "if you knew how I love this beast. I saved him from the hutchers four years ago. In those days I had only a hod. I have raised seven children with my hook. The father is gone and one other, and my eldest daughter was taken away a fortnight ago. My worst grief was that I had to take one to the foundlings—I had eleven in all—four of them died at the breast it's no use; you can't have good milk when you work in the streets all night. This little donkey has been my consolation. He was better company than my husband. He never got drunk, and never beat me, and I never beat him. Did I, Pierrot?"

The poor little beast appeared to share in the conversation. He half raised his ears and assented. One of my friends passed by and asked me what I was doing. "I am making a new friend." "He may be witty, but he is not handsome." "I find him admirable, and I would like to see you in his place. He has been out since midnight. Here, you want to help me in a work of charity?"

"With all my heart."

"Very well. Let us buy this ass and put him on the retired list. This good woman will take care of him." The ragpicker looked at us severely, fearing we were laughing at her. But when she saw the shine of the Louis-d'or, she smiled. "How much did Pierrot cost?"

"Ten francs,"

"Well, you go back to the abattoir and buy another ass, and take good care of this one." I gave my card to the women and said good-bye, to her and the donkey. The miracle was complete. The ass started off in high spirits, the woman pushing the cart from behind.

That evening the poor woman came to me in tears. I understood at once. "Ah, sir, he is gone!" "Poor Pierrot," sir, we got to St. Ouen one way or another. But when he came in sight of our hut he fell on his knees. I tried to raise him, but this was all over. My children came running crying. They talked to him and, kissed him. He looked at them, so sadly as to break our heart. I tell you, there are lots of people in the world not worth half so much as poor Pierrot. Think of it, he wanted to die at home after finishing his day's work." Like a soldier who dies after firing his last cartridge.

The ragpicker opened her hand, and I saw the money I had given her in the morning. "Here are the hundred francs, sir."

I do not know whether I most admired her or the donkey—the ass who did his duty to death, or the woman more delicate than our charity.

"I DON'T CARE."

"I am sorry to see my son give way to anger," said a patient mother.

"I don't care," replied the passionate child.

"You will become an ignorant man unless you study better," said the faithful teacher, later.

"I don't care," he muttered under his breath.

"Those boys are not the right sort of companions for you," said his pastor.

"I don't care," he answered, turning on his heel.

"It is dangerous to taste wine," said his friend, warningly.

"I don't care," was still his obstinate reply.

A few years after, he was a worthless drunkard, plunging into every sort of excess, and finally ending a miserable life of crime without hope.

"I don't care," was his ruin, as it is the ruin of thousands. Look out for it, boys and girls. Keep away from it. Don't let it find a place in your heart, or pass your lips. Always care. Care to do right, and care when you have done wrong.

Pray earnestly that you may never lose your soul from a reckless spirit of "I don't care."

YOUNG MAN WHOSE HOUSE ARE YOU SHINGLING?

[SCENE, *Whisky-Shop.*—TIME, *Midnight.*]

SHOP-KEEPER AND WIFE.

Wife.—"I wish that man would go home if he has one to go to."

Shop-keeper.—"Hush! hush! he'll call for something to drink directly."

Wife.—"I wish he would make haste about it, then, for it's time every honest man was in bed."

Shop-keeper.—"He's taking the shingles off his own house and putting them on ours."

At this time James began to come to his right senses, and commenced rubbing his eyes, and stretching himself as if he had just awoke, said:

"I believe I will go."

"Don't be in a hurry, James," said the whisky-seller.

"Oh! yes, I must go," said James, and he started.

After an absence of some time the whisky-seller accosted him with:

"Halloo, Jim, why ain't you been down to see us?"

"Why, I had taken so many shingles off my house it began to leak, so I thought it time to stop the leak, and I have done it," said James.

The whisky-seller and his wife were astonished. James is now a happy man, and his wife and children are happy too.

Now, young man, whose house are you shingling?

HERE is a temperance lecture which, though dealing with vast figures can he readily made personal to every one of the large number of men who make up the aggregate employed by the speaker. It is Mr. Whitworth, M. P., an English manufacturer, who in Drogheda, Kilkenny and Manchester, has immense interests which, as it will he seen, suffer materially from the prevalent intemperance of the working classes. He said recently: "I am a commercial man more than a politician, and I am connected with concerns in this country employing 45,000 men, and paying something like £4,000,000 every year in wages. I will just give the result of Sunday's drinking in one of these concerns. We pay £10,000 a week, and employ between 7,000 and 8,000 hands. We never commence work on Monday, because we find the men do not come in sufficient numbers to make it worth our while to get up steam to turn the machinery. Now I have calculated very minutely what the cost of that is to that concern. It is £35,000 a year loss—equal to four per cent. on the capital employed. I want to know how long can this country stand such a drain as that. We are competing with the whole world, and I say that with a weight like that we shall not long he able to compete with it."

GOOD HEART.

BURNS.

It's not in titles or in rank,
It's not in wealth like London Bank,
To purchase peace and rest;
It's not in makin' muckle more,
It's not in books, it's not in lore
To make us truly blest:
If happiness has not her seat
And centre in the breast,
We may be wise, or rich, or great,
But never can be blest:
No treasures nor pleasures
Could make us happy long;
The heart's ay, the part ay,
That makes us right or wrong.

AFRICA.

The London Missionary Society has received from an English gentleman an offer of five thousand pounds to be made by them the nucleus of a fund to establish a mission on Lake Tanganyika, with its head-quarters at Ujiji, the spot now famous as the meeting place of Stanley and Livingstone. The early travels and discoveries of the latter explorer were all undertaken when he was a missionary of the London Miss. Society, and for this reason the directors of the Society have lost no time in appointing a committee to consider how such a mission as that above mentioned may be prudently and safely commenced. In close connection with this come letters from Lieutenant Cameron describing his journey from Lake Tanganyika to the west coast, a journey which has placed him in the front rank of African explorers, as he traveled over 1200 miles of entirely new country, and by a course of most extensive and elaborate observations has succeeded in laying down for the first time a sound geographical basis for further exploration. Lieutenant Cameron has traversed the African continent from west to east, and in the opinion of competent authorities has established the identity of the Lualaba and Congo Rivers, a most important and satisfactory result of his undertaking. In his report he speaks of the interior as being "mostly a magnificent and healthy country of unspeakable richness," in which good coal, gold, copper, iron and silver ore are abundant, and where with a wise and liberal expenditure of capital one of the greatest systems of inland navigation in the world might be utilized. With a capital of from five to ten millions of dollars to begin with he believes that a great company properly managed, could have Africa open in about three years, which is certainly most encouraging, though the very brightness of Lieutenant Cameron's hopes seems by contrast to deepen the darkness of the other side of the picture. We still hear of caravans and cargoes of slaves, of rapacious and cruel traders, of false and inhuman natives, and the frequent encounters between the representatives of the powers which have united to put down the slave trade, and the dealers in human life, show how far we still are from the end of the struggle. The latest English papers describe an affair which took place between one of her Majesty's vessels which was cruising off the coast of Zanzibar after slavers, and a native vessel lying at Tanyata waiting for its cargo of slaves. The Englishman was attacked by the natives and had a sharp fight, which, after two or three days of fruitless endeavor to find the chief criminals, ended in the burning of two native villages.

It seems but too evident that if all the civilized nations of the earth were to unite for the purpose of putting down completely and finally the African slave-trade, their power would be no more than adequate to the undertaking, and certainly no Christian of any race ought to refuse such personal aid as it may be possible to give toward this great work. If Africa is to be opened by the powerful hand of commerce, Christianity can surely follow without further waiting in the steps of the pioneer explorers, and be ready in the persons of her missionaries and teachers to bid welcome to the advance guard of civilization.

A CLERGYMAN asked some children, "Why do we say in the Lord's prayer, 'Who art in heaven,' since God is everywhere?" He saw a little drummer who looked as if he could give an answer, and turned to him for it; "Well, little soldier, what say you?" "Because it's headquarters."

A PICTURE FROM THE OTHER SIDE OF THE WORLD.

One of the most interesting countries of the globe is that which is opposite us: the great empire of China, with its four hundred millions of inhabitants, a civilization older than history can estimate, so well satisfied with itself and anxious to keep out the "foreign devils," as it politely calls other nations, that it could only be opened like an oyster—by the knife—and yet sending, now, hundreds of its youths to learn republican institutions and inventions from America, the youngest of the nations.

China has been opened to some extent to the missionaries for nearly fifty years, and the American Board of Foreign Missions have now stations and missionaries there. They have a great deal of work to do: to learn the most difficult language in the world, to root out deep set superstition, reform unfeeling cruelty, and oppression, and shameless vice—and all for people who naturally think themselves wiser and better than all the rest of the world.

Our picture gives the front view of a mission chapel of the American Board, at Peking, the capital of China, a city of 2,000,000 inhabitants, without a street in it wide enough for a horse and wagon to pass through. The people ride about in wheelbarrows and baby-carriages pushed by coolies, as the Chinese laborers are called. The Missionary Chapel in the picture is the plain building at the right. The artist has also shown us part of a Chinese marriage procession, passing gaily along, with the musicians in front doing their best to deafen every ones' ears with the hideous din that passes in China for music.

A MISSION CHAPEL AT PEKING.

The poor little bride, perhaps not more than twelve years old, is being carried to her husband whom she has never seen and who has never seen her. As there is no room for a carriage where the streets are so narrow, and he is not allowed to "take his wife home on a wheelbarrow," where she could be seen, she is sent in a "sedan chair," tightly shut up, as you see, and locked. The key is given to the husband, and if he does not fancy the little bride's looks when he opens the door, he may shut it up and send her back to her father; but then he loses all the money he has paid to buy her, so that few wives get sent back.

Even in the Christian chapels, the missionaries have to respect the popular feeling that it is improper for men and women to associate freely, as they do in more civilized countries. The men must sit on one side and the women on the other, and sometimes even are separated by curtains.

Mr. Gulick, a missionary of the American Board in China, speaks of two great drawbacks to the success of missionary work there. One of these is the habit of eating and smoking opium, which destroys thousands of the Chinese. The encouragement of this terrible vice, for purposes of trade, is a heavy responsibility upon the British Government.

Another drawback to mission work in China, Mr. Gulick says, is the custom of binding the feet of the girls. Respectable women in China must have small feet. I had supposed that the process of binding was commenced with the infant at a few days or months of age; such is not the case.

At six or seven years of age the little girl is taken in hand and her feet are bound. The most of the joy of childhood must then end. For two years hers must be a lot of great suffering, and ever after, through life, she is but a tottering cripple. The foot, which would naturally be eight or nine inches in length, is reduced to from three and a half to four and a half inches. After two years of binding, or say—it the process is commenced at the seventh year—by the ninth year of age, the new foot is said to be formed—*deformed*—for the new foot, the result of the cruel binding, bears no resemblance to the former. The bones of the heel are drawn down toward the great toe; the four smaller toes are bent under the foot, and so bound as to nearly cease to be. The bones, ligaments, and sinews of the foot are so crushed and bent by the binding that the new foot bears, to outward appearance, as little resemblance to the human foot as does the hoof of a horse. Mothers seem to have no pity for their daughters when crying from the torture of foot-binding.

The new foot once formed, as it will be in two years' time, the mischief can never be fully remedied; the bones are displaced and the malformation is complete. The bandages are continued through life. Indeed, I believe that after even a few months of bandaging the pain consequent upon removing the bandages is much greater than that of continuing them. A woman having large feet, that is, feet that have not been bound, is supposed to be a bad character, or else of very low caste. Hence parents, valuing their daughters, or desiring that they may be respectably married, must have their feet bound. To neglect this at the proper age would prove one to be remiss in parental duty.

If a man would treat his horse with such cruelty in New York city, he would be justly prosecuted by Bergh for cruelty to animals. Some few of the missionaries that we met are battling faithfully against this heathen custom, while others speak of it as a question which coming ages of Christian light will meet, but which cannot be faced just now.

Intelligent Chinese, in defending the practice, say that binding the feet is not as injurious to life and health as the binding of the waist practiced by Christians in other lands; that their daughters can never move in good society with large feet; that, if the feet are not bound at the proper age, in girlhood, resort will be had to it later in life, in order to save the disgrace, with much greater consequent suffering; that the daughters themselves will reproach their parents and teachers with having neglected their duty in omitting this part of their physical education.

GOOD SECURITY.

I have been told that there are 31,000 promises in the Bible. To-day one may come across a promise which he thinks the best, but next day he may be in trouble, and may think another is the sweetest of all. But we know they are all good. We may make promises which we don't keep or don't intend to, but God never makes a promise he can't or don't keep.

A few years ago I was working for a man, and went into the country to collect some notes, and my employer took out his notes and wrote on some B, G and A., and when I was going out, he called me and said, "When you see a note marked B, that is bad; A is doubtful, and G is good." I find that the church is divided up the same—some of the people don't see that God's promises are good. When you come to any of his promises mark them all good. His are not dated, but they will all be paid. He has promised us a crown, a mansion, and to be heir with Himself, and let us believe Him. Soon after the Chicago fire a friend wanted to console me because I lost everything, but I told him I had more than I lost. When I got out of my house that night one promise came to me: "He that believeth shall inherit all things." Bear in mind that if we take God at His own Word we are richer than any prince in this world. Let us feed upon these promises.

Dwight L. Moody.

SUBSTITUTES FOR PAPER.

Before the invention of writing, events were recorded by the planting of trees, erection of altars, or heaps of stones, and by similar devices; while the most ancient mode of writing was on bricks, tiles, oyster shells, and tables of stone, to which succeeded plates of various materials, ivory, bark and leaves of trees, etc. In the book of Job mention is made of writing on stone, on rocks and on sheets of lead; on tables of stone Moses received the commandments, and a bill of feoffment on copper has been dug up in Bengal dated a century before the birth of Christ. The laws of Rome were painted on wooden tables, but the perishable nature of these induced the use of wax, which was written upon with sharp instruments made of iron, bone, reed or cane.

In process of time the art of writing grew to consist of painting with different kinds of ink, and this occasioned the

search for suitable material to receive such writing. Bark of trees, linen, etc., were used, but as these moulded, dressed skins of animals came into use and received the name of parchment, from Pergamus in Asia, where they were first dressed. The manufacture of paper became general in the sixteenth century, but did not attain great importance until early in the eighteenth century, and indeed every year since that date has seen some improvement in the process of the manufacture of that which has become one of the necessities of modern civilization.

THE following beautiful lines from the *N. Y. Observer*, are sent to us by a charming old lady and dear friend, of ninety-two years, who has been a constant subscriber to the SOUTHERN WORKMAN from the first, and who strikingly illustrates in her own person the sentiment of the verses:

GROWING OLD.

Softly, oh softly, the years have swept by thee,
Touching thee lightly with tenderest care;
Sorrow and death did they often bring nigh thee,
Yet have they left thee hut beauty to wear.
Growing old gracefully,
Gracefully fair.

Far from the storms that are lashing the ocean,
Nearer each day to the pleasant home light;
Far from the waves that are big with commotion,
Under full sail, and the harbor in sight.
Growing old cheerfully,
Cheerful and bright.

Past all the winds that were adverse and chilling,
Past all the islands that lured thee to rest,
Past all the currents that wooed thee unwilling
Far from the port and the land of the blest.
Growing old peacefully,
Peaceful and blest.

Never a feeling of envy or sorrow
When the bright faces of children are seen;
Never a year from their youth wouldst thou borrow;
Thou dost remember what lieth between.
Growing old willingly,
Gladly, I ween.

Rich in experience that angels might covet,
Rich in a faith that has grown with thy years,
Rich in the love that grew from and above it,
Soothing thy sorrows and hushing thy fears.
Growing old wealthily,
Loving and dear.

Hearts at the sound of thy coming are lightened;
Ready and willing thy hand to relieve;
Many a face at thy kind words has brightened—
"It is more blessed to give than receive."
Growing old happily,
Blest, we believe.

Eyes that grow dim to the earth and its glory
See hut tha brighter the heavenly glow!
Ears that are dull to tha world and its story
Drink in the songs that from Paradise flow;
All their sweet recompense
Youth cannot know.

Fourscore! But softly the years hava swept by thee,
Touching thee lightly, with tenderest care;
Sorrow and death thay did often bring nigh thee,
Yet they have left thee hut beauty to wear.
Growing old gracefully,
Graceful and fair.

THE visit of the "Hampton Singers" to the Flag Ship *Hartford* was rendered memorable hy a remarkahle "catch" of fish rarely seen in our waters. About the time the *Queen Emma*, which never played any tricks before on her loyal subjects, was capsized, the attention of the officers and crew was attracted to an unusual splashing in the water alongside, and throwing over the line, they hauled up at successive casts, two Brigadiers (one of which weighed over two hundred pounds), one principal, one treasurer, one deacon, one Bank President and one of the Banks, (a clear case of "watering stock"), and one Hymen whose torch at least was quite put ont. Tho' not of the vocalists, these fish appeared to be mostly of the *Bass* family. There were enough in the haul at any rate for a good mess, and as they were successively landed flapping on the clean deck of the *Hartford*, they made the fact evident. Their path to the cabin was marked with briny tears profusely shed; but after being scaled and dressed, they were warmed up, and all enjoyed the entertainment. The songs of the students, "Nobody knows the tronble I've seen" and "Keep me from sinking down," to say nothing of "John (or Jack) saw," which last was considerately omitted, acquired a new significance on this occasion.

That "La Reine," when on a visit to "Le Roi," should have so unceremoniously turned over her loving snbjects to the tender mercies of old Neptune, cannot certainly be attributed to the superior attractions of the old Sea-God who was in a most ungracious mood, bnt must be charged to the inconsistency of the sex, (which we don't admit), or the prevailing unreliability of persons in high places, and this we don't believe—we give it up. What we do know is, that the kindness and hospitality of the gallant Admiral and his officers on the occasion will ever be gratefully remembered.

At Home.

BABY AT THE WINDOW.

Behind tha purple islands
The sun had sunk to rest,
Bnt floods of gold and crimson
Still glorified the west.
And at the western window,
With Bahy on my knee,
I sat to watch the splendor,
And let dear Baby see.

His soft hand clasped my finger,
He sat arect and still:
A stranga, swaat awa and wonder
His spirit seemed to fill,
As if he heard God speaking
From ont tha glowing skies,
And all the soul was listening
In his large lustrous eyes.

I've often saan man hearken
To God's great words of grace
With far lass serious feeling
Than lit tha Bahy's face.
What solamn sense of grandeur
Within tha small mind wrought?
How did tha far-off beauty
Impress the bahy thought?

No word of mina conld reach him;
He faced that light alone,
As if before him glistened
The steps of God's whita throne.
And in that infant presence
My thoughts with reverence trod;
I saw his Angel looking
Upon the face of God.

Ah Lord, who lovest children,
Thou talkest to the child;
From ont thy crystal heavens
Thy face on him hath smiled!
O let its brightness navar
Be hiddan from his eyes!
Thy tendar lova illumina
His pathway to the skies.

MARY E. ATKINSON.

WHY BABY CRIES.

"What is tha nse of so much crying and screaming all day long, and all night long?"

"Babies never cry so long or so much as that, Aunty. It is a part of the Creator's plan, that they should cry three to ten times in twenty-four hours. You know our limbs are developed by exercise. Babies cannot run abont—they cannot even creep for some months—and still they must have some way of developing their limbs, their lungs—some way of promoting the proper circulation of the blood and the proper digestion of their food. Now crying does all these things. You may have observed that as soon as babies are able to creep, they cry very much less. So we think the Creator intended that crying should develop the different organs of infancy."

"Now," said Aunt Gerusha, "God's ways are mysterious. I never supposed that God so made babies that they must grow by crying. This fact shows a purpose and a plan."

"Now, tell me again, Dr., what good crying does; for I want to tell our good minister that infants praise God by crying."

"Well, Aunty, crying expands the lungs, swells out all the thousands of air cells, makes those air cells healthy so that they can aid in purifying the blood. Then, crying promotes the secretion of saliva, which keeps the mouth moist and comfortable, and also mixes with the food and aids in its digestion. Then, again, crying compels the heart to drive blood all through the body in larger quantities than it otherwise would, and makes it circulate more equally. Then, again, crying rolls the stomach, and thus aids the digestion of the food by way of mixing the digestive finid of the stomach with the food." But I refer to moderate crying; not crying arising from great pain or distress, and not the crying produced by overfeeding. You know some mothers keep the stomach of their infants crowded full all the time. Now, the stomach of an infant is very small and very tender. It requires nearly three hours, or more, for milk to digest in an infant's stomach. This organ ought to have time to rest. It should not be kept at work all the time.—*Prairie Farmer.*

PRETTY CURTAINS AT LITTLE COST.

The *Housekeeper* says: "One of the most agreeable materials for curtaining windows is coarse unbleached cotton sheeting. The irregularity of tha thread, and the roughness of the surface gives its soft folds the charm of a much more costly material, and its yellowish hue warms the light of cool north windows almost to the glow of sunshine." It seems impossible that anything so coarse and cheap can be pretty; but we have tried it and advise our readers to. A narrow, bright border of Turkey red, or a pretty calico stripe makes a pretty finish.

WHAT TO DO IN CASE OF FIRE.

Do not get confused; admit no one to your house except firemen, policemen or neighbors.

If a lady's or child's dress takes fire, endeavor to roll the person up in a rug, carpet, or any piece of woolen stuff.

Keep all doors and windows closed until the firemen arrive.

If smoke enters tha room and it is difficult to stand erect, get your mouth as close to tha floor as possible and breathe easy, as there is always a fresh current of air near the floor. A wet cloth over the mouth will greatly aid breathing.—*Housekeeper.*

HOUSE AND HOME.

In most cases the buying and building of a house is more especially a man's work, and it is the husband and father of tha family who is principally responsible for the thought and labor which lay the foundation of the Home. It is for him to earn the money, to choose a suitable site, to see that the house is well and carefully built, properly divided, ventilated, drained, etc.; but from the moment that the family enters the house as a home, the responsibility is shifted, and it is the wife and mother who must bear the chief burden of the housekeeping and become tha ruling spirit of the home. The man, as the bread-winner, finds that his work necessarily keeps him during the greater part of the day away from his home and family, and consequently the duty of regulating and controlling the household falls mainly into the woman's hands, and any conscientious woman will gladly do all in her power to fit herself for the due performance of the work which is so plainly set before her. It seems as if it could hardly be necessary to press upon women of any intelligence the importance of their position as wives and mothers, and yet the evidences of carelessness and ignorance which constantly force themselves into notice, show but too plainly how much the majority of women need assistance and instruction in respect to the every day work of their lives, that work which ont of small things rightly done, builds up so beautiful and grand a whole.

In endeavoring to give in a brief space and a familiar way advice which may practically help and teach the women into whose hands these papers may fall, I find that the subject of family life divides itself naturally into several branches, and in writing of them I shall give precedence to the one which is of invariable and permanent importance, viz: the care of children. I put this first because the first fifteen or sixteen years of the life of a man or woman determine largely what his or her character is to be, and it is over these first fifteen or sixteen years that parents, and especially mothers, have almost unlimited control.

Tha physical care of the child during this period usually devolves entirely upon the mother, and it is to the ignorance of mothers that a large proportion of tha deaths among children under five years old is due. Children who are born healthy can easily be kept so by obadience to a few simple laws, and even delicate children will often become healthy adults if properly cared for during tha first years of life. A baby from the time of its birth until it is twalve months old should always if possible be nursed by its mother, for in this way only can it obtain food which is natural and therefore entirely safe. In cases where this is impossible cow's or goat's milk diluted with lime water is tha best substitute; and after a haby is seven or eight months old, simple preparations of wheat flour, rice, crackers, etc., may be used, but always in small quantities and with great care. Indeed until a baby has safely passed its first year all but the simplest food should be prohibited, bnt after that age it is well, if the child is healthy, to begin with a variety of light food, as potatoes, eggs, bread and hutter, hominy, a little fruit, a little meat properly cooked and cut very fine, etc., gradually increasing the variety and quantity of the food given, bnt being always exceedingly careful to give nothing rich or indigestible, and to closely watch the condition of the stomach and bowels. During all the years of growth a child's food should be nutritive and easily digested, and even with very small means a careful and thoughtful mother can provide such food for her family. Fish, meat, vegetables and fruit plainly cooked, that is, boiled, broiled or roasted without much grease or spice, cold or, better still, stale bread of wheat or corn, eggs, milk, sugar or molasses in small quantities, hominy, rice, etc., can each and all be safely eaten by children over three years of age; and from such food given always at regular times and in proper quantities, nature can be trusted to build up the healthy bodies which are so essential to the happiness of human beings. That meals should be given at regular intervals and that nothing should he eaten between them is of tha utmost importance, for the habit of permitting children to eat candy, nuts, fruit, etc., indiscriminately, is as harmful as it unfortunately is common. Simplicity and regularity are essential in feeding children, and the mother who through ignorance or carelessness disregards these two rules, may be sure that her innocent children will, sooner or later, suffer for her sin.

Of scarcely less importance than good food is cleanliness, and no child can be considered really clean which is not thoroughly washed every day. This process of daily bathing should date from tha day of the child's birth, lukewarm water being used for babies, who should, as soon as they are a month or so old, be put into a tub or large basin and carefully washed from head to foot with a soft sponge or cloth, and soap; the best time for the bath being the morning, though if more convenient to the mother it can be given at night. Children who are properly washed in this way will be directly benefited as to their general health, and are usually almost entirely exempt from certain skin diseases which are the result of uncleanliness. Care should always be taken to thoroughly dry the skin on all parts of the body after bathing: baths should never be given immediately after eating, and for children, should always be of medium temperature, neither hot nor cold.

In addition to the daily bath the cleanliness of children should be ensured by frequent changes of underclothing, and this is not a difficult thing to do, because the under-garments of little children are so easily washed and cheaply made that almost any mother can provide and keep clean a sufficient supply if necessary. In clothing young children, even in warm climates, thin flannel shirts are almost indispensable, for they protect the chest, stomach, and bowels, and prevent much of the danger arising from sudden changes of temperature. Beyond this, there is little to be said in respect to clothing, except that the garments should all be loose and comfortable, and so far as possible adapted to the changing seasons, for a little care in putting on and taking off extra clothing will save children from many of the colds, and ailments resulting from colds, from which they suffer. The substance of all teaching in regard to the physical care of children is simply that if parents can ensure to their children wholesome food, comfortable clothing, and cleanliness, they need have little fear about their physical condition; for though the food may be very plain, the clothing coarse and the cleanliness not always apparent to the eye, yet such is the power of the natural laws that obedience to them in the above particulars is sure to develop children born without inherited weakness, into strong men and women. Of the other essentials to the physical health of children, viz., plenty of fresh air and out-of-door exercise, I need hardly speak, for, as a general thing, the children in whose interest I am now writing enjoy to the full these two privileges and are therein greatly, though perhaps unconsciously, blessed.

If the physical davelopment of children is largely dependent upon parents, the same is true of their intellectual and moral growth, for tha first of these parents being indirectly, and for the second directly, responsible. Tha duty of parents in regard to what is commonly called tha education of their children is usually plain enough, for though they are frequently unable to give instruction themselves, they can almost always succeed in securing the regular attendance of their children at good schools and in providing for them certain advantages at home. While a mother is often too busy to teach her children even so much as the alphabet, she can always see that they are properly prepared for school, that they are punctual in attendance, suitably clad, that their books are kept in order and their lessons learned, in short, can make their road to learning an open way and greatly simplify the work of those who actually teach them. In the home life, too, tha father and mother can provide many advantages for children at comparatively small expense, and it is the presence or absence of these which make the atmosphere of a home helpful and elevating or the reverse. To have a few pictures, prints or chromos, well chosen and neatly framed, to take a good paper or magazine, to buy a few good books, to take children now and then to hear a lecture or to some similar entertainment, are all of direct assistance in the mental education of the young and are no great tax upon the means or the energies of parents. In most cases the best thing which you can do for your children is to give them the opportunity and excite in them the desire to obtain a thorough education, and thus to make up to them so far as possible for the disadvantage which your own lack of education must inevitably be to them.

As you probably know only too well, the time for receiving the education which books give is past for yourselves, and feeling, as you must, what the lack of it is constantly costing you, you should be all the more willing to make every effort to secure it for your children. Your duty is plain enough, so plain indeed that but the briefest statement of it should be necessary: Send your children to the best school within your reach and send them properly prepared; provide for them at home, so far as your means will allow, everything which will teach them or help them to learn, and by your own conversation and behavior show them how important you consider the work of education, remembering that the responsibility of your children's ignorance is rather yours than theirs.

Inseparable from this intellectual training of your children is the development of their moral nature, and it is in directing them in respect to the great choice between good and evil that your chief work as Christians and as parents most certainly lies. It may not always be possible for you to give them all that their physical welfare demands, your own ignorance may not improbably stand in the way of their attaining the intellectual advantages which their growing minds require; but it is only your own sin and folly that need prevent you from bringing up your children to be virtuous men and women. It is from you that they must learn the beauty of goodness and the hatefulness of sin, and it is your teaching during the years when your influence is superior to every other that will influence them all their lives through. It is no light thing to teach a child to be honest, truthful, pure, patient, industrious, careful; but perhaps the most difficult part of the work lies in the preparation for it, that is, in making yourselves what you wish your children to be. As you cannot teach children that which you do not yourselves know, so also you will find it impossible to make them that which yourselves are not, and the virtues which you desire for your children you must first practice, or all your endeavors will go for nothing. I shall reserve for another chapter that which I want to say to you in regard to the moral training of your children, asking you, however, to think a little in the meantime for yourselves about this important subject.

THE RT. REV. JAMES THEODORE HOLLY, D. D.,

FIRST BISHOP OF THE NATIONAL HAITIEN CHURCH.

(Consecrated in Grace Church, New York City, November 8, 1874.)

The following account is taken from Leaflet No. 5, issued by the Women's Auxiliary to the Board of Missions:—

"The Island of Haiti was one of those discovered in 1492 by Columbus. It is four hundred miles long and more than one hundred in breadth. The largest part of it is now called St. Domingo, and forms a separate Republic, its inhabitants being mostly of Spanish descent. The Republic of Haiti, on the other hand, which occupies the western portion of the Island, is French, and is very thickly populated.

"The pioneer and founder of the Episcopal Church's Mission to Huiti is the Rt. Rev. James Theodore Holly.

"Of African descent, Mr. Holly was born of free born ancestors in Washington City, in 1829. His parents were Roman Catholics, and in that faith their son was reared. He was educated in the public schools of New York and Brooklyn, where his parents successively resided. At twenty-one he abandoned the Romish Church, and shortly afterward determined to enter our Ministry. While pursuing his studies to this end, he supported himself by shoemaking, for, as he afterward told Bishop Coxe, 'his father had made him learn a trade, saying that no one ever knew to what vicissitudes he might be reduced;' and many a time, since then, has Mr. Holly found the usefulness of this manual learning.

"In June of 1855 he was ordained Deacon by Bishop McCoskry, of Michigan, the Diocese in which he was then living; and immediately afterward came to New York and obtained permission of the Foreign Committee to examine the field in Haiti. He returned from there after a two month's absence, but there was no money then in the treasury with which to send a missionary to the Island, so Mr. Holly took charge of St. Luke's Church, in New Haven, until May, 1861, being ordained Presbyter by Bishop Williams. During that month he sailed in the Brig *Madeira* with a Missionary colony to Haiti. It was composed of one hundred and eleven persons, who were chiefly from Connecticut. They landed in Port-au-Prince, and went thence to a plantation three miles from the city. There were no comfortable houses, and much hardship was endured. Through poverty and exposure forty-three persons died within six months. Mr. Holly's family of eight was reduced to three. Most of the colonists returned to the United States, but Mr. Holly, with about twenty others, remained at Port-au-Prince, Mr. Holly continuing to exercise his ministry with diligence and perseverance.

"In the year 1874, the Foreign Committee sent for Mr. Holly to come to New York, where, in October, he was elected Bishop of the Haitien Church, and consecrated to that Office, in Grace Church, New York City, Nov. 8th.

"Many will remember the crowded edifice, the numerous people of the new Bishop's own race and color who gathered there to see this highest Office of the Church conferred upon one of themselves, and there were those who remarked upon the sweet-toned earnest voice that answered to the solemn questions then put to one of a hitherto despised race.

"What England had done for Africa ten years before in sending Crowther, the former slave boy, to minister as a Bishop in

THE RT. REV. J. T. HOLLY, D.D.

his native land, the Episcopal Church of the United States had now done for Haiti.

"His flock were joyously waiting for him, and on the arrival of the steamer, he was conducted to his church, where the faithful had assembled for a Thanksgiving Service, entering under a triumphal arch, surmounted by the phrase *Gloria in Excelsis* Deo."

We are permitted to extract from a letter of appeal, dated *October* 29, 1875, addressed by Bishop Holly to the Rev. Geo. Whipple, Secretary of the American Missionary Association:

Rev. and Dear Sir:—

I have the honor to enclose herewith a copy of an appeal made to American Christians and philanthropists, without distinction of creed or party, to come to the aid of the struggling people of Haiti in the new career of Industry, Education and Religion now being inaugurated by the patriotic government of General Domingue, the present President of that island.

This appeal is concerned with the matter of education, that it is proposed to foster under my auspices with the approbation of the Haitien Government.

I am expected to enlist my friends and sympathizers in the States to found the establishment, and this accomplished, some further aid will be given by that government.

Just about the time he became of age, Bishop Holly was an employe in the office of the American Missionary Association. He thus alludes to it in an appeal to the Americans for aid in his work, in 1875:

My former connection with your association as an humble employe in your office; the dating of my solid convictions against the errors of Romanism, running back to the time of this employment under your auspices; and the long and devoted work that your association has done for my poor unfortunate race in days that tried men's souls; all this emboldens one to make this solemn application to you for aid in the work that I am now doing among the Haitien people in this interesting crisis of their national development.

While a rector in New Haven, Mr. Holly became a favorite correspondent for one of the Southern *Reviews*. When asked by its proprietors for his photograph that it might adorn the pages of the *Review*, he sent it to them, quietly remarking that they might be surprised to find that he was a colored man. For some *unexplained* reason the photograph was not published, and the correspondence dropped.

Correspondence.

CALIFORNIA.

II.

AGRICULTURE.

"Hurrah for the land where the moor and the mountain
Are sparkling with treasures no language hath told;
Where the wave of the river and spray of the fountain
Are bright with the glitter of genuine gold."

So writes one of our American poets. I do not know whether he had California in his mind when he composed the lines, but she would answer to the description better than any portion of the country. But let none of my readers be alarmed at this extravagant beginning. I am not going to spin any California yarns, but deliver a sober and honest account of this wonderful region.

Extravagant stories about the size of the products of California have long been current in the East. I need not to repeat them, but I will say from my own observation, that they are substantially if not, perhaps, literally true. Here we find plums that are often as large as hens' eggs—and when I say hens I don't mean bantams,—pears that would rival a small pineapple in size, and peaches of corresponding dimensions. Nor is it true that Californian fruits are coarse and wanting in fineness and delicacy of flavor. The very largest are not always especially palatable, but those which, though of medium size, are still larger than the average eastern product, are of a most excellent quality. The variety of fruits produced in California is great: Apples, pears, peaches, plums, strawberries, raspberries, currants, melons, apricots, figs, grapes, quinces and others grow in abundance. It must be confessed, however, that some of them are flat and insipid as compared with those raised in the East. The strawberries I should scarcely recognize as such, and the apples are remarkable only for their size and almost uniform fairness. But the grape is the crowning glory of Californian fruits, and I might almost say of all her productions. Over a hundred varieties are cultivated and nearly all of them are choice. The clusters hang thick and heavy from the vines, and the vineyards present, I am told,—for as yet I can only speak from hearsay—an exceedingly rich appearance. I have frequently seen bunches that would weigh several pounds. One vine whose yield was especially remarkable was exhibited last fall at the mechanic's fair, and is to be sent to the Centennial exhibition at Philadelphia. It covered a space eighty feet square and produced between two and three tons of grapes.

But although California is the second fruit-producing state in the Union, ranking next to New York, the fruit interest is by no means the chief one among farmers. The wheat crop is by far the most important. Immense fields of this grain may be seen all through the valley of the Sacramento and San Joaquin rivers, which is one of the most fertile tracts to be found in the whole world. These two rivers flow from the north and south respectively, and uniting, pour their waters into the bay of San Francisco. Thus the valley through which they pass extends through the greater portion of the state, and its rich and level plains form the principal agricultural district of California. The soil is exceedingly rich—a black adobe with a mixture of sand. Wheat and other grains are raised with astonishing ease, and the yield to the acre is sometimes unprecedented and almost invariably large. Manure is never used, and the hoe is an almost useless instrument. The method of planting corn is to drop the kernels in the furrow made by the plow and to cover them with the earth raised by the next furrow. The field is then left until harvest-time, as the crops are never hoed. Corn, however, receives very little attention here, as wheat-raising is more profitable. One gentleman in northern California raised last year one hundred and sixty thousand acres of wheat, from which he realized a profit of one hundred thousand dollars. California ranks, I believe, as the first wheat-growing state in the country.

Cattle-raising is also common in some parts of the state. Indeed, in some places the graziers crowd out the farmers by their enormous flocks and herds. Fifty or sixty thousand sheep sometimes belong to a single owner. The pasturage, however, is very poor in the summer season, just when excellent feed is needed, owing to the unbroken drought which then prevails. But in the rainy season the grass grows luxuriantly. In some regions the *native* clover grows to such a height that a traveller passing through it can tie the tops together over his horse's back. And this, I will add, is no California yarn.

Yet notwithstanding all the advantages of soil and climate, the farmer has yet many obstacles to contend with in California. The soil is abundantly rich; the crops are raised with little trouble; the toil need not be incessant, as it must be in the East where the farmer is almost a slave to his labor; and the climate is so mild that rheumatism and premature old age need not afflict the careful liver. But the continuous drought of seven or eight months is a serious hindrance to the growth of the crops, and not till the system of irrigation is perfected may we look for the best results from agricultural labor in California. Already attempts are made in this direction. Verily, this would be a poor field for Sancho Panza, for he would have a windmill to fight at almost every turn. But pumps alone are not sufficient. The copious fall of rain that occurs in the winter months must be treasured up in reservoirs, to be used through the summer as required. The farmer finds other obstacles in the high price of labor, and the high rate of interest. When money loans at nine or ten per cent., the profit from farming must be large indeed to induce the owner of capital to undergo the drudgery of manual labor instead of putting his money at interest. And he who is without capital would be reluctant to borrow and invest in a farm when almost all his profits would be eaten up by the interest money he would be obliged to pay. Again, some branches of agriculture languish for want of proper support. It has been proved by experiment that California can produce cotton of a quality unsurpassed; but not until cotton-mills are erected throughout the state will this article become a staple product.

THERE are always many times in the life of every man and woman, when it is found that ready money is by all odds the best earthly friend. *Begin* to save now; you need something ahead, no matter what your condition in life. Save something TO-DAY to provide for TO-MORROW.

SAVE THE TRIFLES.—The small deposits made by all sorts of people, including the little folks, in the Home Savings Bank, often foot up to very respectable sums in a day.

Four beautiful fine oil chromos 7 x 9 and one 9 x 12 sent for fifty cents, and six size 7 x 9 and six size 9 x 12 sent for $1, and a full family portfolio of 100 oil and gem chromos, *very fine*, all designs, $2. They are scriptural scenes, landscapes, sea views, hunting and fishing scenes, Rocky Mountain scenes, birds, animals, fruits and flower designs. Our chromos are fascimile reproductions of the choicest works of the *great masters*, and pronounced by connoisseurs equal to the original oil paintings. Three hundred Decalcomania pictures sent for 50 cents, large, mixed, all kinds, $1; and 1,500, $3. A sample of these goods with full instructions to transfer the same will accompany each of the above orders if desired. Address, inclosing price, and a three cent stamp for return of goods by mail. B. ALEXANDER & CO., wholesale and retail dealers, 8th street, opposite Cooper Institute, New York. Agents and tradesmen are making money selling our goods. Ladies are meeting with great success in this work. A full agent's outfit of 200 fine samples sent on receipt of $5. Please state the name of the paper you saw this in. 12–6.

CLEAN LIPS.

A very kind old lady, many years ago, taught a little private school of young children in a town of New England. She loved her Saviour, and therefore cared very tenderly for her little lambs, trying to bring them to the fold of the Good Shepherd. She always had a pleasant word and kindly smile for them, and often had a flower, an apple, or a kiss to give, for such as behaved properly; and the simple rewards from her loving hand were prized.

This lady's little pupils never had to be *sent* to school. They ran off cheerfully before nine o'clock, that they might be ready to hear the first tinkle of her school-bell. One day her heart was deeply wounded by hearing that a fine little boy, about nine years old, had said some naughty words at play. She called Charlie to her; and taking both his hands in hers, and looking sorrowfully into his bright blue eyes, she asked, "Have you used naughty words to-day, my child?"

"I didn't swear," whimpered Charlie.

"Are you willing to go home now, and repeat your words to your dear mother?"

"No, ma'am," faltered the little culprit as he hung his head and blushed deeply.

"And, my dear boy, have you forgotten," said his kind old friend, "that One was listening to you, holier than any mother,—even yours,—and loving you far more than even the best mother can love her little son? He heard in heaven your naughty words. I am afraid, my child, that, when the lips are naughty, the heart must be very unclean too. I cannot make your heart clean, Charlie; but I will ask the Lord Jesus to do it for you. One thing, however, I can do: I can cleanse your lips. They would not be fit for your mother's 'good-night' kiss if I did not clean them for you." The old lady then called for a bowl of clean water, and took from her desk a bit of fine soap and a little sponge. Then, bidding Charlie open his mouth, she washed it well,—teeth, tongue, lips, and all. She then wiped them dry with a soft, fresh napkin, and bathed his tear-stained face, and kissed him. This simple punishment, and her real sorrow, apparent to the child while she inflicted it, made a deep impression, not merely on Charlie, but on the whole school, who witnessed the transaction.

Charlie is now a man; but *never* since that day has one improper word passed his lips. Ever since, at the very thought of such a thing, he says he fancies he *tastes soap*, and hears again the gentle voice that reproved his youthful naughtiness.—*Early Days.*

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent.* Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNES' BRIEF U. S. HISTORY.
BARNES' SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.

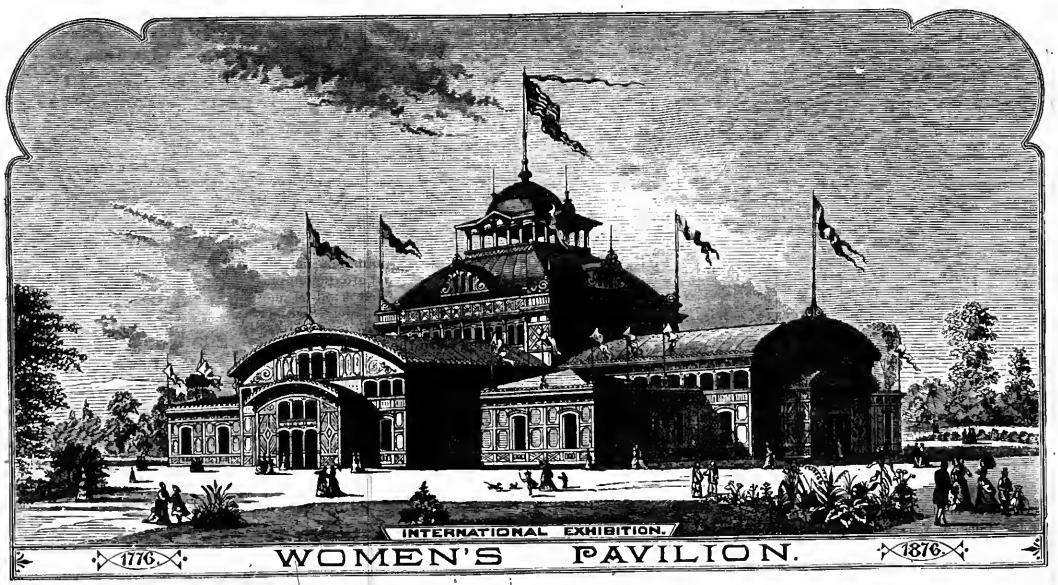
DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. V. HAMPTON, VA., MAY, 1876. NO. 5.



THE AMERICAN CENTENNIAL.

The Centennial of America—*centum*, hundred; *annus*, year—her one-hundredth year. One hundred years ago what a feeble infant she lay in Liberty's roughly rocked cradle; to-day how strong she stands among the Powers, holding in her arms a new-born nation, Freedom's latest child, awaiting its own unforeseen development.

It is most appropriate that this national birthday should be celebrated by the American people in Philadelphia, the country's earliest capital, where the Declaration of Independence and the Constitution were signed, and the great bell rang forth from the belfry of Independence Hall, "Proclaim liberty to all the land and to every inhabitant thereof."

Thank God that though the old liberty bell is cracked, the glad shout of freedmen comes ringing back from every inhabitant of our beloved land, on this its Centennial day.

The City of Brotherly Love; the city founded by the men of peace; and now rejoicing in the title of the City of Homes, where more humble families are enjoying the comforts of a separate domestic life than in any other city of the United States,—this is certainly an auspicious site for our national celebration.

We are fortunate in having a series of pictures of the principal Exhibition buildings, given us by the Centennial Commission. We present two of them this month to our readers, some of whom will not be able to get to Philadelphia this summer. There are in all, with the special structures raised by some of the foreign nations and states, the hall for the judges, houses of foreign commissioners, restaurants, &c., about one hundred and fifty buildings, of which the few we can show our readers are the chief.

Fairmount Park, in which all these stand, is situated within the city limits of Philadelphia, and is one of the finest parks in the world. It includes over 2000 acres, varied by hills, groves and meadows, streams, and lakes and springing fountains. At one end of it are the Fairmount waterworks, sending out the crystal waters of the Schulkill to all the homes of Philadelphia. A "Zoological Garden" where animals are kept is included in the enclosure: beautiful flowers delight the eye, and tame deer roaming under the forest trees. At quite the other end from the water-works two hundred and thirty-six acres have been enclosed for the Centennial Exhibition. Here has risen, as if by magic a "city of glass." Ever since Mr. Paxton, the architect of the English "World's Fair," had his happy thought of developing a new style of architecture from a green-house, Crystal Palaces have been the fashion for National Exhibition buildings the world over. The great structures are therefore chiefly of glass, set in iron framework, and glitter in the sunlight like fairy palaces. There is enough plain surface, however, for some fine fresco ornamentation.

When the Centennial Exhibition was first planned, only a home affair was thought of. It is always pleasant, however, to ask friends to one's birthday party, so the American people's invitation was sent out to all nations to

come, not only to see our progress, but to bring with them the fruits of their own. More than forty nations have accepted the invitation, and the result will be not only a national but an international exhibition greater than the world has seen before.

The upper one of our two pictures represents the Main Exhibition Building in which all the states and nations will be represented who do not prefer to erect separate buildings.

It is a great palace of glass, four hundred and sixty-four feet wide and nearly 2000 feet long. St. Peters church at Rome, the wonder of all beholders, covers eight acres; the Great Pyramid of Egypt, the largest permanent structure in the world, covers eleven acres; but the glittering roof of this modern palace of industry covers *twenty* acres. I was fortunate in having a view of it while empty, when its vast proportions would be most apparent and impressive. I supposed myself in the centre of the building and was exclaiming with wonder at its immensity when I was told that I had only reached the middle of one of the side aisles. When I see it again it will be, I suppose, brilliant with the richest products of the worlds industry, and thronged with the people of many nations. For vast as it is, every inch of available space from floor to ceiling was long ago engaged, and now is fast filling up with articles of exhibition, while it is estimated that many thousand persons will cross the ocean to America during the coming summer, besides the crowds from every quarter of the Union. Railroads and steamship companies have reduced their fares and added to their conveyances to accommodate these throngs. Great hotels have been built, and many private houses opened their doors for them.

Here will be rich velvets and pictured tapestry from French looms, fine Parisian dolls and all the dainty creations of French artisanship; airy laces from Belgium, wood carving and jewelry from Switzerland, musical boxes and toys from Germany (such toys and musicboxes as "needle guns," too, perhaps), silks and mosaics and corals from Italy, shawls from India, china from China, ivory from Africa, carpets and cutlery from England, and books from all countries. Of course this is only the beginning, not to speak of our own manufactures and inventions from North and South, East and West of this great Union, the country greatest in inventions in the greatest century of invention that the world has known.

The Educational progress of the world is to be carefully represented. In this department the Hampton Normal and Agricultural Institute is to have a good place, and its exhibition will have a three-fold interest to the people of science and thought who are concerned for the progress of education in general, for the education of the freedmen, and for the combination of industrial with academic training.

The lower picture we present is of the Woman's Pavilion, the beautiful building erected by the Woman's Branch of the Centennial Commission for the representing of woman's work and progress in the XIX century. Here, women artisans, women artists, women authors and women inventors are sending the beautiful and useful results of their industry. It was a fine idea to associate women in the leadership of this national exhibition. They have thrown themselves heart and soul into the arduous labors and responsibilities of the enterprise, and will be well represented in it. An exhibition of the world's progress in the last century would be incomplete without a representation of woman's work, though the best part of it cannot be exhibited in a world's fair.

The 10th of May is the day appointed for the opening of the Centennial exhibition, and it will not be closed before sometime in November. The opening ceremonies will include a poem by Mr. Whittier, a cantata by Mr. Sidney Lanier of Georgia, a grand Centeunial March by Wagner, the great German composer, and the formal announcement by President Grant that the exhibition is opened. Of all this we will give our readers an account in our next number.

THE following is a brief extract from an article in the London *News* of July 23d, 1866:

"A musical wonder has just arrived from America, in the person of a blind negro, whose power of playing the piano 'by ear' is as remarkable as his appearance is odd and amusing. He not only performs solos with a full command of the dexterity which distinguishes pianoforte soloists, but is able to play from memory, after once hearing it, any piece of music, no matter how elaborate, performed before him for the first time by an accomplished player. He can play two distinct tunes at one time—one with each hand—and sing another tune simultaneously, and can perform other clever musical feats which would puzzle the best trained musicians. His manners are eccentric, and he applauds himself even more loudly and delightedly than the audience applaud him."

Blind Tom was born a slave in the State of Georgia, and is now 27 years of age.

HAMPTON, MAY, 1876.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at fifty cents apiece.

NO OBSTACLE is more serious to southern prosperity than a certain wide-spread misconception as to the purpose and tendency of northern republicanism. It is strange but true that at southern elections, passion still presumes to appeal to prejudice in such terms as these: "Do you want your daughter to marry a nigger? if not, vote against the party of social equality." As if social equality is any more a part of the republican platform than of the conservative! Intelligent northern men would baudage the eyes of justice; but they choose their society on precisely the same principles as intelligent southerners. To assume that they desire negro associates is not only absurd in itself, but directly contrary to experience. For twenty years large communities of colored people have been living among northern men who were ready to make great personal sacrifices for their emancipation and education. Yet with rare exceptions no social intercourse whatever has taken place between the races. With mere political equality all are satisfied. And of all nations the blacks are the least intrusive.

Twenty years ago the danger to slavery from free discussion was real and imminent. Intolerance was deliberately taught and practiced, as the only safe basis upon which society could be reared. The old frame-work now supports the political scarecrow of social equality. And the old hatred of free speech is artfully used to inflame southern communities against the vanguard of northern republicanism.

It is part of the Conservative's creed to invite emigration from the North. In the forsaken fields of Old Virginia there is proof enough that they do not set about it in the right spirit, when they expect a new-comer to leave his opinions behind him. Cheap farms, good soil and a fine climate weigh little against a Yankee's instinctive love for saying whatever he chooses within the limits of decency and courtesy. And no mistake more fatal is made against the material interest of the South than when men are socially ostracised because they think and speak for themselves on political subjects.

All patriotic men, therefore, should unite in dismissing this mischievous bugbear of social equality to take its proper place among forgotten absurdities. The breaking of the color line in politics would be the harbinger of better times for all classes, black and white. Parties would differ on financial questions, the bitterness of sectional hate would no longer turn unwelcoming eyes upon the stream of wealth and enterprise which is waiting to flow in upon upon the South and open her untold resources to the admiration of the world.

THE English papers strongly condemn the course of the American press and the American government in allowing the free publication of the government scandals which have so startled the nation. They say that England also suffers, now and then, from official corruption, but it is not thought worth while to tell everybody. The proper courts investigate the matter, pass judgment, and the whole affair is settled and the offender removed without the assistance of a reporter. One journal quotes a lady correspondent who says she *supposes* it is best to have such things discovered if they exist, but how shocking to put it in the papers! All of which has a show of reason, but the difference in the cases lies just here. In America, the people are the government, the court and the jury to try and to remove public offenders, and the case must be brought clearly before them. A member of our Cabinet to be impeached for bribery, our minister to England on trial for lending his name to a stock gambling concern, our President's private secretary escaping conviction of complicity in the frauds of the Whisky Ring, only to be brought up on charges of conspiring to steal the documentary evidence against it from the government safe, and to attempt to fasten the crime on an innocent man!—a black page of history to put into the hands of young Americans; but far worse would it be, we believe, to let them lose the significance of its stern lessons; far more mortifying and disastrous to the country to repeat in the next generation the blunders of this. Let the people see what are the temptations of office and what kind of men they can trust with it—let them see what it means to have unprincipled rulers, and learn the responsibilities of the ballot.

Governments accustomed by all their traditions to associate public interference in politics with sedition and revolution may judge it wisest to cover up a festering corruption from the public eye, but to a Republic which holds its redemption or its ruin in its own hands, such a course would be finally fatal.

SOME of our colored brethren, editorial and others, with something of the English idea that it is better to "hush up" a disagreeable truth, have deprecated the sometimes plain speaking of the SOUTHERN WORKMAN in regard to the condition and necessities of the colored people in various sections of the South. We are very glad to reflect the lights of the picture, and do so as often as seems consistent with truth. But it is not manly to shut one's eyes to the dark side. But what use in talking about it? Well, it is not the American way of doing things, to cover up a wrong and expect it to right itself. Better look an evil square in the face, and decide what we are going to do about it. We have no doubt that our (colored) correspondents whose reports of their fields of labor, bravely given, sometimes seem discouraging, are much better fitted to work for the improvement of their race than if they could not see its faults or would not acknowledge them. He that covereth his sins shall not prosper.

THE HAMPTON NORMAL SCHOOL received a call on Sunday, March 26th, from a party of distinguished visitors,—Hon. Judge Taft, Secretary of War, Chief Justice Waite, and General Sherman, with Generals Butler, Martindale, Negley and Cavender, Governor Smythe, Hon. L. B. Gunchel and Dr. Walcott, the Board of Managers of the National Soldiers' Home, and the Military Committee from the House of Representatives, General Terry of Virginia, Hon. M. I. Townsend of New York, J. M. Shomburgh of Tennessee, H. Z. Strait of Minnesota, J. Reilly of Pennsylvania, J. G. Cameron and Mr. Wheeler. This party, with several ladies and other gentlemen, having come from Washington to visit Fortress Monroe and the Chesapeake Soldiers' Home, accepted an invitation from General Armstrong to visit the Normal School, accompanied by Governor Woodfin of the Home.

The school which was just assembling to its usual Sunday afternoon Bible-class exercises, received the honorable guests with the hymn "My country 'tis of thee," and then listened very attentively and with frequent applause to several brief addresses.

SECRETARY TAFT

in a few stirring words said that he rejoiced in the sight before him, and assured them that Liberty is the only hope of any race, and that there is no permanency to liberty without education, that they and their people are the beginning and they are the assurance of the end—the glorious end of liberty to all the earth.

GENERAL SHERMAN

was greeted with the song,—

"Glory, glory, how the freedmen sang,
Glory, glory, how the old woods rang,
'Tis the loyal army *sweeping to the sea*,
Flinging out the banner of the Free."

Amid great applause, he said pleasantly, "I will not talk to you, boys; I will talk to the girls. It gives me very great pleasure to see so many bright and promising pupils enjoying these advantages who once would have been bought and sold. Now you are free—free to pick out your own husbands—only be a little careful, that's all. You are the creation of the present age, and all, from here to Canada, are interested in your welfare. I am glad that your teachers recognize the value of this gift of song which you possess more than your white brethren and sisters. It speaks to the heart which needs teaching quite as much as the head. Remember, all of you, that your influence will extend by what you have learned to call geometric progression. Each of you will teach many others, and each of those as many more, till you will be thne the teachers of the whole thirty millions of your race here and in all countries. You will be held accountable to return to your race the full measure of the advantages you have here. I hope you will so do it that your new rights of freedom will become not only a legal fact, but a real thing, universally true and universally acknowledged."

GENERAL TERRY,

of Virginia, was then introduced by General Armstrong with a few words of reminder of all that the Old Dominion has shown of kindness and aid to the school. General Terry said very warmly that he was very much gratified by this his first opportunity of visiting this Institution. He said: "I cannot claim any credit for your freedom. I did not fight to make you free; but you are free, and I am glad of it, and you may rest assured that I for one will protect you in your liberty. I am glad that the State has done as much as it has for this Institution. As a citizen of Virginia you can rely on me, and on all the white citizens of Virginia, for sympa-

thy and aid to this Institution."

These assurances were received with applause.

GENERAL BUTLER

was then introduced. He said:

"Young men and young ladies. The memories of the past come too thickly thronging up in my mind for me to address you as I would. I came here to Hampton in 1861, when most of you were children in arms. I felt it my duty as representing the Government of the United States to found a school here for such as you. What must be my feelings when I see this result of a soldier's duty to his country. You are here enjoying these advantages of instruction; equality in rights, equality in thought, with men and women of any race and color, enjoying equality on earth as you will equality in Heaven. You have a great destiny, because to you more than to whites will those of your own race listen with confidence. Our country is to rejoice in the fruits of your action. You are to teach your people the elements of knowledge, the love of country, the love of liberty and the love of God. I would impress upon you the great responsibility of your actions. Go forth, and bring your race up to the high place God means them to occupy, and great shall be your reward in heaven."

The last speaker was the

HON. MARTIN I. TOWNSEND;

General Armstrong introducing him with the remark that had it not been for his meeting with Mr. Townsend seven years ago in Albany, he would not be here now as Principal of the Hampton Normal School. Mr. Townsend said:

"My life has been talking, but I do not feel like talking now. The emotions that I feel it were useless to try to express, while the sentiments I would have expressed have been so well presented by others that I could make no addition. I see here those who are to be the teachers of their race; those who are to make its homes virtuous. I see those who are to be its fathers, men who are to be doctors, lawyers—best of all, farmers, and who are to teach others to be the same. You have the sympathy of all good people, I don't care whether they live North or South—whether they have been taught that slavery is a good thing, or, as I was, that it is a very bad thing. Every good man or woman now sympathizes in your welfare, and wishes you well. But let me tell you that donations from legislatures can't give you success; teachers can't give you success; you have got to work out your own destiny. So has every man and woman. The muscles of a man's mind wont be strong any more than the muscles of his back unless he exercises them for himself. You must do as the rest of the world has to. Work out your own destiny! There is no doubt as to the success of your people. *Your* people?—when I look at your faces I can't tell whether your people or my people is most represented among you. But if you look at history, you wont find any one stock always ahead. For the last twenty-five hundred years my race is ahead. We have got the front seats now, it is true, and you will have to work hard if you want to get them. But twenty-five hundred years ago, and for ages before that, my race was not heard of. At the time the monuments of Egypt were building, when astronomy flourished on the plains of Chaldea, when the Hamitic people—the children of Ham—were ruling Spain and Carthage, your race had the front seats then. My ancestors were wallowing in the swamps, in darkness from which no ray of light has penetrated to this century. Why have we the front seats now? Because a better civilization was introduced, and the old vice and ignorance slowly swept before it. The introduction of Christianity into middle and northern Europe is what has given us this social elevation and refinement, unsurpassed in history. Let me tell you whereln your great strength lies,—Religion, Morality, Industry. These make men of any nation or color prosperous, and without religion, without morality, without industry, all the legislation in the world is useless to make them so."

The addresses were interspersed hy frequent singing hy the Hampton Singers and the whole school who will long remember the occasion. And while regretting the interruption of the accustomed Bible classes, it was no unworthy Sunday service, we think, thus to stir again in all hearts the sentiments of love to country, which in our nation's most exalted periods has always throbbed in unison with love to God.

Returning to the Soldiers' Home, addresses were made to the Veterans, noticeable nmong which was that by General Terry of Virginia, who told the old soldiers that though he could not call them comrades he was glad to be able now to call them friends—that they had belonged to the finest army in the world and had conquered the next finest, the only ones that could have conquered it. He said that he was glad to see them so comfortably cared for and wished that his own comrades could be. This wish was echoed hy the Northern speakers, and General Martindale closed with an eloquent address, alluding also to what they had just seen at the Normal School as one of the most deeply interesting scenes he had ever witnessed.

THE Hampton Normal and Agricultural Institute acknowledges with thanks the receipt in March of a "Celestial Indicator," worth twenty-five dollars, an ingenious apparatus for illustrating the movements of the heavenly bodies, the precession of the equinoxes, &c.; a donation from the Bryant Celestial Indicator Co., of Hartford, Connecticut.

HAMPTON AT THE CENTENNIAL

One of the chief points of interest at the approaching Centennial exhibition in Philadelphia, one that will be sought for among the thousands of distracting objects hy many thinking people from both sides of the ocean, will be the illustration of the Educational progress of the world; another will be the special point of the education of the freedmen on which so much depends for the next century; a third, the illustration of methods of combining industrial with academic education, which is one of the practical problems of the nge.

The representation of the Hampton Normal and Agricultural Institute will combine all these points of interest, and is a duty to the world as much as to the school. A good place in the Main Exhibition Building has been secured where it will be easily recognized hy those who are interested.

The school will be represented:—

1st. By pictures. A fine oil painting, four hy three feet, hy Mr. Pratt of Boston, gives n good view of the whole water front of the buildings and grounds, and is n beautiful picture in itself. Large maps and ground plans are added, and over twenty imperial photographs have been taken hy Mr. Larrabee, photographer from Mill Creek, giving faithful views of separate buildings, interiors of Virginia Hall, Assembly Room, Class rooms, Printing-office, Industrial room, Laundry, groups of students, the Working Squad, Farm hands, brickmakers, Senior Class, pictures of negro cahins, and some of the "old folks at home," to illustrate the progress of the times.

2d. By seven hound volumes of manuscript examinations of classes in all the grades of the school, in Writing, Spelling, History, Arithmetic and Algehra, Geography, Grammar, Moral Science.

3d. By specimens and models of work from the girls' industrial room and shops; samples of agricultural improvements; specimens from the Printing-office.

There will be also a file of the SOUTHERN WORKMAN, copies of the book "Hampton and its Students," and pamphlets of the "Hampton Students' Cabin and Plantation Songs." Also a thorough statistical report of the school in all its departments, up to the present time, including the Treasurer's report.

The work that Hampton is doing in its preparatory department, and outside through its graduates, will be illustrated hy photographs of the Lincoln and Butler Schools, interesting also as illustrating the progressive steps in education and civilization; by a bound volume of manuscript exnminations of the Hampton Preparatory Class in the Butler School, taught hy Mrs. Eunice Dixon, and Tanner's Creek School near Norfolk, taught hy Mr. J. B. Towe; hy samples, written on slates and framed behind glass, of writing, &c., hy the primnry pupils of the Butler and Lincoln Schools. These earliest efforts on slntes will be a very attractive part of the exhibition. A large map of Virginia, West Virginia and North Carolinn with the stations where Hampton graduates are teaching clearly indicated, will give a hird's-eye view of the greater part of the area through which Hampton's influence thus extends.

The strong point of the exhibition will be its characteristic representation of persons and personal work as well as of huildngs and furniture and methods.

Mr. J. B. Towe, a Hampton graduate teacher, and one of the first class of Hampton Singers, whose essay on "Old Time Music," illustrated with songs hy the school, will be remembered with interest hy those who nttended last year's Commencement, will be in attendance upon the articles exhihited and ready to answer questions about them.

IT IS customary to regard the religious movement at the Hawaiian Islands as a retrograde one, at this time.

The friends of good work will be glad to read the following extracts from a private letter hy the Rev. E. Bond, one of the pioneer missionaries, whose labors for over forty years in a remote corner of Hawaii have been as sound and wise as they have been earnest and self-sacrificing.

He writes to the lady whose letter from the Pncific appears in nnother column, in regard to a recent effort to educate girls and boys in a sensible way:

KOHALA, *January* 27, 1876.

Dear Sister ——:

I have just made up my accounts of Seminary finances for the past thirteen months, *i. e.*, up to December 31, 1875, and my thoughts naturally turn to you, as one of our most prized patrons. Indeed, you don't know how much your voluntary inquiries, approval of our course of study and discipline, and pecuniary aid cheered and strengthened us, especially as we were and expected to be unpopular, in consequence of our old fashioned notions and persistent purpose to waste no time in our school policy, on mere *show* and gratification of personal vanity as well as parental.

The year—our first—has been a year of many petty trials, mainly because the parents did *not* wish their girls to work, and *did* wish them to be taught solely in English. But thro' the abounding grace of God we have kept steadily on our way, turning neither to the right hand nor to the left, and now we have been raising our Ebenezer, saying "Hitherto hath the Lord brought us. All praise to Sovereign grace that can use such as we in his blessed service.

Lizzie has worked like a heroine. We had our first examination at the beginning of the year. By means of the constant lying of some who were hostile to the school, the impression had gone all over the Island that we were teaching little or no English and kept the girls at hard work or else shut up in the house! Well, as to studies, both in Hawaiian and English, the examinatiou took all hy surprise. There was great astonishment when the fruits of Lizzie's hard but *silent* work stood out before them, and then there was a perfect fervor among our *Kohala* people to get their girls into school. Ten came immediately in, making our number thirty-one, and I was obliged to notify *Kohala* people that they could enter no more. Then four came from other Districts, till we have thirty-five, and shut down till July. (We receive pupils in January and July only.) Well, there is now no complaint about work, tho' the girls have for months haked, pounded and mixed their own *poi*, cultivated their own potatoes, and done all the work of the establishment. I have the *kalo* pulled and taken to the cook house, and they do the remainder of the work. We had a man to bake, but he was takea sick and then the girls came in. We shall get a man again, if a safe one can be found.

The conduct of the pupils has been good—very little coercivo disciplinc has been requlred, and so far as the school itself is concerned, the year has been one of prosperity and profit. And now, all complaints from parents seem to have ceased.

Finanelally, we carry a balance of twenty dollars to account of 1876, which is a better showing than I had expected. But mercies abound on all sides. Our churches on this Island have nearly all contributed *something* for the school; some five dollars, and others twenty-five or fifty.

Personally, this school has been a heavy addition to my already large work. For two years, now, I have toiled in all sorts of work, to save the money for our sustentation—personally taking hold of every joh to be done. At my time of life the demands on my physical ahility have been too heavy and many at a time. I have been so worked out that the end looked close at hand. Bnt so far the Lord hath kept me, and he will keep me till my work is done—and then I want to go.

My boys' school, which many prophesied would make mischief with the girls', has done itself great credit hy thoroughly good behavior. At the outset there were indications of Hawaiianism on both sides. I took my boys and set the whole case before them—told them how disgraceful before men and displeasing to God was such conduct, and that I was unwilling to have the world know that they could not behave themselves decently without hit and bridle all the time, and, in short, I threw the responsihility entirely upon themselves. And with thankfulness I say it, that to this day I have not known or suspected a single hreach of decency or impropriety on their part.

I hear, via. *Waimea*, that you are still hard at work for the Master. Around *Kawaihao* your record is physically written for generations yet to come, and still more indelibly in the hearts of many poor Hawaiians who have passed to the other side, as well, I trust, as in those of many who are still struggling with foes without and foes within, to win the prize of eternal life, thro' the sovereign grace of our crucified Lord. The work is not, nor for five or six years past has it been to the eye of sense, very cheering. But faith looks beyond, and how can we prove recreant to the Master in such a time as this!

Affairs certainly have a more cheery look than a year ago. Our Sahbath congregation has, within the past eight months, filled up, and our Sahbath-school numbers, on an average, nearly three hundred. Still, there is no clear evidence of a *heart warming* in the Lord's service. For this we long and pray.

Aff. yours,

E. B.

THE little chapel in the National Soldiers' Cemetery of which the church connected with the Hampton Institute has had the charge and use for the last five years, has become familiar and dear to many as Bethesda Chapel. This church organizntion includes the officers and many teachers and students of the Normal School, and many residents of the neighborhood, both white and colored. The needs of the increasingly large congregation have made it very desirable to add to its capacity hy opening the transepts into the hody of the church, and application for permission to do so was made some time ago to the War Department at Washington which has charge of the National Cemeteries. The request was refused, on the ground that the Department had decided to give up all such chapels, and the school was requested to remove it rather than repair it. The recent visit of the new Secretary of War to the Institute had, however, the effect of convincing him of the importance of this chapel, and the Institute has therefore received permission from the War Department to continue to occupy it, and to carry out any desired plan of repair. This will be good news to many who have pleasant associations with the little chapel, and are interested in the welfare of the church worshiping there. About $1,000 could be advantageously expended in repairing it. No fund which can be appropriated to this object exists, but it is hoped that one can be raised by subscription. Any contributions from members of the church or others who desire its prosperity will he very acceptable. Donations may be sent for this purpose to J. F. B. Marshall, Treasurer of Hampton Normal and Agricultural Institute.

THE Commencement exercises of the Hampton Normal and Agricultural Institute will be held this year on Thursday, May 18th. Forty-four students are to graduate. This early day is selected for the accommodation of our friends from a distance who will find this the most pleasnnt and convenient time for visiting Hampton. We expect, therefore, a somewhat large attendance, and shall be glad to welcome all that come. The exercises are open to the puhlic. It will be better for any who desire to attend from a distance to notify Gen. S. C. Armstrong, Principal, in order that sufficient preparations may be made for the comfort of all. Full directions as to the journey here will be sent on application.

The school will continue in session after the Commencement exercises, nntil its ordinary closing time, the middle of June, with the difference only that the Senior Class will receive normal training, under charge of Professor Allen of Mansfield, Penn.

THE CENTENNIAL MEDITATION OF COLUMBIA.

By MR. SIDNEY LANIER of Georgia.

A Cantata which is to be sung at the opening of the Centennnial.

I.

From this hundred-terraced height
Sight more large with nobler light
Ranges down yon towering years:
Humbler smiles and lordlier tears
Shine and fall, shine and fall,
While old voices rise and call
Yonder where the to-and-fro
Weltering of my long ago
Moves about the moveless hase
Far below my resting place.

II.

Mayflower, Mayflower, slowly hither flying,
Trembling Westward o'er yon lanking sea,
Hearts within *Farewell dear England* sighing
Winds without *But dear in vain* replying,
Gray-lipp'd waves about thee shouted, crying
no! *It shall not be!*

III.

Jamestown out of thee—
Plymouth, thee—thee, Albany—
Winter cries, *Ye freeze: away!*
Fever cries, *Ye burn: away!*
Hunger cries, *Ye starve: away!*
Vengeance cries, *Your graves shall stay!*

IV.

Then old shapes and Masks of Thlage,
Framed like Faiths or clothed like Kings—
Ghosts of Goods once fleshed and fair,
Grown foul Bads in alien air—
War, and his most noisy lords,
Tongued with lithe and poisoned swords—
Error, Terror, Rage, and Crime,
All in a windy night of time
Cried to me from land and sea,
No! Thou shalt not be!

V.

Hark!
Huguenots whispering *yea* in the dark,
Puritans answering *yea* in the dark!
Yea, like an arrow shot true to his mark,
Darts through the tyrannous heart of
Denial.
Patience and Labor and solemn-souled Trial,
Foiled, still beginning,
Soiled, but not sinning,
Toil through the stertorous death of the Night,
Toil, when wild brother-wars new-dark the
Light,
Toil, and forgive, and kiss o'er, and replight

VI.

Now Praise to God's oft-granted grace,
Now Praise to Man's undaunted face,
Despite the land, despite the sea,
I was: I am: and I shall be—
How long Good Angel, O how long?
Sing me from Heaven a man's own song!

VII.

"Long as thine Art shall love true love,
Long as thy Science truth shall know,
Long as thine Eagle harms no Dove,
Long as thy Law by law shall grow,
Long as thy God is God above,
Thy brother every man below,
So long, dear Land of all my love,
Thy name shall shine, thy fame shall
glow"

VIII.

Music, from this hight of time my word unfold:
In thy large signals all men's hearts Man'a
heart behold:
Mid-heaven unroll thy chords as friendly flags
unfurled,
And wave the world's best lover's welcome to
the world.

HOUSE AND HOME.

The moral training of children ought, and if it is to be successful, must, begin with the earliest development of their intellectual faculties. As soon as they are conscious of their own will, they should also become conscious of the existence of other and stronger wills, and the parents should endeavor so to regulate their conduct toward their children, as to make them, as early in life as possible, recognize the fact that the wills which of necessity are so frequently opposed to theirs, are not only strong but wise. That is, you should be so careful, so judicious and so unselfish in governing your children that they may quickly learn to trust you and to feel even in moments of anger and impatience that you are their best friend. Most of you, I think, must have formed in your own minds some idea of what you would like your children to be, and it is a good thing for you to keep constantly before yourselves the standard to which your children are to attain, either abstractly or in the person of some individual whose character you admire. If you love your children with the ordinary love of humanity, one of your deepest, if not your deepest interest in life will lie in watching and guiding their development, and in preparing them as far as you can for the future; and I hope I am right in believing that among the parents who read this there is not one who is not honestly desirous of seeing his children grow up to be good men and women. Taking for granted, then, that you have a full sense of your own responsibility, and are keenly alive to the sacredness of the burden which the Almighty Father lays upon every parent, I shall try to condense for your use some of the experience of those who have made the education of children, in the family and in the school, the study of their lives.

I have already said that, in order to train children properly, you must, first of all, have their confidence, and you will naturally ask how the confidence of these little thoughtless, unreasoning beings is to be won. In reply, I should say in brief, by letting them see that what you demand of them you yourselves fulfill; that is, when you ask them to be truthful, be sure that their quick ears do not find you out in falsehood; when you tell them of the danger and sinfulness of anger, jealousy and hatred, do not let them see in you daily proof of uncontrolled passions; when you command them to be honest, temperate and industrious, do not let them find that in your own life you cling to deceit, self-indulgence and laziness. "Practice what you preach," is a homely text which has served for many a sermon, but can never be more forcibly applied than in regard

COLUMBIA.

to the relations between parents and children; for in all the world you will not find more severe or acute critics than those little ones whose sharp eyes and ears are constantly measuring your life by the rules which you give to them. You must show your children by your daily life that you have real and practical faith in the virtues of whose value and beauty you talk to them, and although you may frequently fail to reach the standard which you have set up, yet if your endeavor be honest, your children, ay, even your *little* children, will quickly and surely receive impressions from your character which will be deep and permanent for good. Take, as an example of this, the exhibitions of fretfulness and ill-temper which are unfortunately not uncommon in family life, and to which children in their intercourse with each other are especially liable. You want to teach your children to be patient, gentle, kindly in deed and word, and these are things which you cannot enforce by mere authority,—you must in your own person show them how much good temper has to do with the happiness of life; you must be gentle and kind *to* them, and then must demand *from* them gentleness and kindness in return. Example, in short, is of the first importance in the education of children, for they instinctively admire and desire to imitate those older than themselves with whom they associate, and are directly and strongly influenced by what they see and hear in their every day life.

But example, important as it is, will not alone do the work; love and authority must go hand in hand as its assistants, and it is to combine these wisely that is the second great difficulty in the path of parents. To love your children warmly and yet not to injure them by over-indulgence, to exact obedience without undue severity, to be firm and unyielding and yet not unkind, to be tender and forgiving and yet not weak, is by no means an easy task, and it is just this that a conscientious parent must strive to be. If you have won your children's confidence by showing them that you *are* what you desire them to be, that your practice and your precept are the same, then the next great requisite in your government of them is, probably, absolute truthfulness, for any attempt at deceit at once destroys their confidence in you, and will, sooner or later, make your authority null and void. By absolute truthfulness I mean that you should never tell a child a falsehood even about trifles, that you should never break a promise to a child if it is possible to keep it, that you should do your best to let your children find you neither changeable nor inconsistent. For example, if you have to give medicine to a child, do not attempt to gain your point by saying that the medicine is "good," when it is really disagreeable, for you will rarely be able to deceive a child in that way more than once, and the result will be that you will be distrusted and disbelieved. Tell the child plainly that the medicine is not pleasant to take, but must be taken, and obtain obedience by gentle reasoning or, if necessary, by absolute authority. The same course should be pursued in all similar cases, that is, when you desire to do anything which is disagreeable do not rely upon deceit, for you will find it a broken reed; but tell the exact truth and with all possible kindness insist upon obedience. You will find that after two or three experiences of this kind the child's confidence in you will be implicit, and that, furthermore, he will have learned that when you seriously demand his obedience his easiest course is to give it as quickly and as willingly as possible. And this brings up another point, viz; the folly of entering into unnecessary conflicts with your children, of fretting them needlessly, and irritating them about things which are not essential. There are numberless small difficulties into which children are constantly falling which are really of very little importance, that is, are not matters of right and wrong, and do not in any way affect a child's moral nature, and of these it is far better for parents to take no notice. Do not tease your children about little things, for this tends to make them fretful and unhappy; but, on the contrary, give them all the liberty possible, guarding yourself against using your authority so frequently as to make it dreaded or despised. When, however, you do give an order or demand obedience in any form, be sure that there is no evasion, let your children understand that when you speak your decision is final, your authority supreme, and, above all, when any conflict arises between you and your child, do not at any cost permit the child's will to conquer yours. Firmness is absolutely essential in the moral government of children, and you can make no greater mistake than to give way to a child when once an issue has been raised between you. If you have deliberately given a child an order of any kind, have required any particular course of action, or ordained any punishment, then no matter how much time, strength and patience it may cost you, you must make good your words, and prove to the child that your will and power are stronger than his. If your child finds out that he can coax or weary or frighten you into revoking an order, or remitting a punishment, your positions will be speedily changed, and his not yours, will be the ruling will. Therefore, do not give too many orders, or inflict too many punishments; but when you do decide that either the one or the other is necessary, then let nothing shake your determination or alter your action. You will find that such a course will not only be better for your children, but will also save you infinite trouble, for it will put an end to that constant teazing and bickering between parents and children, which so often mar the happiness of family life and induce on both sides irritability of temper. Children soon find the difference between a person who is constantly finding fault without reason, giving orders which can be disobeyed with impunity, and ordaining punishments which are never inflicted, and a person who reproves seldom but earnestly, whose orders are absolute, whose punishments are not frequent, but serious and not to be escaped. Under the first of these two systems, children will be careless, impertinent and self-willed; under the second, almost any child will become orderly and obedient, and it is for parents to decide which shall reign within their own family circle.

The question of rewards and punishments is one which as a matter of course occupies much of the attention of every one who is brought into close relations with children, and it is certainly by no means a simple matter. To discourage children in wrong-doing and to encourage them in doing right, is practically the first object of moral education, and some system of punishment and reward is undoubtedly indispensable, especially with young children, who can understand nothing which does not directly appeal to their senses. As a general thing, however, rewards should not be *offered* to a child as an inducement to right-doing, but should be *given* after the act is performed, and then only when the child is really deserving, for constant rewards are to the moral nature what too much sugar is to the digestion, producing in both cases unwholesome and morbid conditions. You can teach children to feel that your approbation is their best reward and that their goodness is your and their happiness, without creating in them a habit of expecting habitually a recompense for good behavior, and in this way you can gradually lead them to understand that it is their motives which you value rather than their actions, that you look deeper than the external conduct, into the spirit which prompts it.

As to the punishment of children the best authorities upon the subject of education are in the main agreed, but even yet there is much left to the ingenuity and patience of parents. Corporal punishment, either in schools or in the family, has no part in the best modern systems of education, and there are very few teachers or parents who should permit themselves to use it. It is commonly a wrong to the child and is almost always inflicted in a spirit of anger, which alone would effectually prevent it from having any good effect. In these days it is usually very ignorant, very careless or very cruel people who depend upon corporal punishment to assist them in governing their children, and any thoughtful and moderately patient person ought to be able to find many expedients which are far more useful and reasonable and which will win from children obedience through respect instead of through mere physical fear. If children were simply and wholly animal in their nature then we might consider blows a suitable form of punishment, (though even animals, as modern experience has proven, get far too much of this crude and barbarous discipline), but as they have another and a higher nature it is only logical that the highest and most successful system of education should appeal to that rather than to the merely brutal instincts. I dare say that most of you feel that you would be almost helpless if the power of whipping your children were to be taken away from you, and are quite sure in your own minds that nothing can take the place with a child, of what is popularly called "a good whipping;" but in this as in other things your safest course is to accept the facts established by those who are wiser and more experienced than you are. If reason and affection both fail, say the wisest modern teachers, there still remain a variety of punishments, which will affect children

without injuring them or making them feel that they are treated with injustice. You can deprive children of some pleasure, take their liberty away from them for a shorter or longer time, by shutting them up, or confining them within certain limits; you can in various ways treat them differently from the other children of the family; you can take away from them some article of food of which they are fond, in short, a little thought will show you that there are numberless ways of inflicting real punishment upon children, without striking a blow. In selecting from these, it is well, so far as possible, to suit the punishment to the offence, for example; if a child does harm or mischief with its hands, as by striking another child, wilfully breaking or tearing anything, punish it by securely tying the offending members, or, again, if a child errs by saying anything wrong or untruthful, punish it by keeping it alone, where no one can be hurt or annoyed by which it may say. But, whatever your punishment may be, never inflict it when you yourself are angry; wait always until your passion is cooled and you can use your sober judgment, for this is the chief safeguard both for yourself and the child, and one without which you will be almost certain to do the child injustice.

Example, love, truthfulness, firmness, each and all are necessary if you would rightly train your children, and to go back to the beginning, to take up once more our text, your precept and your practice must be one and the same. The Christian grace which you strive to nurture in the hearts of your children, you must first firmly plant in your own hearts, looking then in humble faith toward the Supreme Source of all fruition, for "Paul planteth, Apollos watereth, but God giveth the increase."

AFRICA.

Our readers may be interested to know that the Presbyterian churches of Scotland have combined to organize a mission to Lake Nyassa which they have called the Livingstone Mission Expedition, in memory of the great missionary and explorer, who died in the hope that the path which he had opened would quickly be trod by the feet of Christian teachers. The realization of this hope is apparently near at hand, for the accounts received by the Scotch churches from their expedition are most encouraging. The commander, Lieutenant Young, writes from Upper Shire, above the Murchism Cataracks, that the party were all well, and that the steamer *Illala* had been transported safely, though with much difficulty. The negroes in the lower part of the Shire valley, who were chiefly Makololo, had received them with great joy, thousands of them rushing to the banks as the steamer approached the villages, dancing, singing, and shouting that their fathers, the English, had come back to them.

Of a later date than Lieutenant Young's report is a telegram from London, dated February 3d, which brings information that the expedition had reached Lake Nyassa, so that we may now look for speedy intelligence of the actual establishment of the mission. There seems to be no doubt that in that locality, at least, the natives are eager to be taught and will put no obstacle in the way of mission work, so that unless the climate should prove especially unfavorable, there is no apparent reason why the mission should not become permanent, and the station just established on Lake Nyassa prove the headquarters of Christian work in Central Africa.

A FEMALE SEMINARY AT HARPOOT,—

A GIRLS' SCHOOL IN THE GARDEN OF EDEN.

A girls' school in the garden of Eden, with an Eve for assistant teacher. That sounds strangely, doesn't it? but that is what the *Missionary Herald* has given us a picture of this month, with an interesting account of it written some years ago by one of the American Missionaries, Rev. C. H. Wheeler. He says:

"Perhaps some of you don't know where Harpoot—or Kharpoot, as it has until now been spelled—is. In Genesis, second chapter and fourteenth verse, you read of the two rivers, Hiddekel and Euphrates. Standing upon the hill-top, just back of the houses in the picture, you can see, ten or twelve miles to the north, a branch of the Euphrates flowing to the west, while, some forty miles to the southeast, in the Taurus mountains, are the head-waters of the Hiddekel, now called the Tigris, upon whose western banks, about one hundred miles to the southeast of Harpoot, is the great walled city of Diarbekir, and farther to the south, upon the eastern bank of the river, lie the ruins of Nineveh,—the city to which Jonah was sent (Jonah i: 2). South of these, and on the Euphrates, lie the desolations of Babylon. (Isaiah xiii and Jeremiah li chapters.)

"Thus you see that Harpoot lies in one corner of the land of Eden, perhaps upon the spot where God planted the garden, (Gen. ii: 8,) and where sin began, and not very far from the spot where the Lord 'confounded the language of men.' (Gen. xi: 1–9) Of both these events we at Harpoot are daily reminded, by the fearful prevalence of sin about us, and by that 'Babel'—that *confusion* of tongues—which compels us to use four languages, the Arabic, Armenian, Koordish, and Turkish, in the Theological Seminary, in order to prepare men to speak to the principal nations about us; while to preach the gospel to 'every creature,' in our great missionary field, at least seven languages must be used.

"As there are neither railroads, steamboats, nor stage-coaches, nor even roads for carriages of any sort, in that part of Turkey, but only plenty of room to ride on horseback over the lofty mountains and vast plains, we must have horses for ourselves and the native "helpers" to ride. So, on the left of the picture, at the right of Mr. Barnum's house, you see the stable in which are kept several horses for this purpose.

"In the western end of the upper story of the large house, in the centre of the picture, lives Mr. Allen. The middle part is my house, now occupied by Mr. and Mrs. Williams; while the eastern end and the lower story are occupied by the teachers and pupils of the 'Female Seminary,' about which I am going to tell you.

"Between the graveyard on the hill and the road in front you see an enclosure, which we dignify by calling it the 'garden,' on much the same principle as we Orientals call blind people 'enlightened' ones, or as you Occidentals sometimes call very poor skim-milk cream, because we and you like to call things by a pleasant name. Our 'garden' in Eden is the furthest possible from a *real* one, being, except in early spring and late fall, a mere barren, desolate, rocky mountain-side, upon which can grow no green thing except the very few and very small trees, which are kept alive by hiring a man once a week, in the rainy summer season, to pour upon the roots of each a goat-skin 'bottle of water.' (Gen. xxi: 14.) This he does for about seven-tenths of a cent per bottle. Here you see why 'willows by the watercourses' are spoken of (Isaiah xliv: 4,) and 'trees planted by the rivers,' &c., (Ps. i: 3; Jer. xvii: 8). No others live in those lands of summer drought.

"Upon the outside of the roof of the large house you see a sort of railing, or 'battlement,' such as God bade the Israelites build around their houses. (Deut. xxii: 8.) Persons sometimes fall from the roofs which have no such protection, and die. You can see how readily one can, like Peter, (Acts x: 9,) go upon the house-top to pray. The 'battlement' upon one side of this house is of boards, and so close and high as to form a place of real retirement, where, in the heat of summer, we sometimes sleep of night. The house is built upon the mountain-side, by digging into it, so that while the front portion of the roof is some thirty feet above the road, the back portion is level with the terrace of the 'garden.'

"But I promised to tell you about the Female Seminary. Come with me on a missionary tour among the villages, and see women everywhere doing the drudgery, even to carrying upon their backs huge baskets of manure, to be mixed with straw, made into cakes, and dried for fuel, while their husbands *do the knitting*, and you will see and feel, as we do, the necessity for using some means for elevating woman to her true place, not as the servant, but as the equal, the 'helpmeet' of man. But ignorant people can't be really 'elevated,' because the higher you raise them in position the lower they sink in the estimation of those who behold them.

"To give anybody, man or woman, who is unfit for it, exalted position, only makes that unfitness the more evident; and, if we wish women in Turkey to enjoy their 'right,' of leaving the dung-basket and taking the knitting-needles, they must have some education.

"So soon as possible, then, after opening the Seminary for raising up pastors and preachers, we opened one also for their wives, and required every married student to bring his wife with him to be educated.

"The women, of course, live with their husbands, and only attend the school as day-scholars. Some of them are the mothers of several children, one having a family of twelve, while another, at forty years of age, is a grandmother. So our seminaries have a department not needed in this land,—a nursery. While the older children are sent to one of the city schools, the younger ones are committed to the care of a woman hired for that purpose, with as many girls as she needs to assist her, while the mothers spend about seven hours a day, on five days of the week, in improving their minds and hearts,—and I might add *bodies* too, for among the graces taught in the Seminary is that Scriptural one sometimes forgotten even in Christian lands, and oftener still in Turkey, to 'cleanse ourselves from all filthiness of the *flesh*,' as well as of the spirit. (2 Cor. vii: 1.)

"In this 'nursery,' stanchions, or poles, are put up on two sides of a room, and between these and rings in the wall, rope-cradles are suspended, for the smaller children, Just before leaving Harpoot I went to take a look at the 'nursery.' As I opened the door, one of the babies began to cry, and nearly all of its eighteen companions joined in the chorus, making such a din as will make me long remember the visit.

"But we must hurry on to the Seminary, where more than thirty students' wives, and fifteen girls from different cities and villages, who have been received as boarders on the premises, are hard at work, acquiring knowledge.

"But let us pass through the outer gate, that to which the missionary, Mr. Allen perhaps, is riding up, and enter the Seminary. We Orientals don't 'introduce' people, so 'tis taken for granted that you know Miss West and Mrs. Williams, as well as Kohar, ('Jewel,') and Mariam, ('Mary,') the assistant-teachers. Eva, ('Eve,') the other assistant-teacher, instructs those women who speak Arabic and Koordish; for here, as well as in the other Seminary, different languages are

THE FEMALE SEMINARY AT HARPOOT.

used.

"Seated upon the floor, in as many rooms, you see three classes, one, perhaps, in the Bible, which all study daily, from the beginning to the end of their course; another in geography; and the third may be the 'weak ones' as they are called, who are making their first feeble attempts to write figures, or perhaps to add them up upon their slates.

"Then come more advanced classes in arithmetic, and again others in the Bible, the Catechism, moral philosophy, grammar, reading, writing, or some other branch, till we come to one in which all unite, learning to sing those hymns so precious to some of you; 'Sweet hour of prayer;' 'Rock of Ages, cleft for me;' 'There is a happy land;' and scores of others which have been translated.

"So much has public opinion changed, that hundreds, I might say some thousands, of women and girls have learned to read, and the past winter, more than five hundred girls attended the school opened by us. The feeling has become very common, even among those who do not receive our teachings, that it is a disgrace for a woman not to know how to read; while, among those who attend our 'Protestant' meetings, the feeling is so strong in favor of educated pastors' wives, that one of our best preachers recently lost a 'call' to be a pastor, because his wife, the 'grandmother' spoken of above, is not as learned as the people wish.

"And with intelligence, woman, even in Turkey, is gaining her true position of honor and influence. All know that 'gos-

pel-men' treat their wives well. One of the bitterest enemies of the Protestants in Harpootcity,—a woman who never attends our meetings,—has had her daughter taught to read, and has given notice that she will give her in marriage to a 'gospelman,' 'because Protestants treat their wives well,'

"If time would allow, I could tell you much which they have done to enlighten and save hundreds who, but a short time ago, were, with themselves, in the darkness and degradation of ignorance, superstition, and sin."

MAN.

BY GEORGE HERBERT.

My God, I heard this day
That none doth build a stately habitation
But he that means to dwell therein.
What house more stately has there been,
Or can be, than is Man? to whose creation
All things are in decay.
For man is everything,
And more. He is a tree, yet bears no fruit;
A beast, yet is or should be more.

Nothing has got so far,
But man has caught and kept it as his prey.
His eyes dismount the highest star:
He is in little all the sphere:
Herbs gladly cure our flesh, because that they
Find their acquaintance there.

For us the winds do blow,
The earth doth rest, heaven move, and fountains flow;
Nothing we see but means our good
As our delight, or as our treasure;
The whole is either our cupboard of food,
Or cabinet of pleasure.

The stars have us to bed;
Night draws the curtain, which the sun withdraws.
Music and light attend our head.
All things unto our flesh are kind
In their descent and being;—to our mind,
In their ascent and cause.

More servants wait on man
Than he'll take notice of. In every path
He treads down that which doth befriend him
When sickness makes him pale and wan.
O mighty Love! Man is one world, and hath
Another to attend him.

Since then, my God, thou hast
So brave a palace built, O dwell in it,
That it may dwell with thee at last!
Till then afford us so much wit,
That as the world serves us, we may serve thee,
And both thy servants be.

THE HEATHEN OF NORTH AMERICA.

In this Centennial year, when we are pleasing our national pride by heaping up evidence of our country's greatness, it may be wise for sober minded people to look about for the facts which go to show how much there is still to be done, and how far we still are, as a nation, from anything like complete civilization.

Foremost among the reasons which should keep us back from undue self-satisfaction is the existence within our borders of more than a hundred thousand human beings who are living and dying absolutely as heathen. Our western territories are to-day the home of numerous tribes of Indians, a majority of whom are total strangers to civilization, or worse, are familiar only with its vices, knowing the white man only as an enemy or a victim. North of the Canadian boundary, much successful work has been done among the Indians by missionaries of the English church who have penetrated far into the frozen forests of British America, establishing churches and schools, and effectually changing the mode of life of whole tribes. The work has been hard, and has needed brave men to do it; but the brave men have been found, and the missions are now organized beyond the fear of failure, though their success seems almost incredible when we read of what their support costs; as, for example, in cases where a missionary is obliged to stay for five or six consecutive years at a station where he lives nine months out of twelve on snowshoes, receives one mail a year, and from the beginning of the time to the end never sees a white face.

This hopeful state of things finds a most unpleasant contrast upon the American side of the boundary, where the Indians have, as a rule, been politically abused and morally neglected. In the few instances where they have not been contaminated by the vices, or made furious by the misused power of the white men, in other words, when they have had a fair chance, they seem, in spite of their cruel and debased instincts, to be capable of real and permanent elevation. As a practical illustration of what may be done for them we have only to refer to the case of the seventy representatives of the Kiowa, Comanche, Cheyenne and other tribes, who were selected as criminals and sent last summer to St. Augustine, Fla., where they have since been receiving desultory instruction and are living habitually under wholesome influences, and in direct contact with a good class of whites. These men have improved steadily, are by no means lacking in intelligence, and show a marked desire to adopt the habits and customs of civilized men, having become already conscious of the sin and shamefulness of their past lives. It is, of course, too soon to speak with any certainty as to their mental power or as to their capacity for receiving moral instruction, but their present condition is hopeful, and offers real encouragement to those interested in the future of their race. It is hardly to be expected that they will stand the test of a return to their barbarous tribes, unless they can be in some way accompanied by the influences of Christianity, and though the question of the national attitude toward the Indians is too wide to be discussed here, our duty as individuals and as citizens is clear enough. Their condition can be materially improved, their degradation is not inevitable, and for our own interest as well as theirs we should do our utmost to facilitate their elevation from the heathenism for which they are not responsible. So long as these Indians find their home in the territories which come under the jurisdiction of the United States Government, so long must their barbarism be a national disgrace, and it is in that light that we would present the subject for consideration at a time when, as a nation, we are hearing so much more of the things we have done than of those that we have left undone.

LETTERS FROM HAMPTON GRADUATES.

GOOD NEWS OF NORTHAMPTON COUNTY; SOME PEOPLE WHO WILL NOT SELL THEIR VOTES FOR HATS;—A TEACHER WHO THREE YEARS AGO COULD NOT WRITE HIS NAME "FIT TO LOOK AT";—"MAKING MY OWN DESKS."

Our letters from Graduates this month are bright and suggestive, and give, on the whole, very encouraging reports of the various fields represented. Simple, straight-forward and unvarnished, they are their own warrant of honesty,—and as many of the graduates read this column, we would say here to them all that while we have room from time to time for only a few out of the many letters we receive, we want them to keep on writing, for their own benefit and their teachers, with no reference to appearing in the paper, and no effort at fine writing. Write to your friends and teachers, and not to the public.

NORTHAMPTON COUNTY, VA., *Feb.* 19, 1876.

Dear Teacher:—After reading so many interesting letters in the SOUTHERN WORKMAN, from graduates, I have thought it necessary to give you a compendious account of what I have done, and am doing. For the last three years I have been working as a teacher in Bedford County, Va. There I had a very interesting school. The scholars seemed eager to learn, and some of them could read very well. They were making rapid progress in arithmetic, and could spell extraordinary. They also studied geography and grammar, and had very good understanding of both. The colored people were fast accumulating property, and, as a general thing, seemed to be very economical. They possessed good qualities, both morally and physically. When I left there last July, they had splendid crops of tobacco, corn, oats and wheat coming on. The people are very fond of raising tobacco, and don't think they are doing much unless they have very large crops.

After my school closed, as I had been suffering with the rheumatism very badly, thought I had better return home to spend my vacation to recuperate. I arrived home the latter part of last July, but with no intention of remaining. After I had been home a short while, the people were anxious for me to take a school for them; but as I had promised to return to Bedford, it was hard for me to decide to continue at home. I could perceive that after I had been home a short time, by the vicissitudes of the climate, that my health had somewhat ameliorated. Feeling that [illegible] ter, I concluded to take the school here. The Superintendent and trustees were very anxious to employ me as a teacher. Forthwith I was examined, and had the honor of passing a creditable examination.

After my examination I paid a visit to my *Alma Mata* to see the doctor, by a request of one of my friends, to get a prescription for the rheumatism. At the Hampton Normal and Agricultural Institute I saw a great many changes in the buildings, compared with the ones that were there when I entered school. Also many new faces from different parts of the country. Time would fail me to enumerate the different things and the many changes that I saw at the H. N. and A. Institute. So much for that.

After my visit to Hampton I returned home and opened school, November 1, 1875, about two miles and a half from Bridgetown, at Mr. H. E. Collins' residence, with three scholars. (Mrs. Anna Pitts Collins had formerly taught this school at her dwelling.) I continued to have a very small number of pupils as long as it remained there. Finding that I could not get a full school at Mr. Collins', it was removed to Bridgetown where the house was soon filled. Since I have opened school in the present place I have had sixty-nine scholars on roll, and of that number thirty-three in the alphabet. While I have had so many in the alphabet, among the whole number mentioned I have some very bright and energetic, and recite splendidly. It is pleasant to be with some of them, because they seem to recite with perfect celerity. I hope by next October to send you a representative of my school.

I am happy to inform you that I think prejudice is somewhat eradicated, and knowledge is diffusing. My people of Northampton County seem to be firm in their political opinions, and when voting day comes they meet like brave men. They do not sell their votes for hats, shoes, etc., but would rather buy. I was surprised when I arrived home to see the improvement they had made and the property they had accumulated. A great many of them have comfortable homes. At some future time I will give you a more lengthy account of this county. Yours truly,

JOHN H. CARTER.

VIRGINIA, *March* 12, 1876.

Dear Teacher:—I am glad that I *now* have the pleasure to write to you to tell you about the close of my school. As I had such a full school, I did not let all my scholars *speak* at the last day. I picked out the best of them to write pieces, some to speak by heart and some to read, and some to speak dialogues. And on the 10th of March I closed my school and invited all to come, both white and colored, and there were a plenty of both sexes here. I had my scholars well trained and they did well. If you could have been here on that day you would have been pleased yourself. This school has been going ever since the fall of Richmond, and both white and colored said that the close of my school beat all of them. The teacher of the white school was with me on that day, and he spoke in my behalf for the school another year. All the trustees were here with me on that day, and they gave me great applause.

General, two years ago if anyone had told me that I would be where I am to-day I would have laughed at them. But I thank God for all of that. He is the one to look to for all of that. Three years ago I could not write my name fit to be looked at, and who must I look to for it but *God* and the *teachers* of the H. N. and A. Institute. I often think of Hampton now and wish that I was there. After my free school closed I thought that I could make two or three months in school at Hempton; but the people came together and employed me themselves, and said that I should not go awey for the want of money. They have gotten me to teach three more months for them. The people came together like men, white as well as colored put in.

I em now getting along nicely with my Sabbath-school. That numbers seventy-five, and they are very much pleased with the Sunday-school papere; they say that they can see through them so well and they are plain to read, and so much explanation in them.

To-day is the first day of the pay school, or rather to-morrow. My Sabbath-school was quite full this morning. They want me up here another year, but I do not think that it will be in my power to do so. If I could go to school this summer I think that would enable me to teach here another term. But with my little striving and God's doing all, I will make out the best I can. Your most obd't scholar,

W.

VIRGINIA.

Dear Teacher:—After returning from my day's labor over forty or more scholars, I wrote you last year, telling you of my school in a colored church, which I closed in June, 1875, and had a vacation of two or three months. I began teaching again the 11th of October, 1875, taught five months, and closed; came back to the church where I taught nine months in '75. On my returning to the church I found it very much out of school repair, and I had to make more, and in addition, I made e pretty good black-boerd. I can't do enough for my people when I think how much other kind friends have done for me. My present session commenced about the 28th of February last, and ends 31st of July, 1876, nothing to the contrary. I have forty-four or more scholars on roll, and they are not all who went to come. I can't accommodete the applicants.

I saw in my last paper, the SOUTHERN WORKMAN, several letters from the graduetes of the Hempton Institute; one of them touched my views precisely. The writer spoke of the cads which his labor bad eccomplished; he doubted whether he had done any good among those whom he had tried to instruct, when he saw his scholars associeting with dissipated society. I felt for him, and heve asked myself the same questions over and often.

I heve some very ept scholars, and nice oaes, too. They think so much of me, I hardly know what to do for them. I have no tracts, pepers, nor anything of the sert to give them. They ere poor, end so am I. I did give them some of your Sunday-school papers last year which I peid for myself. I tell them I em not able to buy such things as papers and books for them now, but hope I will some future dey. They say they do not look for me to buy such things for them; they thenk me for fixing their school in such nice condition.

General, I thenk God, and you, too, that I heve the ability of doing good among the needy. The colored people here listen to me when I tell them about their incorrect steps. They heve made me their clerk in the church, and when I tell them that they are working contrary to the church discipline, they give over et once. When I first commenced teaching, many of them didn't care enything for the Bible nor its teaching. They sey now that there is no religion outside of the Bible that will seve them in the day of Judgemeat —a greet chenge in the church.

But I guess I um taking up too much of your time talking about these little things. There is one request which I wish to ask of you. I huve seen a good many of the boys and talked with them ebout the several letters from the graduates, hut can't find out who they ere from, and would thank you to have the last part of their names spelt out in full. My Sunday-school will begin next Sundey, the Lord being willing. It promises a very large one. Guess I'll have to call on you for a little instruction ebout it. E.

TWO SORTS of SOUTHERN SENTIMENTS.

An exchange thinks that the following extracts from late numbers of Southern papers will surprise some readers in the North:

"It is a notorious fact that those farmers who are the tightest on the negroes in their employ never fail to get as many hends as they wish. We know several of our largest planters who treat the negroes working for them exactly as they did their slaves, working them from daylight to sundown, allowing no idling; and if a darkey trespasses any of the rules he is tied up and e sound thrashing administered to him; then, if he leaves, the employer hunts him up, brings him back, and doubles the dose. This generally mekes an effectual cure, and the offender resumes work, makes a good hand, and is anxious to bire to the same man another year. The employer has got value received out of his hands, and is, consequently, able to pey full wages. Govern your hends, and all sides will be better satisfied. Let them govern you, and the country will soon go to the dogs."

A private letter just received from a Southern lady, a daughter of Virginia, and as her letter shows, a slaveholder before emancipation, offers such a striking contrast to the "notorious fact"(?) asserted above, and is so interesting a testimony to the fact, perhaps less "notorious," that as marked a division exists in Southern sentiment itself as between any called Northern and Southern, that we take the liberty of printing it. Human nature was doubtless not changed in the one day of the Emancipation Proclamation. Those who had been unjust were unjust still, and those who had been righteous were righteous still. This letter is a noble specimen, hut only a specimen, of the kindly appreciation of the colored people manifested by many of their former masters. Many more could give us interesting accounts of old family servants, and we would be very glad to receive them.

"The articles in the SOUTHERN WORKMAN as to the condition of the colored people interested me very much. There is one point about the slaves I have never seen fully brought out, and wish my pen could do justice to the subject. This is thet the slaves improved just

in proportion to their chances, the house servants and those brought into intimate associations with educated whits people making much higher characters than the plantation hands, who often learned nothing which would elevate them above their savage ancestors, except to work and wear clothing adapted to the climate. Many of the house servants of the South were people of elegant manners, showing many beautiful traits of character. I believe all the slaves of our connection, but Uncle Frank's family, and a great many of those belonging to my husband's people own their houses and lots. Some have little farms in Roanoke. One of the boys, trained to lead his blind master, has long been a clerk in Washington, and is in good circumstances. The last servant brother William had was bound to him until twenty-one by his father. John's term has lately expired and he is now steward in a Pullman car; gets twenty-five dollars per month and board. I saw a sweet letter from him to his blind master lately, in which he said he still read the lessons of Scripture daily, as he had been taught to do from childhood, and expected soon to be confirmed. When we get a compulsory law of education, I think the colored people will improve much faster."

NEWS OF THE MONTH.

A. T. STEWART, the merchant prince of New York, died on April 10th, leaving a fortune of fifty million of dollars. His magnificent dry goods store on the corner of Broadway and Tenth Street in New York City, the largest retail store in the world, will of course be carried on by the firm as usual, and few of the crowd that throngs it day after day will miss the owner and founder of it all who used to spend part of every day there, attending to the business and watching with eyes that nothing escaped, every branch of it, as much as the smallest shopkeeper on the great thoroughfare. Mr. Stewart's death adds another to the examples death has laid open to us this year, of a wonderful success in life achieved by men who started from the bottom of the ladder. The lives of Astor, Wilson and Stewart repent the lesson that the great essential to success in whatever direction is a concentrated and steady, unconquerable purpose—the faculty of *sticking* to it.

Mr. Stewart was of Irish birth and Scotch parentage. He was educated in the university of Belfast in Ireland and graduated with honor. He came to this country at the age of twenty, and by an accident finding himself with a small store on his hands, through the failure of a man to whom he had advanced money, he concluded to save his investment by carrying on the business, as advertised that "A. T. Stewart offered for sale a general assortment of fresh and seasonable dry goods." He has been offering such an assortment ever since, till the sales from his retail and wholesale departments have amounted to $203,000,000 in three years. Nine branch houses exist in various countries of Europe, and and he had just started a manufacturing village in Glenham on the Hudson for the manufacture of carpets and other articles which are now imported. Mr. Stewart was thoroughly and actively loyal to the United States Government through the civil war. He was General Grant's first nominee to the Secretaryship of the Treasury, but the appointment was prevented by the discovery of an old law prohibiting the holding of that position by any active importer.

Mr. Stewart's benefactions were princely in various directions during his life. He sent a ship to the relief of the sufferers from famine in Ireland, and brought back and provided places for a colony of Irish emigrants. After the France German war his sent a steamer loaded with flour to the relief of the French, and gave $50,000 to the victims of the Chicago fire. His will disappointed many who expected large donations to public charities. He left, however, directions to his wife and her advisers (he leaves no children) to carry out his purposes in this respect. He remembered handsomely all of his employees who had been at least five years in his service, and left a million to Judge Hilton, his legal adviser, who has exchanged this with Mrs. Stewart who has the bulk of the property for her interest in her husband's business. The public will look anxiously for the promised execution of Mr. Stewart's plans of benevolence. One of them is known to be the completion of a large hotel for poor working women where they can procure respectable and comfortable board and lodging for prices within their means. He left in his palatial marble house on Fifth Avenue one of the finest private art galleries in this country. It was commonly reported before his death that this was to be presented to the city of New York. It would be a princely gift. Mr. Stewart's own explanation of one secret of his success in business is interesting and valuable.—"My business has been a matter of principle from the start. The customers are treated as the seller would like to be in his place. Nothing is misrepresented; the price is fixed for all at the lowest possible figure. What we cannot afford is violation of principle."

THE SURRENDER of Winslow, the Boston forger, to the American government by Great Britain, where he was arrested, has been long delayed by a disagreement between the two nations in regard to the extradition treaty. This treaty, signed in 1842, specifies a certain number of crimes for which extradition may be demanded. Forgery is included in the list; but in 1870 the British Parliament passed a law that no prisoners should be surrendered without a pledge that they should not be tried for any other offence than the one on which they were extradited. Great Britain makes this demand in Winslow's case. America will not accede to it, as it is founded only on a law of the British Government which cannot bind America. Secretary Fish has notified the British government that if the treaty is not carried out, America will consider it broken and will surrender no prisoners to England. If not surrendered, Winslow will soon have the right to demand his release. It is not at all likely that this will be decided otherwise than amicably finally. Two nations that could settle such a delicate question as the Alabama Claims by arbitration will not quarrel violently over a formality which each is equally interested in adjusting equitably.

THE impeachment trial of Secretary Belknap is proceeding in Washington. The defence is a formal one, calling in question the right to impeach an officer after he is out of office. There is much to be said on both sides. If the right be not allowed, any dishonest officer who sees discovery approaching may resign out of harm's way, while on the other hand, if the right be allowed, any new party that comes into power may amuse itself by impeaching its predecessors. These are the horns of the dilemma.

IT SEEMS likely that General Schenck will escape conviction of intentional dishonesty in the Emma Mine scandal, though it is hardly probable that he will be returned to his embassadorship.

1,200 TONS of exhibits from France and $750,000 worth of paintings from England have arrived for the Centennial. Lively times in the Quaker City.

THE BLACK SWAN, as she has been long most popularly known, one of the earliest of successful colored public vocalists, died March 31st at her home in Philadelphia. Her real name was Miss Elizabeth Taylor Greenfield. She was born a slave in Natchez, Miss., sixty-eight years ago. She attained success under great obstacles, won celebrity on both sides of the Atlantic, and was patronized by noble families in England. She was the friend and at one time the instructor of Miss Carrie Thomas, one of the Hampton Student Singers, who, when a child, sometimes sang in her concerts.

A BILL introducing silver payments instead of fractional currency has passed Congress.

MR. MOODY'S work has closed at the New York Hippodrome.

QUEEN VICTORIA is now called Empress of India.

MT. HECLA in Iceland and Mt. Vesuvius in Italy are now in full eruption.

ROBERT LINCOLN, the son of President Lincoln, is running for Republican Secretary of State in Illinois.

THE CAPTAIN of the United States steamer *Alaska*, sent to Liberia to help the Liberian Government suppress a revolt of the native tribes, has been successful in effecting a peaceful treaty between the conflicting parties. Liberia has thus been saved from a destructive war.

THE fine monument to Abraham Lincoln, erected by the colored people of America, was unveiled in the city of Washington with very interesting ceremonies on April 14th. On the day after his assassination an old negro woman, named Charlotte Scott, living in the family of Mr. Reuker at Manetta, Ohio, gave her employer five dollars as the beginning of a subscription for this purpose. The result was an organization under the auspices of the Western Sanitary Commission. The colored regiments then in the service contributed largely, one of them about $2,000. The statue was executed by our American sculptor, Thomas Ball of Florence, at the price of $17,000. It is in a group of bronze, representing the act of emancipation. Lincoln stands erect, holding the great Proclamation in his hand, over a negro at his feet who is rising from the ground, the shackles falling from his arms. The whole cost of the statue was contributed by the colored people of America; the granite pedestal was given them by Congress. The height of the monument is twenty-two feet. It stands in Lincoln Park, the figure of Lincoln fronting the Capitol. It was veiled in flags. A large procession was formed of colored troops and societies with bands of music. On the speakers' stand were the President, members of the Cabinet, justices of the Supreme Court, members of the Senate and House, besides the speakers. After Hell Columbia by the Marine band, prayer and reading of the Emancipation Proclamation, Professor Langston formally accepted the statue in behalf of the nation, and called on President Grant to unveil it. Amid great applause, music and booming of cannon the stars and stripes glided down and revealed the beautiful work of art. A poem was read, composed by Miss Cornelia Ray (colored) of New York. Frederick Douglass then delivered a fine oration in eulogy of Mr. Lincoln, and the very interesting ceremonies closed.

MEXICO is in a state of revolt, and Matamoras is in the hands of the insurgents.

A REVOLUTION is progressing in Hayti, and so far triumphantly. President Dominique has fled. Biron Cennal who was exiled from the country is in Port au Prince, and is expected to resume the government.

THE NATIONAL COLORED CONVENTION of April 7th at Nashville, Tenn., was attended by an immense audience. Resolutions were adopted approving of and reaffirming devotion and adherance to the National Republican party and its principles, but stating that nevertheless there are just reasons for complaining against those members of that party who have proved recreant to their trusts; returning thanks to the friends of freedom; disfavoring any desire to cherish ill feeling toward the former slaveholding element of the South, but, on the contrary, extending to them the olive branch of peace; asking all good men to arise in their sovereign capacity to support the arm of the law and protect all citizens against mobs, assassination, outrages, and violence; that the determined and incressing efforts of enemies of their race to establish a color line presents a condition of affairs to be deplored by all lovers of liberty and order; that they hold no sympathy with official rogues, but most earnestly condemn dishonesty, corruption, and infidelity.

Supplementary resolutions were adopted recognizing the validity of the present State Government of Louisiana, under which Pinchback was elected to a seat in the United States Senate, and deeply deploring the manner in which his contest had ended, and regarding it as humiliating to the pride of the colored people of America; that Senator Morton, by his unyielding course, and those Senators who voted and acted with him, are deserving of the lasting gratitude of the colored American citizens; and favoring compulsory education in the Southern States.

HAMPTON INSTITUTE has been specially favored of late with a succession of pleasant visitors. Besides the military party whose visit is described in another column, the school has been glad to welcome Mr. Geo. S. Hillard of Boston, the well known author of "Six Months in Italy" and of valuable text books. Rev. Dr. and Mrs. Furness of Philadelphia, old and tried friends of Hampton; Rev. Charles Stoddard, one of the editors of the New York *Observer*, Mr. F. Marquand of New York with Mr. and Mrs. Elbert B. Monroe, (Mr. Monroe is Vice-president of the Y. M. C. A. of New York), Mr. and Mrs. Samuel Johnson and sons of New York, Mr. Rogers, editor of the Berkshire *Courier*, Dr. and Mrs. Wales of Elmira, and Mrs. and Miss Washburn of San Jose, California. Miss Washburn was for several years a valued teacher in the Hampton Institute, and several interesting letters of hers from California have appeared in the SOUTHERN WORKMAN. From some of our friends we heard while here. The school will not soon forget Dr. Furness's fatherly "sitting down talk" to them about the old and new times, Mr. Stoddard's stories of the Deaf Mutes in whom he is interested, and Mr. Hillard's kind words in the class rooms. And through the columns of the Boston *Advertiser*, Berkshire *Courier*, Elmira *Gazette* and New York *Observer* several of our friends have given very kindly and pleasant accounts of their visit.

WE CALL attention to an advertisement in this issue, of the iron single bedstead made of gas pipe, in the Engineer department of the Hampton Institute.

Its advantages are, freedom from crevices in which insects can be harbored, good appearance and strength, and the fact that it can be readily taken apart for shipping and be screwed together again.

CORRESPONDENCE FROM THE PACIFIC.

We publish another letter from the lady in the missionory field of the Sandwich Islands whose former communications have interested our readers. The letters were written to family friends without a view to publication:

HONOLULU, *Februaru* 7, 1875.

Dear ——:

As you like to hear of natives, I will report a little. When I commenced going ont among them last July, they seemed dead spiritually. Parker felt *kaumaha* and was glad of my poor help. I have not failed to go out every Sunday, except one stormy day, to one of the nine districts, where there is a little church to meet the natives in, since I began to go. There are also two or three places in Honolulu to meet them. A week ago it was cloudy, but no rain. Having been prevented by rain for two or three weeks, I went elsewhere, as *Manoa* is a drenching place when it rains. Parker appointed the meeting there a week ago. No rain, but plenty of mud. The natives were doubtful of my going, and were not ready. Mrs. Judge Spaulding of Cincinnati, formerly from Windsor, Conn., had been with me once, and desired to go again. We found the road rough and muddy, especially the hill this side of the church. We persevered and reached the old church, and looked for the bell-rope, to call the hearers, but it was *minus*. Then motioned to a man at distance who came; but being a Mormon (they are scattered all around) declined, but ran for the *luna*, who had evidently been asleep. He being rather old and stiff, called some boys, who like squirrels climbed up the ladder to the rickety belltower, and grasped the tongue, and made a great clattering. By waiting nearly an hour, some twelve persons had gathered. In the mean time, Mrs. S. and I admire the dark and light shades of the corrugated hills, also the green, desolate valley. The little rippling stream of water, which was near by the church, seems not to have changed since you so often saw it. The grass and weeds grow close to its edge, as in the days gone by. Stunted guava bushes, and a few other shrubs, with numerous rank weeds, and a few neglected *taio* patches here sprend out on the landscape. Far up in the valley were dark, heavy clouds with a cold, autumnal look. I proposed another bell-ringing. The boys liked the fun, and clambered up again, and clattered until I motioned to have them stop. All were seated in the gloomy church, which seems as tho' God's judgment passed upon the church and the ungodly, as described in Isaiah, chap. liv, were upon all things. Just ready to begin, when five large and small dogs opened fight, as tho' for a voluntary in our services. A man kicked and drove them off. My hymn book, and one other. No one to sing but myself, and one verse sufficed. I called on a man to read, and then we had a talk about it and they seemed to get warmed up. Natives seem born to be led. Had they thought I would come through the mud, no doubt more would have been there. They care little to hear each other. Mormon and Catholic influence has been most demoralizing; they are all over the isles.

I walked yesterday afternoon, to *Lukoko*, one of the crowded, uninviting places of Honolulu. With india rubber shoes, picked my way along quite well. This is the place where I think I told you, a man pulled around him the rags and remnants of the old and tattered cloak of bigotry and prejudice, and assumed the attitude of a stump speaker, and seemed to doubt the propriety of my speaking to them, being a woman. He also asked if Parker sent me there, and I replied, "No, God sent me."

Well, I went there yesterday and was warmly welcomed, and the small house was nearly filled. They did not expect me; but rang their little bell, and some ran to call the people, as it is a neighborhood church. It proved to be the most interesting meeting I have had with natives. So much so that it was protracted nearly two hours. Religious interest has been increasing among natives all around the past few months; together it seems encouraging. I do not hope for the nation, only for individuals. There was religious interest among some white people during the week of prayer, which continued two weeks. Several conversions of hard men, unknown to you, and some young folks also. Gibson, the great Mormon of Lanai, professed to be converted last year. People hoped with trembling, but he holds out thus far, externally. I think there is much more to encourage one in working for negroes at the South, than for natives here. But each one must work in the sphere in which Providence has placed him or her.

A very pleasant letter from Mr. Bond yesterday, in which he tells of his school, and of a native girls' school, taught by Miss Lizzie Lyons. He speaks so kindly and appreciatingly of my school as to greatly encourage me. I will send it that you may know something of *Hawaii nei*.

Your sable printer makes me call the *kharub* tree the rhubarb tree. Whoever read of a rhubarb tree? See Thompson's "Land and Book" for description of *kharub* tree.

Mr. H—— is arranging and packing various things for the great Centennial. He has over one hundred varieties of ferns. All are handsomely mounted. The ferns of these isles are much sought after these latter years. There is an oil painting of Hilo Bay, by a *Kanaka*. A sketch of *Halea Kela*, by Mr. Bailey. Many and various kinds of splendid corals and shells from Micronesia. You and E——had better go to the Centennial, and you need not be ashamed of the Hawaiian exhibition. Hope N—— and F—— will go also. Go and see what sugar is made here. Quite a number of people go from here.

Describing her first voyage from the United States to the Sandwich Islands in 1832, Mrs. Armstrong writes:

We came in a whale ship with wretched accommodations. I was seasick most the whole voyage of six months. Sometimes partially suffocated for lack of fresh air in the stateroom below deck, which I was unable to leave, and the water, much of the time, sent forth such a bad odor that one must hold the breath or cover the nostrils while drinking. The whole scene rises up before me as a sort of Purgatory. Surely no man but in ignorance, could ask a woman to go with him in such horrid surroundings as were in the whale ship *Acerick*, with an intemperate commander, and no woman but in ignorance could consent to go without violating the command, "Thou shalt not kill." I look back, and wonder that I lived—and more, that I have any health, instead of the perfect health that I now enjoy. The promise has been fully verified in me, "as thy day is, so shall thy strength be." To go on a mission in these latter days, is to lie on "flowery beds of ease" compared with what it was in former years.

THE
NATIONAL SERIES
OF
STANDARD
TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNES' BRIEF U. S. HISTORY.
BARNES' SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.
CHAPMAN'S DRAWING BOOK.
CLEVELAND'S COMPENDIUMS.
NORTHEND'S SPEAKERS.
GRAHAM'S REASONABLE ELOCUTION.
PEABODY'S MORAL PHILOSOPHY.
BOYD'S COMPOSITION, ETC.
CHAMPLIN'S POLITICAL ECONOMY.
BEER'S PROGRESSIVE PENMANSHIP.
PECK'S GANOT'S NATURAL PHILOSOPHY.
PORTER'S CHEMISTRY.
JARVIS' PHYSIOLOGY and LAWS of HEALTH.
WOOD'S AMERICAN BOTANY.
CHAMBER'S ZOOLOGY.
STEELE'S "14 WEEKS" IN EACH SCIENCE.
PUJOL'S FRENCH COURSE.
WORMAN'S GERMAN SERIES.
SEARING'S CLASSICS, ETC., ETC.,

The whole crowned by a unique collection of professional manuals known as

THE TEACHERS' LIBRARY,
In Thirty Volumes.

A Descriptive Catalogue of all A. S. Barnes & Co's publications will be sent free to the address of any Teacher or School Officer applying for it.

The National Teachers' Monthly commands in its editor and contributors the best professional talent the country affords. Subscription, $1 per annum.

HAMPTON, JUNE, 1876.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at fifty cents apiece.

COMMENCEMENT DAY AT HAMPTON.

CLASS OF 1876.

The eighth anniversary of the Hampton Normal and Agricultural Institute was marked with sunshine without and within. The clouds that threatened rain in the morning, either passed away or served as a veil to moderate the summer heat; a pleasant breeze cooled the air, and the large company of visitors present seemed to thoroughly enjoy the occasion.

Among the visitors present, were Rev. Dr. Schaff of New York, at the head of the United States Committee on Bible revision, Commodore Thomas H. Stephens, U. S. N., Capt. W. H. Murdaugh of Portsmouth, and his son, editor of the Norfolk *Evening Times*, Judge O. M. Dorman, Maj. Gen. Pemberton, the ex-Confederate General, and Captain Pegram of the Confederate Navy, and Mr. Henry P. Worcester, Gen. V. D. Groner, A. L. Hill, Esq., Mr. R. W. Santos, Mr. W. H. Sharp, Mr. T. A. Williams, Mr. Bell, and many other prominent citizens of Norfolk and Portsmouth, who, with their families, made a party of fifty-three, who represented these cities and expressed thorough gratification with the exercises of the day.

Of the Board of Trustees of the Institute the following members were present: Rev. Geo. Whipple, D. D., President, Messrs. Alex. Hyde of Massachusetts, Anthony M. Kimber of Philadelphia, Samuel Holmes, Edgar Ketchum, and Rev. M. E. Strieby of New York, and Rev. Thomas K. Fessenden of Connecticut.

Mr. Z. Stiles Ely of New York, and Hon. Lewis H. Steiner of Frederick, Maryland, also present, were elected members of the Board of Trustees at this anniversary.

Among other distinguished guests were Mr. and Mrs. Howard Potter of New York with a party of friends, Professor Newell of Baltimore, Superintendent of Schools of the State of Maryland, Rev. Dr. Braden, editor of the *Independent*, London, England, Miss Mary Anna Longstreth of Philadelphia, Miss Caroline Richmond of Providence, R. I., Hon. H. R. Hitchcock, Inspector General of Schools in the Sandwich Islands, Rev. Mr. Church, President of Oahu College, Sandwich Islands, with his wife.

The Class of '76 is the sixth which has graduated from Hampton. Forty-four received diplomas, twelve of whom were young women.

The morning was spent according to custom in examinations. Classes were examined in the various elementary studies and in elocution and Natural and Intellectual Philosophy, the crowd surging from class room to class room, after the manner of such crowds. A marked improvement upon last year was observed in the Senior examinations in some respects. The elocutionary exercises were listened to with interest, showing the natural richness of voice of this people and evidently well calculated to correct as natural defects in articulation and pronunciation.

EDUCATION THROUGH SELF-HELP.

A large card bearing this inscription was suspended prominently above one of the most attractive parts of this school exhibition. A room opposite the Assembly room had been fitted up tastefully as a bower, for the exhibition of specimens and models of the industrial work of the students. In a show case on the table were neatly made garments from the girls' Industrial room. Models were exhibited of cabinet and cooper work made in the workshops on the place, bedsteads, tables, wash-stands, wardrobes, of the pretty Virginia pine. Horns, hollowed and polished by the boys, and filled with dried grasses, added to the decorations of the table, and with some fine photographs of the school grounds and buildings were for sale for the benefit of the Institute.

In the hall below a table was set out with products from the farm, early vegetables and fruits, green peas and asparagus and strawberries. Among the decorations of the table was a branch of flowers curiously carved from a potato by one of the students. As representing the industrial features of the school, this table and the bower attracted much attention, as did also, for the same reason, the farm buildings, the barn, (a new one is greatly needed), the engine grinding bones, the workshops, the Printing-office, the girls' Industrial room with four sewing machines at work, the laundry and kitchen.

At half past twelve the company were refreshed by a collation on the piazza of General Armstrong's house.

The afternoon was devoted to the Commencement exercises proper, according to the following programme:

MUSIC.

SALUTATORY: HARRIET TUBMAN — Laura E. Davis
ORATION: THE SOUTH AS IT IS — Amos W. Calvin
RECITATION: INDEPENDENCE BELL — Richard H. Fantleroy

MUSIC.

ORATION: THE WORK TO BE DONE IN THE SOUTH — William A. Forsyth
RECITATION: THE FAMINE — Georgia Gray
ORATION: SHOULD WE UNDERTAKE TO CIVILIZE AFRICA? — Walter M. Ivy.
ESSAY: MANNERS AND MORALS — Jennie Shelton

MUSIC.

A READING FROM DICKENS' — Dennis F. Douglass
ORATION: THE NEGRO IN THE REVOLUTION — James C. Robbins
VALEDICTORY: THE BIBLE IN THE PUBLIC SCHOOL — Frank D. Banks

MUSIC.

The orations and essays were marked by great moderation and good sense, a clear-headed, (let us say level-headed), way of looking at subjects that must be thus looked at to be handled effectively. The delivery of the speeches and the recitations reflected great credit upon the teacher of elocution. Hiawatha's Loss of Minnehaha, in the Famine, was a beautiful performance.

Diplomas were presented to the forty-four graduates by Rev. Geo. E. Whipple, President of the Trustees.

Then followed three short, crisp speeches from the following gentlemen:

Rev. Dr. Schaff, of New York, was introduced by General Armstrong. Dr. Schaff is originally from Switzerland, and his slightly foreign accent only served to emphasize his vigorous and beautiful English. We very much regret our inability to give every word of his speech. He said:—

"Thanks to all. Thanks to General Armstrong, thanks to the teachers, thanks to the students, thanks to the trustees, who have prepared for us this treat. I am truly glad I came here. I have enjoyed every moment, far beyond my expectations. The education of the colored people is a success. Success has been defined to be something that succeeds *all around*. This school is such a success as that.

"Virginia has been the Mother of Presidents. May she be the mother of many such institutions as this. May North and South, East and West, forgetting past differences, join hands for the future in the grand march to freedom, to glory, and to God."

REV. DR. BRADEN,

editor of the *Independent* of London, England, was then introduced and said:—

"General Armstrong and dear friends: If you detect in my speech, as in our brother's from Switzerland, a slight foreign accent, I trust you will be able to perceive beneath it the honest warmth of an English heart. Since I have been in your country, I have heard an American story—there are a great many American stories you know. A gentleman sent his servant with a gallon jug to get a gallon of molasses. He gave him money enough for a gallon and a half and the servant brought back no change. 'Where is my change?' asked the master. 'I bought a gallon and a half,' said the servant, 'and put it in the gallon jug.' 'Oh,' said his master, 'well, I don't care so much for the money as for the *strain on the jug*.' That's the way I feel today, my friends,—as if you had been pouring a gallon and a half into my gallon jug.

"When I came to this country, I had made up my mind to come to the South and see what my freed brothers and sisters were doing, and what is being done for them. I with many others had been profoundly touched by the sweet singing of the Jubilee Singers in England. Since I have come here I have had a letter from a lady in England who writes to me: 'The Jubilee Singers are doing a missionary work. They are singing the gospel up and down the land. They must do good.' They must indeed, and so must you as you sing your songs and go forth to work among your people. My brothers and sisters going out to this missionary work, I pray God to give you a courageous heart. You will need it. It will not all be like this pleasant day of your commencement. It will be hard work among a people beneath you. The tendency will be to drag you down to a lower level. Be on your guard. Be careful to maintain the nobility of your own disposition. Maintain your intellectual vigor, your cultured taste, your moral strength acquired here.

"General Armstrong, I congratulate you on being at the head of such an army as this. May it multiply and increase in strength from year to year.

"I will give you as my parting word, my young friends, the counsel which Rev. Charles Kingsley, the English author and minister, wrote in a young lady's album,—

'Be good, dear child, and let who will be clever,
Do noble deeds, not *sing* them, all day long,
Making life, death, and that sublime *forever*
One grand, sweet song.'"

PROFESSOR NEWELL

of Baltimore, State Superintendent of Education in Maryland, was then introduced by General Armstrong with the remark that the foreign character of the speeches to-day would still be kept up by Professor Newell who is an Irishman.

Professor Newell said:

"Ladies and gentlemen. Part of the advantages I expected in going away from home was the privilege of spending the whole day without saying a word. That, however, is always rather a hard thing for an Irishman to do, and I may speak to-day without failing in the modesty which is another Irish characteristic, to thank you for this great treat. From my heart I thank you for the great enjoyment I have received to-day.

"It may interest you to know that I came here yesterday from having spent four hours in examining a school something like this—the Colored Normal School in Baltimore. It will also interest you to hear that the State of Maryland has within the last four years placed the colored and white schools of the State, in law and in practice, entirely on the same level. We mean to do all we can for the colored schools, and—with help from the colored race itself—we shall succeed. For self-help must raise all who do rise. The fault lies not in our stars but in ourselves. You have been helped by the North and helped by the South, helped by the East, and, I dare say, helped by the West; but remember that if you are helped effectually, the help must come from yourselves also."

After a brief speech of thanks to the speakers and friends by General Armstrong, the exercises were closed with singing of Coronation—"All Hail the power of Jesus' name"—by the whole audience, and a prayer by Dr. Schaff.

The graduating class will receive a month of special Normal training under Professor Allen of Pennsylvania, and then go out to add forty-four stars to the map of Hampton graduates' schools.

A SPECIAL course of Normal training in the science of teaching, under the charge of Prof. F. A. Allen of Pennsylvania, was opened at the Hampton Institute on Monday after Commencement Day, to continue until the close of the school term in June. It is attended by the recent graduating class and many of the post-graduates who have returned for the purpose. Some notes of Professor Allen's lectures will be given hereafter in the SOUTHERN WORKMAN, for the benefit of those of the Hampton Graduate teachers who were unable to attend the course.

ON MONDAY, May 3d, Curtis N. Banks, member of the Preparatory class of Hampton Normal school, was struck with apoplexy while at his desk in the evening study hour, in the Assembly room, and died the next day, with no return to consciousness. His funeral services were attended by the Chaplain and members of the school, who followed him to his last resting-place in the school burial-ground on the shore of Asylum Creek.

Pleasant testimony to his excellent Christian character has been received from the friends who sent him to the school, and he will be tenderly remembered by his schoolmates, upon whom his sudden death has made a deep impression.

We are happy to comply with the request of our exchange, the *Southern Planter and Farmer*, to notice its May number.

We have several times already called our readers' attention to the magazine and given them extracts from it. It is one of our most valued agricultural exchanges, ably conducted, original, enterprising and full of useful and suggestive information for southern workmen. The May number is an excellent one, containing reports of the Virginia State Agricultural Societies, and the usual number of timely articles, among which we may notice,—"Grape Growing in Virginia," Judge Cox on "Old Virginia Hams," and "Rose Colored Farming," a letter excellent in tone and spirit. It has also the fourth of a series of papers on "The Public School in its Relations to the Negro" by "Civis," with an introduction by the editor giving it his official endorsement.

We have already given our readers some review of these articles and our opinion of their line of argument. We see no objection to the free discussion of the higher politics such as this, by the leaders of public sentiment, whether ministers in the pulpit or editors of agricultural journals. The public school question affects our wheat crops as well as our harvest of souls.

We believe in a free press along with free schools and free suffrage, and that they will all rise and fall together. We like, too, an honest and open-mouthed enemy whose trumpet gives no uncertain sound, and such we believe "Civis" to be in attacking a system which he considers "the sum of all political evils" and we look to as the hope of all political good. His articles present the most favorite arguments of his party in the ablest manner, and we are not surprised to hear that they are eliciting sympathetic responses from many in the South, nor on the other hand, that they are calling out earnest disclaimers and the most opposite expressions of such Southern sentiment as that of Captain Chamberlayne, whose noble address before Randolph Macon College, published with fine impartiality in the *Planter and Farmer*, we copied and reviewed in the Southern Workman of last January.

The whole South is waking up to the consideration of this important question of free schools, and it is well that it should. It is no matter at all that it has for a century been regarded as settled in the North. It is brought home to Southern minds now as never before, and with complicated relations calculated to bias the mind and warp the judgment without the most calm and deliberate thought upon it. When "Civis" declares that "the public school system and the American theory of government cannot exist together," that "whether children are to grow up ignorant or not is not a proper question for government," and proposes to apply to the State debt the money annually appropriated to the support of the public schools," it is time for the American citizen in the South to pause and reflect that the growing up of its children in ignorance is a question which the State can by no means get rid of and cannot afford to ignore. If not answered in one way it must be in another. The statistics of our prisons, the history of one neglected child growing up in ignorance, like "Margaret," whose story we heard last year, whose descendents in six generations numbered seven hundred paupers and criminals with a murderer in every generation, are perpetual answers to "Civis." Shall we tax ourselves for school-children or for paupers and criminals? Have we the right or not to choose between county school-houses and county jails? Will it pay best to buy school-books or ropes for hanging?

We have reviewed in a former number, the arguments of "Civis" against negro education in particular; its simultaneous "dangers" and "impossibility." The South itself is dividing on these vital questions, and, standing somewhat one side, though heartily interested observers of the discussion, we content ourselves for the most part with furnishing to it such practical answers as the Hampton Institute is steadily working out, encouraged by many noble words and deeds and letters from Southern friends of progress and education.

Meanwhile the conflict is one of honest ideas and need not descend to personalities. The distinguished gentleman whom we understand to be represented by the *nom de plume* of "Civis," in a very polite note to the Principal of Hampton Institute, expresses regret in his inability to accept an invitation to its Commencement, and the hope to have the opportunity at some future day of witnessing its exercises and conduct. It is this spirit of candor and mutual respect which should animate all honorable men who differ on questions which all are equally and deeply concerned in having settled according to the highest right.

As "Civis" allows himself to grant, "If the negro, moved by his own instincts, stimulated by his own aspirations, make good, in his own way, by his own strength, and at his own expense, his fitness for citizenship, then the question is put beyond cavil, and the doctrine of negro equality is settled affirmatively and forever." Perhaps, if even with some help the negro succeeds in raising himself to a measure of this perfect manhood, the fact of his right to as much of it as he can get will be generally regarded as established.

Very pleasant and cordial notices of the Hampton Commencement have appeared in the leading Norfolk papers. It is always gratifying to have the kindly appreciation of our neighbors, and we take pleasure in acknowledging the frequent proofs of this that we have received.

Situations for the summer, North or South, are desired by several students of the Hampton Normal School; plain cooking and housework by the girls; farm work, waiting or general work by the boys. Applications may be made at once to Gen. S. C. Armstrong, Normal and Agricultural Institute, Hampton.

The Hampton Institute acknowledges with thanks the courtesy of Commodore Stevens in lending his steam yacht for the accommodation of its guests on Commencement Day, and that of Captain Woodfin in extending the hospitalities of the Chesapeake Military Home, and placing his conveyances and his yacht at the disposal of the school. Thanks are also due to Mr. Henry P. Worcester, the enterprising leader of the large and pleasant party from Norfolk.

NEWS OF THE MONTH.

POLITICAL.

Very important changes in the Cabinet have been made by General Grant, in appointing Judge Pierrepont, heretofore Attorney General, to the ministry to England made vacant by General Schenck's recall; making Secretary Taft Attorney General, and appointing "Don." Cameron Secretary of War. The appointments were at once confirmed by the Senate.

The roll of the Republican National Convention is complete now, with the exception of four States and three Territories. The number of delegates chosen is 684, and the number to be elected is only 72. The most generous estimate of each candidate's prospects shows that no one of them will enter the Convention with a majority on the first ballot. Mr. Blaine comes nearest to it with his total of 262 votes, but he falls short then by 117 votes.

The youngest member (how young is not specified) of the House of Representatives, Mr. White of Kentucky, has introduced a bill for the entire prohibition of the sale or importation in the United States of intoxicating liquors or spirits of any kind, except under restrictions for medicinal, scientific or mechanical purposes. The bill provides no penalty for disobedience.

The Post-office Committee at Washington have reduced the appropriation a million and a quarter dollars. If adopted this will cut off the fast mail trains.

The Belknap impeachment trial is progressing.

The Hawaiian Treaty bill has passed the House. It was to legislate for the carrying into effect of the Reciprocity Treaty ratified by the Senate last year. The treaty admits sugar and many other native products of Hawaii to our ports free of duty, thereby securing to us trade and influence in that kingdom.

Up to May 9th, Republican State Conventions had been held in twenty States and three Territories. On the Democratic side only eleven States had yet held Conventions. Connecticut favors Jewell. Colorado is said to prefer Blaine, but did not instruct her delegates. Georgia was divided between Morton and Coukling. Indiana declares for Morton. Maryland is pledged to Blaine. Massachusetts is unpledged but favors Bristow. Mississippi is unpledged but favors Morton. New York delegates are uninstructed, but the platform declares for Senator Conkling. The Ohio delegation is instructed for Governor Hayes. Oregon for Blaine. Pennsylvania for Governor Hartranft. Rhode Island unpledged. South Carolina is unpledged, but two-thirds in favor of Morton. Texas is claimed for Morton. Vermont unpledged, and divided between Blaine and Bristow. Virginia declares for Blaine; also Wisconsin. The three Territories stand: Montana instructed for Blaine, Utah is said to favor him likewise, and Wyoming is pledged to Bristow.

The Democratic Conventions stand Connecticut unpledged—divided between Tilden and Senator Bayerd. Georgia is claimed by Tilden. Indiana instructed for Governor Hendricks. Louisiana unpledged. Massachusetts claimed by Tilden. Nebraska uninstructed, said to favor Tildon. New Hampshire likewise. New York solid for Tilden. Pennsylvania uninstructed, but favoring Governor Hendricks. Rhode Island unpledged. Texas unpledged.

Trouble has arisen in Samoa, an island in the far Pacific, the King having deposed his prime minister, the latter succeeded in dethroning the king. A captain of a British steamer tried to reinthrone him and a fight ensued, after which the British steamer carried off the Prime Minister and his brother to the Fiji Islands. The American Consul acted in favor of the British throughout the whole.

The Democratic House majority having significantly requested the President to inform it as to what executive acts he has performed at a distance from the seat of Government, during his administration, and whether this was in accordance with the act of Congress of July 10, 1790, which directs that all officers attached to the seat of Government should remain there, the President sent in reply a message showing that every president, from Washington to Lincoln, except Harrison who died a month after taking office, and Lincoln whose continued presence in Washington was made necessary by the rebellion, has been in the habit of absenting himself from the seat of Government from time to time, and discharging any executive duties necessary wherever he might be. Washington, in particular, shortly after the passage of the act referred to, having issued an executive proclamation in reference to the subject of it from Georgetown, a place remote from Philadelphia which was then the seat of Government; while Jackson was absent 503 days in all, and signed at Boston the famous order for the removal of deposits from State Bank. Adams was absent 385 days. Jefferson 797 days, and one-fourth of his whole official period he signed his executive acts from Monticello. Madison was absent 637. Monroe 708. John Quincy Adams 222 days. Van Buren 131. Tyler 163. All these and others frequently signed official acts while absent, and often while travelling.

The bill to admit New Mexico as a State in 1877 has passed the Senate and is before the House. The *Tribune* fears that taking two Senators and one Representative out of the State would go far to depopulate it, and thinks that if it is possible for them to get a living at home they had better stay there.

GENERAL.

The materials for the first railroad in China are on the way from England. The road is to extend between Shanghai and Woosung, nine miles, and will be finished in July.

An old-fashioned stage-coach line has been introduced to run for pleasure parties over a sixteen mile route in the suburbs of New York City.

The Centenniel Commission has finally decided to close both the buildings and the grounds of the Exhibition on Sundays.

A very interesting feature of the great Centennial Exhibition at Philadelphia will be a collection of American newspapers. This will give to intelligent visitors from abroad a clear insight into the peculiarities of our civilization. We are more given to newspaper reading than any other people. In our newest frontier settlements the newspaper is the first "institution" to be founded. There are nearly 8,000 periodicals now published in this country, and a collection of them will show all the phases of taste, politics, religious faith, social and business, and professional life. A building has been erected for this purpose, and a separate and numbered place is assigned for each paper, whether weekly or otherwise. Mr. George P. Rowell, through whose indefatigable energy and perseverance the collection is being made, deserves great credit for the effective interest he has taken in the matter.

The rebellions continue in Cuba, Hayti, and Mexico.

The Norfolk Bible Society held its annual meeting April 30th. Judge O. M. Dorman read an interesting report of the year's work from which it appears that 1,061 families were visited and eleven or twelve in every hundred supplied with Bibles. In five months six hundred Bibles and Testaments have been distributed.

The retrenchment of the nation is seen in the fact that our imports from Great Britain have fallen off more than 100,000,000 from what they were in 1873—a fall of 37 per cent.

Alarming riots in Barbadoes, the most eastern of the Carribbee Islands, and the earliest settled of the British possessions in the West Indies.

Thirty-four children from a New York Juvenile Asylum sent to Illinois, where they will be distributed among several families.

Lieutenant Cameron, the young English explorer of Africa, has had the honor of a reception of welcome by the Royal Geographical Society in London, and the Society's gold medal for the year. He is the only one of the explorers who has crossed the African continent from coast to coast, a journey of 3000 miles which has performed on foot in spite of sickness, toil and varied dangers. He took nearly 5,000 observations of latitude, longitude and elevation, and settled some important geographical problems in regard to the courses of rivers in the regions he traveled through, some of which had never been explored before. His success is of great value in the work of opening Africa to the light, and leading to the abolishing of the infamous slave trade.

The Council General of Lyons, France, has established a fund of $4,000 for sending a delegation of workmen to the Philadelphia Exhibition. The Council also voted $200 toward the fund for the erection of the Franco-American monument.

A tablet to the memory of John and Charles Wesley, the founders of Methodism, in Westminster Abbey, the great Cathedral of the English church in London, where is gathered the dust of Kings and Queens, dignitaries of the English church, and those illustrious personages that they have delighted to honor. The admission of a tablet to the memory of the great Dissenters speaks well for the progress of the times and the liberality of Dean Stanley, the ecclesiastical head of Westminster, who performed the ceremony of unveiling the tablet.

Emerson Institute, Mobile, Ala., was hurried by an incendiary on the 16th inst. The people of Mobile, both white and colored, manifest a willingness to aid in rebuilding. The flourishing school, which is thus turned out of doors, numbers about two hundred and fifty pupils. The property was bought for the American Missionary Association in 1868 by the aid of the Freedmen's Bureau and the liberality of Mr. Ralph Emerson. The insurance is $7,500. It will require $15,000 more to replace the building.

The Centennial Commission has given the Pennsylvania Bible Society the right to build a Bible Pavilion in the Exhibition grounds for the purpose of circulating the Scriptures in all the languages which will be represented at the Exhibition.

Taking the lowest, estimates it is computed that 70,000 Africans are still annually exported into slavery, besides all that perish on the way to the coast or on the passage, which, by Dr. Livingstone's estimates, raise the number to 500,000 annually sacrificed to the slave trade.

THE CHRISTIAN UNION.

In announcing his intentions concerning the specific editorial management of the *Christian Union* for the coming year, Mr. Beecher says:

"With a change in the business organization, I propose to take a far more active part, and to make the paper my own in a more important sense than ever it has been. I shall consider it a parish parallel with Plymouth Church, and I shall give it the same earnest zeal that I give to that; the same spirit, and the same views of Christian life and disposition.

For the small sum of $3.20 per year, (which includes the prepayment of postage at the mailing instead of the receiving office as heretofore), the subscriber receives fifty-two numbers of the *Christian Union*, or 1248 pages, comprising not less than *two thousand three hundred and eight columns of reading matter* in one year, which if issued in book form, would cost the subscriber over ten times the subscription price of the paper.

AUGUST FLOWER.

The most miserable beings in the world are those suffering from Dyspepsia and Liver Complaint.

More than seventy-five per cent. of the people in the United States are afflicted with these two diseases and their effects, such as Sour Stomach, Sick Headache, Habitual Costiveness, Palpitation of the Heart, Heart-burn, Waterbrash, gnawing and burning pains at the pit of the Stomach, Yellow Skin, Coated Tongue and disagreeable taste in the mouth, coming up of food after eating, low spirits, &c. Go to the Drug Store and get a 75 cent bottle, or a Sample Bottle for 10 cents. Try it. Two doses will relieve you. For Sale in Hampton by Messrs. Selden & Co., and Druggists generally.

DYSPEPSIA.

Americans are particularly subject to this disease and its effects: such as Sour Stomach, Sick Headache, Habitual Costiveness, Heartburn, Water-brash, coming up of the food, coated tongue, disagreeable taste in the mouth, palpitation of the Heart and all diseases of the Stomach and Liver. Two doses of Green's August Flower will relieve you at once, and there positively is not a case in the United States it will not cure. If you doubt this go to your Druggist and get a Sample Bottle for 10 cents and try it. Regular size 75 cents. 6-1y

GOD'S ARROW.

"He hath made me a polished shaft; in His quiver hath He hid me." Isaiah xlix: 2.

What is my life? And what avails for me
The discipline of years,
The joy and pain, the loss and gain, the toil,
The rapture and the tears?

Thus questioning among my fleeting days,
A message to me came,
From out my Lord's recorded words, direct
As if He spoke my name.

What is thy life? It is a shaft which years
Have polished for God's hand.
Is thy sphere narrow? O, sharpened arrow! thy use
Is yet to understand.

Thou knowest not His purpose. Know thou this:
He hath a use for thee.
Hid in His quiver, forgotten never, await
His touch. Nay, it may be

The shadow of His hand which draws thee forth,
That makes this moment dark.
He taketh aim, and, swift as flame, thy life,
God's arrow, finds its mark.

Fear not, He cannot fail: He boasteth naught,
He makes no soul in vain.
With courage stand his shaping hand. His tool,
The keen, sure edge of pain.

With patience wait. Unsent by Him, thy flight
Were but a fall to earth;
But in God's hour, almighty power and skill
Divine shall speed thee forth.

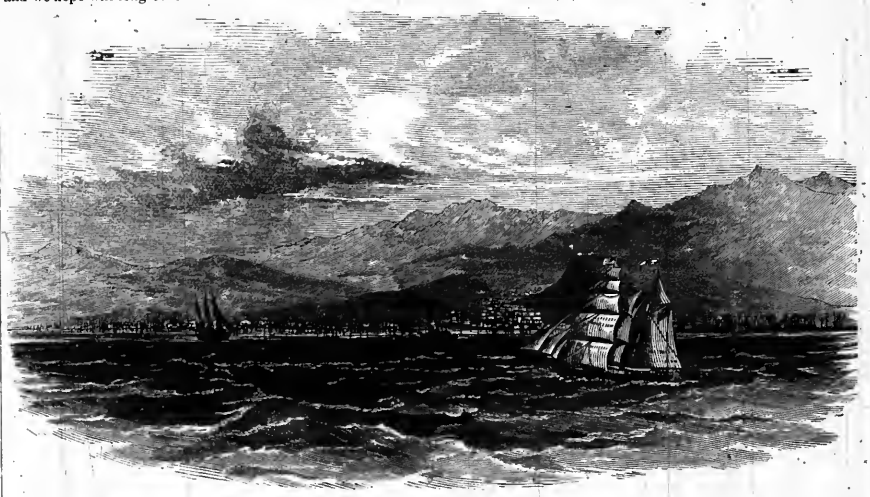
And on no trifling errand. Grand His aim,
His mark high out of view;
And better than thy loftiest plan, His thought
Of what thy life shall do.

MARY E. ATKINSON.

THE MORNING STAR—THE CHILDREN'S MISSION SHIP.

A ship owned by the children of many Christian lands and sent by them to carry the glad tidings of God's love to the uttermost isles of the sea. Is not that a beautiful idea—a still more beautiful reality? But where is she bound, and how came the children to send her? Far, very far away in the western part of the great Pacific ocean, between the Sandwich Islands and Asia, lie hundreds and hundreds—perhaps a thousand little islands. The Micronesian Islands they are called, because they are small. The sea is dotted with them over a space far larger than the whole United States. Some of them are clustered together in groups; some rise lonely out of the waves; some with rocky, frowning cliffs, and some are low coral reefs, covered to the water's edge with tangled tropical forests where birds of gay plumage flash through the boughs. They bask in perpetual summer cooled by fresh sea-breezes—the most delightful climate in the world. Tropical fruits grow in abundance—oranges and bananas and cocoanuts and pineapples and mangoes. A Paradise, but sin has entered there. The thick forests hide fierce savages—untamed by the beauty, unsoftened by the loveliness of Nature—cannibals some of them, feasting on the blood and flesh of their enemies slain in the battles they are constantly waging against each other and the neighbors on the islands to which they venture in their little canoes. Sometimes they are blown off to more distant ones and stay there, and so the islands are peopled, as all originally were, doubtless, from the main land.

Twenty years ago, after the Sandwich Islands had been with wonderful success Christianized by the devoted missionaries of the American Board, they turned their eyes longingly to these islands beyond. They would gladly take their lives in their hands and venture among the fierce islanders to do them good; but how could they go—few trading vessels dared to stop there, and those who did go out on them were as much isolated from the outer world as if the ocean had indeed swallowed them up. They needed a ship of their own, and the American Board of Missions, with a fine inspiration, appealed to the children of the United States to give them one. The call thrilled the hearts of the children and their parents. In four months after the appeal was published the mission ship was launched and started on its nine months' journey around Cape Horn. It was named the *Morning Star*, and the missionaries hailed its appearance in the East with great joy. It was a staunch, little brigantine with two masts, of one hundred and fifty tons. For ten years it cruised between Honolulu and the Micronesian Islands, carrying missionaries, and supplies, and letters, and joy from island to island. Great changes for good were wrought, though amidst great trials and discouragements. Then it became old and unseaworthy and had to be sold. Again the Board applied to the children, and eagerly was the call responded to till $25,000 were contributed by over 150,000 little stockholders, many joining from Europe, Asia, Africa and Hawaii, as well as the United States. The new *Morning Star*—they could not give up the old name—reached Honolulu, March 1867, and 2,000 Sunday-school children marched to the wharf to meet it. It was a beautiful ship, larger than the first, but not so fortunate, for in three years' time, Oct. 1869, it was wrecked on one of the islands, though happily with no loss of life. This time the children did not wait to be asked. As soon as they were allowed, contributions poured in, and February 27, 1871, a third *Morning Star*, built after the model of the second one, sailed from Boston. It has ever since been speeding on its mission of mercy among the islands, and we hope will long continue there.



THE "MORNING STAR" APPROACHING HONOLULU.

Great changes have been wrought in the thirty years since the first was launched. The last reports in the May number of the *Herald* are exceedingly interesting.

NATIVE TEACHERS.

One of the most interesting features of the Micronesian mission is its marked success in employing native helpers. The very first year, the missionaries wrote back that their "Hawaiian helpers were not behind the white teachers in faith, patience and self-denial." In 1874 the *Morning Star* carried Micronesian converts from one island to another as missionaries. The natives adopted them at once, as their own to support and care for—an arrangement which would hardly have been possible for white missionaries. Mr. Chamberlain, who went with them, in his report this year calls these latest converts "the *grandchildren* of the American Board," considering Christian Hawaii its child, the Micronesians converted through Hawaiian teachers its grandchildren, and these taught by the Micronesians, its great grandchildren. His report is very interesting, giving "the fresh impressions of one looking for the first time upon such naked barbarism, such beginnings of Christian civilization, and such rapid progress, even where the laborers have been only most illiterate native Christians. In all the groups, and on nearly all the islands occupied, it will be seen that there is much to encourage: but the progress has been specially remarkable at the Mortlock Islands and Pingelap, where Ponapean helpers, after only two and three years of effort, have gathered many, apparently, into the fold of Christ. At each station on the Mortlocks a little church was formed during this visit of the missionary vessel, and one of the Ponapean teachers was ordained pastor.

"Three years ago, Pingelap had no teachers, having previously refused every missionary advance. The following year Father Alexander reported these people as 'almost as rude and nearly as wild as Gilbert Islanders.' Last year a licensed preacher was sent them, and on the arrival of the *Morning Star*, October 27, 1875, out of a large, quaint village, built on stilts, a curious population moved on each side of the coral-path where your representatives passed to the mission premises. Every one was clad—a sight not seen before since leaving Honolulu. Even the babies had swaddling-clothes, and toddling little ones had comical pants, and miniature jackets of calico. The dwelling of Manassch was found to contain eight apartments, large and small, inclosed by a tight verandah. It was well matted, after Pingelap notions of comfort and luxury, and is really the best native-constructed house in Micronesia, for any missionary.

"The church, completed and dedicated this year, is about sixty-five feet long by forty-five wide. The walls are fourteen feet high and four feet thick, built of solid coral blocks, some requiring fifty-five men to carry them from the reef where they were cut. The roof is lofty, well thatched with pandanus-leaves, and reminded me of the old thatched church in Hilo and its long, steep rafters. The floor is of native plank, hewed four inches thick. The pulpit is a simple table, supported by one standard, and the pulpit sofa is small and tasty. The posts, beams and pillars are skillfully ornamented with woven patterns of cocoanut-twine, in place of paint or carvings. All this is of the people, who have worked freely and with a will, with no foreign oversight or direction.

"Before breakfast on Thursday, October 28th, Mr. Sturges, at the daybreak prayer-meeting, had commenced the examination of one hundred and six candidates for church membership."

Mr. Chamberlain's statements make quite apparent the vital importance of these annual visits of the *Morning Star*.

SERG. JASPER AT FORT MOULTRIE.

There is something very fascinating about heroism. It may add new lustre to a famous name but it needs to borrow none, and the heroic deed of a plain man lifts him to a higher eminence than that of rank and title. So, he who loses his life in a noble cause finds an immortality even on earth in the memory and admiration of the world. Such a hero was Sergeant Jasper, the simple soldier of the Revolution. He has not been forgotten for a hundred years, and will not be for a hundred years to come.

One hundred years ago this "leafy month of June," a terrible battle was raging in Charleston Harbor around the little American fort on Sullivan Island. Eight British ships of war, under Admiral Sir Peter Parker, with a large army under Sir Henry Clinton, threatened Charleston. The American defences were good though hastily made. After the British Evacuation of Boston, Washington, fearing an attack on the southern coast, had set General Lee to watch the movements of Sir Henry Clinton, and news came of the approach of the fleet but just in time to make ready. General Lee had worked indefatigably and his officers with him. General John Armstrong held a force on James's Island, and in the city was Governor Rutledge with the militia and a working corps of three hundred colored men building barricades and earthworks along the shore. Fort Sullivan, as it was then called, was commanded by the gallant Colonel Moultrie, and his garrison of 1,000 men had worked themselves night and day to finish it in time for the attack. No doubt our Sergeant Jasper worked with the best; the bravest men will not shirk work any more than danger. It was built of palmetto logs and sand, the best possible materials for receiving the storm of shot and shell which buried themselves in it without doing great damage. It was considered the best of the defences of the city, and it needed to be, for upon it the whole British fleet concentrated its fire. General Lee, anxious for the result of the contest, had tried to build a bridge of boats for retreat to the mainland if necessary; but the boats fell short, and Colonel Moultrie said, "For my part, I never was uneasy on not having a retreat, because I never imagined that the enemy would force me to that necessity." Such brave commanders are likely to have brave followers. On the ramparts of the palmetto fort floated the first American flag displayed in the South. General Moultrie says in his "*Memoirs*": "As there was no national flag at that time, I was desired by the Council of Safety to have one made. As the state troops were clothed in blue, and the fort was garrisoned by the 1st and 2d regiments who wore a silver crescent in the front of their caps, I had a large blue flag made with a crescent in the upper right hand corner, to be in uniform with the troops."

A little before eleven A. M., on the 28th, the flag ship *Bristol* ran up the signal for attack, and from ships and fort the boomiug of three hundred cannon burst into the brightness of the summer morning. An English historian says: "The continuous thunder from the ships seemed sufficient to shake the firmness of the bravest, and daunt the hearts of the oldest veterans, but the return from the fort could not fail of calling for the respect of as well as of highly incommoding the brave seamen of Britain. In the midst of that

dreadful war of artillery they struck with the greatest consistancy to their guns, fired deliberately and slowly, and took a cool and effective aim. The sloops were torn in pieces and the slaughter was dreadful. At one time the quarter deck of the *Bristol* was cleared of every person but the Commodore who stood alone, a spectacle of intrepidity and firmness seldom equaled."

What terror must that thunder of cannon have struck to the hearts of the helpless wives and mothers of Charleston who thronged the roofs of the city to watch the contest, and sent their agonized prayers to Heaven for dear ones in the dreadful battle cloud, and the noble cause they fought for. How must they have watched the crescent flag of the young Republic, the symbol of its new-born hopes of Independence. While that flag waved they knew the patriots held their own against Sir Peter Parker's veterans. Suddenly, early in the action, it disappeared. How their hearts seemed to stop beating! What—all is lost—the patriots have struck their colors—and no retreat. No—it is a chance shot has struck the flag-staff—the flag has fallen outside the rampart on the beach.

Here comes our hero—no stars or straps on his shoulder. One of the boys in blue. He leaps the parapet—into the very jaws of death—he walks the length of the fort through the storm of iron hail, picks up the flag, fastens it on his ramrod, and scrambling up the rampart, plants it again on the bastion in the sight of all the fleet—the crescent flag waves again to cheer the hearts of the watchers in Charleston. Cheers upon cheers greeted him as he leaped unhurt within the fort. The men could fight all day after that, and they had to; but at sunset what was left of the British fleet sailed slowly away, and Charleston was safe.

And was not the hero rewarded? The next day Governor Rutledge visited the fort and presented Jasper his own handsome small sword, which hung at his side, and thanked him in the name of the country. He offered him a lieutenant's commission, too, and what do you think he said?—"Thank you but couldn't you make it brigadier general?" Not exactly; he said, "No, I thank you, sir. I am only a sergeant. I cannot read or write, and am not fit to keep officers' company." One hardly knows which to admire most, his heroism or his simplicity, but they are apt to go together. Sergeant Jasper he was and Sergeant Jasper he remained till, after other deeds of bravery, he met a soldier's death, gallantly planting the crescent flag on the rampart of the British works at the seige of Savannah.

After the battle at Fort Sullivan its name was changed to Moultrie for its gallant commander. Perhaps some of the old palmetto logs might still be seen under the modern fortifications, but they are not needed to preserve the memory of Colonel Moultrie or Sergeant William Jasper.

The Palmetto Guards, of Charleston, have announced their determination to celebrate the Centennial anniversary of the battle, and have invited all army organizations, North and South, to join in the celebration. It is to be hoped the invitation will be heartily responded to. One of the happiest lessons of this Centennial year is that North, South, East and West are all brothers, with common memories and common interests.

OPENING DAY AT THE CENTENNIAL.

Our great Centennial Exhibition was opened auspiciously on May 10th, in glorious sunshine in spite of threatening morning clouds, and in a better state of readiness than any other of the great World's Fairs had reached on their opening days, in spite of many prognostications to the contrary and chidings of American procrastination.

The scene was one of unbounded enthusiasm and brilliancy. There is always something impressive and inspiring in the sight of a vast crowd, and this was the vastest, certainly, that was ever seen in this country, if not in the world. The very newspaper columns dazzle one's eyes with descriptive epithets—waves of red whits and blus, streaming banners, golden eagles, glittering palaces, imperial majesty, dashing uniforms, costumes of all nations,—with seas of song, colossal orchestral harmonies, chiming bells, thundering salutes, and tens of thousands of voices joining in deafening cheers.

But when one reads of *acres* of closely packed auditors, and estimates of their number at a quarter million, one is apt to feel better satisfied to sit at home and read about it all, with pleaty of breathing room, unless we could have had a place on the grand stand with Dom Pedro, or, better yet, a perch on the top of the main building, the best possible point both for seeing and hearing: the whole gay panorama spread out far below, the music of the orchestra, the voices of the chorus and even the words of the speakers floating up above the confusing noise of the multitude.

We have not begun to tire of watching the panorama below us, when cheer after cheer from the vast throng announces the coming of the procession. First the Governor's Staff, mounted, then regiments and companies of National guards and Marine corps and Militia, with their bands, then in a handsome barouche, drawn by four gray horses, the President of the United States, Governor Hartzanft of Pennsylvania, Secretary Fish, with Mr. Geo. W. Childs, who entertained the President at his home. In the next carriage Secretaries Robeson, Bristow and Taft and Postmaster General Jewell, then the brilliant uniforms of various regiments of National and State troops.

On the Grand Stand the front place was reserved for the President and his party. Here, also, were represented the different departments of the National, State and City Governments, the various Diplomatic Corps, the members of the Centennial Commission, officers of the Army and Navy and other distinguished guests. Many ladies added to the brilliancy of the scene. Dom Pedro, the Emperor of Brazil, with the Empress had a prominent place. As the band was playing Hail Columbia, General Sheridan mounted the platform and was received with hearty cheers from the multitude. As the President walked to the front of the platform, the orchestra played

"Hail to The Chief"

among the shouts of the crowd.

The ceremonies were begun by the rendition of eighteen National Airs of different countries, by the orchestra of one hundred and fifty performers under the leadership of Theodore Thomas. At eleven o'clock began Wagner's Grand Inauguration March written for the occasion. Magnificent and grandly effective as it was, its details were lost beyond the near neighborhood of the orchestra in the immense auditorium. During its performance, Frederick Douglass appeared on the platform and was received with hearty applause.

The venerable Bishop Simpson, Bishop of the Methodist Episcopal Church, then made the opening prayer which was listened to with the most devout and impressive attention by the vast throng. And then the grand chorus joined in singing to a choral by John K. Paine, Whittier's simple and beautiful

CENTENNIAL HYMN.

Our father's God! from out whose hand
The centuries fall like grains of sand,
We meet to-day united, free,
And loyal to our land and Thee,
To thank thee for the era done,
And trust Thee for the opening one.

Here where of old, by Thy design,
The fathers spake that word of Thine
Whose echo is the glad refrain
Of rended bolt and falling chain,
To grace our festal time, from all
The zones of earth our guests we call.

Be with us while the New-World greets
The Old World thronging all its streets,
Unveiling all the triumphs won
By art or toil beneath the sun;
And unto common good ordain
This rivalship of hand and brain.

Thou who hast here in concord furled
The war flags of a gathered world,
Beneath our western skies fulfill
The Orient's mission of good will,
And, freighted with Love's golden fleece,
Send back the Argonauts of peace,

For art and labor met in truce,
For beauty made the bride of use,
We thank Thee, while withal we crave
The austere virtues strong to save,
The honor proof to place or gold,
The manhood never bought or sold!

O! make Thou us, through centuries long,
In peace secure, in justice strong;
Around our gifts of freedom draw
The safeguards of Thy righteous law,
And, cast in some diviner mould,
Let the new cycle shame the old.

Then came the formal presentation of the building; first to the Centennial Commission by Mr. John Welsh, head of the Board of Finance, responded to in acceptance by General Hawley, President of the Commission. This was followed by the singing of the Centennial Cantata, written by Mr. Sidney Lanier of Georgia and set to music by Mr. Dudley Buck of Connecticut. We gave the words of this Cantata in last month's SOUTHERN WORKMAN. The bass solo, sung by Mr. Myron W. Whitney of Boston, rendering the last verse of the Cantata, the Angel's Song to Columbia, was encored and was the most loudly applauded part of the whole musical performance.

General Hawley made the presentation of the Exhibition to the President, who in a longer speech than he is accustomed to, declared the International Exhibition open. As he concluded amidst great cheering, the National Colors were unfurled from the top of the Main Hall, and all the other buildings.

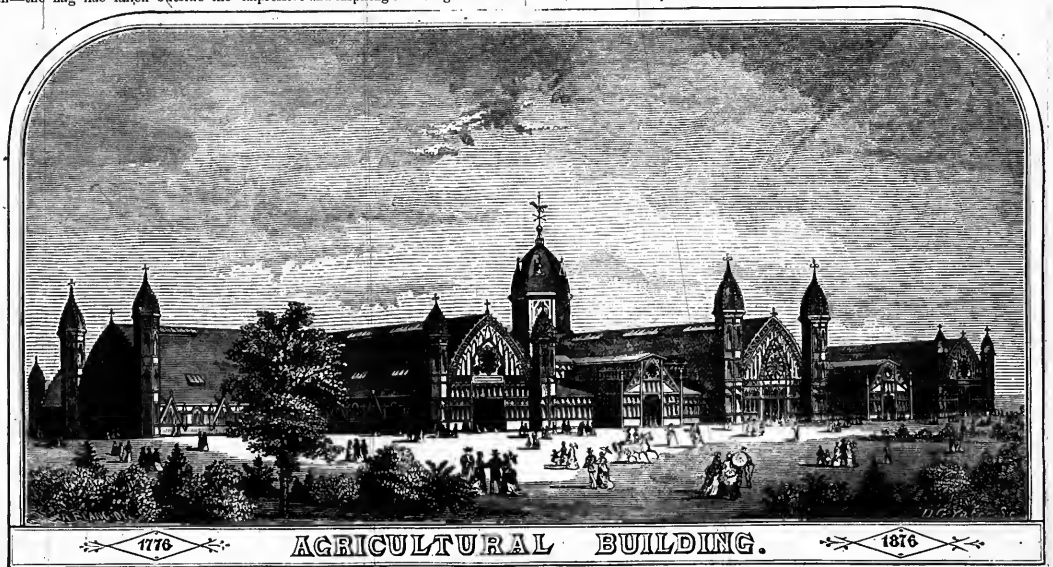
The great procession then formed again, four thousand strong, and commenced the march to the Main Hall, the orchestra and chorus uniting in the majestic harmony of Handel's Hallelujah Chorus. The march was through the Main Hall and Machinery Hall to the platform before the mighty Corliss engine which drives all the vast system of machinery in the great Hall. The President courteously invited the Emperor to join him in starting the engine, and together the chief Rulers of North and South America laid their hands on the throttle and obedient to the touch, the monster awoke to life.

The chimes in the tower burst into a glad melody, a hundred guns boomed forth from George's Hill, and cheers upon cheers from the vast multitude announced the Great Exhibition opened.

THE WOMAN'S PAVILION

was formally opened in the afternoon. The Empress of Brazil was received by the ladies of the Centennial Commission, and with Mrs. Gillespie, the President, started the Baxter engine which furnishes the power to that building. The Empress was much interested and pleased by the beautiful display of woman's work.

And so with great rejoicings, a very general display of the National colors and national enthusiasm throughout the city and a grand illumination in the evening, America's Centennial celebration was opened.



HORTICULTURAL HALL

This was, of course, one of the most attractive and beautiful of the Exhibition buildings. It is also the most nearly complete. Long months ago the exhibitors sent in their plants to accustom them to their new quarters under the care of competent gardeners, and now palms and orange and banana trees, tropical orchids and lilies, and cacti spread their broad leaves and swing their trailing vines, and fill the air with fragrance and the eye with beauty from fruit and blossom as if they were blooming under their native skies, while the enchantment of the scene is added to by tinkling fountains and the sweet music of a wonderful organ played by electricity, the latest, perhaps, of American inventions.

From the steps of this great Conservatory—which, by the way, is three hundred and fifty-five feet long by one hundred and sixty feet wide and seventy-two high—the best and the most picturesque view can be obtained of all the grounds. The long Main Building and the roof of Memorial Hall are visible through the shading trees, the arches of Agricultural Hall, the groups of pavilions and State Cottages, the Woman's Pavilion and Government Building. The grounds around the Horticultural Hall are in better order than any in the enclosure, and here is the pleasantest retreat from the noisy crowds to the quiet of grassy lawns and bright flower beds and shady paths.

LETTERS FROM HAMPTON GRADUATES.

JEFFERSON SCHOOL, CHARLOTTESVILLE, VA.

Dear Teacher:—Knowing that you are always glad to hear from the Hampton graduates, I thought I would let you know what I am doing and how I am getting along. I came to this place on the 1st of October, and took charge of my school on the 11th. When I arrived here I was delighted to find my old friends and schoolmates, Benj. E. Tonsler and Thos. Cayton, looking as hearty and good-natured as ever. They had been teaching here about a month before my arrival.

We have a very large graded school with five teachers and two hundred and eighty pupils. Three of our teachers are graduates of the Hampton N. and A. Institute, the other two are residents of this place and have been teaching here for several years. I tell you we have our hands full. The school that I teach was formerly taught by a northern lady employed by the New England Aid Society. This lady taught here for six or eight years, and several of her old scholars are now teaching schools themselves. Our school is not as well graded this year as it will be next, owing to the fact that this is the first attempt at grading it at all. The grading is all the work of the teachers, and it was not easy work I assure you to place two hundred and eighty scholars just where they belonged, and in such a manner that each of the five schools might have anything like an equal number of pupils, so as to maintain the required average attendance. But we did the best we could under the circumstances, and, hereafter, each scholar, when he enters, will be placed in the department that he is fitted for, and will be passed from one room to the next higher till he goes through the school.

Of course all of our scholars are not just what we would like to have them, either in their habits or morals; but we are doing all we can to bring them up to the Hampton standard. We intend to root out all the noxious weeds and give the useful plants a chance to grow. You know we can't transform a nightshade into a cabbage—don't care what we do to it—so I think the better plan is to pinch it up at once. I have thirty-five pupils enrolled this month—all the other teachers have from fifty to sixty. Nearly all of my scholars could enter the Junior class at Hampton, and a few could enter the Middle class. In addition to the studies required by law, I have a class in Philosophy and Book-keeping. We have our teachers' meetings regularly, when we compare notes, discuss methods of discipline, and talk over matters relating to the welfare of the school generally. We have all of the scholars to meet in one of the largest rooms occasionally, for the purpose of giving them general instructions and securing harmony of feeling. On these occasions we lecture or rather talk to them on some interesting subject, and these discourses are always listened to very attentively, and are invariably followed by many questions from the scholars—some of them much easier asked than answered, which shows that our pupils are wide awake.

Well, I read in the papers sometimes about the colored people's dying out, &c., but it don't look much like it in this place. Two hundred and eighty scholars attending our school, besides those that attend private schools (for there are two or three colored private schools in town), and a hundred or so more running about the streets, looks like anything else but "dying out." When I see all of our pupils assembled together, receiving instruction from teachers of their own race, and hear them strike up one of their old tunes—such as "Roll, Jordan, roll," or some other old plantation song—I am constrained to say that this is God's work; man could never have brought about such a great change. In my next, I will tell you something about the social, moral and political condition of our people here, and how they are getting along generally. Yours very respectfully,

JOHN W. COLLINS.

VIRGINIA, *April* 27, 1876.

Dear Teacher:—Your letter came to hand a day or two before my school closed, and as I have forgotten just how glad I was, I will not now stop to think, but leave it for another time. My school closed, as I told you before, on the 24th of March, and on the following Saturday night we gave an exhibition for the benefit of the Baptist Church. The Baptists were trying to buy a nice brick church from the white people, and as I had no money to give them, I thought I would try to make some for them. I charged ten cents admission, and realized $2.50. The programme consisted of *poetry, prose, dialogues, reading, spelling* and *singing*. The scholars acted their part very nicely, and I felt that the time had not been spent in vain. One old man came to me at the close of the exercises and said, "You closed up your school better than *any* teacher that has ever been here yet."

The last few days of my school were the most pleasant of the term. Everything worked so smoothly that I almost came to the conclusion that I would, though I had said that I would not, teach there another term, I had my scholars to meet me, for the last time, at the school-house on the following Sunday evening, and we had a farewell time, singing, &c. I gave them those little tracts that you gave me, and told them instead of playing marbles and other things on the Sabbath, to stay at home and read them. After making out and sending in my monthly and term report, and putting my school-house in order, I bade it a long farewell on the morn of the 1st of April, and arrived here that eve. I found mother sick and father very much cast down by the dull times. As I did not get my money for teaching, I could not relieve them, and being at home under such circumstances was more a pain than a pleasure to me. So after walking about a day or two, gathering up horns and polishing a few, I, and I went down to where J. is teaching, on the 6th, to attend a teachers' examination on the following day. G., J. and her assistant, I, and I were the only colored teachers present, and we answered every question that was asked us but two.

The examination began with a debate upon how to teach Orthography, and should children be required to spell *through* the *speller* before they learn to read any, and should writing be taught before they are *perfect* in spelling? The representatives of Hampton took an active part in the discussion, and when it closed the majority was in favor of the Hamptonians, who held that it was best to teach the three together as nearly as possible. At the close of the debate we took a short recess, during which time we sang several pieces for the benefit of our white friends who were quite agreeable, and who told us to make ourselves welcome. The meeting was again called to order by the County Superintendent who asked us a few questions in Arithmetic, Geography and Grammar. The questions were answered promptly and correctly, and the Superintendent said that he was satisfied. Then one of the trustees said that he highly esteemed the interest and part that we had taken in the discussion, and the willingness we manifested to learn from others who had had better opportunities than we had, what we did not know. And he said that we did not act as if we thought we *knew it all*, and just as long as we manifested such an interest, they, the trustees and white teachers of the neighborhood, were ready and willing to give us any aid in our work they could; but just as soon as we got to a point where we thought we could not be taught anything, and just as soon as we thought it our duty to teach Baptist, or any Sectarianism, or politics in our schools, that they had no further use for us as teachers. After this he requested J. to sing, alone, "O, bear me away on your snowy wings to my immortal home," for the benefit of the Superintendent. After which we adjourned to meet again Friday, before the fourth Sunday in May. The subject for that day is Arithmetic. I and I went with J. to her boarding-place, and that night G. came and we had a nice time talking and trying each other's skill at dominoes.

I would like very much to come to the Institute and go north this summer as I did last, but I cannot. Money is wanting. I guess I shall go to Oxford, N. C., next week to see if I can get a school.

I am, as ever, your old friend and scholar,

I.

My Dear Teacher:—When I wrote to you before, I told you that the old people were very intemperate, and so they were. At that time there was one temperate man here, (except myself), M. ——, whom I board with. I asked him if he thought that a temperance society would do any good. He said he thought it would. We organized one with thirty-six members, and then went to work. We have monthly meetings and the result has been good indeed; the improvement among the members is the neighborhood talk. We have on roll near a hundred. When I came here I thought that there was as much Africa here as I cared to witness about that time. It was almost dangerous for a man to go to their meetings, because there would be drinking, swearing and fighting, all in the time of service. But I am proud to be able to say that there is not much of it now. The people have learned to have more self-respect, and have come to see that they are only just what they make themselves.

As for political matters, there is nobody here that troubles himself about them. I have not said anything on the subject publicly; in fact, I have had no cause to speak. This is a very quiet neighborhood in that respect; everybody seems to be busy attending to their own domestic affairs. One man asked me why I did not offer for an office. I told him that I had one and as much work as I could do, and that I could do more good in my office than in any other. I find that the clouds of ignorance and superstition are passing away and that the light is beginning to shine. I feel very much encouraged at the change that has taken place. I believe that if we do our duty, the Lord will grant success. Much love to the teachers and students at Hampton. I trust that I shall be able some day to come there and study a little more.

Yours most obediently.

Dear Teacher:—Thinking of Hampton and my kind friends there this afternoon, I thought you would be pleased to know where I am and what I am doing. It was always my intention while in school to become a teacher, as you know. So when the "Teachers' Institute" met in this place last July, I was present, passed an examination, applied for the school here, and received a situation. There were others who applied for the same school, and among them a white man who has been teaching it for five years. And as it is a very large school, two teachers were employed, I as his assistant. I did not like the idea of assisting him at first, as I wanted to see what I could accomplish in a school all my own. But thinking of what our good Principal once said in one of his lectures to the school, I concluded "where there's a will there's a way" and accepted the situation. I am pleased now to say that I have a very nice school. It numbers seventy-five scholars, fifty-two of which I am teacher. So, you see I have a good deal more to do than the principal. I find him a very kind, obliging man. I get along very well indeed with him, and do not think I shall have need to regret my position.

I am teaching Sabbath-school also. The instruction gained in the day-school is very important, but I consider the Sabbath-school instruction vastly more so. There have been schools here for the colored children ever since 1868, but very little interest has been manifested toward them by the teacher, especially as regards their moral and intellectual habits. I found that such a thing as Scripture reading, prayer and singing was an entire stranger in the school. I consulted the principal, and, after long and earnest persuasion, he yielded to my request.

The greater portion of my people in this section are quite industrious, and possess to a great degree good morals. I find that the white man here, as most everywhere in the South, is somewhat prejudiced toward the colored, but not extremely so. For toward the honest, industrious colored man they seem to retain a good, friendly feeling. There are some who are not in possession of such feelings, and one great reason is because *they* fail to have that self-respect and truthfulness which is so very essential to their welfare. As a fact, those that look upon themselves and show an interest in the elevation and progress of their race, are more highly respected by the whites than those who appear unconcerned and willing to take what may be put upon them; for we have heard them say, when asked to aid us in building churches, &c., "We are glad to see you interested for the good of your people and are willing and ready to help you all we can." I feel more and more every day that I can never thank you enough for what you have done for me. But knowing that you helped me that I might help others, I will do all I can. I received the *Educational Journal* of Virginia for the months October and November, for which please accept my many thanks.

Your former pupil,

S.

VIRGINIA.

Dear Teacher:—I received your very kind and interesting letter some time since, as you know, but I have not, (I am sorry to say), had an opportunity to answer it until now. I have been for the last two weeks preparing my school for the closing exercises of my term, which will end in March.

I go to see my mother once in every month. My old playmates around home seem to me just the same as I left them. They were anxious for me to take charge of the school when I came home, but I would not do it, for I thought my influence would not be much among them, being raised up in their midst. They are very jealous of me, too. They don't like to see any one in their rank get above them. They say I am stuck up, because I don't stand on the corner of the streets and in the store doors with them.

The teacher at my home is a colored lady from New York, a graduate of the Philadelphia high school. I think she is a very nice lady.

I was made Superintendent of the Sunday-school here this morning, which was somewhat a surprise to me. I thought it would be better for them to get a man that would be with them all the time; but, however, I did not refuse to serve.

I have been trying to get up money enough to get the Sunday-school edition of the SOUTHERN WORKMAN; but the people are really so poor in this county that it seems almost impossible for me to do so. But, nevertheless, I will not give up trying. The board here spoke of extending my term, but I don't know whether they will have money enough in the treasury to do so. If they don't, I will have a pay school for awhile. The county has not, as yet, paid me for my services.

Yes, Miss H., I can truly say there was no lesson I learned at Hampton that could be compared unto the love and trust I found in my Father in Heaven. I realize His goodness every day to me, and He has ever been a good and loving Father. But at times I think I am so ungrateful and wicked! I pray to Him daily to keep me near Him and to make me a better Christian—a true Christian. I have prayed for M., and I intend to keep praying for him until God converts his soul.

I don't know whether I will be able to make it convenient to get to Hampton this year to take the course of Normal training or not. I would like to very much, but I can't say just now. As I think of nothing more to say at present, I will bring my letter to a close. Please write soon, and please don't treat me as I have you. God bless and pour out his blessings upon you day by day is my prayer.

I am, ever your friend,

J.

VIRGINIA, *March* 20, 1876.

Dear Teacher:—Yours of the 10th date of January is in hand. And in accordance with your request I have shown your proposition, concerning the Sunday-school paper, to the pastors of our churches; but I cannot say that they have done as much as they might have done for it. I am truly sorry to say that our most influential men are so inactive to the general good of the people. At this time, the people must be met at the church or not at all. They will not readily turn out to any meeting save a church meeting. And in many cases the pulpit occupants are men who look too narrowly at their duties, as the new principal influence in the community. And ever since the emancipation this has been so. For the past four years my attention has been drawn to the fact, and the pressing want of men prepared also for the religious teaching of the colored people. I think it is a fact that our people can be better reached from the pulpit than any other place. They will go to church if nowhere else, and in most cases whatever is said from the sacred stands is law and gospel. And I must say that I am glad that they have such unwavering confidence in their spiritual leaders. Were it otherwise I firmly believe they would be much more difficult to lead. Therefore I thank God that he has provided a means by which His people may be reached and put to action.

So far as I know of the general standing of our teachers, it is good, and they have great power over the people in almost every particular save one, and that is this: they rarely can get them to come together for any purpose to do business. Teachers sometimes may say what they may in the way of having the people attend certain appointments, and it only serves for the time being. I have striven very hard since my teaching to have them turn out upon all occasions of any merit. I think it is the best way to reach them and wrought such impressions as will cause them to go to work, that is, more zealously. A person who desires to see things more in what he calls the right way and gait does not like any other movement. Our people here sometimes are all alive in good things, and then again they seem to be all asleep to everything that is good. I find and feel the great want of more workers in every community. One or two men cannot begin to do the work that is to be done among our people.

While I have been working for the SOUTHERN WORKMAN, it has been almost alone. I had a chance not long ago to make explanation of the paper which you sent me to show the pastors. And during the time I asked the congregation if it would satisfy me to know how many there were in it who were subscribers to any paper at all, and so they did. When I called for hands there were to be seen between five and ten in the midst of many people. Well, I was startled at this, and hardly knew how to treat that sad aspect. Anyhow, endeavored to say something that would do them good and show them the consequences of not being posted in the common reading of the times. And I have reason to believe that my talk did good. There would not be half the difficulty there is to circulate a good paper if the parents could read. But since they have not this privilege they care but little for their children in this respect. I tell them to take a paper anyhow, and make their children read to them. And I furthermore tell them that they must take a paper for their children's benefit. I want to attend the teachers' institute, so you may regard me as one of its members. I receive the journal every month, with thanks to you. Many subscribers might be had here with a little trouble. I want to write you a letter about the people in general as soon as I can.

I am yours,

T.

A CAUTION FOR THE BOYS.—The swimming season is nearly at hand, and in a few weeks the bath houses will be liberally patronized and secluded nooks by the waterside eagerly sought out. There is a fact which we would like to have impressed upon the minds of the boys, remembrance of which may save some of them from death. The art of swimming is a grand one and should be generally learned, while the healthy results of the swimming bath are invaluable. But there is a time for the bath as for all things else, and that time is not immediately after meal-time nor when the body is overheated by activity. No person should enter the water within two hours after eating, for the reason that there is great danger of epilepsy at such times, many fatal bathing accidents being attributable to this fact. There are doubtless many persons, especially boys, who enter the water repeatedly just after eating and have escaped serious consequences. Thus far they, of course, have been very fortunate, but the fact remains that in every instance when they have gone swimming at such times, they have placed themselves in extreme danger of death. The danger of bathing while the body is overheated we have pointed out so often that we need only emphasize it at present by this allusion. These matters are worth remembering.

Mr. Charles Nordhoff, for many years on the editorial corps of the New York *Evening Post*, has within a year or two brought out two interesting books on California, Oregon and the Sandwich Islands, and more recently a work in pamphlet form, giving the results of a winter of travel and observations in the Southern States. It is a valuable and suggestive work. We quote from it the following forcible paragraphs:

NEGRO SUFFRAGE NOT A MISTAKE.

No thoughtful man can examine the history of the last ten years in the South, as he may hear it on the spot and from all sides, without being convinced that it was absolutely necessary to the security of the blacks and the permanent peace of the Southern communities to give the negro, ignorant, poor, and helpless as he was, every political right and privilege which any other citizen enjoys. That he should vote and that he should be capable of holding office was necessary, I am persuaded, to make him personally secure, and, what is of more importance, to convert him from a freedman to a freeman. That he has not always conducted himself well in the exercise of his political rights is perfectly and lamentably true, but this is less his fault than that of the bad white men who introduced him to political life. But, on the other hand, the vote has given him what nothing less could give—a substantive existence. It has made him a part of the State; wherever, as in Arkansas, the political settlement nears completion and the color-line is broken, his political equality will help slowly—but certainly—to make him a respectable person. I will add that in this view many Southern Democrats concur. "If the North had not given the negroes suffrage it would have had to hold our states under an exclusively military government for ten years," said such a man to me.

THE NEGRO INDUSTRIES.

Free labor is an undoubted success in the South. The negro works; he raises cotton and corn, sugar and rice, and it is infinitely to his credit that he continues to do so, and, according to the universal testimony, works more steadfastly and effectively, this year, than ever before since 1865, in spite of the political hurly-burly in which he has lived for the last ten years. Nor ought we of the North to forget that a part of the credit of the negroes' industry, to-day, is due to the Southern planters who have been wise enough to adapt themselves to the tremendous change in their labor system, and honest enough not to discourage the ignorant free laborer by wronging him of his earnings, or by driving unjust bargains with him. I have satisfied myself that the black man gets, wherever I have been, a fair share of the crop he makes. If anywhere he suffers wrong, it is at the hands of the small farmers, who cultivate a thin soil and are themselves poor and generally ignorant. It is a curious evidence of the real security of the negro, even in the rudest parts of the South, that many thousands of them have emigrated from Alabama and Georgia into the Yazoo bottoms in Mississippi and into the cotton regions of Arkansas and Louisiana—parts of the South where, if we might believe the general reports which have been spread through the North, no negro's rights or life are safe.

THE NEGRO NOT FOREHANDED.

The black laborer earns enough, but he does not save his money. In the heart of the cotton country a negro depending on his own labor alone, with the help of his wife in the picking season, may live and have from seventy-five to one hundred and twenty-five dollars clear money in hand at the close of the season. If he has several half-grown boys to help him in the field, he may support his family during the year, and have from one hundred and seventy-five to two hundred and fifty dollars clear money at the year's end. Few laborers as ignorant as the average plantation-negro can do as well anywhere in the world. Of course he lives poorly; but he thrives on corn-meal and bacon, and has few doctor's bills to pay. Unfortunately, as yet, he commonly spends his money like a sailor or a miner, or any other improvident white man. Very few lay by their earnings; yet the deposits in the Freedman's Bank showed how very considerable were the savings of the few, and I am sorry to say that the criminal mismanagement of this trust has struck a serious blow on the South, for it has given a fresh impetus to the spendthrift habits of the blacks. They have, as yet, far less desire to own farms than I hoped to find. They are, like almost all rude people, fond of owning an acre or a house-lot; and in Southern towns and cities it is common to find them such owners. But a comparatively small number, as yet, are freeholders in the best sense of the word. This, however, will come with time.

SCHOOLS AND CHURCHES.

They are anxious to send their children to school, and the colored schools are more abundant in those states which I have seen than I expected to find them. I think it may be said that the colored people, so far, have got their fair share of schools and school money. By general consent of both colors, there are no mixed schools; nor would it be wise to force this anywhere. The church is a favorite and well-supported institution among the blacks. I was surprised to see both their number and the substantial character of the church-buildings in the towns. Most of the colored people are either Baptists or Methodists, and their preachers, almost universally negroes, are often illiterate and sensational. The congregation is easily excited, and the preacher evidently thinks he has failed unless he produces shouts, shrieks, and other demonstrations among his audience. I cannot say that the negro congregation is either noisier or more fantastically demonstrative than many white congregations I have seen in the rude parts of the West in my younger days; and on several occasions I heard a negro preacher denounce the sins of his people with a plainness of speech which might with advantage be imitated in more pretentious churches. The preachers, being men of influence, have naturally become politicians. One or two have been sent to Congress. The State Legislatures have also contained them, and they are not always men of good character. It seems to me a pity that both races cannot attend the same Christian church. The church ought to be democratic in the truest and largest sense of the word, and, if it were so, it would be a more important means than it now is in the South for the moral elevation and the civilization of the colored people; but I fancy the blacks prefer their own churches, and would be more difficult to change in this particular than the white people even.

THE OIL RESOURCES OF AFRICA.

For miles along the west coast of Africa, extending between Cape Blanco and St. Paul de Loando, are vast forests of palms, the oily fruit of which has for centuries rotted unused upon the ground. The palm forests back of the coast line between Cape Palmas and Elmina are said to be practically inexhaustible; and so also, in the neighborhood of Fernando Po, immense tracts are covered with the trees. The total export of the palm oil to England exceeds, it is said, 50,000 tuns, or a value of $10,000,000 per annum; but this represents an exceedingly small commerce compared to what might be the case were the enormous resources fully or even moderately utilized. The Fernando Po oil crop, as an example, seldom equals 400 tuns per annum; altogether 4,000 might easily be produced.

The difficulties in the way of development are the unhealthiness of the country and the monopolies controlled by slave-dealers. One of the latter buys the entire right to a large and valuable region by paying the King of Dahomey $10,000 a year. The iniquity of this monopoly is increased, by this King himself, without reference to market prices. The penalty of noncompliance with the King's command is decapitation. Trade is carried by the most primitive means. In Bonny, which is now the greatest palm oil market on the West Coast, the manila, a bronze coin from Birmingham, England, not unlike a bracelet in shape and size, is the current medium for money, in Old Calabar, the currency is copper wire and brass rods, about three feet in length and bent double; on the Guinea coast, gold dust is used, and one tribe uses strips of iron tied up in bundles of eight or ten pieces.

The fruit from which the oil is obtained grows in the form of a large cone, about the size of a man's hat. It is covered with long spines which protect the nuts, the latter being about the size of a large olive and of a deep golden color. The palm tree forests in the midst of which most of the factories exist, are said to be very picturesque. The trees, which tower to an enormous height, are as thick as it is possible for them to be, forming in some places large and impassable clumps, and in other, opening in wide and tortuous vistas. The trunks are often covered at the lower part with tufts of lovely fern, the emerald green of whose long fronds, as they droop gracefully to the earth, forms a beautiful contrast to the sombre brown of the trunks which they ornament. In the open spots in the forests, the factories, mere collections of huts, are built. In Dahomey, the nuts when gathered, are thrown into a trough formed by marking off a small area about six feet square, beating down the earth to form a floor and enclosing it in a wall about eighteen inches high. Into this receptacle the husks are thrown, to be trodden under foot by women until the husks and the oil which exude together, form a kind of putty. The mass is then thrown into vessels of hot water, when the oil rises to the top and is skimmed off. In Fernando Po, it is the practice to let the nuts rest in heaps until almost putrefied; hammering with stones follows, and then simmering of the pulp in a kettle, after which the women squeeze out the oil with their hands. The men do not engage in the manufacture, their labor ending with climbing of the trees and shaking down of the fruit. It will be observed that the outside of the nut only enters into the process. The kernel separately yields a so-called black oil, and forms the staple of a trade with England, where the hard portion is subjected to the action of powerful crushing machines.

Oil from the palm nut is, however, by no means the only fatty product to be obtained from rank African vegetation. No one has ever estimated the vast resources of this description, which abound in the countries bordering on the river Niger: and it is only in the shape of experimental and comparatively small exports that we get a glimpse at them. From Senegambia and Guinea come Touloncuma oil, used by the natives for annointing their bodies and for burning in lamps, and Galam oil, a natural vegetable butter very much used in Africa for preparing food. The castor oil plant grows wild with great luxuriance in Senegambia; and throughout West Africa there is an immense yield of pea or ground nuts, which already has given rise to a large commerce. In the northern part of the continent and especially Algeria, there are enough olive trees to supply, if fully developed, the demand of all Europe. The province of Kabyle is an enormous olive tree forest. The cocoanut palm grows in immense forests in Zanzibar, where its fruit is exported to France and England for making stearine for candles. The *trichilia capitata* on the Zambesi produces small black seeds which contain a large quantity of solid fat. The "forna" nut of Central Africa yields an excellent oil for culinary purposes, and is cultivated by the natives. A tree discovered by Dr. Kirk on Lake Nyassa, also gives a rich oil, which even the natives have not utilized.

There is no doubt but that, in the gradual progression of commercial colonies for development of the resources we have indicated, the most rapid means for opening up the interior of Africa will be found. Such expeditions as those of Stanley and other isolated explorers, though they may add to our knowledge of other resources, do nothing toward their utilization, but rather only show us how great is the task which civilization sooner or later must accomplish, in overcoming the natural obstacles of a neglected continent.—*Sci. Am.*

Agricultural.

CHARCOAL AS MEDICINE.

Nearly all sick horses and cows are made so in the first place by eating improper food, or too much of it. As soon as the owner finds any of his animals sick, it is the common custom to begin dosing with medicine. We must not leave the animals to die—we must "do something!" and so all manner of hurtful drugs and poisons are thrust down its throat—saltpetre, copperas, turpentine &c.—quite sufficient to make any well animal sick, or to kill a sick one. This evil is increased by the neighbors' remarking as follows: "You didn't give the poor thing enough;" "you should give it oftener;" "you can't expect your beast to get well if you don't do more for it."

My rule has always been to give nothing unless I knew exactly what to do; and in the meantime attend to every exterior comfort practicable. If the weather is cold, I place the sick animal in warm quarters, avoiding all exposure and giving pure air and strict cleanliness.

There is one medicine that can never do harm, and is commonly beneficial; this is pulverized charcoal. As I have just remarked, nearly all sick animals become so by improper eating in the first place. In nine cases out of ten the digestion is wrong and charcoal is the most efficient corrective. It will cure in a majority of cases, if promptly administered. A hired man came in with the intelligence that one of the finest cows was very sick, and a kind neighbor proposed the usual drugs and poisons; but the owner being ill, and unable to examine the cow, concluded the trouble came from overeating and ordered a teacupful of pulverized charcoal given in water. It was mixed, placed in a bottle, the head held upwards, and the water and charcoal poured down. In five minutes improvement was visible, and in a few hours the animal was in the pasture quietly eating grass.

Another instance of equal success occured with a young heifer, which became badly bloated by eating green apples after a hard wind. The bloating was so severe that her sides were almost as hard as a barrel. The old remedy—saleratus—was tried for the purpose of correcting the acidity, but the attempt to put it down always caused coughing, and it did little good. Half a teacupful freshly of powdered charcoal was next given. In six hours all appearance of bloating was gone, and the heifer was well.—*The Veterinarian.*

HINTS ABOUT WORK.

Plowing for Corn.—There is no better ground for corn than a well top-dressed sod. The nearer the plowing of this can be brought to the time of planting the better. The seed quickly germinates in the moist fresh soil; the cut worms are busy upon the grass roots and let the corn alone, and the weeds do not start until the corn has had time to get a good growth and shoot ahead of them. The quick growth is greatly helped by some active fertilizer sown on the surface and harrowed in lightly.

Selection of Seed.—It is important that good seed be used. If the best ears have not been selected at husking, or at harvest time from stalks bearing two ears, it would be better to pay a high price for good seed to those who have been more careful, than to take the seed from the corn crib. It is only by carefully selecting the seed for years in succession, that we can improve our present varieties.

Planting Corn.—With the excellent implements we now have for cultivating this crop, there is no need to plant in squares or hills and so waste ground. With rows from 3 to 4 feet apart, the seed may be dropped singly 6 inches to a foot apart. We can have then in the first case 29,000 plants of the small kinds, and nearly 15,000 of the large kinds to an acre. With one good ear to a stalk, the crop would be equal to from 140 to 150 bushels of shelled corn per acre. Why cannot every stalk in a corn field be made to produce a single ear as well as a portion only, when room enough is given? This is what we have yet to learn in the way of growing corn.

"*A good Start*" is a great help in doing any thing, but most especially in growing crops. To thoroughly harrow the ground before sowing, to sow the seed while the soil is fresh, and to use some active fertilizer near the seed, but not in contact with it, will give any crop a good start. The common mixture of poultry droppings, wood ashes, and plaster in equal parts, makes an excellent fertilizer. If mixed while dry, or immediately before using it, no ammonia from the droppings is lost.

YELLOW FEVER DISINFECTANTS.

Whenever a case of yellow fever occurs in New Orleans the streets surrounding the square are sprinkled with Calvert's No. 5 carbolic acid diluted in fifty parts of water. A large sprinkler on wheels is used for the roadway, and the sidewalks are sprinkled by hands. The grounds of neighboring yards are similarly treated, and the privy vaults disinfected with a solution of zinct iron chloride. At the termination of the case by death or removal, the infected apartments are fumigated with sulphurous acid or chlorine. The extent of the ground disinfected is according to the lapse of time since the appearance of the fever. The extent of the infection along the ground is about forty or fifty feet daily, so that after some days' delay the whole square must be inclosed with a disinfecting band, and the enclosed surface sprinkled.

THE CONSERVATORY
OF THE
Hampton Normal & Agricultural
INSTITUTE

Now offers for sale—roots of the *Yellow Jasmine, Coleus, Begonia, Honeysuckle*—Fragrant Monthly, *Pink Azalea, Geraniums, Heliotrope, Euoymous or French Laurel, German Ivy*, and grasses for hanging baskets; bulbs of the *Amaryllis Atamasco, Calla Lily, Smilax* and *Oxalis*.

THE HYGEIA HOTEL,
H. PHOEBUS, PROPRIETOR.
OLD POINT COMFORT, VA.
Terms: Transient $4.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, threnghly built and elegantly furnished, is situated npon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salnbrity, the range of the thermometer here for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 69°. 74°, 78°, for Summer; 70°, 59°, 46°, for Autumn; 45°, 44°, 43°, for Winter; and 48°, 52°, 63°, for the Spring months. —Open for guests all the year.— 11-75, tf.

60 to 80 BUSHELS PER ACRE!

THE WHITE RUSSIAN OATS
SOMETHING NEW!
Farmers Read This.
Agents Wanted in Every County.

These Oats have lately been introdnced into this country and prove to be the best now known. The attention of farmers is especially invited to this new cereal, which for their prolific qualities, hardiness and perfect adaption to every variety of soil and climate, makes them a peculiar favorite wherever introdnced. Their yield is enormous—being from 60 to 80 bnshels per acre. They are strictly rust-proof. A package that will yield from 6 to 10 bnshels of Oats with circnlars giving special terms to agents and full instructions as to time and manner of sowing will be sent pre-paid to any part of the United States or Canada on receipt of $1.00 or 8 packages for $5.00; 1 dozen packages for $8.00; one-half bushel $3.50; 1 bushel $6.00.

These Oats we offer are fresh and gennine seed of last year's production.

Now is the time to procure your seed, so as to be prepared for early fall sowing. Address
C. H. TIBBS & CO.,
6-2 Cleveland, Bradley County, Tennessee.

The American Educational Cyclopaedia,
A REFERENCE BOOK FOR ALL MATTERS OF EDUCATION IN THE UNITED STATES AND IN THE WORLD.

It is valuable for **Teachers, School Officers, Clergymen, Lawyers, Editors, Politicians, and Parents** with children to edncate. It is endorsed by the highest anthorities in the land, among which are 47 ont of 48 State and Territorial Superintendents. It contains 800 pp., bound in cloth, $2; in manilla covers, $1.50. J. W. THE
NATIONAL SERIES
OF
STANDARD
TEXT-BOOKS.

This series of school-books, nnmbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

HAMPTON, JULY, 1876.

PREMIUM.

From and after November, 1875, *on receipt of one dollar, one year's subscription to the* SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. *The books are sold at fifty cents apiece.*

THE possibilities of negro culture are no longer a question. To be black is not to be incapable of the highest scholarship.

The differentia of the two races in respect to intellect are in the average and not in the absolute.

But capacity for knowledge is not necessarily capacity for progress. Lack of brains is not the greatest difficulty with tropical or oriental races. The Hindoos and the Zulus have poets and orators.

A people in the ruts of barbarism, as were some of the ancients, may have a literature and science that will not in the least relax their bondage to vice.

We cannot reason from intelligent negroes, necessarily, to a civilized progressive race. The question with them is not one of special proficiency, of success in one direction—the pursuit of knowledge—but of *success all around.* It is one of morals, industry, self-restraint; of power to organize society, to draw social lines between the decent and indecent, to form public sentiment that shall support pure morals, and to show common sense in the relations of life.

Too much is expected of mere book-knowledge; too much is expected of one generation. The real upward movement—the levelling up, not of persons but of people, will be, as in all history, almost imperceptible, to be measured only by long periods.

It is easy in twenty years to teach a million of colored children to read, but that is not all. Ninety-five per cent. of the Sandwich Islanders, from five to twenty years old, are at school, yet they are decaying. Spelling books do not, as a matter of course, make manly fibre, and practical self-restraint is not the immediate result of learning. If a plain education increases, as we believe it does, the average man's value by twenty-five per cent, it alone cannot change his nature nor extinguish the passions that he has inherited and that incapacitate him for self-government. That requires time.

Knowledge must be digested; the negro's power to acquire it is greater than his ability to assimilate and turn it to account; it sometimes makes him seem like a ship with much sail and little ballast.

Only so far as common sense and character influence a people and make a public sentiment are they advancing,—not that the majority need be virtuous and high-minded, but that there are enough good and resolute men to compel respect for decency and put down the wrong, no matter how many on its side. Thus ten righteous men may save a city. Moral force is the heavy artillery that Providence takes sides with. This and not his machinery and manufactures is the success of the Anglo Saxon. In vain has he belted the earth with telegraph wires and tracked it with railroads if corruption shall triumph over honesty.

This race presents many discouraging aspects, but it is saved and continually improved by a leaven of good and true men whom schools and seminaries of learning yearly supply.

But such men are not so much the product of schools as of home influence. The family is the corner stone of national existence as well as the unit of the church and of society. At the fireside and the family altar is kindled the light that leads to the salvation of a people: here are nurtured the men and formed the forces that shape destinies. History abounds in proofs of this.

The Christian home is the point of departure of civilization. Without it schools and churches can do but little, as among the heathen who may be converted to the truth, but so long as they live like savages, no matter what they profess, they only attain to a low standard of morals and easily backslide. As a missionary once said, "They compare well with respectable sinners at home." They may be gathered into schools and into the fold of the church, but the family only can supply the nurture that makes character strong and the conscience quick and sound.

Colored youth, to escape the terrible associations of negro life, the temptations of which are inconceivable to those in good circumstances, and to become better than their fathers, need the training and the refuge of Christian homes. Are they springing up as the result of negro education? Are there signs of social organization and of sound public sentiment?

In Norfolk, Richmond, Danville, Charlestown and throughout the South the negro is a considerable property owner. He has over 300,000 acres of land in Georgia alone. As a squatter he lives in squalor; as an industrious tenant he improves; as an intelligent freeholder he builds a decent house, tidily kept, with a pretty garden.

The dead level of slavery is broken; they are rising or sinking according to their qualities and opportunities; thousands are collected in families. In time we expect to see such diffused intelligence, such self-respect and regard for character as to create a leading class, creating, by sympathy and unity, a higher negro sentiment, honest and fearless, sensible and not sentimental about the position of the race, making the best of their disadvantages, and, regardless of numerical weakness, trusting in being right and in moral force for controlling influence.

With this directing power which institutions at the South are preparing, the colored race, though weighed down by a mass of degradation, should steadily prosper, gradually passing from subjection to impulse to subjection to reason; basing their prosperity upon ownership of the soil, and diligence in labor and study, and in whatever their hands find to do. Their children will then grow up in good home influences and school-teachers will sow their seed in fruitful soil. There will be a success higher than intellectual attainment, success in moral force, in good sense—success all around.

THE American Missionary Association of New York has established in nearly every Southern State one or more educational foundations of great present and prospective power for the welfare of the colored race whose benefits therefrom it will be difficult to estimate.

While devoting due attention to theological training it has, far more than any existing organization, done a generous and catholic work in fitting teachers whose mission is not sectarian, but for the benefit of whatever denomination may reap the fruit of their labors.

Congregationalists have sent over a million and a half dollars into the South and, for twelve years, over four hundred teachers annually, through whose aid thousands have been brought to the light, but they have received no corresponding increase of numbers. Baptist and Methodist societies have been far more benefitted.

The American Missionary Association burdened itself with a heavy debt of nearly $100,000, because it was better to incur the debt than to refuse the passionate appeals for teachers that came up from every quarter of the South. At the close of the war, the enfranchised blacks sought instruction *en masse*; not a dollar was offered by a southern state; the need was imperative. Few realized the danger of letting the first fresh tide of enthusiasm die out, as in Jamaica where the aspirations consequent upon emancipation have, from neglect, almost ceased.

In the present stage of negro education debt should be avoided; foundations have been laid; state taxation is providing for free schools; the movement is assured and the duty of the North is to aid the important central institutions that yearly send out fresh forces as teachers and preachers to combat ignorance and superstition.

But ten years ago the situation was critical. Kuklux were rampant; it was venial to shoot a "nigger"; the Carpet-bagger was reaping his wicked harvest in the name of loyalty and patriotism, and the terrified or plundered freedman, a victim or a tool, found his best friend in the ostracised and detested "Yankee schoolmarm" who alone brought the means of escape from his real bondage—that to ignorance and his own vices, and, with the Bible and the spelling book trained his conscience and his mind, teaching him to use prudently his new-found liberties. To meet the need of the hour compelled a debt just as much as it did to drive the armies of Lee from the defences of Washington. That debt was incurred in the cause of liberty and humanity, and the wealth of the nation that owes so much to negro labor and to the efforts of the American Missionary Association should pay it.

FUNNY.

A correspondent of the *Virginia Patron* thus reinforces the thunder of the Anti-Free-school party:

He says,—"The truthfulness of the forcible argument of 'Civis' in his recent warfare vs. Public Schools, viz.: that 'the negro has an inate consciousness of his own inferiority and if left alone will show it on all occasions," was happily illustrated right in the circumstances which seek to make him an equal. Riding in to Danville early one morning, my companion and myself overtook a party of negro lads and lasses en route for the school-house. My companion, it must be said with regret, was given to profanity and an occasion so extremely loathsome scarcely ever failed to arouse him. The words here quoted from him were, then, interspersed with frequent oaths and uttered in an extremely angry tone:

Com.—(Loudly and angrily.) Where are you goiug?

Boy—(With fear and trembling.) Ise gine—giae—gwine to schule.

Com.—(With surprise.) What for?

Boy—(Nervously.) Dey sends me, sur.

Com.—(Same toue.) Who?

Boy—Dad.

"By this time the boy's nerves have become completely unstrung beneath so strong a charge of angry looks, tones and words, and 'his deeply moved soul is expressing itself in eloquent tears.'

Com.—(More tenderly.) What is that in your hand?

Boy—(Fearfully.) It's (sob) it's (sob) it's a book, sur.

Com.—What do you do with it?

Boy—(With more courage, his educational pride being touched.) I (wipiag away a tear) I—I—I tries to learn.

Com.—What are you crying for?

Boy—(Tears all gone.) Ise skeered.

"There was a brighter and more hopeful tune on the countenance of this future statesman, (our 'nation's ward'), as our companion assured him as we drove on that he would be likely to serve his state after a while. 'But' added he, to me, 'it will be, if ever, in the penitentiary.' The utter folly of an effort to make the negro an equal of the whites, bears absurdity on its very face. The very 'innate consciousness of his own inferiority' is and will be found an insurmountable barrier."

Argument,—A small black boy cries when sworn at furiously by a big white man.

Ergo.—The negro race has an innate consciousness of inferiority.

It may be that "Com's." own small boys are too much used to their parent's profanity to find it awe-inspiring. Possibly they are developing an innate consciousness of future superiority of their own in that line.

We *have* seen a mere small white boy thrown into fits of tears by the sight of a big black man, without the adventitious aid of swear-words. He was terribly "skeered," but the force of the inference—the innate consciousness of inferiority in the white race—did not then occur to us.

WHEN so much is said and so vigorously said by the leaders of one party in the South of the "unmistakable" evidence that the "real feeling of the people" is in sympathy with "Civis" and Dr. Dabney in their attacks upon free schools and negro education, it is only fair to give the real feeling of a very opposite sort that exists in the South a chance to come to the surface. The letter from a Southern lady which we print in another column gives as "unmistakable evidence" as could be desired of such a feeling, and there are many reasons to believe that it is very widely spread among the best of Southern men and women. The letter is addressed to a former "Mammy" in the writer's family, now employed as forewoman in the Industrial room of the Hampton Institute, where two of her sons are at school.

WE QUOTE from a correspondent of the *Springfield Republican* the following translation of an extract from a leading journal of Paris, and remark that the educational institutions and departments of the various states from which, as from perennial fountains, streams of pure and saving influence are pouring over the country, are, most of them, assigned to places in the Centennial Exposition anything but expressive of their importance to the nation's future, compared with the contents of show-cases and specimens of handiwork adapted to the cravings of luxury:

"It is by liberty and labor that this miracle of a growing power has been accomplished. The exposition at Philadelphia is nevertheless not all, and at this moment, when the wonders of industry are displayed in one of the historic cities of the United States, many other problems are agitated in this land so rapidly transformed by an indefatigable race. There is, above all, a question of grave importance by the side of the pomps of Philadelphia, viz., What is the real measure of progress in ideas, morals and institutions beyond the Atlantic? The great republic has, up to this time, triumphed over all natural difficulties as well as the complications of civil war. The exterior is grandeur, but what is there beneath it? For some time strange symptoms succeed each other, and seem to reveal an increasing invasion of corruption upon the domain of public morals. One recollects that, some years since, frightful scandals were discovered in the municipal administration of New York. There was then an organized plunder of all public and private interests, and unfortunately this was not peculiar to New York, but was reproduced, though with less noise, in many other cities. No one can tell how far this corruption has gone or may yet go. This is the reverse of the beautiful medal of the American republic. The evil exists, beyond a doubt. A congressional committee, some years since, bluntly declared, 'that it was necessary to turn the thieves out of public service—that they were to be found in offices high and low.' General Grant has said, in one of his messages, that it is necessary 'to protect the country from numerous abuses and the squandering of the public funds.' Parties have made haste to put in their programmes 'the reform of the civil service.' And to sum up all, it is proved that this strange phenomenon of administration and political demoralization has made alarming progress for a number of years. It is a problem which earnestly engages the most eminent publicists of the United States. The evil which strikes the most clear-sighted minds of the United States, and of which the recent scandals are only a symptom, is due to causes diverse enough and profound enough,—to an ever-increasing change of morals and institutions. That which made the strength of the constitution, as Washington understood it, scarcely exists, to-day. The great republic begins to suffer from the vices of democracy—from the unchaining of cupidities provoked and favored by an unlimited system of elective offices—from the lowering of the moral and intellectual standards in public assemblies—from the blustering denomination of *politicians* organized to prey upon the public life. It is doubtless only a crisis, and the people which has known how to triumph over the danger of dissolution by civil war will, sooner

or later, know well how to oppose energetically that which threatens its moral and national existence."

THE letter from Mrs. Orra Langhorne of Lynchburg, will be read with interest as the testimony of an educated Southern lady, born and brought up under the old regime. Her views as to the character, progress and capabilities of the freedmen possess peculiar value for all interested in the colored race.

THE HAMPTON NORMAL SCHOOL acknowledges with thanks the receipt of a patchwork quilt, the work of the pupils of the Washburn Industrial School of Worcestor, Mass. This Industrial School, founded years ago by Deacon Ichabod Washburn of Worcester, is one of those successful charities which are quietly working out here and there in our land, in the very spirit of the Master, the problems of the world's redemption. Children of any aid and nationality are welcomed alike to its privileges if they need aid and are willing to learn to sew. The last report, read by Rev. Mr. Cheever for the Superintendent, Mrs. Souther, shows a good year's work. The school has met every Saturday since November 6th. Twenty ladies have given their time to the labor of teaching sewing, Scripture lessons, and singing. One hundred and fifty children have been members of the school during the past winter, with an average attendance of one hundred and thirty, and four hundred and forty-five garments have been cut and prepared for their use, of which one hundred and one have been completed by two classes this session. It is required that these be made neatly and presented for examination. On New Years Day each child received a present of a parcel of candy and a picture card, and at the close of the session each girl of the twenty classes received a package of flannel for a skirt, and an orange. The humanizing and elevating influence of such practical benevolence will tell upon many generations, and the cup of cold water to these little ones will not fail of its reward.

AT THE beginning of the year, the American Colonization Society issued an appeal for funds to send a company of colored emigrants to Liberia, the expenses of the past year having exhausted the receipts of $24,230.23. The Executive Committee remark that the society "has demonstrated the practicability and desirableness of setting the negro on his ancestral shores." And their appeal is made in the belief that "African colonization involves the highest interests of the colored population of the United States and the civilization and evangelization of Africa." The value of teachers of their own race for any people who are to be elevated has indeed been established again and again in missionary lands and among our own freedmen. Just how it is to be proved in Africa—whether by training native helpers on the ground, or by colonizing colored Americans, and whether the American freedman can in most cases best help his people by emigrating to Liberia or by staying here, are still open questions, and we shall be glad to give our attention fairly to any facts bearing upon either side.

The New York *Tribune* some time ago published a striking letter from a colored resident of Liberia to an American friend, in which he asserts that the influence of the Liberian Colony upon the natives has been anything but civilizing, that the wars have resulted from the colonists' oppression, and that they have even tried to reduce the aboriginal tribes to slavery in fact if not in name. He says that a Liberian Senator declared to a white missionary from the United States, "Sir, I assure you it was a great mistake that we did not introduce slavery here," and that this spirit pervades the community. This sounds almost incredible; but he forcibly says: "How indeed could it be otherwise? We know only slave-holding civilization. No one can expect the stream to rise higher than its source. It is wrong to suppose that to have suffered injustice and hardship makes men merciful and just. To expect us, the victims of tyranny and oppression, to be other than tyrants and oppressors is as unphilosophical as it is unjust."

Strange as is this fact of human nature, it has often been repeated in history. To suffer persecution does not make men merciful—the Children of Israel enslaved the Canaanites—Calvin burned Servetus—the Puritans hung the Quakers. Is this an inevitable chapter in the future development of African history, or can we raise the fountain-head at home before we turn on the streams to water the desert?

THE *American Citizen*, published in Lexington, Ky., says:

"The colored people vote with the Republican party, not because of any peculiar *social* advantages that they derive from so doing, but because of the *avowed* principles of that party in favor of equal human rights in a *legal* and not a *social* sense especially. They fear the Democratic party chiefly because of its *past record;* but should it so conduct itself in the future, as to remove this feeling of distrust from the black man, we know of no reason why he should always cast his ballot solid for the Republican party. The colored people, as soon as they deem it politically safe to do so, are just as likely to divide their votes between the two great parties as any other class of our citizens."

Agricultural.

IT IS interesting to note in the recent writings and discussions about "formulas" for certain crops, to what a large extent the results of close scientific investigations are being rendered plain to, and applicable by all intelligent farmers throughout the country. The manure formulas for special crops, based upon the researches of scientific men who have devoted years to patient tests in the laboratory and field, is a plain instance of the direct aid rendered by science to practical agriculture—a tangible evidence of the harmony between practice and science. Science is telling the farmer what to do; is showing him how Nature may be made to assist his operations; is saying to him "your methods and means of working are good so far as they go, but are imperfect—take advantage of my experience and reach better results in a shorter time." In this matter of home-made manures for special crops, Prof. W. J. Land, chemist to the Georgia Department of Agriculture, says of compost of which stable or farm manure forms an important part, with acid, phosphate or dissolved bone: "The economy and profit of the compost system is no longer a debatable question with practical farmers. However much the pseudo-scientist, who rejects facts which his theories fail to explain, may endeavor to turn it to ridicule as "unscientific"—with the true economist and practical agriculturist the solid facts derived from crucial test of Nature's laboratory, will outweigh all his theories and the shallow sophistry by which he seeks to sustain them. The true scientist, however, does not shut his eyes to facts, but uses them as material of which to build his theories." And then he goes on to say that "all farmers should be careful to save all excrementitious deposits from all kinds of stock for the compost heap, the coming season, as it will be worth millions to the State in money saved and increased production." It is to this matter of composting that greater attention should be given: our farmers have not sufficiently appreciated its importance, nor given sufficient labor to the suitable preparation of farm manures to become fitted to yield up their food readily to the crops to which they have been applied.

Maine Farmer.

SOUTHERN COW PEAS.

At the close of an article descriptive of Cow Peas, given last month, we stated that we expected an article upon their cultivation; this has come to hand, but we are quite unable to make room for it, and it must be deferred until another month. For those who wish to try the crop, we here give the essential points on planting, hoping to publish the entire article anon. The crop is grown with success in Virginia, and judging from the mass of herbage the plants produced in our trial referred to last month, we should judge them worthy of attention in more northern localities.

Even poor land will grow cow peas. On very poor land the peas are sown the end of April, the crop turned under to enrich the land, and a second sowing immediately made. The peas must not be sown until the soil is warm; the land is well plowed, and a bushel of seed for good land, and 5 or 6 pecks for poor, is sown broadcast, and harrowed in, or covered by a light plow; sown in June or July, the seed should be plowed in deep. The Red, Clay, Black, and Whippoorwill, are the kinds most esteemed for fodder, and they do better on poor soils. The Lady, White Table, and Crowder varieties require richer soils, and are the kinds cultivated for table use; they are often sown between rows of corn at the last working. Cow peas are often cultivated in orchards, serving to shade the ground around young trees, and at the same time furnishing a valuable crop of fodder.

SEA-SAND is largely used as a fertilizing agent by the farmers on the French coasts of Normandy and Brittany, who apply it at the rate of three hundred and fifty-three cubic feet to the acre, and obtain such wonderful results that they are able to reap abundant wheat crops for several years running. The sand is replete with nitrogenous matter. The mixture of fresh and salt water, at the mouth of rivers, appears to favor the growth of submarine vegetation. Crustacles and molluska of all kinds get entangled in vast numbers in these bays, and the most productive oyster beds are found there. The beach is covered by the remains of shell-fish, and the weed brought in by the sea is impregnated by animal detritus. These deposits, added to those derived from the luxuriant vegetation which covers the bottom of the sea, and which when torn from the rocks by a tempest sometimes covers the surface so densely as to impede navigation, contribute to the powerful fertilizing qualities of the sea-sand, and explain the results which follow its use.

AT A RECENT horticultural meeting at Nashua one of the speakers gave the results of his experience in hedge planting. He advised a single row hedge, with the plants set about six inches apart. A successful hedge, in his opinion, cannot be grown compact as it should be, so filled with foliage and shoots that a bird cannot get through, in less than eight years. It needs care and watching and should not be allowed to grow to scraggy limbs at first. The roots of the various kinds of evergreen should be cut about every spring and thus caused to send out fresh sprouts that will make them valuable afterward. One difficulty experienced in cultivating evergreens is that inexperienced persons do not set them as deep in the earth as they should be. They ought to be put deep in the earth and the soil packed about them in such a way that the air cannot get at their roots. If the earth is dry it should be wet with one or two pails full of water and mulched.

OYSTER SHELL LIME.—"D. G.," North Brookfield, Mass. Oyster shells freed of all adhering mud and other matters, consist of 98½ per cent. of carbonate of lime, 1 per cent. of phosphate of lime, and less than 1 per cent. of animal matter. When burned they are converted into lime, which is more nearly pure than that from the ordinary lime-stones. It is thought by some to be superior to stone lime as a fertilizer, on account of the animal matter it contains; this is of course an error, as the animal matter is destroyed in burning; it permeates the shell throughout, and its destruction by heat causes the lime to fall in a fine powder. The unburned shells are practically of no value.

WHEN THE COWS COME HOME.

Many of our farmers have wasted years of valuable time just because they did not teach their cows to come home at night. Any one who has lived or traveled in the country will remember the familiar "Cobos! Cobos!" of the farmer's son or hired man as he endeavors to coax the cows from the great pasture. We have had a little experience in these matters, and well remember how many times we have waded through the brush and bogs looking for the cows, and, boy-like, we thought them dreadfully contrary animals. But we have lived long enough to learn better, and now think the biped the more contrary animal of the two.

Boys, we will tell you a secret that will save you a great deal of trouble, and it is this: Every time the cows are driven up at night or in the morning, give them a good lick of meal or bran, and the cows will always be on hand at the milking time.—*American Stock Journal.*

We have received from Europe a limited quantity of the Bismarck, late Cabbage Seed, which produces solid heads of cabbage the size of the mouth of a flour barrel and larger. These enormous cabbages are raised with the most ordinary cultivation, in any climate, and at present prices, double the ordinary profit is realized from their production. In transplanting from these seed, great care should be used to give sufficient space for growth. A package sent to any address, post paid, on receipt of 50 cents; 3 packages $1.00; 8 for $2.00. A sure cure for cabbage pests and 4 beautiful chromos, The Maiden's Dream, full set sent free with each package. Address, B. Alexander & Co., sole U. S. Agents, 8th st., opposite Cooper Institute, New York. Please quote this paper. 12-6

AUGUST FLOWER.

The most miserable beings in the world are those suffering from Dyspepsia and Liver Complaint.

More than seventy-five per cent. of the people in the United States are afflicted with these two diseases and their effects, such as Sour Stomach, Sick Headache, Habitual Costiveness, Palpitation of the Heart, Heart-burn, Water-brash, gnawing and burning pains at the pit of the Stomach, Yellow Skin, Coated Tongue and disagreeable taste in the mouth, coming up of food after eating, low spirits, &c. Go to the Drug Store and get a 75 cent bottle, or a Sample Bottle for 10 cents. Try it. Two doses will relieve you. For Sale in Hampton by Messrs. Selden & Co., and Druggists generally.

DYSPEPSIA.

Americans are particularly subject to this disease and its effects: such as Sour Stomach, Sick Headache, Habitual Costiveness, Heartburn, Water-brash, coming up of the food, coated tongue, disagreeable taste in the mouth, palpitation of the heart and all diseases of the Stomach and Liver. Two doses of GREEN'S AUGUST FLOWER will relieve you at once, and there positively is not a case in the United States it will not cure. If you doubt this go to your Druggist and get a Sample Bottle for 10 cents and try it. Regular size 75 cents. 6-1y

Four beautiful fine oil chromos 7 x 9 sad one 9 x 12 sent for fifty cents, and six size 7 x 9 and six size 9 x 12 sent for $1, and a full family portfolio of 100 oil and gem chromos, *very fine*, all designs, $2. They are scriptural scenes, landscapes, sea views, hunting and fishing scenes, Rocky Mountain scenes, birds, animals, fruit and flower designs. Our chromos are facsimile reproductions of the choicest works of the *great masters*, and pronounced by connoisseurs equal to the original oil paintings. Three hundred Decalcomania pictures sent for 50 cents, large, mixed, all kinds, $1; and 1,500, $3. A sample of these goods with full instructions to transfer the same will accompany each of the above orders if desired. Address, enclosing price, and a three cent stamp for return of goods by mail. B. ALEXANDER & CO., wholesale and retail dealers, 8th street, opposite Cooper Institute, New York Agents and tradesmen are making money selling our goods. Ladies are meeting with great success in this work. A full agents outfit of 200 fine samples sent on receipt of $5 Please state the name of the paper you saw this in 12-6.

INDELIBLE MARKING PAPER FOR MARKING CLOTHING WITHOUT A PREPARATION.—*Direction*—Lay the Indelible Paper upon the article to be marked, and place over it a thin piece of writing paper, upon which write with a common lead pencil, or any smooth point. If the marking is pressed with a hot flat-iron or otherwise heated for a few seconds, it can be washed immediately with hot water and soap as usual. Warrant-d not to fade or spread in the cloth. A package sent, post-paid, on receipt of thirty-five cents, two for sixty cents. Address B. ALEXANDER & CO., Sole United States Agt's, Eighth street, opposite Cooper Institute, New York. Agents wanted, send for terms. Please quote this paper. 12-6

BALTIMORE AND NORFOLK.

PEOPLE'S LINE.

The swift and reliable iron steamer *Sue* leaves foot of Gay St., Baltimore, Mondays, Wednesdays and Fridays, at 4 P. M., for Norfolk, touching at Old Point. Returning, leaves Norfolk Tuesdays, Thursdays and Saturdays, for Baltimore, at 4 P. M., and Old Point at 5 P. M., thereby affording travelers a delightful view of Chesapeake Bay by daylight.

Fare: Baltimore to Norfolk $2.00.
Round trip 3.00.
Don't buy through tickets. 3t

1620—1875.

The following has appeared substantially in former years, but the distinguished chronicler, in preparing a Centennial edition, has given it some fresh touches, put on from the Connecticut point of view, as may be seen in the allusions to Gen. Israel Putnam, for instance, under dates interesting to him and his descendants:

1620. Lands on Plymouth Rock, and sets up for himself.

1621. Keeps Thanksgiving—in no danger of overeating.

1632. Builds a Meeting House.

1623. Proclaims a Fast Day.

1628. Cuts down a May Pole at Merry Mount, as a rebuke to vain recreations.

1635. Is crowded for accommodations, and stakes out a new farm at Connecticut

1637. Makes war on the Antinomians, and the Pequot Indians—and whips both.

1638. Starts a *College*, and

1640. Sets up a *Printing Press*.

1643. Goes into a Confederacy—the first Colonial Congress.

1648. Lays down the *Cambridge Platform*. Hangs a Witch.

1649. Sets his face against the unchristian custom of wearing long hair, "a thing uncivil and uncomely."

1651. Is rebuked for "intolerable excess and bravery of apparel," and is forbidden to wear gold and silver lace, or other such gew-gaws.

1652. Coins Pine Tree Shillings—and makes the business profitable.

1663. Prints a Bible for the Indians.

1680. Buys a "hang-up" Clock, and occasionally carries a silver watch that helps him guess the time of day. About this period learns to use Forks at table; a new fashion.

1692. Is scared by *Witches* again, at Salem; but gets the better of them.

1701. Founds *another College*, which, after a while, settles down at New Haven.

1704. Prints his first *Newspaper*, in Boston.

1705. Tastes *Coffee*, as a luxury, and at his own table.

1767. Constructs another *Platform*—this time at Saybrook.

1716. Begins to sip *Tea*—very sparingly. It does not come into family use till five and twenty years later.

1711. Puts a letter into his first *Post-Office*.

1726. Eats a *Potato*—and takes one home to plant in his garden as a curiosity.

1721. Is *Inoculated* for the Small Pox—not without grave remonstrance from his conservative neighbors. Begins to *Sing by note* on Sundays, thereby encountering much opposition and opening a ten years' quarrel.

1740. Manufactures tinned ware, and starts the first *Tin Pedler* on his travels.

1742. Sees Faneuil Hall built. The cradle of Liberty is ready to be rocked.

1745. Builds an *Organ*; but does not yet permit it to be played in the Meeting House.

1756. Buys a bushel of *Potatoes* for winter's use—all his friends wondering what he will do with so many.

1755. Puts up a *Franklin Stove* in his best room; and tries one of the newly invented *Lightning Rods*.

1766. About this time begins to wear a collar to his shirt. When he can afford it, takes his wife to meeting in a *Chaise*, instead of on a pillion, as heretofore.

1765. Shows his dislike to stamped Paper, and joins the "Sons of Liberty."

1768. Tries his hand at *Type Founding*—not yet successfully—in Connecticut.

1770. Buys a home-made *Wooden Clock*.

1773, Waters his *Tea* in Boston harbor. Plants *Liberty Trees*, wherever he finds good soil.

1774. Lights Boston streets with oil *Lamps*: a novelty (though "New Lights" had been plenty, some years before).

1775. Shows Lord Percy how to march to "Yankee Doodle." Calls at Ticonderoga, to take lodgings for the season. Sends General Putnam (under the command of several colonels) with a small party, to select a site for Bunker Hill Monument.

1776. *Brother Jonathan*—as he begins to be called in the family—declares himself Free and Independent.

1786. Buys an "Umbrillo" for Sundays; and whenever he shows it is laughed at for his effeminacy.

1791. Starts a *Cotton Spinning* factory.

1792. Has been raising Silk Worms, in Connecticut; and now gives his minister (not his wife) a home-made silk gown. Buys a *Carpet*, for the *middle* of the parlor floor.

1793. Invents the *Cotton Gin*—and thereby trebles the value of southern plantations.

1795-1800. Wears *Pantaloons* occasionally, but not when in full dress. Begins to use *Plates* on the breakfast and tea table.

1802. Has the boys and girls *vaccinated*.

1806. Tries to burn a place of *Hard Coal* from Philadelphia; a failure.

1807. Sees a boat go by *Steam*, on the Hudson.

1815. Holds a little *Convention* at Hartford, but doesn't propose to dissolve the Union. Buys one of Terry's patent "Shelf Clocks," for $30.00, and regulates his watch by it.

1817. Sets up a Stove in the Meeting House, and builds a fire in it on Sunday; an innovation which is stoutly resisted by many.

1817. Begins to run a *Steamboat* on Long Island Sound—and takes passage on it to New York, after making his will.

1819. Grown bolder, he crosses the Atlantic in a steamship.

1820. Buys a *Steel Pen* (one of Gillott's, sold at $33 per gross). Has his every day Shirts made without *Ruffles*.

1825. About this time, puts a *Percussion Lock* on his old musket.

1826. Buys his wife a pair of queer-shaped *India Rubber* overshoes. Puts on his first False Collar. Tries an "Experimental" railroad, by horse power.

1828. Tastes his first *Tomato*—doubtingly. Is told that it is unfashionable to feed himself with his knife—and buys *Silver Forks*, for great occasions.

1833. Rubs his first *Friction Match*—then called a "Lucifer," and afterward "Loco Foco." Throws away the old Tinder Box, with its flint and steel.

1835. Invents the *Revolver*, and sets about supplying the world with it, as a pence-maker. Tries a *Gold Pen*, but cannot find a good one yet—nor till 1844. Builds a real *Railroad*, and rides on it.

1837. Gets in a panic—and out again, after free use of "shin-plasters."

1838. Adopts the new fashion of putting his letters in *Envelopes* (a fashion which does not fairly prevail till seven years later).

1840 Sits for his *Daguerreotype* and gets a picture fearfully and wonderfully made. Begins to blow himself up with "Gunpowder" and

CELEBRATING THE FOURTH.

"Burning Fluid"; and continues the process for years, with changes of name of the active agent, down to and including "Non-Explosive Kerosene."

1844. Sends his first message by the *Electric Telegraph*.

1847. Buys his wife a *Sewing Machine*—in the vain hope that somehow it will keep the buttons on his shirts. Begins to receive advices from the "Spirit World."

1855. Begins to bore and be bored by the Hoosac Tunnel.

1858. Celebrates the laying of the *Ocean Cable*, and sends a friendly message to John Bull. Next week begins to doubt whether the cable has been laid at all.

1861. Goes south to help compose a family quarrel. Takes to using Paper Money.

1861-1865. Climbs the Hill Difficulty—relieved of his pack after Jan. 1, 1864; but loses GREAT HEART, April 14, 1865.

1865. Gets the Atlantic Cable in working order at last, in season to send word to his British cousins (who have been waiting for an invitation to his funeral) that he "lives yet."

1865-1875. Is reconstructing and *talking about* Resumption. Sends his boys to the Museum to see an old-fashioned Silver Dollar.

1875. Goes to Bunker Hill to pay honor to the Illustrious men who commanded General Putnam. Thinks he won't inflate—and helps struggle a western rag-baby. Gets ready to celebrate his second golden wedding by a grand family reunion in Philadelphia.—*Boston Semi-Weekly Advertiser.*

In the year 1761, any one looking into the sitting-room of the chapel-master of Saltzburg might have seen a little figure bent over a table, busily scratching away with pen and ink. The childish hand hardly knew how to hold the pen, but hurried along with marks and dots and strange-looking characters, smeared with ink, and now and then blackened with a huge blot as the pen dashed from ink to paper with trembling eagerness. The door opened, and the chapel-master entered with a friend, but the little curly head did not stir.

"What are you doing, my son?"

"I am composing a concerto for the harpsichord, papa. I have nearly finished the first part."

"Let me see."

"No please; I have not yet finished."

The father took the paper, however, and showed it to his friend. They both laughed heartily at the scrawl; but on looking more attentively, the chapel-master said:

"See, it is really composed by rule; but it is too difficult, no one could play it."

"It must be well studied before it is played," said the boy. "See this is the way it begins."

And running to the harpsichord, he succeeded in playing enough of it to show what his idea was.

It was indeed a musical composition, correctly composed, but containing such great difficulties that an able musician would have found it impossible to execute it on the harpsichord.

The chapel-master was Leopold Mozart, and the little composer, only five years old, was Wolfgang Amadeus Mozart, afterward so celebrated in the musical world.

Two years before, he had stood listening at the fireside while his papa gave a music-lesson to his sister Anna.

"Thou teachest Nunnerl, papa; teach me too."

"But thou art a baby, Wolferl; wait, my little man."

But when the lesson was over, and papa gone, the little fellow went to the harpsichord and standing on tiptoe, groped among the keys, with his baby-fingers stretched wide apart, till he found and played a *perfect chord*. Papa's music-ear caught the sound, and he rushed back into the room to find that his baby had indeed all alone, found his way into the beautiful tone-world.

After that, music-lessons were for him too, and he was never far away when Nunnerl was at the harpsichord, but, perched on his father's knee, followed every movement and tone, and

Court, and played before Francis I., the Emperor, to the wonder and delight of all who heard them.

His father had only taught him on the harpsichord, but he had a little violin on which he played to amuse himself. Six trios composed by Wenzl were once brought to him to try his powers. Little Wolfgang begged that he might play the second violin part, and brought out his own instrument to play with the others. His father refused him, and bade him run away; but Schachtner, whose part it was, called him back and said, "Never mind, little man, wipe away those tears, and stand by me." He did so, looking over the musician's shoulder; and soon Schachtner was surprised to hear a clear clean-cut tone striking in with his. Gradually he heard the music distinctly played, and softening his own tones more and more, let the little fellow play on. Finally he ceased playing altogether, and Wolfgang played on without interruption through that trio and the next, and until the whole six had been performed. He had become absorbed in the music, and all unconsciously threw his whole soul into the performance, and with flushed cheek and flashing eye, played on to the close, radiant with delight, while the tears rolled down the chapel-master's face as he listened to the boy.

He had never before heard him play on the violin, and was overwhelmed with astonishment and joy.

"Little music-king thou art, my Wolferl, and thou shalt reign over us all," he cried as he clasped him in his arms.

Before Wolfgang was eight years old, and Anna twelve, they had performed at the courts of Vienna, Paris, Munich and London. At Vienna they saw and played with the Marie Antoinette, and Wolfgang shocked the fine Court ladies by jumping into the lap of the Empress for a kiss. He could play the works of Bach, Handel and other masters, and in England composed six sonatas, which he dedicated to the Queen.

Returning to France, they traveled about in that country and in Holland, and Wolfgang played on the organs of most of the churches and monasteries.

One evening being caught in a thunder-storm, they took shelter in a monastary. The monks were at supper, and did not know of their guests' arrival. But soon, wonderful music began to steal into the hall from the chapel; sometimes sweet and sad, then wild and stormy; now a single voice with pleading tones, again a great chorus of response; now the rolling of the thunder and the booming of the wind, and, as these died away, a soft, clear sunny strain, telling that the storm was over. The Fathers were in great affright; one and another stole into the dark chapel to listen, and they counted themselves over and over again to be sure they were all there. But at last a light was brought, the strangers were discovered, and Wolfgang greatly enjoyed their amazement, terror, and delight. They could not believe it was he who had played such music, so far beyond what even Brother Ambrose played—their fine musician. They thought it was a spell — an enchantment — a holy charm — a miracle. And when at last convinced he was a true mortal boy, they lavished the kindest hospitality on the Mozarts, and bade them God-speed on the morrow with many a blessing.

At the consecration of a church belonging to the Orphans' Home in Vienna, Mozart composed the music for the occasion, and conducted it, although only twelve years of age. At thirteen, he went to Rome with his father, and there, in the Sistine Chapel, below the grand painting of "The last Judgment," which Michael Angelo had painted three hundred years before, he heard the wonderful music of "The Miserere."

This is only performed in Holy Week by the Pope's choir, and no one has ever been allowed to have a copy of the music, or even to see it. But so astonishing was little Mozart's memory, that, on his return from the chapel, he not only wrote out the music correctly, but could also sing it perfectly,—a feat which made him the musical wonder of the age.

He was received with the greatest enthusiasm in Italy; made a Knight of the Golden Spur, by the Pope; elected a member of the Philharmonic Academy, and had praises and honors heaped upon him in the very land of song and art.

At fifteen years of age he composed his first opera. But we must now take leave of the *boy*.

His works were numerous, and have

long; and at thirty-five he left to the world the rich inheritance of his musical compositions.

They are full of grace and beauty. Some of them are sad and mournful; some running over with fun and frolic; but sonatas, operas, and masses all speak the genius of the great musician.

His last work was a requiem, which a stranger came to him and ordered. Mozart began to write it, and was to have it finished in a month. But when the stranger returned it was not done.

"How much longer do you want?"

"Another month," replied Mozart.

He continued to work on it, but his health, already poor, began to fail, and he grew feebler each day. He often told his wife he was writing the requiem for himself, and his melancholy increased day by day. He fancied that the unknown person was a being from another world, and became convinced that he was sent to warn him of his own departure. Painfully he worked on with his failing strength, and at last the requiem was completed; but when the stranger called for it Mozart was dead, and the solemn requiem, written for another, was his own death-song.

THE LORD'S PRAYER IN ARABIC, BULGARIAN AND HAWAIIAN.

In the library of the Bible House in London is a wonderful and most interesting sight—a specimen of the Lord's Prayer written in every known language of the world and in every dialect of each language and in every age of the dialect. It seems like a pledge of the promised time when the knowledge of the Lord shall cover the earth as the waters cover the sea, and as we look over the many strange and puzzling characters, we can but pray for His Kingdom to come when the most beautiful of all prayers shall be not merely written in the languages, but on the hearts of all, from the least to the greatest.

The first of the three specimens in our picture is in the Arabic tongue. Look on your map of Asia and find Arabia, and remember all you have been told of it. It is a strange country, a country without a navigable river; the camel is its ship of commerce, with which its merchants cross the vast sandy deserts where even a wolf could not live three days. The Arabian horses, you know, are the finest in the world. Kings pay royal prices for one; but the Arab loves his horse as one of his family and will scarcely sell it unless he is starving. The Arabs are a wild, wandering race, proud of its great antiquity and of never having been driven out of their desert land, while their ancestors have been the conquerors of all modern eastern nations. Their language is spoken more or less from India to the Atlantic. It is therefore very important for the Eastern missionaries to learn it.

Bulgaria is a province of Turkey in Europe, extending from the Danube to the Balkan Mountains. The Bulgarians also are an ancient race, once very warlike. They were conquered by the Turks in 1397, and since then have become a peaceful people, living by their farms and flocks. They are noted for their honesty, honor and manly qualities. Oppressed as they have been by their Turkish conqueror, they have never been degraded. Their language is somewhat like the Russian or Polish. Long before the Bible was printed in their language they had a great longing for it. The New Testament was translated for them first by the British Bible Society. Afterward Dr. Riggs of the American Board of Foreign Missions translated the Old Testament and Psalms for them, and then with three other gentlemen, two of them Bulgarians, made a complete translation of the New Testament.

In our last month's paper you learned a good deal of the interesting mission to Hawaii or the Sandwich Islands, with its beautiful missionary ship, the *Morning Star*.

The Hawaiian language is a very beautiful one—very soft and musical, with no harsh sounds. The natives had no written language of their own. The American missionaries had to make one for them, and write down their words as they sounded. Of course they took the English letters, as the Hawaiians had none of their own, and that is the reason that you see the Hawaiian Prayer written in English. Though I think you will not find it easier to understand than the others.

But the Lord heareth all who call upon Him, and to Him that heareth prayer shall all flesh come.

The Lord's Prayer, in Arabic.

أَبَانَا ٱلَّذِي فِي ٱلسَّمَوَاتِ. لِيَتَقَدَّسِ ٱسْمُكَ. لِيَأْتِ مَلَكُوتُكَ. لِتَكُنْ
مَشِيئَتُكَ كَمَا فِي ٱلسَّمَاءِ كَذٰلِكَ عَلَى ٱلْأَرْضِ. خُبْزَنَا كَفَافَنَا أَعْطِنَا ٱلْيَوْمَ.
وَٱغْفِرْ لَنَا ذُنُوبَنَا كَمَا نَغْفِرُ نَحْنُ أَيْضًا لِلْمُذْنِبِينَ إِلَيْنَا. وَلَا تُدْخِلْنَا فِي تَجْرِبَةٍ.
لٰكِنْ نَجِّنَا مِنَ ٱلشِّرِّيرِ. لِأَنَّ لَكَ ٱلْمُلْكَ وَٱلْقُوَّةَ وَٱلْمَجْدَ إِلَى ٱلْأَبَدِ. آمِينَ

In Bulgarian.

Отче нашъ, който си на небеса, да ся свети име-то твое; Да дойде царство-то твое; да бъде воля-та твоя, както на небе-то, *така* и на земя-тѣ. Хлѣбъ-тъ нашъ насѫщный, дай *го* намъ днесь; И прости ни дългове-тѣ наши, както и ный прощавамы на наши-тѣ длъжницы; И не въведи насъ въ искушеніе, но избави насъ отъ лукаваго; защото е твое царство-то и сила-та и слава-та во вѣкы. Аминь.

IN HAWAIIAN.

E ko makou Makua iloko o ka lani, e hoanoia kou inoa. E hiki mai kou aupuni; e malamaia kou makemake ma ka honua nei, e like me ia i malamaia ma ka lani la; e haawi mai ia makou i keia la i ai na makou no neia la; e kala mai hoi ia makou i ka makou lawehala ana, me makou e kala nei i ka poe i lawehala i ka makou. Mai hookuu oe ia makou i ka hoowalewalcia mai; e hoopakelo uo nae ia makou i ka ino; no ka mea, nou ka aupuni. a me ka mana, a me ka hoouanaia, a mau loa aku. Ameue.

CENTENNIAL VIEWS.

MACHINERY HALL AND MEMORIAL HALL.

We give our readers pictures this month of two of the most interesting of the great Exhibition buildings.

MACHINERY HALL

is 1402 feet long, 300 feet wide, and over 60 feet high. Within this vast enclosure what do we see? A network of pulleys and shafting. A maze of flying wheels and spindles and complicated machinery, driving and whirling and whirring away with distracting din, fascinating to a mechanic and bewildering to the general beholder who thinks himself with awe in the very present of the spirit of the Nineteenth Century.

Here are steam pumps, steam hammers, steam drills and sugar mills; steam coal mining machines and hydraulic presses, carding machines, cotton looms and calico printing machines. Here are sewing machines in every variety, some that sew on lace and some that sew sails with seams sixty feet long. Here is a machine that is weaving ribbons with portraits of Washington, Lincoln, and Queen Victoria. Here are turbina water wheels, harvesting machines, silk looms and machines for making hats.

One of the most ponderous of the machines is a well-borer from Belgium, that stamps into the ground with an iron foot weighing 20,000 *pounds* and shod with chisels. It ought to be called "Nelly Bly," for

> "When it *bores*; it lifts its foot
> And then it sets it down,
> And when it lights, dere's music dar
> In dat part ob de town."

To turn from this monster and the Rock-drills and quartz-crushers that grind the mountains to powder, to the dainty little saws and files doing fairy-like work on ladies watches—then to the magical Fourdrinier paper-making machine that works away by itself as if it had brains of its own, and then to the great printing presses—Hoe's and Bullock's and Walters' that are covering the paper at the rate of ten thousand newspaper sheets an hour with thoughts that breathe and words that burn to mould and create that mighty power called public sentiment—then we feel indeed that

Each one of these printing presses does the work of twenty-one men that used to be employed on the old-fashioned presses. And if that is not contrast enough just look at the press here exhibited which Franklin used, and step over to the Ivy mills still running where he used to buy his paper, and in which the Continental money, so coarse and clumsy, was made. It is by such contrasts that we appreciate the immense stride the country has taken in a hundred years.

We must see before we go the huge Corliss engine that furnishes the power for all the machinery in the Hall. Remember that there are 10,400 feet of shafting running at the rate of one hundred and twenty revolutions per minute. The Commissioners were troubled to know how to supply this power till Mr. Geo. H. Corliss of Providence, Rhode Island, one of the greatest inventors and manufacturers of engines in the country, came forward and offered to put up and run, all at his own expense, an engine that would do the work. It has cost $200,000. It stands forty feet high, has a fly-wheel thirty feet in diameter, of fifty-six tons weight, has twenty tubular boilers and supplies 1,400 horse power. It is itself perhaps the most wonderful machine in the Hall; the largest stationery engine ever built, driving fourteen acres of machinery, while twenty months ago it was a mass of iron ore. It was put up here for the first time, and the measurement of some of its parts were as close as the one-hundredth part of an inch. It is a marvel of science and skill. When Sir Edward Thornton, the English commissioner, was introduced to Mr. Corliss, he said, "Not Mr. Corliss who built the great engine?" When told that it was, he said, "We give such work to our old men in England." It is indeed a work for a young man to be proud of, and in America it is our young men who are called to the world's work. How great the need of a training that will fit them for it.

In the hydraulic annex, a hall 208 by 210 feet annexed to Machinery Hall on the south, the power is obtained for the machines that run by water, and the pumps are exhibited. Here is a tank thirty-three feet in height above the floor, supplied constantly by two rotary pumps and pouring a waterfall thirty-six feet in breadth into a lower basin. This is a great attraction to visitors, and the cool rush of the waters is a pleasant change from the din of the steam works.

MEMORIAL HALL.

We have left little room for a description of Memorial Hall, and it is probably less interesting to most of our readers, as pictures of men. Though every one likes to look at pictures, our country is even yet too young to have developed a universal appreciation of art. Memorial Hall will help, no doubt, for here are specimens, and some very fine ones, of pictures and statues from all the principal nations of the world. England has sent the best exhibit of modern paintings. In the Italian rooms there is a wonderfully interesting collection made by Signor Castellani, (Signor, pronounced Seen-yor, is Italian for Mr.), a collection of antique marble and bronze statuary of the finest ancient art, unearthed, some of it only within the year past, from the soil of Italy where still unnumbered treasures lie buried in the dust of ages. Here are also beautiful specimens of fifteenth century porcelain and earthenware at which we wonder that things so fragile have lasted so long. And here, most interesting of all, perhaps, is a collection of articles found in very ancient tombs near Rome. Brouze caskets containing articles for the toilet and the bath, mirrors (of polished metal), combs, brushes and dainty toilet articles, all of exquisite form, and delicately carved and chased with figures and scenes and other elaborate designs. The old Romans were a luxurious, art-loving people.

Memorial Hall is, of course, more solidly built than the other buildings as it is intended to remain permanently, while the others will be taken down when the exhibition is over. It is built of granite, iron and glass, 365 by 210 feet, with a square tower at the four corners, and a dome in the centre. It stands on a terrace ascended by steps, at the top of which are colossal bronze figures of winged horses held back by female figures. At the base of the dome are seated four figures representing the Arts and Sciences, on the top is a standing figure, and the four corners are surmounted with an eagle at each corner.

THE GLORIOUS FOURTH OF JULY

in Philadelphia will be the high festival of the Centennial year of course, and we will give our readers a full description of it in our next number. Meanwhile we advise them to use their influence wherever they may be for a worthy and patriotic observance of a day when North and South, East and West ought to feel a heart-warming toward their common country. Never mind making a great noise. Don't leave it all to the boys with their ear-splitting fire-crackers and cannon; but get out the Old Declaration of Independence and read it, read the poem on the old Independence Bell, make an oration if you like, and by all means sing The Star Spangled Banner, and My Country 'tis of Thee.

IT'S MEAN.

One snowy morning, some of the boys went and shoveled away the snow for a poor old woman near the school-house, who had no one to help her. When Sam heard of it, he asked—

"What did she give you?"

"What did you suppose we wanted?" said Harry.

But Sam replied, with an air superior wisdom, that for his part he did not believe in anything that "did not pay."

He will not even make a kite for his little brother, unless Willie gives him something in return.

He seldom spends his own money for candy or cakes; but if any of his brothers or sisters have sugar-plums, Sam always has his share. He gets away the boys' playthings by what he calls "bargains." He thinks he is "sharp;" and he does not always confine himself to fair trading. He takes advantage of the simplicity or carelessness of others, and calls it "smart;" nay, he even looks down on those who are kind and generous, and calls them "silly" for doing what "does not pay."

If he could only see that his habits "don't pay!" Even if there were nothing but this world to live for, this low selfishness is bad policy, if it were nothing worse. But it is much worse. It is walking on a path that leads farther and farther away from God; it is directly opposite to those two great commandments upon which "hang all the law and the prophets." He who lives to himself alone is more unlike than any other creature to Him who came not to be ministered unto, but to minister, and to give his life a ransom for many.

POLITE TO GOD.

"Mother, should we be more polite to people than we are to God?".

"No, my son; but what made you think of it?"

"Well, so I thought; but last evening, when uncle Ralph was walking in the garden with Miss Helen, little Carlo ran up to him, and put his muddy paws on his clean, white pants, and he said an ugly word. He looked scared; his face turned red, and he said, 'Do excuse me, Miss Helen.' And I wonder if he will ask God to excuse him when he says his prayers to-night?"

"I hope so," said his mother; "but you had better remind him of it."

"Yes, mother; I will."

NEWS OF THE MONTH.

POLITICAL.

The National Repnblican Convention which assembled at Cincinnati, Obio, Jane 15tb, for the nomination of a Repablican candidate for President, consisted of seven hundred and twenty-nine deligates from the States and Territories. The platform adopted declares,—

I. Tbe United States not a league but a nation.

II. Equal rigbts must be protected according to the Declaration of Independence.

III. Government is under obligation to secure complete liberty and exact equality to every American citizen in the exercise of all civil, political and public rigbts.

IV. Commercial prosperity and National credit demand that the promise, made by the National Government, to provide at the earliest possible moment for the redemption of the United States notes in coin, should be fulfilled by a continuous and steady progress toward specie payment.

V. Appointments should be made as the Constitution provides, by the Presidcat and Heads of Departments and aot by Coagress, and should be given in reference to honesty and fitaess.

VI. All who betray public trusts sbould be promptly prosecuted aad punished.

VII. The public school system is the bulwark of the Republic, and the Constitution should be amended to forbid the gift of public funds to sectarian schools.

VIII. Duties on importations are neccsary to the revenue and should be adjusted for the interest of American labor and the prosperity of the whole country.

IX. Public lands should be devoted to free homes for the people and not to corporations and monopolies.

X. Treaties should be made to fully protect adopted American citizens.

XI. Tbe effect of importing Chinese labor should be investigated.

XII. The party approves recent acts of Republicau legislatures giving additional rights to women in personal and property relations, and appointing womea to superiatendence of educatioa, charities and other publie trusts. Their honest demaads for further rights should be respectfully eosaidered.

XIII. Polygamy should be prohibited aad pat down in the Territories by the general Government.

XIV. The national pledges to soldiers and sailors must be fulfilled.

XV. All sectional feelings and tendeacies are depreeated, and all efforts to attain party success by sectional division.

XVI. The Democratie party is still in sympathy with eaemies to the Union, and has sbown itself in the present Lower House incompetent to administer the Governmeat.

XVII. The National Administration merits commendation for honorable work in management of foreign and domcstic affairs, and President Grant the gratitude of the people for his immense services in war and peace.

After six unsuccessful ballots Governor R. B. Hayes of Ohio, was, on the seventh ballot, nominated as the candidatc for President. W. S. Wheeler of New York, was nominated as the Republican candidatc for Vice-president.

On June 5th Mr. Blaine took the investigation of his case into his own hands, read the private letters which it was claimed would criminate bim, before the Houso himself, and showed their innocence, astonished everybody by charging the chairman of the investigating committeo with suppressing a telegram from London exonerating him, and forced the gentleman to an acknowldgsment. Mr. Blaine's triumph was complete.

On the Sunday after the exciting scene in Coagress, Mr. Blaine was prostrated by a sunstroke as he was entering chureb with bis family, and was unconscious for several hours. His attack was owing in great part to the immense nervous strain to which he had been aubjected, and he owes his narrow escape from death to his perfectly temperate and correct habits of life. He is now nearly restored to health.

Speaker Kerr has been entirely exonerated from the charges brought against him. His health is improving.

The Impeacbment trial is renewed—Belknap's counsel renew the motion to dismiss the proceedings, on the ground that the Senate's jurisdiction was not sustained by a two-thirds voto.

JENERAL.

Hayti still unsettled.

The Sultan of Turkey after beiag forced by his ministry to abdicate, committed suicide, or, as some think, was murdered. His nephew reigns in his place, and for the present the Eastern question rests in peace.

A lightning train bas been run from New York to San Francisco in three days and a half—at an average speed of forty-five miles an hour; the greatest feat ever accomplished in railroading.

President Stearns of Amherst College died snddealy last montb.

The Old South Church in Boston, of Revolutionary memory, was sold in Jnae for $1,350 aad is to be taken down withia thirty days. Too bad.

Winslow, the Boston forger, has been released by Great Britsin. The Englisb press disapprove. The United States will declare the treaty abrogated, and a new one will have to negotiated.

Cotton manufacture is increasing in the Soath. From 1869 to '75 the number of spindles more than doubled.

The cotton crop report is favorable.

Mrs. Abraham Lincoln is restored to saaity.

A fishing dory, sixteen feet loag and two and a half wide, named *Centennial*, has sailed from Gloucester, Mass., for England.

Mr. Augustus Hemenway, a well known merchant of Boston, and a generous contributor to the Hampton Institute, died on June 10th at Cuba, after a sudden illness of but twenty-four bours.

Washington's Monument.—Mr. Robert C. Wiatbrop, Presideat of the Washingtoa Monument Association, has prepared a plan for the completion of the moaument, which has been adopted by the Associatioa. The design is to abandon that part of the original plan which calls for a temple or pantheon and to erect a simple shaft three bundred feet high. The purpose of surrendering the charter or allowing tbe monument to remain nnfinished or be taken dowa, is to be abandoned, and subscriptions are to be solicited from time to time until the monument is completed.

EDUCATIONAL MATTERS IN PENNSYLVANIA.

The large circalation of the *The American Rural Home* in Pennsylvania, and the interest taken hy it in Education, make it desirable that it should contain a summary of the report of J. P. Wickersham, Superintendent of Public Instruction for that State, for the year ending June 1st, 1875. The whole number of school districts in the State is 2,809; the whole number of schools, 17,091; the average time tbat schools were kept open, 6.85 months; whole number of teachers, 19,880, consisting of males, 8,585, females, 11,295. The average salary of male teachers a month was $41.07; average salary of female teachers a month, $34.09; whole number of scholars, 890,073; average number attending schools, 551,848; average number in each school except in Philadelphia, 48½; average cost of teachiag each scholar, except in Philadelphia, 92 cents per month; in Philadelphia, $1.01; appropriations paid by the State, $536,025.13; amount of tax levied, $7,798,816.26; average mills on a dollar levied for schools, 6.33; average mills on a dollar levied for buildings, 4.14; expenses for school-houses, $1,722,103.54; cost of instruction, $3,755,399.03; fuel and contingencies, which include fees of collectors and trensurers, salaries to secretaries, debt interest and other expenses, $1,971,341.00.

THE SUNFLOWER AND FEVERS.

A correspondent of the *Soil of the South*, writing from a place in Alabama which he says was peculiarly subject to fevers, gives the reeult of his experience in the premises, and in not a single instance where he planted sunflowers around his negro cabins did their inmates suffer from fevers, while his wife, two children and two house servanta all had fevers, he not having planted any of the sunflowers around his own dwelling, which, in his opinion, accounted for the difference in the results. We trust that next spring New Orleans may be surrounded by a cordon of sunflowers, that they may be scattered through every garden and cover every vacant lot in the city. Who knows but that they may prevent yellow fever also? The correspondent of the *Soil of the South* says:

"My opinion is, that the sunflower in its rank growth absorbs the very elements in the atmosphere that produce fever, or chill and fever, and what is the life of the sunflower is highly obnoxious to the health of the human family; nor do I believe that a man could ever have a chill who would sleep in a bed of rank sunflowers. This, too, seems to be no new theory, as Lieutenant Maury states that his gardener —a Frenchman—informed him that their sanitary influence had been long known in France."

Lynchburg, *June* 6, 1876.

My Dear Mammy:—

Your letter was received with much pleasure, some time since, and should have been answered sooner.

I have been looking out for some account of the Hamp on Commencement, but have not seen uny, until the Workman came on Saturday. I suppose the Centennial occupies all thoughts this yenr.

Mr. ——— says the most interesting account of the opening day he has seen was in the Hampton paper. I read it all, as usual, and am glad to see such nice letters from the graduates. I think the remarks about that old fogy "Civis" very good indeed, and wish he could be made to go to Hampton once to get his eyes opened to what is going on there.

I think Lynchburg is a good place to judge of the progress of the colored people, for we have all sorts here, from the petted house-servants down to the rough farm hands. There are about 6,000 in the city, and considering the poverty of the greater portion, they give surprisingly little trouble to their more independent neighbors; and in the five years I have lived here, there has never been anything like a political disturbance. Many of them are getting into comfortable circumstances, and some eight or ten families might almost be called rich, and nearly all of these people were destitute at the emancipation. I think the aristocratic white people of the South are too apt to compare the colored people with themselves, instead of with the poor class of whites who stand upon the same level in many respects. The negroes have certainly, as a class, improved much faster in ten years than the poor whites. Having associated with educated people gave them better manners and more ideas of refinement than the poor whites could acquire under the old system.

I get a good deal among the colored people, because I feel deep interest in them, and am struck with the efforts they make at having nice houses; even very poor families will have nice looking beds and white curtains at the windows. Their grateful hearts lead them all to have pictures of Lincoln and Grant and often John Brown on the walls. I do not admire the latter myself, and do not think anyone ever so misunderstood the character of the colored people as he did; but I can respect his enthusiasm, even though fanatical, and think it natural that the colored people should revere the memory of one who gave his life in a desperate effort to free them.

The colored people of Lynchburg lost $16,000 by the Freedman's Bank, and though this seemed very hard at first, it has proved a blessing in disguise, as it made them buy real estate, and a very large number are buying lots and building houses.

The African Baptist Church was lately pronounced unsafe, and the trustees applied to Mr. ——, a leading white Baptist, to sell them a lot for a new building in a very desirable location. Mr. —— is very kindly disposed to them and fixed the price at $2,000, if paid in one week from that time. The price was very low and the church determined to make up the amount. The people who lived near the proposed location objected very much to having the church built, and offered Mr. —— $4,000 for his lot. I cannot blame them very much for this, for the Baptists are subject to revivals, and keep up their services, often accompanied by intense excitement, until 12 o'clock at night. Mr. —— notified the trustees that if the money were not paid at noon on the day appointed, the contract would be void. Mr. ——, a nephew of the Judge, lent them $500, and a great many white people contributed small sums; the church members canvassed the town, and at 11 o'clock on the day stated the money was all paid. But the people had brought in all their little gifts in coin and fractional currency and it was impossible to count it in time, and Mr. —— wanted to hold them to the very letter of the bargain. So Mr. ——, who with several assistants had been trying to count the money, wrote his check for the amount and gave it to Mr. ———. When the money was all counted, it was found to be a good deal more than was required. This church has had the State Association to meet in it, and I was much interested in two services I attended during the term. On Sunday morning the S. S. Association met and several ministers made short addresses, and I am sure I never heard better. The Association sent $2,000 to the General Board of Missions, which seems wonderful to me, considering the poverty of the people.

I have almost filled my page without saying half I meant to do, and must close now. Bessie says, give you lots of love from her. Give my love to Lucy and the boys. I hope Albert is getting along fast.

Hoping to bear from you soon again, I am yours,

Affectionately, Ohra Langhorne.

LETTERS FROM HAMPTON GRADUATES.

Carnioan Settlement, Darien, Ga.

Dear Teacher:—I have received several handbills, or cards, and pamphlets, &c., from dear old Hampton, hut cannot tell who sends thsm, yet I imagine that it is my dear, good, patient, while teacher.—Miss H.

Yes ma'am, I have been teaching here in Darien since last May; but as my school was discontinued in the city for awhile, on account of having no building, I am employed by both people and State here, and I have a very nice, large school-building, or Baptist Church, given over to me *free* of charge. I was teaching in the same building you were, when you taught there. I have a very bright set of scholars—forty in number—and it would do you good just to be passing by the door, in the pretty grove, as they sing "We are marching on with shield and banner bright." I must say that all the schools I've taught since I left Hampton have made me feel delighted in thinking that I am able and can do some good for my *people*. My scholars have progressed rapidly, and they *all* seem to like those gymnastic motions (that Miss W. used to teach us at dear old Hampton) which I carry them through every morning. I must say that the children down here in Georgia seem to appreciate the teachings and the instructions of *colored* teachers, their own race, very much.

Dear Teacher:—I would have graduated last term had I returned, but, owing to the reduced circumstances of my father, I taught. I left here in June, 1874, and went to my home. I took charge of a school at C——, where I remained until September, 1875, when I returned. I first taught for the people who paid me one dollar per month for each scholar. I was there a week before beginning my school, which time I spent in going around, visiting and getting acquainted with the people. Every person expressed his joy at having a teacher who, they hoped, would stay with them. The longest time that any other had stayed there was six weeks. Those three teachers were women who allowed themselves to be frightened and driven away by the whites who opposed them because they told the children not to say mistress and master, as was the custom when they met them. The other teachers had been sent there by the state. I bearing credentials from merchants with whom they traded, got along better than my predecessors. I was there a very short while before a man came and asked me to do a little calculation for him. I did it, and soon came his employer, who had talked with me and seemed very friendly, and said "You must stop that or make your track cold about here." He told me that was not my mission there.

We will now go to the first morning I entered upon the duties of my school. You can imagine the unpleasant sensations which came over a young teacher. That was my first experience in the work, and I found more than half my scholars to be larger than I was. The first day I enrolled twenty-one. Five could read words of one-syllable, six knew the alphabet, the remainder knew nothing; three could count a hundred, and five could not tell their names. You can see, from the above statistics, what I had to contend with. I said to myself here is work to do. I succeeded in giving them a start by November, when the county school opened and I was requested to teach, forty-five dollars per month being offered me. I accepted the offer, and taught seven months for which I have not yet got my pay. General Armstrong allows me to remain and pay up when I get my pay. I had a large Sunday-school which was largely attended by the older people who listened very attentively to what was said, as it was there that they could note the progress of their children. They could not spare the time to visit my day school. The only trouble between the races there was in politics.

The colored people are buying land rapidly. I know of several who denied themselves greatly to pay for their land. They would boil the pot at dinner, eat their pot-liquor and bread, warm up the greens for supper, an ash-cake for breakfast, and would boil the pot next day with the same piece of meat. They spin and weave all their clothes, buying a nice dress or suit for Sunday. The trouble is, they do not know enough to tell exactly when they have paid up, and often pay too much. I am here and hope to be better fitted for the work that is before me when I go out again.

Very respectfully yours, D.

Dear Teacher:—I am in my school at half past 8 A. M., and remain there until after 4 P. M., and walk at the rate of six miles per day. I find so much work to do I hardly know which end to begin at. Morals to be taught, as well as spelling, reading and writing, so there is but little time for letter-writing or any deviation from training the minds of the needy. Dear teacher, I see no time for play or amusement, day nor night. I lie in bed one-half of my time, deliberating over the next day's labor; the work is great and demanding. Here are children of all descriptions in school; some are rude, some idle, some with their hands up for something. I often ask myself the question, whether all teachers are as deep in meditation as I am about their schools.

The Southern Workman has been quite interesting to my school-children and others, they like the letters very well that I read to them. They wanted to know how letters get into the papers. I told them that the letters that were to go in the paper the printer took and read over, saw what phrases were correct and those that were not. He then had little things called types which he placed for every letter in the word, and set them in rows just as the teeth of a comb. Then he would ink his rollers and run them backward and forward over the paper. The children thought it must be very tiresome to do all these things. They were much attentive while I was thus explaining to them the several steps taken in this business.

THE HYGEIA HOTEL,
H. PHOEBUS, PROPRIETOR.
OLD POINT COMFORT, VA.
Terms: Transient $4.00 per day; $17.50 per week and upwards, according to location, &c.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.
The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.
The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 60°, 74°, 76°, for Summer; 70°, 59°, 46° for Autumn; 45°, 44°, 42°, for Winter; and 46°, 61°, 68°, for the Spring months. —Open for guests all the year.— 11-75, tf.

60 to 80 BUSHELS PER ACRE!
THE WHITE RUSSIAN OATS
SOMETHING NEW!
Farmers Read This.
Agents Wanted in Every County.

These Oats have lately been introduced into this country and prove to be the best now known. The attention of farmers is especially invited to this new cereal, which for their prolific qualities, hardiness and perfect adaption to every variety of soil and climate, makes them a peculiar favorite wherever introduced. Their yield is enormous—being from 60 to 80 bushels per acre. They are strictly rust-proof. A package that will yield from 6 to 10 bushels of Oats with circulars giving special terms to agents and full instructions as to time and manner of sowing will be sent, pre-paid to any part of the United States or Canada, on receipt of $1.00 or 3 packages for $2.00; 1 dozen packages for $6.00; one-half bushel $3.50; 1 bushel $6.00.
These Oats we offer are fresh and genuine seed of last year's production.
Now is the time to procure your seed, so as to be prepared for early fall sowing. Address

THE
NATIONAL SERIES
OF
STANDARD
TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.
The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."
The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.
It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.
For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works,

NATIONAL READERS AND SPELLERS

Hampton Normal & Agricultural Institute,

HAMPTON, VIRGINIA.

ANNIVERSARY EXERCISES,

MAY 18, 1876.

The following accounts of the last Commencement exercises are published for the information of the friends of the Institute, as evidence of the success of negro education, and to enlist fresh interest in and aid for the Hampton work end for the cause of Christian civilization among the freedmen of the South:

REPORTED BY THE REV. JOHN W. HARDING, OF LONGMEADOW, MASS., FOR THE SPRINGFIELD REPUBLICAN.

"To-day has been the brightest yet in the eight years' history of Gen. Armstrong's school, —for his it confessedly is, by the preemptives right of his creative energy and personal inspiration. With full numbers, a supply now nearly adequate of spacious, handsome and convenient buildings, a higher standard, from year to year, of mental and morel culture, and a growing acquiescence of favorable southern public sentiment, the future of Hampton is a pre-determined success. To begin with, its situation is a grand advertisement. Easily accessible to both North and South, on the edge of a great through line of travel, but just enough apart for proper seclusion, its scenery and climate are the loveliest, and its surroundings uncommonly attractive. Such charming water-views as are furnished by the windings and inlets of Hampton creek, with Fortress Monroe and Hampton Roads in the near distance, and the wide ocean stretching beyond, are hardly to be found elsewhere on the broad Atlantic coast. Many remarkable historical associations, too, lend their peculiar flavor, while Fortress Monroe, Portsmouth navy-yard and aristocratic old Norfolk—now taking a new lease of life and vigor—combine to supply indirect influences of high social culture and good society. Besides all this, Hampton enjoys a valuable advantage over remoter institutions of its kind, in belonging to such a liberal and progressive border state as Virginia, where the Mason and Dixon line is rapidly fading out, and the pulses of enterprise, capital and education are beating stronger, every day.

"By taking the inside route, via rail and Baltimore boat, we arrived at Hampton in the early morning, a day in advance of the anniversary exercises, so having opportunity of witnessing the regular ordinary daily inspection by companies, each class forming a company, officered by themselves. There is also a daily inspection of rooms, guard duty and training in a fire brigade, a Hunuemun fire engine having been recently purchased, with 700 feet of hose. During the past year, in connection with two new dormitory buildings, an encouraging experiment has been tried in self-discipline, through a code of the students' own regulations, subject to approval of the teachers, and carried out by their own officers. It has worked well in repressing petty outlawry, bad language, and inducing general good behavior and a manlier tone of personal responsibility.

"There is a map hanging in General Armstrong's office, including Virginia and portions of adjoining states, blazoned over with stars, indicating the various locations of the graduates, some 150 having taught during the last five years, from graduating classes averaging from 40 to 50. About 4,000 children were under their instruction, last winter, and the present graduating class of 44 will bring at least 1,500 under the influence of the Hampton methods and in contact with its spirit. These methods are invaluable to southern education, because so entirely thorough, prompt and accurate, and pervaded through and through by a high-toned, conscientious spirit of manly and womanly character and behavior. Dr. Ruffner, superintendent of public education in Virginia says, 'School-houses are ready, salaries provided, but teachers cannot be found.' But of the 4,561 Virginia school-houses, 2,101 are built of logs, and only 676 are provided with good furniture. The Hampton graduates, however, says General Armstrong, 'have sometimes built their own school-houses, and often made their own benches.'

"The underlying theory of the Institute is a good, practical, common-sense English and industrial education, through the utmost appliances of self-help, with no pretense to high collegiate culture, but only such as will fit its graduates for the hard and self-denying work of beginning at the bottom, and patiently but surely lifting up their people. The aim is to furnish good, earnest, solid common-school teachers, and especially solid in that most fundamental requisite of the southern negro,—character. The course of study occupies three years, and requires $210, or $70 per year, for the instruction of each student, who is expected by his own efforts to earn more than is given him. For instance, the previous school year the students paid in cash,—principally from earnings during vacation, or as provided by parents or friends,—$6,007; in personal labor on the Hampton farm, and in other industrial employments at of from five to ten cents per hour, $7,488: there was received as personal aid from outside sources $3,310; leaving a balance of unpaid debts, $446. Thus, four-fifths of all school expenses, except tuition, are paid by the students, who, it should be remembered, are, in general, utterly poor. Their parents can seldom help them much, and they have no rich friends. And still it is demanded of them, as better for their character and self-respect, to meet their personal expenses of board, fuel, lights, washing, furnish rooms, etc. They must *live* by their own efforts and the efforts of their personal friends. Their *tuition* is *given* them. The girls' industrial training is in cutting and making garments, the use of sewing machines, bread-making and plain cooking, and all departments of household work.

"In addition to this industrial feature, the Hampton teachers rely much for the formation of character on religious training, and particularly the practical religion of every-day righteousness, as distinguished from the passionate and sensuous and noisy type of the traditional negro piety. At the same time, without being sectarian, it is squarely evangelical. When Gen. Armstrong, appealing to Boston Unitarians for help, frankly stated this, Rev. Dr. Ellis said: 'That's right. We don't place much reliance here in Boston on a personal devil. But you can't get on without one down among those negroes.' Rev. Mr. Tolmen, whose ministrations the students attend, by his plain, instructive and earnest preaching and faithful pastoral care, has succeeded in impressing a rational and intelligent type of religion, interpenetrated with daily virtues, which the negro religion of shouting and dancing and convulsions had not the least conception of. It is illustrated by the case of a negro in old Hampton who stole a suit from one of the clothing-stores so as to appear well at his first communion. Mr. Tolmen places no dependence whatever on the bare fact of regular membership in the negro churches of whatever denomination, in admitting to his own church. As the public sentiment of the school permeates the community, the congregation increases by accessions from the more intelligent negroes of old Hampton; and wherever go the graduates, they carry with them the leaven of a purer religion. Yesterday evening, a little before sunset, and just as the Hampton steamer glided up to the pier with a fresh accession of guests, a novel spectacle arrested their attention; not the drill and martial music, but a baptismal service, the whole school gathered on the edge of the lawn that slopes to the water-side from Gen. Armstrong's house, singing their sweet hymns, while a Congregational clergyman from Massachusetts (Mr. Tolmm's health being too feeble for the service) went down into the water, accompanied by a colored brother with a sounding staff, who, having found a sure footing, returned to the shore and brought back a company of his schoolmates for immersion, that being the form which best suits the general religious sentiment of the southern people of color. Some colored ministers who chanced to be present afterward expressed their gratified convictions that the performer of the rite must have come from somewhere beyond the 'color line,' because he used the address, 'My brother in Christ.' In my Hampton walks, some amusing instances were told of the readiness with which the unlettered negro misapprehends scriptural end other expressions through his ear, when reasoned with on the religious uselessness of so much shouting. 'If we should hold up, the stones would cry out.' 'Don't the Bible say, '*Hollered* be thy name?' A devout old auntie was specially fond of having read to her the account of the conversation with 'Negger-Demus.' One of the farm hands complained to Mr. Tolman of Mr. Howe, farm manager,—who is an expert mechanic,—'Massa Howe bad man, *very* bad man. Good God! He cusses!' 'What does he say?' 'He say, every day 'most, *Hell-lo!*' As a specimen of their pulpit anachronisms, in a glowing description of the Hebrews in Egypt, the land of Goshen was dwelt upon as famous for Goshen butter, where Alderneys and other fancy stocks dwelt up to their knees in clover and timothy. When a woman had gone into such vigorous convulsions in the midst of the congregation that it took several men to hold her, the preacher ordered her to be carried out. It was demurred, 'If you carry her out, you carry out the spirit of the Lord.' Says the preacher, stretching up with authority,—and in his class it is quite despotic,—'I say, carry her out; she wants *wind*.'

"Under Mr. Howe's excellent management, the school farm is rapidly coming into high condition, and in its skilled methods, improved stock, machinery, a Hoedley agricultural engine of nine horse-power, with a bone-digester and a burr-stone mill, a threshing-machine which earned $300 in one month by going to the aid of outlying farmers, a sorghum-mill presented by Mr. Cooper of Ohio, and, in fact, in about everything to make it a model farm, it is an agricultural educator, not alone for the students, but the whole region. Its total receipts, the past year, were $7,998, against expenses of $8,465, leaving a balance against the farm of $467. There was paid for students' labor $2,137, which did not, however, pay in profit to the farm, though it did in instruction, in self-help to the students. A cooper's shop for making 'truck' barrels has been added to the industrial operations, and also brick-making. Trucking proved, last year, a losing business, and its illusions, like those of our Connecticut river tobacco, are becoming more and more apparent. Early potatoes didn't pay for shipping, 400 barrels being fed to stock and the balance hardly paying for freight and barrels. The grounds of the Institute have been strikingly improved in respect of grading, carriage-drives and ornamental trees, with a grand supply either already set out in place or waiting in the nursery of centennial elms, Norway maples and Spanish chestnuts. A new cottage dormitory has been added to the buildings, of which there is now a substantial end permanent supply, nothing more being needed in this line except, perhaps, another dormitory, to relieve the boys whose beds crowd to the eaves the attic in Academic Hall. The material foundations are well laid, and now Gen. Armstrong is pushing for a permanent endowment fund of $200,000 to supply end support the vital educational forces of heart and brain that mold and build up character, and says that he is going to get it, which, in his case, means business, with Mr. Fessenden, Hampton's efficient financial secretary, to make it doubly sure.

"The anniversary examinations and rhetorical exercises, to-day, were largely attended, and showed less, perhaps, of the eagerness and earnestness, and sentiment of the dramatic period of emancipation and contraband memories which now is nearly passed, but better preparation and better average capacities. The best possible teaching is that of personal inspiration, the teacher's own vital and magnetic force, and just that was manifest in every recitation-room we entered. Especially marked in excellence was Miss Lord's lesson in reading, by far the best we ever listened to, and an admirable model, could it be repeated in any of our teachers' institutes. Gen. Armstrong's vigorous handling of Dr. Mark Hopkin's 'Outline of Man' elicited a responsive vigor from the senior class, who showed remarkable mental grasp of abstruse themes, considering their antecedent disadvanteges for studies of this sort. Miss Isabel Eustis of your city, who is mentioned here as a winning and popular teacher, conducted a spelling match, which rose, as the contest ended, to great enthusiasm. One of the best exercises of the school, that deserves introduction elsewhere, is a tri-weekly talk with the school, which might be called a newspaper exercise, calling attention to important current events. Among other interesting features, too numerous to mention, were the accuracy and cleanness of accounts kept throughout all the departments, both educational and financial, each student having his own personal book-keeping of the minutest items of debit and credit, and nothing anywhere left to the slipshod and drowsy management of the old plantation regime.

"Virginia Hall, or rather 'Whitin Chapel,' as the memorial tablet of a generous donor now christens it, was crowded in the afternoon by a curiously mixed assembly. On the one side, a mass of intelligent and glistening faces, shading from darkest ebony to the octoroon, and headed by the graduating class and the melodious Hampton Singers; on the other side, their white friends from far and near, North and South; among those on the platform were General Pemberton of Vicksburg memories and his wife, Commodore Stevens and party of Portsmouth navy yard, the officers of Fortress Monroe and their lady friends, Judge Dormnn of Norfolk and other representative Virginians, colored and white ministers of various persuasions, Dr. Philip Schaff of New York, and Dr. Braden, editor of the English *Independent*,—both these last-mentioned made excellent closing speeches. The rhetorical exercises by three young women and seven young men were well composed and spoken with naturalness and self-possession. Indeed, bashfulness seems to be entirely a lost art with these students, or else it is bravely concealed. Their themes were germane to the times: 'The South as It Is;' 'The Work to be Done in the South;' 'Should we Undertake to Civilize Africa?'—negatively answered; 'The Bible in the Public School,'—strongly advocated.

"But having already transgressed my limits, with only the excuse that Hampton is a very suggestive and contagious place, touching so many interests in various quarters, your correspondent stops himself by saying that whether the 'color line' shall crowd the freedman further South and West,—as in fact it is already doing to a large extent from each state as Georgia,—or whether the outlook of Africa shall more strongly invite, as it promises just now to do, or whether be fights it out on the 'color line,' and stays in his native haunts to stand by his 'civil rights,' in whatever event, or whatever future, Hampton is on precisely the right track."

[From the New York Evangelist.]

BY THE REV. PHILIP SCHAFF., D. D., OF THE UNION THEOLOGICAL SEMINARY, NEW YORK.

"The 18th of this month was a bright day for Hampton. It was the anniversary of the Hampton Normal and Agricultural Institute for the education of colored school-teachers, under the able leadership of General Armstrong. Forty-four young men and women were graduated, some as dark as their African ancestors, some almost as white as their former American masters. One had blue eyes and red hair. The difference of color told a sad tale of bygone days. Less than twenty years ago the same persons who now received a well-merited degree of scholarship and fitness for teaching their fellow-men, might have been offered on the slave market for sale to the highest bidder! Virginia has been the mother of Presidents in the first century of our national existence. Let her now become the mother of model institutions for training her colored children to Christian manhood and womanhood, that 'the new cycle may shame the old.'

"The education of the negro is no more an experiment; it is an accomplished fact, and an encouraging success. The examinations of the three classes, the orations and recitations of the graduates, were highly creditable, and equal to the Commencement exercises of many a white college of old standing. The teachers and patrons of the school, and the visitors from the North, must have felt abundantly rewarded for all their labors and sacrifices. The negro songs alone were worth a journey to Virginia. They went to the quick of our sensibilities, and will long resound in our memories, urging us 'never to get weary till we reach the top of Jacob's Ladder, and enter our eternal home.' The Hampton Singers, who a few years ago thrilled the cities of the North, fully sustained their reputation at home. They are singing evangelists, like their brothers and sisters, the Jubilee Singers. May those songs never die out! They divide two eras in our history; they ring out the old year of slavery, and ring in the new year of liberty; they remind us of our shame and of our glory; they reveal the genius of the colored race for one of the noblest of the arts, and their simple, childlike faith, which elevated and comforted them in the days of degradation, and enimates them in their new career of freedom.

"Hampton is admirably located for such an institution, about two miles from Fortress Monroe, in full view of Hampton Roads, where the memorable naval fight between the Merrimac and the Monitor took place, and turned the fortunes of war in our favor. The buildings erected by Northern liberality are large, commodious, and kept in excellent order. The large farm is worked by the pupils, and supports itself. The Principal, the son of a missionary in the Sandwich Islands, and a General of the Union army during the civil war, has the full confidence of the Board, and the general respect and love of his pupils. Long may he live to train an army of school-teachers, who will be among the architects of the new South on the firm basis of intelligence, virtue, and religion."

(From The Congregationalist, Boston, Mass.)

"The anniversary exercises of this well-known and popular institution at Hamptou, Va., took place on the 18th of May, under very pleasant circumstances. The time was fixed a month earlier than heretofore, for the benefit of the graduating class, the academic year continuing until the usual time, and the lower classes remaining at regular work. The graduating class numbered forty-four, of whom twelve were young women, the largest class that has ever left the Institute. The usual exercises were attended by a large and interesting company. President Church of Oahu College, Sandwich Islands, was present, and thus sums up his impressions, which are of peculiar weight and value:

"'It is not common for such school exercises to be spoken of with unmixed commendation; but to one engaged for many years in the work of education, both in this and a foreign land, it is a matter of surprise that these pupils have made such large acquisitions of knowledge in three or four years of their student-life at Hampton Institute. When we remember the poverty of educational advantages in which the early childhood of these pupils was spent, we can but say that they demonstrated fully that they have a capacity for improvement that promises abundant reward for all efforts made for their intellectual culture.

"One very important feature of the Institute is its system of manual labor, in which all the pupils participate. Great care is taken (which is of the first importance to such a people) to impress upon them the idea that they are being educated, not to raise them above work, but to fit them for it—to fit them to be intelligent workmen in some field of productive labor. The value of moral and religious influences as aids in education is with them also fully recognized. It is a pleasure to commend such a school to the generous support and patronage of the public."

CENTENNIAL VIEWS.

HORTICULTURAL HALL.

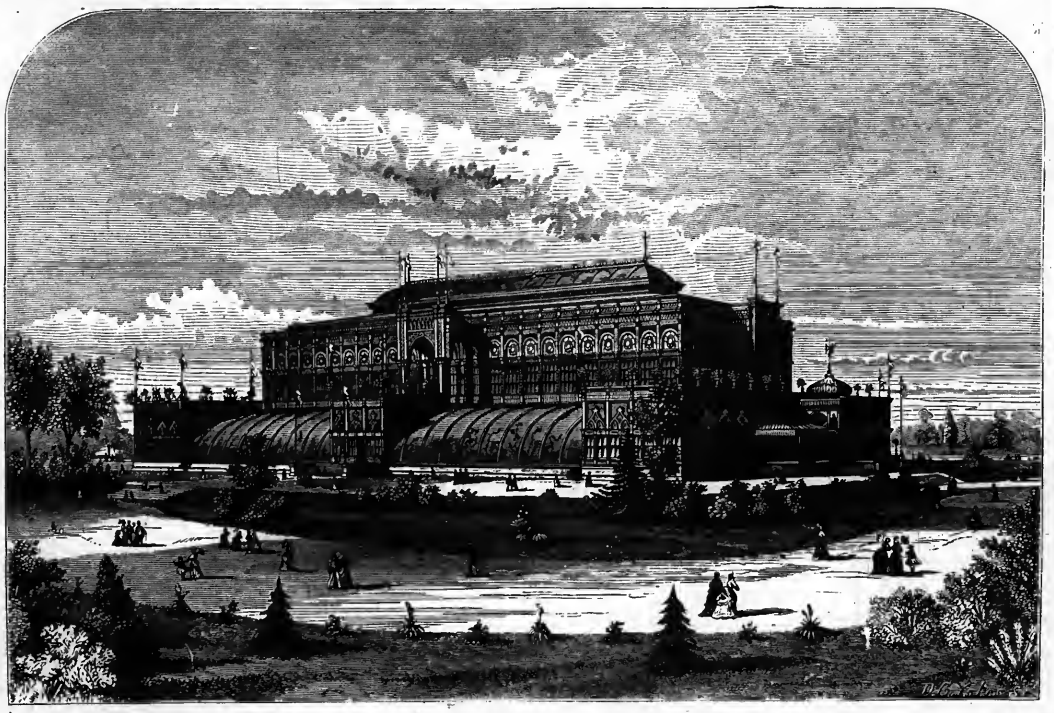
Tropical ferns and palms basking under an acre and a half of glass roof in the tropical atmosphere of a forcing house, are attractions one needs cooler weather to appreciate than a Philadelphia July affords. With the fading of the Rhododendron show in early June, the glory of Horticultural Hall departed. There it still stands, however, one of the facts of the great fair which it will not do to ignore—a glittering palace of glass, three hundred and eighty-three feet long by one hundred and ninety-three wide, and one of the most beautiful of the buildings. We walk hastily across the sunny stretch which separates it from Machinery Hall, pity the burned-up grass, wish ourselves in the centre of the Lake fountain with its hundred lofty jets springing over our heads, then, with a glance at the brilliant flower-beds outside, slip into the arched doorway and walk languidly around the green aisles, trying to imagine how they look crowded with the pink and white masses of a hundred varieties of rhododendrons. The chief attractions now are the tree ferns from Australia and the Sandwich Islands, and they are rather more curious than beautiful, looking like burnt gate posts, ten or fifteen feet high, with bunches of gigantic ferns on top.

Then there are various sorts of palms—date, sago and cocoa,—camphor trees and coffee trees, an india rubber tree with thick, fleshy leaves not quite large enough to cut a pair of rubber boots out of, a banana with its ponderous fruit stalk that it dies in bearing, oranges and lemons and taro and sugar-cane. Among all the green there are now hardly any flowers. One we noticed—a gleaming, passionate creature, scarlet lipped and purple hooded like a fiery serpent; one would expect it to be carnivorous and deadly.

A large fountain in the centre of the Hall made a pretense of coolness, but like most fountains in America, there is more bronze and stone than water about it. The design is pretty—three or four children playing on a reedy river bank, and getting up their courage for a dip in the cool basin below. One envies the little wet scamps. The artist is Miss Margaret Foley, an American lady residing in Rome, Italy.

There have been many rare and beautiful flowers here earlier in the season, some of the most delicate of which were brought from Europe in full bloom. A gentleman who witnessed their unwrapping described to us the careful process by which they were preserved. Each separate blossom or spray was lightly eased in cotton, and held from rubs and jars by small sticks planted in the earth of the pot which was then boxed and itself surrounded by a palisade of sticks, outside of which moss was packed. They were not watered or opened at all on the journey. The moment of unwrapping was an anxious one. Twelve days had elapsed since they were packed, and it seemed hardly possible that such fragile things could have endured the ordeal. Exclamations of surprise and pleasure greeted each dainty blossom as it emerged into a foreign daylight—a little pale and drooping, but soon raising its head, and in a few days blooming as bravely as in its native soil. The experiment was as novel as it was successful.

Many of the home contributions were made from the greenhouse of a gentleman, who, dying, left a provision in his will for keeping a beautiful conservatory on Chestnut St., Philadelphia, always stocked with beautiful flowers, and exposed to the full view of the public; to gratify, as he said, a common love and longing for the beautiful, such as he had felt without being able to satisfy when he was a poor boy himself.



HORTICULTURAL HALL.

THE CENTENNIAL FOURTH IN PHILADELPHIA.

The second century of the American Republic was welcomed as the first was, by the glad ringing of the "Liberty Bell" from the belfry of Independence Hall. Thirteen peals marked the last moments of the old century, and twenty-five more, to fill up the present number of states, ushered in the new. The new bell, a handsome and musical successor to that which rests with a crack in it, mute but honored, in the National Museum, is the gift of Mr. Seybert, a patriotic citizen of Philadelphia. Long may it swing.

Twenty-two thousand visitors are said to have entered Philadelphia the day before the Fourth. Baggage masters and expressmen were reduced to insanity and the owners of trunks to despair, in their frantic endeavors to sort and pair travelers and baggage. It ought to be noted as a sign of the century's progress that nightfall could find the invading hosts quietly eating supper in their respective boarding places in peaceful expectation of the morrow.

To the five thousand invited guests who, born to good fortune, had reserved seats on the platform in Independence Square, the commemorative scenes of the Fourth were in the highest degree inspiring. Patriotism on the pavement at high noon of a July day, in the centre of a suffocating crowd, is a loftier virtue. Yet the masses rose to it, if cheers, waving hats, and, what is sublimer, general good nature and order under such trying circumstances be any proof of devotion to one's country.

The excitement rose to wild excitement as the long military procession entered the Square and passed in review before the platform. Cheers greeted the faded Revolutionary flags waving their historic tatters proudly beside gorgeous silken banners over every company that could claim one, and the legion representing the combined commands of the thirteen original states, led by General Heath of Virginia in the absence of General Burnside, was received with great applause.

Vice-president Ferry presided on the platform in the absence of President Grant. Here also were Governor Hayes, the Republican candidate for the Presidency, Secretary of War Cameron, Generals Sherman and Sheridan, ex-Governor Walker of Virginia, the heads of the Centennial Commission with the foreign Commissioners, and the Nation's other distinguished guests—Dom Pedro, Emperor of Brazil, and the Marquis de Rochambeau of France, whose illustrious ancestor shared with Washington the honors of Yorktown. The orators of the day were also on the platform.

A chorus of 1,200 voices and an orchestra of two hundred and fifty instruments were led by Professor Gilmore with a baton made from the famous Washington elm under which General Washington took command of the Continental army at Cambridge. An orchestra overture founded on the national air Hail Columbia opened the services. General Hawley, President of the Centennial Commission, then announced the presiding officer of the occasion, and Vice-president Ferry made the opening speech, closing with the prophecy of a universal spread of American institutions, saying,—"When that period shall arrive, Great Britain, so magnanimous in her presence on this auspicious era, will then, if not before, praise the event when American independence was won under Washington, and when freedom and equality of races were achieved under Lincoln and Grant."

A prayer by Bishop Stevens of Pennsylvania, the present Chaplain to Congress, followed, and then the spirited Hymn of Welcome by Oliver Wendell Holmes was sung by the full chorus, accompanied by the orchestra, to the music of Keller's Hymn

"WELCOME TO ALL NATIONS."

I.

Bright on the banners of lily and rose,
Lo, the sun of the century sets!
Wreathe the black cannon that scowled on our foes;
All but her friendships the nation forgets!
All but her friends and their welcome forgets!
These are around her, but where are her foes?
Lo, while the sun of the century sets,
Peace with her garlands of lily and rose!

HAMPTON, AUGUST, 1876.

PREMIUM.

From and after November, 1875, *on receipt of one dollar, one year's subscription to the* SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at fifty cents apiece.

A NEW Century has dawned upon America. What will it hring? The newspapers facetiously declare that the people have now set their faces forward and are looking eagerly for July 4th, 1976. There is some truth and reason in this. Like all youth, the young Repnblic is accustomed to look forward more than backward. But as the last cheers in Independence Square have died away, and we leave the contemplation of our heroes and our greatness, and go back to our congressional dead-looks and investigating committees, and look forward to the dust and strife of an approaching Presidential election, It is well that we can carry with us freshened memories of the great past and new impulses of patriotic devotion to the land for which our fathers died. There are those who forecast the approaching decline of the American republic from the history of ancient republics. But the case has changed. They are like the chill at exactly the same hour of every other day until his friends set all the clocks back, and when he thought the appropriate time had come they told him that it was long past and he needn't shake. These prophets of evil are timing onr chill hy the clocks of the Roman republic, hut the wheels of the XIX century move so much faster that we ought to have shaken to pieces before now if such historical analogies control our fate. Our one century has been equal to many in its unparalelled progress, and instead of our declining in prestige, nearly every country in Europe, influenced hy our success, is tending toward republican forms of government. On the other hand, with all the nations of the world flowing into us, with so many diverse elements to be reorganized, harmonized and assembled in one way or another; with the Indian qnestion, the African qnestion, the Chinese qnestion, the Catholic question and a few others, there is small danger from onr perishing from inaction and the enervating luxury of idleness. We have work enough laid ont for one or two centnries, and our country is worth living for.

THERE can be no question that the nation's future will be in a great measure affected hy the future of that race which is beginning Its first century of freedom as the country is beginning her second. The most striking event which has marked our last hundred years has been the abolition of slavery at Its olose, and however many shades of political and sectional differences may have existed among the thousands who took part in our Centennial rejoicings, there could hardly have been one American among them who did not feel after all a sense of relief and draw a free breath, for that we could invite the nations to sit down at our Centennial celebration under a flag free from the old reproach.

In looking forward to its own development, impatient for the full attainment of its dreams, disheartened hy the first delays, as were the children of Israel when they saw the wilderness stretching before them instead of the promised Canaan, It will be well if the new nation will consider the conditions which marked the struggles and success of the early colonists of America. Different as are their circumstances, there is in some respects a striking similarity, as there was between those of the settlers themselves representing though they did widely diverse nationalities, languages and creeds of the old world, while the spirit which animated most of them was such as would carry men successfully throngh any circumstances.

As in his eloquent oration in Philadelphia, Mr. Evarts remarked, "The search for civil and religious liberty actnated the Pilgrims, the Pnritans, and the Churchmen, the Preshyterians, the Catholics nnd the Quakers—the Huguenots, the Dntch and the Walloons—the Waldenses, the Germans and the Swedes, in their several migrations which made up the colonial population. Instead of a capricious and giddy exaltation of spirit at new gained liberty, a sober and solemn sense of the larger trust and duty took possession of their souls, as if the Great Master had found them faithful over a few things and had now made them rulers over many." With the same longing for liberty, with a marked earnestness and fervor of religions faith and feeling which they should cling to as their strongest hope, the freed people should emulate the sturdy thrift, the stern morality, the industry and love of learning of the fathers of our country, the virtues which made "the little one become a thousand and the small one a strong nation." And the country mnst help them do it or suffer with them.

THE history of Methodism in this country reads like romance. Transplanted from England to the shores of the New World in 1776, it began at once spreading in all directions like leaven, and with a rate of progress that seemed to increase like the country's in a multiplying ratio. Appealing strongly to the feelings, claiming a personal inspiration and unction from the Holy Ghost, urged hy men of holy lives and iron wills and total self-abnegation, it took hold on the masses of the people with a power unequaled. In 1801 it numbered 2,500 in its church membership. In 1866 when its juhilee was celebrated, it counted a million; far outnumbering any other denomination.

The secret of this immense powar has been, in great degree, its exact adaptation to a present need. The backwoods settler wanted backwoods preaching—earnest, practical, stirring, rough it may be, suited to just such needs, and such he had from the Methodist circuit rider. The church has been accnsed with some canse of ignoring the valne of an educated ministry. Its fonnders were university men. Wesley himself was a voluminons author in almost every branch of literature. He was the founder of the system of cheap pnhlications in England, and directed all his itinerants to "see that every society is supplied with books, some of which onght to be in every honse."

In America, Bishop Ashury, for fifty years the master spirit of Methodism, oonsecrated a Methodist College at Ablngdon, Virginia. He did not believe, however, that pretentious colleges and universities should be attempted hy the church in its infancy, and formed a grand scheme of estahlishing more practically useful academies in every conference. He established the first Sunday-schools in America. This practical spirit pervading the church sent forth ministry armed with the sling and stone of the plainest trnths instead of a full olassical and theological armor which they could have no use for in the wilderness. The Bible and hymn book were their arsenal, and often their only other books were the book of nature and of human nature; they learned to read men. The circnit rider stndied his Bible on his knees in the thicket or on the snow of the prairie; composed his sermons on horseback, and after an all-day ride through the wilderness, exposed to storms and lurking Indians, preached it in a log cahin or the open air to a set of rough, unlearned, swearing and fighting backwoodsmen. Such preaching must go straight to the point as they did with their rifles that could drive a nail at fifty yards. A square aim at their sins they could understand, hut no polished rhetorio or theological disquisitions. Such a preacher was old Peter Cartwright, the son of an old Revolutionary soldier in Virginia, converted from gambling and vice, and for fifty years a pioneer in Methodism. Rongh as a pine knot, and as full of light and fire; unlearned, bitterly sectarian, hut unwearied in self-sacrifice, pure and kindly and a ruler of men; able to knock down an assailant and then pray with him and convert him. Such was Rev. Valentine Cook who wrote in 1794, "Yesterday I walked upward of thirty miles in mud and water, wet all day throughout. Yet glory was within." Such was the venerahle Bishop Hedding who averaged 3,000 miles' travel a year and a sermon a day while he was in the itinerancy, owning no dwelling place and no conveyance hut his horse. He used to say with a glowing face when he was an old, white haired veteran, "If I had my life to live over again, and the Lord would make me a doctor, or a lawyer, or a merchant, or a millionaire, or a prince, or a minister, I'd be a minister."

The present position of the colored people of America calls for just such a spirit, and just snch ideal devotion as made the glory and snccess of early Methodism. In that romantic history there is both suggestion and comfort for the young freedman who thirsting for education, ambitious for self-improvement, and unwilling to stop short of a classical and professional degree, sees little chance of attaining it and less prospect of using it, while he feels at the same time the pressure of an imperative present need, a call to enter the field at once with what force he has, as a primary teacher or pioneer preacher and not a doctor of law or theology.

There is a school of theorists whose plan for improving the world is for every one to devote his whole attention to improving himself. The trouhle with that plan is, first, that there is always hut a limited number of men and women who are up to that—not to say down to it,—and, second, that, in their very exaltation and self-cultnre, they forgot utterly to cultivate the noblest part of any natnre, unselfish love, and, having not charity, they are as sounding brass and tinkling cymbals. How tame such a theory of life shows beside those grand old backwoods bishops.

"Whoso findeth his life shall lose it," said the Master. "Whoso loseth his life for my sake shall find it nnto life eternal." What work do yon want in the world? To help make the world better? Then yon never need be out of work. Give yourself to the children of your people. Train them to hnild the temples that you have longed to build. And that will be better than to be lawyers without clients, professors without chairs, theologians without hearers, and with none to come after you. It is greatest to fill the need of the hour.

HAS HE A RIGHT TO AN EDUCATION?

His parents are the poorest of the poor, and, I might well add, the most ignorant of the ignorant, and are able to do nothing for him. He is very desirous of obtaining an education, and I was anxious to place him in your Hampton Institnte that he might avail himself of the opportnnity there offered of *helping himself*. This he *must do*. I hold myself responsible for five dollars per month toward his board, and his clothes and the rest he must do for himself. I am not willing he shonld go in debt, as that is something I heartily disapprove of. With much less help he has taken care of himself here, and I know he can do it there.

His history is qnite interesting. It seems that his parents, who lived fifteen miles from the village up to the time he was fourteen years of age, had no thought of sending him to school; hut, as he says, he saw other boys on the plantation learning their book, and something kept telling him *he* mnet go to school and learn, too. In some way he earned five cents. He walked to the village (fifteen miles) and bought a little primer with the alphabet in it. Then, while working in the field, he would get the boys to repeat the letters for him, from a to z, over and over, till he learned them by note. Then at night he would sit down by the light of the pine knots, take his little book and apply them till he had learned them. Then he wanted to go to school, hnt he lived too far; hut about this time his parents moved to a plantation six miles from the village. One morniug he was at work in the field when he looked and saw a party of children, with their books, going to school. He couldn't stand that. He went into the cabin where his mother was and told her he must go to school. She knocked him over the head and told him to go back to work. He told her, no; he must go and learn. She started to knock him again, when he threw down his hoe and ran—nor did he stop till he came in sight of the school-house. I well remember that morning in March (7th) when, as I called the children to their seats, I noticed a shadow in the doorway, and, looking up, saw this boy literally in rags. I spoke to him and asked him what he wanted, and he reply was, 'I want to come to school, to larn an eddication.' For a while he walked the twelve miles a day; then his mother, finding she could do nothing to hinder him, gave way to him and moved to the village. I ehould have added that when he went home that first night his mother beat him unmercifully and sent him to bed without anything to eat; that the next morning he got up before his mother was awake and ran away to school agaiu, and persevered in that way till he conquered all opposition. Suffice it to say, we have fonnd him enough above the average, every way, to warrant giving him an opportunity to make the most of himself, which I desire him to do. He expresses himself greatly pleased with the school, and I hope he will do well. A. M.

THE following letter was written in reply to an inqniry as to the moral and spiritual welfare of the freed people of the South. It is hy a reliahle lady, for many years a teacher among the people she describes.

ISLAND OF ST. HELENA, S. C.,
February 21, 1876.

My Dear Friend:—

Your letter reached me a few daye ago, and I am willing to do my best to give as correct a view as I can of the results of emancipation here. Of the condition of the colored people generally I cannot speak from personal knowledge; but their condition on thess Sea Islands I do know, and can give a cheerful account of.

If anyone should come from the North and listen to the complaints of former masters, they might naturally think the race was retrograding fast. And if we compare them with nations and races edncated for ages in freedom, civilization and morality, we might think them very low in the scale. But anyone who has watched with eager interest, as I have, the gradual but sure and marked improvement for the last thirteen years, will thank God and take courage for their futnre.

I came down here in 1862, in June; the Islands had heen taken hy the army the winter before. The people were then living on this Island in hnts closely set in lines together, —huts, averaging ten hy twelve feet, with an additional recess just large enough for a hed, most of them with no floors bnt the earth, no heds hut a hlanket,—and into theee they were crowded, not only one family, but two or three. Now, over the island in every direction, instead of these disgusting and dirty houses, are to he seen houses, small indeed, hut tidily whitewashed, with a little verandah in front, standing in the ten or twenty acre lot bought at the land sales, surrounded hy peach and plum trees, with cowshed, pig-pen, corn-house, snugly fenced in. Not a few of these houses have an upper half-story for the children to sleep in—a bed-room below with a bedstead for the parents. A hed of rice straw is considered a requisite hy every one; spoons, forks and plates have nniversally taken the place of the pots and oyster-shells, their former dining requisites, and nnfloored houses are unknown. The children's prize cards, and pictures from illustrated papers ornament, in many cases, the whitewashed walls of the room; mosquito nets, chests of drawers and chairs are not uncommon. The dress is wonderfully improved. On Sundays they were formerly dressed out in rags and tatters of old

finery—a spencer of ragged merino over a dirty checked skirt. The children under twelve were considered well dressed in a shirt, no matter how ragged, and that was usually put on only if white people were about. Now, they dress much as laborers generally do, at their work; and on Sundays no race need be ashamed of the tidy, orderly church-goers. Women and girls in their pretty, light, neatly-made and clean calicoes; the older women in white head-handkerchiefs, the younger, as young people will do, following the fashion in gayly trimmed hats. The men's clothing is quite as much improved, and the majority of parents see that their children come to school passably dressed.

It is now a general rule on the island that the children and clothes should be washed and the house scoured once e week. Of course there is room for improvement, and they are far behind the North; hut we who come in daily contact with them see the daily advance.

They are accused of laziness. That they do not work in the field as long as they used to, I know. Every one above the age of fourteen was driven to the field at snnrise, and, in many places, kept there till dark. Now, they go ont in the morning, fether and mother, boys and girls, end work till the school-hell rings et half-past nine, or, if they are too far from school to hear the bell, till a certain amount of work is done. Then the young people go home, eat, dress and start for school; the grown people work till the sun is hot; then the mother cooks, sews; the fether rests till afternoon, when the work is resumed. In the evening they go to e praise-meeting, sing, talk and welk home in groups. At certain seasons, potato-planting or cotton-picking, for a few days, all work all dey long. The men work during the winter, cutting wood, clearing land, and the women, picking over cotton. They wisely plant enough corn and potatoes to feed the family, end they plant cotton on the rest of their land. The letter is a precarions crop. The cotton money hnys clothes, hnilds their houses, huys en ox or horse, pays taxes.

The long noon-tide rest is needed in this hot climete, and the days or half-days used in political or church meetings I do not consider lost.

There is a great complaint hecause they will not work much or cheeply for others; but as long as work on their own land pays better than ou another's, I think they are right. Before emancipation, you might see acres upon acres of cotton, stretching in unbroken plains, where now every ten acres ere laid out in so much corn, so much for potatoes, so much for cotton. It seems to me e truer civilization. Of conrse Northern employers would be driven frantic hy their slow and clumsy weys; but the Southern white race have just the same fanlt—the result, probably, of slavery and climate combined.

Morality, virtue, was, in the old times, to these people an impossible thing. Now, I have in my class hetween eighteen and twenty girls, growing up in happy girlhood under their parents' care. In other departments of the school as many more; end the two other grammar schools on the island could give the same report. Open, honorahle courtships, marriages publicly solemnized, the young people starting homes of their own; happy homes, virtnons wives, true husbands, ere no longer e rarity on the island, and will soon he the majority instead of the minority. The sin to which they are most addicted is what might be expected in a slave race, viz., stealing; end thet stealing is carried on to no great extent is evident, when among the thousands on our island, there is no police force—one colored constable only, and we sleep in security with nnfastened windows on the ground floor.

In my opiuion of their religion I differ from most people. That their religion is all hypocrisy, because it has not made a nation of slaves perfectly honest, truthful and moral, is as illogical as to call the religion of the Anglo-Saxon race hypocrisy, hecense it has not made them cease from war and learn to do justice to the weaker races. I see evidences that our Lord did not leeve his people comfortless in the darkness of slavery. They who had nothing ou earth found heeven very near; from cruel masters they appealed in prayer and song to the ever-just, ever-kind "Master Jesus," and His love was a strong reality. They said, under the lash, "The Lord coming soon, He know we can't stand it no longor." An old woman dying, her children forgotten, her grandchildren unrecognized in her age and euffering, said to me, "Good-hye, chile; I can't wait to see you again; my Jesus cell me now." Another, in danger of sudden death, said, "The Lord know I is a pore, feehle creature, and He will come half-way down the valley to meet me." Sympathizing friends surrounded a young widow, "Give you joy, sister; your Titus safe with the Lord; we give you joy." This love, warm, deep and true, needs only to be taught to find expression in works instead of words. And it has shown its power alreadg; the patient forgiveness, the love of law snd order, the thirst for knowledge, the ambition for better things, are not natural to enslaved savages,—they are the evident results of e true religion. To that religion I trust their fnture without a fear.

The most crnel master of old times, a man of whom stories are told of unusual atrocity, has come back to the island, and lives without a fear among the people he used to torture. No act of revenge or savagery marked the time when the power passed from the hands of masters to those of their slaves. In several cases the freed people have assisted to the extent of their means their former owners.

To say that there is no hope of improvement in this Christian, law-ehlding, forgiving people who are eager for education, because the vices of slavery yet cling to them, seems, to me, very unreasonahle. I see hut one great danger before them, and that is the practice of drinking intoxicating liquors; and I do wish that a better knowledge of the sin end danger of this vice could be spread among them. We teachers heve a "Bend of Hope" on our island, nnmbering seven hnndred, from children of ten years to young people of twenty, and with temperance songs and facts, end recitations, maintain a steady war against the practice, end with, I am thankful to say, no little snccess.

Hoping this may assist you to prove that the people whom the North freed will yet justify the hopes of their friends,

I remain yours sincerely,

E. MURRAY.

Agricultural.

THE IMPORTANCE OF A FINE, MELLOW SOIL FOR THE GROWTH OF CROPS.

The cereal crops will not flourish on a coarse and lnmpy soil, any more than a pig will fatten on dry, flinty, unground corn; for the reason that in neither case could the food element be made available. Animal life ie hut little nourished by indigested grain, nor is plant life nourished in a soil that is indigestible to the plant. If we apply the richest kind of manure in coarse, hard lumps, it affords but little food to the crop and no real benefit to the soil until it becomes fine and intermingled with the soil; neither will gypsum, bone, or other like fertilizers, produce any immediate effect, nnless they are ground so fine as to become really soluble by the effect of rain and moisture in the soil.

Plants take np nothing from the soil except in solution, for it is impossihle for their roots to take in any crude matter or to feed in any other way. A tree, the roots of which are hard and wiry, will penetrate and draw its snpport from a hard and unbroken ground, but the cereal plants can only flourish in a loose and mellow soil. If we take from the ground a wheat, oat or barley plant, we find the fine earth adhering closely to the roots, and we see nnmorous fine hair roots all coated with the fine earth which is feeding and supporting the plant by the soluble matter it contains, bnt we do not find these hair roots, which are the feeders of the plant, running into lumps of earth for food, though they contain just as much as the pulverized earth, hut the tender roots cannot reach it.

It is true in theory what is already known in practice, that crops feed ouly from the finely-pulverized portion of the soil. The coarser part, though containing just as much plant-food in proportion to its volume, imparts no support to the crop in the way of feeding it. In view of this, we learn the importance of thorongh pulverization of the soil in preparing for the seed. The farmer should bear in mind, in fitting his land for a crop, that he will only get the use of so much of the soil as he pulverizes and makes fine. The balance is unoccupied so far as feeding and sustaining his crop is conoerned.

In cultivating coarse, sandy or gravelly lands, we should make them as compact as possihle, both to hold the fertility from washing down below and to hold moisture in times of drouth; for such lands are liable to lose both, from their loose, porous condition. Heavy rains will disappear in a few hours on such lands, which on olay soils would so saturate it, that several days would elapse before it would disappear. In the one case it runs through the porous soil into the subsoil; In the other, it is held by the tenacity of the subsoil until it is evuporated by the sun and winds.

There is a relution between soil and moisture which develops fertility, and in studying the principles of cultivation we must hold in view the condition of soil best adapted to retain the necessary moisture as well as to discharge a surplns. Clay soils retain more moisture and more fertillty than sandy gravels, but are more liable to be damaged by excess of water.

Sandy and gravelly soils can be worked with impunity soon after the cessation of storms, but clay shonld have time for drying.—*American Rural Farmer.*

YOUNG STOCK shonld be kept growing from their birth. The science of feeding is becoming much better nnderstood than it has been, and the mixing of different kinds to make the food more palatable and nntritions should be a matter of olose study. Food is the raw material from which we make flesh, milk, and wool, and much may be saved hy using this material in the most profitable manner. The mother's milk is the best food for young animals, bnt to this some additional food may be added hy degrees, so soon as the digestive powers are capable of assimilating it.

WE EXTRACT from the report of the Michigan State Board of Health a few words from a report on the apparently difficnlt problem of disposing of the contents of vaults.—

"Now, we have employed a method (in common with others) which many years' trial proves just the thing for country places, and which possesses the following advantages: it is attended with almost no cost; it requires less than a fiftieth part of the labor daily needed for swceping a room; it never, like a water-closet, gets out of order; it is not attended with any perceptible effluvia; and it cannot injure or enter drains or injure wells. The disinfecting process takes place, not 'once a month,' but every day. The contents are rendered as harmless as so much earth, and the men who empty the vaults say they would as willingly do it as to shovel sand. The whole process consists in placing a harrel in the apartment, containing a mixture of sifted road-dust and coal ashes, with a small, long-handled dipper, so that a pint of the dry mixture may be thrown down by each occupant. The absorbing and purifying power of the road-dust is astonishing. The coal ashes are used more particularly for diluting the dust and rendering it perfectly dry. The more clay the road-dust contains, the better it is as an absorbent. The vault shonld be rather shallow, protected from rains, easily accessible for cleaning, and shonld be hid by a swing door at the rear. The closet may be placed quite near the dwelling or in actual connection with it, if the easy and simple daily care is given to it, and it thus relieves the annoyance and exposure of feeble persons or invalids. It should be made pleasant by planting with evergreens, roses, or ornamental shrubbery, as the case may require."

EDUCATING A HORSE.—"There," said Mr. Harrison, pointing to him, "I raised him myself. He's rising nine, now. Come here, Charley." The horse came up to him, and stood looking at me over his master's shoulder'

"How did yon train him?"

"By kindness—thut's the only way—to be sure. Of course yon can make any animal obey by leathering him enough; but then some time when you ain't looking out he'll play you an ugly trick—balk when you're jumping, to let yon tumble on the ground, or rear and fall backwards on you. They're cunning about that sort of thing. I've seen a splendidly educated horse come into the ring and just stand still, not do a single trick, and seem to enjoy to see his master hooted at."

"What is the method of edncating animals?"

"Well, with different animals there's different ways. With horses and dogs yon show 'em often enongh for them to understand it. When I show them several times they find out what you want done, and do it themselves. Then I reward them on the spot. It's all easy; you've only to keep your temper and be kind. Some horses learn very qnickly, but that kind forget just as soon. I like best a slow horse, because he'll remember longer."

ADVANTAGES OF DISADVANTAGES.

Truths come to us often in parsdox. Not one more clearly illustrates my meaning than this—the help that comes from losses.

Thank fortune if yon have misfortune. From single-handed combat with poverty you may learn as none other the valne of prosperity. From lack of talent you may gain a wonderful industry—thet, after all, is commensnrate with natnral gifts. From the disadvantage of a plain exterior you may be driven to beautify the interior of your being. From the disadvantage of parental insignificance or folly you mey be driven to personal excellence and wisdom. If yon heve no influential friends you will build, if you build at all, on a snbstantial basis—the basis of your own merit.

Is you struggle, struggle, struggle, yon gain sinew end muscle. Your body grows strong and your mind is enlarged; your power of will the great force of life becomes all-powerful and irresistible. So, thank fortune you have misfortune. It will redound to your good some day in some wey.

I was thinking of the beginnings of Christianity, of the dauntless heroism of the Apostles, of their God-given euthority of word and work, of their loyalty to the cause intrusted to them regardless of consequences to themselves. I was thinking of the thonsands after thousands of the disciples that crnelly perished, refusing to recent.

Those were tronhlesome times indeed for Christians. A living with the ever-present sense of dsnger from torture and of death, yet resolutely set to meet calamity. Those were heroic days.

All these things are now changed. Chrisrienity has planted its foot the world over, civilizing, purifying, uplifting, comforting. There is no winnowing of persecution—the great granaries of the world are full.

If we ere not now heroic, it is because we are not opposed. Faith exists, hut it is not sternly proved. Christianity is not less precious—but we do not feel that it is imperiled.

They had met the whirlwind uprooting every human interest, leaving only their indestructible faith. We hask in the sunlight of perfect toleration. Our religion affects for good our material interests, until they start up in rank luxurience. Ah! but faith becomes almost swamped in prosperity.

So it is. The apostles were not greater than we, hut they had the huffetings, and beatings, and scourgings of persecntion. They held a great trust. They had the advantage of disadvantages.

And this truth runs throngh all things; hut we do not see it. The hoys say: "If I had a father to help me along, I too could do something." "If I had heen pnt in school I should have known something." "If I had not the stigme of low hirth I could rise." "If I had a fine talent." "If I were not crippled." "If I were not poor!" And the girl says: "If I wasn't a girl I might do something." "If I had e start given me." "If I had not suffered I should heve heauty." "If I had physical strength!" "If I had the advantage of influence I could get e position."

Certainly, if your friends "boost" you yon can get up, hut you do not learn to climh; and they who cannot climh are never secure, even thongh they be lifted.

Necessity is e hard hut the best of masters. If there is anything in a man, necessity will hring it out. Necessity teaches us of what we are capahle. It reveals to ns often capacity that surprises us. Necessity drives into action, and if we are driven into action that is distasteful, the fact of its unpleasantness drives us still farther in order to reach agreeehle action. And exercise brings development, and development power; and power use, and nse recognition; and rocognition demand, and demand for our work, reward.

Also adversity brings out nohle motives. Two girls, equally hright, go to the same school. One is heing edncated by a mother who sews for a living; the other is educated by an opulent father. One is inspired hy a desire to lift the hurden from her morher; the other has no other inspiration than a wish to he intelligent. One works indolently, the other as if for her life. The poor one shoots far ehead of the whole class. She becomes efterward a power in the world. The necessity of love, gratitude, and subsistence drove her into a fine development.

Some hnnger and thirst for knowledge, and the necessity of hunger and thirst sends them to books at every spare moment, perhaps from the plow, from the anvil, from the sewing machine, or tho kitchen, or the work-shop. Such will attain what they seek.

It is said that the Esquimaux binds his young child in a canoo and thrusts him ont into rough waters that he mey become fearless; and his life at stake, driven hy fear, hy necessity, he learns the mastery of the boat, which is to be his life-long companion. So God often thusts us into the deep waters, to teach us mastery of ourselves, and of circumstanccs.

It is e divine law, the law of the advantages of disadvantages.

(Continued from page 57)

II.

Welcome ! a shont like the war trumpet's swell
Wakes the wild echoes that slumber around !
Welcome ! it quivers from Liberty's bell;
Welcome ! the walls of her temple resound !
Hark ! the gray walls of her temple resound !
Fade the far voices of river and dell;
Welcome ! still whisper the echoes around;
Welcome ! still trembles on Liberty's bell ! .

III.

Thrones of the continent ! Isles of the sea !
Yonrs are the garlands of peace we entwine !
Welcome once more to the land of the free,
Shadowed alike by the palm and the pine !
Softly they murmur, the palm and the pine,
"Hushed is onr strife in the land of the free."
Over your children their branches entwine,
Thrones of the continents ! Isles of the sea.

THE DECLARATION OF INDEPENDENCE.

The central event of the commemorative day was, of course, the reading of the Declaration of Independence from the original manuscript, the reader being Richard Henry Lee of Virginia, introdnced by Vice-president Ferry as the fitting reader of the great document, whose grandfather had one hnndred years ago offered in the Continental Congress the resolntion that these United Colonies are and ought to be free and independent States. The appearance of the yellow, time-worn docnment in its heavy frame, called forth a hurst of enthnsiasm. Men cheered, women waved their handkerchiefs and children were held up to look npon the Magna Charta of Amerlcan llberties.

The reading was followed by the orchestral performance of the "Hymn," composed for the occasion by a Brazilian musician and offered by Dom Pedro as the Greeting of Brazil.

THE NATIONAL ODE

was then recited by its anthor, the well known traveler and author, Bayard Taylor. We have room hnt for the first verse:

I.—1.

Sun of the stately Day,
Let Asia into the shadow drift,
Let Enrope bask in thy ripened ray.
And over the severing ocean lift
A hrow of broader splendor !
Give light to the eyes
Of the land that waits to behold thee rise:
The gladness of morning lend her,
With the triumph of noon attend her,
And the peace of the vesper skies !
For, lo ! she cometh now
With hope on the lip and pride on the hrow,
Stronger, and clearer, and fairer,
To smile on the love we bear her,—
To live, as we dreamed her and songht her,
Liberty's latest daughter !
In the clefts of the rocks, in the secret places,
We found her traces;
On the hills, in the crash of woods that fall,
We heard her call;
When the lines of battle hroke,
We saw her face in the fiery smoke;
Through toil, and angnish, and desolation,
We followed, and found her
With the grace of a virgin nation
As a sacred zone around her !,
Who shall rejolce
With a righteous voice,
Far-ahead through the ages, if not she ?
For the menace is dumh that defied her,
The doubt is dead that denied her,
And she stands acknowledged, and strong and free !

THE GRAND TRIUMPHAL MARCH

with chorus Our National Banner, was an appropriate climax to the applause that followed the Ode. The music was by an Englishman, Sir Jullus Benedict, the words as follows, by Dexter Smith of Massachnsetts:

I.

O'er the high and o'er the lowly
Floats that banner bright and holy
In the rays of freedom's snn;
In the nation's heart imbedded,
O'er our Union newly wedded,
One in all, and all in one.

II.

Let that banner wave forever,
May its lustrous stars fade never
Till the stars shall pale on high,
While there's right the wrong defeating,
While there's hope in true heart beating,
Truth and freedom shall not die.

III.

As it floated long before us,
Be it ever floating o'er us,
O'er our land from shore to shore;
There are freemen yet to wave it,
Millions who would die to save it—
Wave it, save it evermore.

THE ORATOR OF THE DAY

was the Hon. Wm. M. Evarts of New York, the famons lawyer and former Attorney General. His oration was an eloqnent review of the nation's progress and a very hopeful forecast of its fnture. He thinke,—

"We have taken no steps backward, nor have we needed to seek other paths in our progress than those in which our feet were planted at the beginning. Welghty and manifold have been onr obligations to the great nations of the earth, to their scholars, their philosophers, their men of genius and of science, to their skill, their taste, their invention, to their wealth, their arts, their industry. But in the institutions and methods of government—in civil prudence, courage, or policy—in statesmanship, in the art of 'making a small town a great city'—in the concurrence of reason and strength in peace, of force and obedience in war—we have found nothing to recall us from the course of our fathers, nothing to add to our safety or to aid our progress in it. So far from this, all modifications of Enropean politics accept the popular principles of onr system, and tend to our model. The movements toward the equality of representation, enlargement of the suffrage, and public education in England—the restoration of nnity in Italy—the confederation of Germany under the lead of Prussia—the actual Republic in France—the unsteady throne of Spain—the new liberties of Hnngary—the constant gain to the people's share in goverument throughout Enrope—all tend one way, the way pointed ont in the Declaration of our Independence."

As the applause which followed the speaker's last eloquent period died away, Handel's grand Hellelujah Chorus hurst exnltantly from the chorus of 1,200 voices. Even more impressive was the singing of the doxology, "Praise God from whom all blessings flow," by the assembled thonsands led by the orchestra.

The vast crowd dispersed quietly. A fine show of fireworks in East Fairmount Park was brought to a sudden close by a display of celestial pyrotechny in the shape of a thnnder-storm, welcome to every one who was not caught in it.

Thus ended the commemorative services of onr National Centennial.

THE "TRUE STORY" OF "MARY'S LITTLE LAMB."

There are floating abont in the great ocean of literature, stray chips of song or story, which from their wit or wisdom, or from some unaccountable reason, become popularized and cherished more carefully than whole navies of world-renowned anthors. Their perentage unknown, they come as literary foundlings to our doors, and, once admitted, command their own place in our affections. Among such is the poem "Mary had a little lamb." There is hardly a child in the lend who has not become familiar with the verses; not e college student who has not sung them to a dozen different tnnes. It has been parodied, paraphrased, and translated into the dead languages. And yet scarce eny one knows who is the anthor, or whether it is fictitions or fonnded on fact. It is, perhaps, in the truth of the story that the popularity lies. For it is the trne account of an incident that heppened sixty-one years ago, not fifty miles from the Cradle of Liberty. And "Mary," e delightful old lady of threescore and ten, still lives and cherishes the memory of the event. The writer, on a recent visit, craved from her own lips the true story of the affair, and will reproduce it as neerly as possible.

"It was when I was nine years old," she said, "and we lived on the farm. I used to go out to the barn every moruing with father to see the cows and sheep. They ell knew me, and the cows, old Broed and Short-horn end Brindle, would bow e good-morning when I came to their stables. One cold dey we fonnd that during the night twin lambs hed been born. You know that sheep will often disown one of twins, and this morning one poor little lamb was pushed out of the pen into the yard. It was almost starved, and almost frozen, and father told me I might have it if I could make it live. So I took it into the honse, wrapped it in a blanket, and fed it on peppermint and milk all dey. When night came I conld not bear to leave it for fear it would die, so mother made me up a little bed on the settle, and I nursed the poor little thing all night, feeding it with a spoon, and by morning it could stand. After this we brought it np by hand nntil it grew to love me very mnch and would stay with mo wherever I went nnless it was tied. I used before going to school in the morning to see that the lamb was all right, and securely fastened for the day.

"Well, one morning, when my brother Nat and I were all ready, the lemh could not be found, end snpposing that it had gone out to pasture with the cows, we started on. I used to he a great singer, and the lamb would follow the sound of my voice. This morning, after we had gone some distance, I began to sing, and the lamh hearing me, followed on and overtook us before we got to the schoolhouse. As it happened, we were early, so I went in very quietly, took the lamb into my seat, where it went to sleep, and I covered it np with my shawl. When the teacher came and the rest of the scholars, they did not notice anything amiss, and all was quiet until my spelling class was called. I had hardly taken my place when the patting of little feet was heard coming down the aisle, and the lamb stood beside me ready for its word. Of course the children all laughed and the teacher langhed too, and the poor creature had to be turned out of doors. Bnt it kept coming back, and at last had to be tied in the woodshed till night. Now, that day, there was a young man in school, John Roulston hy name, who was on a visit to one of the boys, and came as a spectator. He was a Boston boy and son of the riding-school master, and was fitting for Harvard College. He was very mnch pleased over what he saw in our school, and a few days after gave us the first three verses of tho song. How or when it got into print I don't know."

Thns she ran on, telling of the care she bestowed upon her pet until it grew to be a sheep, and she would curl its long wool over a stick; and it bore lambs nntil there was a flock of five, all her own; and finally how it was killed by an angry cow. Then she brought ont a pair of her little girl's stockings, knitted of yarn spun from the lamb's wool, the heels of which had been raveled ont and given away pelcemeal as mementos. No one can donbt that she, whose youth was rendered femons by love for an unfortunate animal, had lived a life of beneficence and charity. With a heart overflowing with love toward all God's creatnres, she has indeed lived to care for the needy and destitute, and be a mother to the motherless. And now, in a green old age, she is surrounded by those whom her warm heart long since taught to cling to her end follow as the lamb in her yonth. When et last she shall cross the river she will find an eternal home in the green pastures and beside the still waters, where the Good Shepherd feeds his lambs. John Roulston died before entering college. Whet the world lost in him who wove into verse that immortalized them, both the story of Mary and the lemh, no one may say.—*Springfield Republican.*

THE FORT MOULTRIE CENTENNIAL.

The following interesting account of the celebration of June 28th at Fort Moultrie, where North and South joined to commemorate the gallant deeds of their common heroes, reached us too late for publication in onr July number. Onr readers will find it a fitting supplement of the description we gave last June of the famous attack and repulse:

"CHARLESTON, Jnne 29th.—The celebration of the Fort Moultrie Centennial was opened on Tuesday night by an imposing public reception to the visiting military at the Academy of Music. Colonel Trenholm, on behalf of the committee of citizens, made an address of welcome, in the conrse of which he said: 'There is the same need now that there was in 1776 for union among the people. Nothing but frequent intercourse and that natural confidence and respect which rests upon acquaintance can repress the agitators, whom for mischievous purposes end against the public goods are perpetually striving to keep alive the passions which the late conflict aroused, and if this occasion is happily instrumental in promoting a better understanding between the sections, it will have accomplished its purposes and vindicated claim to nationality. The spirit of 1776, now evoked, indicates a broad and solid ground on which all may stand, for that spirit elevates duty above all personal aims; it places the general and permanent good of the people before all local objects and temporary interests; applied to the present state of the country, it forbids us to cherish futile enimosities or to brood over disappointments, while it obliges us to honor everywhere and at all times self-sacrificing devotion to duty. Never may the American people cease to reverence their dead of the late war; for, whether in blue or in gray, these brave men laid down their lives in obedience to what they felt to be the impulse of honor and the call of their country. The humble graves throughont the land on which year after year the garlands are renewed by loving hands will in time serve to bind more closely together those of whose past separation they are the evidence, and in another Centennial our descendants will realize that onr country could not echieve her destiny without passing through such trials.' [Applause.] In replying,

CAPTAIN NOYES, OF THE BOSTON LIGHT INFANTRY,

said: 'One hundred years ago, in storm and battle, the flags of the Palmetto and the Pine floated together in defence of their principles and their native land, and now they are floating together again. [Applause.] It is good to be here and together to derive from the memories of the past a guide for the future. The names of Sumpter, Rutledge and Marion are interwoven with those of Hencock, Adams end Otis, and the patriotism of these men would have been of no avail but for the glorious victories of Eutaw, Fort Moultrie, Lexington and Saratoga. Since those days, however, in which the two States stood side by side they have stood face to face in intense strife, but the bitterness has passed away. The same stuff of which onr revolutionary sires were made is fonnd in their descendants, and each can respect and honor the other. The same stars shine above, the same dews bathe the graves of the gray and the blue, and surviving comrades of the deceased heroes have marched in columns bearing floral trihntes to decorate the turf npon the last resting-places of the sons of the North and of the Sonth.'. [Prolonged applanse.]

"Captain Mercer, of the Savannah Blues, said; 'Georgia was one of the thirteen colonies which went into the Revolution and achieved a glorious victory. After that she had fallen back once out of line, hnt she now heard the cry, "Come back!" and without faltering she had come back, and was now again in line striving in friendly emulation with her sister States for the welfare of the whole Union. [Prolonged applause.] Georgia looks to the future. She has no bygones. She makes no apology for the past, hnt she forgets and lebors for the good of all. [Applause.] In behalf of Georgia he extended words of cheer to his comrades, and declared that Georgia wished to see the Government pnre end proud and firmly fixed in the affections of the people.' [Loud applause.]

"Major MacHean, of the Old Guard, of N. Y., said; 'We have come here to testify our admiration of the valor with which yon defended a cause which brougbt sorrow and misfortnne to both the sections, and to extend the hand of friendship and to propose to act with you in bringing about thet confidence which is necessary to onr prosperity. [Appleuse.] The Empire State of the North greets the Empire State of the South [Cheers], and at Philadelphia the bonds of friendship will be renewed and strengthened.' [Applause.]

"Colonel Wilder, of Boston, said; 'Thenk God to-day we are a nnited people, and wonld gladly blot out if we could that page of history that marks the record of fraternal strife; yet thet record adds other names that will be glorious in the next centnry; aye, mnch sopner. It is to-day the sentiment of the sober second thought now that the passions and prejudices of the hour have cooled and softened, and our children will proclaim it, and why not we. Lincoln and Sumner are honored to-day and will be revered in history for their great service to the humen race, and now let me add to the list Lee, Jackson, aye, and Johnston, too; you honor them and why shonld yon not, because they were the brave and true men to whom you gave yonr boys for a cause made holy to you by the awful sacrifice of those who went forth to bettle, with the baptism of a father's blessing and mother's prayers end sister's tears. It was a wild dream, hut to yon a reality, and if you fail to honor and remember those brave leaders, you would heve no just claim to the name of chivelry which we accord you.'

"EX-GOVERNOR BONHAM, OF SOUTH CAROLINA,

was the last speaker. He said: 'If there was a man who went into the war with his whole spirit I was the man. [Cheers.] We gave you the best fight we had, [Loud cheering] and when the war was ended, I feel assured you regarded ns as e foe worthy of your steel, and we can assure you in the same light. I venture to say thet never before in the annals of history has the Anglo-Saxon race been engaged in such a war; feelings were engendered that are now, thank God, ended and obliterated: we felt thet we hed e country left. It was not your country alone, is was our country, it is our country, end shell he our country, and our children's children's country.' [Applause.]

"During the speeches every allusion to the growing good feeling between the sections and to the fixed determination of the South to stand by the Union was received with hearty cheering. At sunrise this morning a salute of 100 guns was fired, and the church bells rang out joyous chimes. All business was suspended, and the mein streets were filled with crowds of citizens end visitors. The decoration of the houses was very general, thousands of American flags converting the ronte of the procession into a long vista of red, white and blue.

"At seven o'clock the line was formed, and a flag was presented to the Pelmetto Guard hy a grand-daughter of Mrs. Barnard Elliott, who, in 1776, made and presented a similar flag to Sergeant Jasper. The presentation took place on the samo spot as that of one hundred years ago. The parade was very fine, embracing 40 companies and about 2,500 men under arms, including one company from New York, one from Massachusetts, sixteen from Georgia, and twenty-two from South Carolina, with the whole garrison, consisting of two companies of infantry and a light battery of Fifth Artillery, heading the column, which was commanded by Gen. Wade Hampton, attended by a brilliant staff. The Centennial Battallon, made up of picked commands from New York, Massachusetts, Georgia and Sonth Carolina, bore bannerets of palmetto leaves, symbols of fraternity, in the muzzles of their muskets, and attracted mnch attention. A feature of the parade was the colored bands and drum corps of Georgia.

"The orator of the day, General Kershaw, rode in a carriage with Governor Chamberlain. The heet dnring the day was intense and there were many sunstrokes. Several of the Old Gnard were nnable to parade. At eleven o'clock A. M. the parade was closed with a review and the commands took steamers for Sullivan's Island, three miles distant, to attend the celebration at the Fort.

"The Centennial celebration at Fort Monltrie

took place in the parade ground, under a mammoth tent. Over 5,000 persons were present. An address of welcome to the visitors was delivered by Governor Chamberlain, after which General Kershaw pronounced the oration, of which the key-note is given in the following extract:

"'South Carolina bids you welcome, thrice welcome; greets you as brethren and friends, and pledges you an untarnished faith and honor that it shall not be the fault of true sons, native or adopted, if our common country be not the home of a happy, free, united and prosperous people, and her career onward and upward, glorious and triumphant for ever. I speak to my countrymen, a South Carolinian to Americans; let your ends be just, we ask no more. Together let us obliterate the passions and prejudices of an irrevocable past, bind up its bruised and mangled victims, and bury deep, in lethean waters, all but the memory of its brave and generous deeds and grand achievements, a common and glorious heritage of the American people.' [Applause.]

"At midday the U. S. sloop-of-war *Plymouth*, ordered hither for the purpose by the Secretary of the Navy, anchored off the fort and fired a salute of thirteen guns. This was responded to by a similar salute fired from the ramparts of the fort by the Chatham Artillery, the guns used being two-pounders, presented to the company by Gen. George Washington. The visitors were subsequently handsomely entertained by the residents of Sullivan's Island. To-night the city is brilliantly illuminated. Several banquets are going on, and the houses of leading citizens are thrown open for entertainment of the military guests. Nothing has occured to mar the celebration but the heat, which has been unexceptionally severe, prostrating hundreds with sunstroke. Only one case so far has terminated fatally, a member of the band of the 5th artillery."—*Evening Bulletin, Phila., Penn.*

HINTS ON SELF-CULTURE.

"Have you anything in your library that will help a new beginner in the way of speaking before an audience on a Sabbath occasion? If you have will you be so kind as to send me a sample, or price, or something of the kind, so I may obtain it?"

We judge from your note, which we have corrected in spelling and punctuation, that you need to begin at the beginning. The alphabet comes before writing, and you need to begin at the alphabet. Reading a treatise will not make you an acceptable or useful speaker. For that you need at first three things, control of your voice, command of language, and self-possession. For control of the voice, read *aloud* fifteen minutes every day in your room, in some book that interests you; there is no better than the Bible. Be careful to enunciate distinctly, and to read naturally, as you would read to a little child. For command of language use your pen. Read the story of the Prodigal Son, for example; then, the next day, write it in your own language. Compare carefully what you have written with the Bible narrative, and see wherein your narrative fails to tell the whole story. Get a good dictionary, and look up all words about the meaning or spelling of which you are uncertain. If some literary friend, your pastor for example, will look over your writing occasionally and give you suggestions, so much the better; but this is not essential. There are works on English composition which after a time may help you; but if you have no teacher, it will be as well to *begin* without a book. Self-possession is only acquired by practice. To acquire this, have something to say in the prayer-meeting, and then say it. Begin very simply. Get hold of an incident; write it out, thus get it clearly in your own mind; then without trying to recite word for word what you have written, tell the story; when you have told it stop. If you make your first lesson simple enough, the next one will be easier. If you have grit and grace to carry out some such a course as this, write to us again in six months, tell us of your progress, and we will give you counsel for further studies. Meanwhile dismiss entirely from your mind the idea that you can be an orator without acquiring the art of writing and speaking the English language with accuracy.—*Christian Weekly.*

The celebrated John Randolph, in one of his letters to a young relative, says: "I know nothing I am so anxious you should acquire as the faculty of saying 'No.' You must expect unreasonable requests to be preferred to you every day of your life, and must endeavor to deny with as much facility and kindness as you acquiesce."

HOW TO BE A GENTLEMAN.

Perhaps a gentleman is a rarer specimen than some think for. Which of us can point out many such in his circle; men whose aims are generous, whose truth is constant, and not only constant in its kind, but elevated in its degree; whose want of meanness makes them simple; who can look the world honestly in the face with an equal manly sympathy for the great and small? We all know now a hundred whose coats are very well made, and a score who have excellent manners, and one or two happy beings who are in what they call the inner circle and have shot into the very centre and bull's-eye of fashion; but of gentlemen, how many? Let us take a little scrap of paper and each make out his list.—*Thackeray.*

HOW TO IMPROVE THE MEMORY.

What we wish to remember, we should attend to, so as to understand it perfectly, fixing our attention specially on its most important and distinctive features. We should disengage our minds for the moment from other things, that we may attend effectually to that which is before us. No man will read with much advantage who cannot empty his mind at pleasure of other objects, and does not bring to the author he reads an intellect neither troubled with care, nor agitated with pleasure. If the mind be filled with other matters, how can it receive new ideas? It is a good practice to improve the memory, and far better than making notes, or transcribing pages at the time, to read carefully, and after a lapse of some days, to write an abstract of what has been read. This will give us the habit of storing up for future use our immediate acquisitions in knowledge. Again, memory is assisted by an orderly arrangement of the thoughts. It is obvious that in recollecting a speech or discourse, that is more easily recalled in which the argument proceeds from one step to another by regular induction. So we ought to conduct our studies; otherwise, memory will be defective.—*Letter of Baron Alderson.*

UMTWALUMI MISSION STATION.

UMTWALUMI, AN INDUSTRIAL SCHOOL IN SOUTH AFRICA.

The cut is a view of the backside of the mission house, taken from a position south by east from it. In 1866 a severe famine prevailed in the district, and at the time the photograph was taken, six wagons, laden with corn, each drawn by twelve or fourteen oxen, having come from a distance of one hundred and thirty miles, had just arrived, the owners of which were waiting to dispose of the precious loads, by sale to the hungry people.

On the extreme right of the picture, in the foreground, is seen the end of the *workshop* and *engine-house*, (for, through the kindness of Colonel Governor, a beautiful steam-engine, for grinding corn and ginning cotton, was given to the station, and in the workshop the people are taught how to make repairs on agricultural implements, and to manufacture simple articles of furniture). An old wheel of a turning-lathe lies against the wall, and in the central foreground lies a pile of wood prepared for the engine. The end of the house, in which is the study and dispensary, is seen on the right, and corresponding to it, on the left, but mostly hidden behind the trees, is the kitchen. The house is commodious, built of burnt bricks, of a bright-red color; is one story high, covered with thatch-grass, and surrounded on all sides with a verandah six feet wide. On the inside it is plastered with a tenacious mud, and papered or whitewashed.

Commencing the Station. The Umtwalumi station was commenced in April, 1851. A plain was found about seventy-five miles southwest of Port Natal, in "*the regions beyond*" all other mission stations, a mile and a half long by half a mile wide, in the midst of a well-populated country, near where three tribes touched each other, and on this the missionary decided to pitch his tent and raise his Ebenezer. A beautiful river washes two sides of the plain, at a depth of one hundred and fifty feet below its surface, which has already flowed forty miles from its source at the base of lofty mountains, and which enters the sea seven miles distant, after dividing a table-land thirteen hundred feet high for a passage. Its waters are pure as the chemist could have made them. Usually shallow, and presenting innumerable aspects of beauty, it is also sometimes swollen by rains, when it suddenly fills its rocky channel,—obstructions are swallowed up, trees uprooted, banks undermined and swept away, and animals even birds, unable to rise, are borne on its careering waves to the sea. On all sides but one rise the mountains, from 1,200 to 3,000 feet high, which, summer and winter, are covered with verdure, and are the happy abodes of animal life. Two hundred yards from this river was chosen the site for the future station, with earnest prayer that on that spot God would honor his own word, and that thence might go forth the *good news* to all the surrounding tribes. Four tribes were easily accessible. The people cared nothing for God, or his Son Jesus Christ, but seemed friendly to the missionary. The young men were willing, on being *well paid* for their unskilled services, to aid in erecting the buildings necessary for a house.

Building. The first thing to be done was to take off the canvas which covered the wagon, and so place it on the ground as to constitute a shelter by night and a sitting-room by day. The men were induced to cut and bring from the forest poles and wattles, for the walls of the house, and the women to cut grass for thatching. The walls were made of sticks and mud, three and a half feet high, with an ample roof covering the whole, twenty-four feet square. On the eleventh day, though the floor was still wet, the missionary was glad to enter it, to protect himself from a pelting storm of rain and hail; and he was merciful enough to take his horse with him into his new house.

This was but a temporary dwelling, and immediately energies were turned toward putting up a house of burned-bricks. The bricks must be made by inexperienced hands, and the timber for the roof and finish must be sought in a forest forty miles distant,—or that used which, at great cost, had been brought from over the sea. Little like a clergyman did the missionary appear as, dressed in frock, and covered from head to foot with clay, he moulded the bricks, or used the saw, the plane, and the trowel; but very thankful and satisfied he was, when, as the new year of 1852 dawned, he was in a comfortable dwelling, which bids fair to stand long after he is dead. It is only right to say, however, that the bricks were in part made by a white man, and burned and laid into walls by him. In its *finishings*, the house, though valuable and comfortable, bears many marks of which a skilled workman might well be ashamed.

Schools. A day-school—the teachers of which have received some part of their compensation from a fund set aside by the Colonial Government, for the improvement of the natives—has been in full operation for the last half dozen years, having on the books nearly seventy daily pupils. The day attendance has, however, averaged only about thirty. These children are mostly from heathen kraals, where no motives are presented, by parents or friends, to induce them to attend. This school has been blessed with pious teachers selected by the missionary, and it is due to them that we here acknowledge their faithfulness and zeal, not only in communicating secular knowledge, but in endeavors to win souls to Christ. From this day-school three lads have gone to the training-school at Amanzimtote, two of whom are sons of important chiefs.

For several years the Colonial Government has made an annual grant of $500 in aid of an Industrial School at Umtwalumi, which has been under the care of an English mechanic, and in which many natives have been taught some of the simpler mechanic arts, in addition to the daily religious instruction imparted by the mission family.—*Missionary Herald.*

"WANTED, A BOY TO ATTEND BAR."

The paper dropped from my hand as I read this advertisement. It seemed as though I had read, "Wanted, a boy to go down to perdition."

I fancied I saw a bright, earnest boy going to a bar-room, seeking a living by that fearful trade of selling wine and rum. I could imagine how, one by one, all the good impulses and desires he had in the beginning fell before the evil influences of the dram-shop; how he learned to drink, to swear, and steal; how bad companions came around him, and helped him on to ruin.

Ah! my lad, or whoever you are, who may be tempted by such a call, let me tell you that you had better work in the field, or at a forge, or digging ditches,—anything honest,—than to degrade yourself by selling death to others. No matter how hard you work, no matter if it soils your hands or clothes, so long as it leaves your heart pure. Beware of such "good places" as will lead you into the snare of the evil one. There are many doors, besides those of bar-rooms, which are almost the same as gateways down to the world below.—*Morning Light.*

At Home.

THE KING AND THE MILLER.

There dwelt a miller hale and bold
Beside the river Dee;
He worked and sang from morn to night,
No lark more blithe than he;
And this the burden of his song
Forever used to be:
"I envy nobody—no, not I I
And nobody envies me!"

"Thou'rt wrong, my friend," said old King Hal;
"Thou'rt wrong as wrong can be,
For could my heart be light as thine,
I'd gladly change with thee;—
And tell me now what makes thee sing
With voice so loud and free,
While I am sad, though I'm the King,
Beside the river Dee."

The miller smiled, and doff'd his cap,—
"I earn my bread," qnoth he;
"I love my wife, I love my friand,
I love my children three;
I owe no penny I cannot pay,
I thank the river Dee,
That turns the mill that grinds the corn,
To feed my babes and me."

"Good friend," said Hal, and sighed the while,
"Farewell! and happy be;
But say no more, if thou'dst be true,
That no one envies thee;
Thy mealy cap is worth my crown,
Thy mill my kingdom's fee;
Such men as thou are England's boast,
O miller of the Dee!"

—*Camden Democrat.*

A HINT TO GRUMBLERS.

"What a noisy world this is!" croaked an old frog, as he squatted on the margin of the pond. "Do you hear those geese how they scream and hiss? what do they do it for?"

"Oh just to amuse themselves," answered a field mouse.

"Presently we shall have the owl's hooting; what's that for?"

"It's the music they like best," said the mouse.

"And the grasshoppers; they can't go home without grinding and chirping, why do they do that?"

"Oh, they are so happy they can't help it!" said the mouse.

"You find an excuse for all. I believe you don't understand music, so you like the hideous noises."

"Well, friend, to be honest with you," said the mouse, "I don't greatly admire any of them; but they are all sweet in my ears compared to the constant croaking of a frog."

A VISIT TO THE HOME OF JEFFERSON.

I seized upon the long-wished-for opportunity of visiting the home of this "Apostle of Liberty," and starting from the old and historical town of Charlottesville, in an hour's time, having traveled three miles, we had reached the summit of Monticello, which commands a view of the Blue Ridge for a hundred and forty or fifty miles.

As we were necessarily compelled to make our visit a very short one, we repaired immediately to the Mansion where we were met by a gentleman who very courteously showed us through the building. I had read Mr. Wirt's description of the place, written years ago when he saw it in its grandeur. He says: "The Mansion House at Monticello was built and furnished in the days of his prosperity. In its dimensions, its architecture, its arrangements and ornaments it is such a one as became the character and fortune of the man."

There is a marked contrast between then and now. To-day you will find the Mansion House at Monticello in a sad state of dilapidation. The walls once decorated with paintings are now disfigured by the hand of time and the names of curious visitors. To be brief, the building is destitute of anything to mark its past splendor, and from what I learn, no effort is put forth to preserve it.

We next sought Jefferson's grave. A few minutes' walk down the mountain brought us to the family cemetery which is enclosed by a brick wall seven or eight feet high. Finding the gate locked, we were compelled to climb the wall which was easily done, for we had discovered it to be down not far from the entrance. A simple granite obelisk marks the last resting place of the patriot, with the following inscription, said to have been written by himself: "Anthor of the Declaration of Independence and the Founder of the University of Virginia."

THOS. CAYTON.

NEWS OF THE MONTH.

POLITICAL.

THE Democratic Convention at St. Louis has nominated Governor Samnel J. Tilden of New York for President and Thomas A. Hendricks, Governor of Indiana, for Vice-president. Tilden is a hard money man. Hendricks, for inflation and repeal of the resumption act.

THE Democratic platform affirms devotion to the Constitution and its amendments, its faith in republics, and the will of the majority; in the equality of all citizens, in education, in the supremacy of the civil over the military power and the total separation of church and State. It denonnces Republican administration, calls for a repeal of the resumption act as a hindrance to resumption; for retrenchment and reform in all departments of the government, and urges the necessity for a change of the party in power.

GOVERNOR HAYES'S letter in acceptance of his nomination gives nniversal satisfaction to the party. He declares for reform in the civil service, and the retention of officers dnring good conduct; says that it is his inflexible purpose, if elected, not to be a candidate for a second term, and declares strongly for hard money.

SENATOR MORRILL of Maine, after some delay from the demands of his position as Chairman of the Appropriation Committee, has qualified as Secretary of the Treasnry to wbicb office he was appointed hy the President on the resignation of Bristow. Mr. Blaine has accepted the Senatorship for Mr. Morrill's unexpired term, and his appointment has been formally made by Governor Connor.

A PRIVATE letter from a friend of Mr. Blaine reports him slowly recovering. His physicians have ordered him to the sea-side.

THE PRESIDENT has removed Postmaster-General Jewell and appointed Second Assistant J. N. Tyner in his place. He has also removed Mr. D. D. Pratt, Commissioner of Internal Revenues. Political reasons are assigned for the change. Mr. Tyner is regarded as one of the most efficient officers in the department and in full accord with Postmaster-General in all his measures of reform. He is from Indiana. A removal which preceded the above was that of Mr. Yaryan, Chief of Internal Revanue Special Agents.

THE dead-lock between the Republican Senate and Democratic Honse on the question of appropriation hills, has been so persistent that if Congress had not agreed to hills making temporary provision for the expenses of the Government while the dead-lock continned, the Executive machine mnst have stopped rnnning. The Post-office and Naval Appropriations bills were at last agreed npon and things began to move.

THE BELKNAP impeachment trial is rapidly progressing with the examination of witnesses, and, if the defense is equally prompt, it may be decided before we go to press.

BOTH HOUSES have agreed with unexpected unanimity on the Senate resolution for finishing the Washington Monument.

THE PROHIBITIONISTS in Massachusetts have nominated John I. Baker for Governor and pledged themselves to woman suffrage.

A GREAT Repnblican mass meeting was held in New York July 12th, to ratify the Republican nominations. Cooper Institute wonld not hold the crowd in spite of the heat.

AN OFFICIAL statement has been prepared at the Treasury Department, showing the receipts and dishursements of the Government from January 1, 1834, to Jnne 30, 1865, exhibiting also the amount of defalcations and the ratas of losses per one thousand dollars. The amonnt collected during that period from Customs was $83,082,085,093, and the losses $2,444,632. The amount collected from the internal revenne was $2,066,871,342, and the losses, $3,459,325; miscellaneous, $463,578,458, and losses, $1,161,634; disbursements for the War Department $3,930,566,021, and losses, $7,513,638; Navy Department, $316,252,950, and losses, $2,572,327; Indians, $144,927,954, losses, $1,483,620; pensions, $343,386,769, losses, $532,378; miscellaneous, $105,893,726, losses, $10,196,467; Post-office Department, $439,155,854, losses, $939,582.

GENERAL.

FOLLOWING the Centennial rejoicings with as sndden a shock as the news of Lincoln's death followed the close of the war, came the terrible news that General Custer with his whole command, thirteen officers and two bundred and fifty men, had been cut to pieces by the Sioux Indians on the Big Horn river, Montana Territory. Three thousand warriors of this fierce tribe, nnder their leader, Sitting Bull, have never consented to go into the reservation set apart for them by the U. S. Government, and committed constant depredations upon the settlers in the Territory till last fall this expedition against them was planned, under Generals Crook and Terry, General Custer's and Major Reno's being detachments of General Terry's command. The hostile region lies between the Big Horn spur of the Rocky Mountains, and the Yellowstone river, of which the Rosebnd is a tributary. Gen. Custer and Maj. Reno, in advance of the rest, discovered the main Indian encampment, and planned a simnltaneons attack from opposite sides, hnt they failed to make it so. Major Reno was soon repulsed, and then Custer charged into the defile from which not one of his whole force returned alive. The surgeons and Mr. Kellogg, correspondent to the Bismark Tribnne and the New York Herald, perished with the rest. General Custer was the youngest Major General in the service, and was a dashing and successful officer of the Union Army all through the war. He never lost a gun or color, and captured more in the field than any other General not an army commander. Fearless of danger be probahle relied too mnch on his invariable snccess, and died with his men. He leaves a wife but no children.

GENERAL SANTA ANNA, the veteran soldier and former President and Dictator of Mexico, died June 20th, in the city of Mexico, at the age of seventy-eight.

CASTLE GARDEN, one of the old landmarks of New York, at the Battery, first a fort, then a theatre, and then an emigrant depot through which tbe vast flood of Irish and German immigration poured into our country, was destroyed hy fire Jnne 10th.

THE whole village of Rockdale in Iowa has been carried away hy the hnrsting of a mill dam.

SOMETHING like the army worm has appeared in Long Island and is making havoc among oats, rye and corn.

THE CENTENNIAL summer will be remembered for the next hundred years, perhaps, for its scorching heat. The summers of '35, '45, '56 and '64 we are assured were as warm; hut then we didn't have to go to Centennial exhibitions, hut could stay at home and keep cool. 102° and 103°, in the shade, has got to be the expected figure in Philadelphia and even the sea-girt city of New York. Norfolk and Richmond are no worse. We are hardly surprised to hear that the earth itself is on fire in some places in New Jersey—in old swamps full of woody matter. The mortality, especially among children is of course greatly increased, and snnstrokes are very common and fatal.

A PRIVATE letter from Dulnth, Minnesota, on Lake Snperior, reports ice twenty feet thick in the harbor June 30th, and not melted the first week in July.

DOM PEDRO sailed for Europe July 12th. A more wide-awake, intelligent and manly a monarch bas seldom sat on a throne. His indefatigable tonrs of sight-seeing from one end to the other of our, conntry, undismayed by our heated term, have been no mere superficial "doing" of a new country, hnt a conscientious inspection of American institutions for the benefit of his own empire. He seems to rule his country on the principle that Stewart conducted his business, with an eye on every detail. His acute observations, extensive familiarity with all that he saw, hearty cordiality and nnostentations manners have won him universal respect and popularity in America.

MR. WILLIAM CULLEN BRYANT has been elected President of Williams College to succeed President Hopkins. The beautifnl memorial vase of silver, presented to him on his eightieth birthday, is now on exhihition at the Centennial.

HARVARD COLLEGE has conferred the degree of LL. D. upon Carl Schurz and President D. C. Gilman of the Johns Hopkins University.

THE bishops of the Colored Methodist Episcopal Church have appointed Friday, August 4th, as a day of fasting and prayer.

THE Rev. Dr. Revels, the colored minister, who was elected editor of *The South-Western Adocate* (Methodist), hut declined the post, has been offered the Presidency of Alcorn University, Mississippi.

BISHOP STEERE, the bead of the Cbnrch of England Mission in East Africa, has offered to the Sultan of Zanzihar the use of his mission press in printing the proclamation against the conveyance of slaves along the coast. The proclamation is considered the most severe blow the Zanzibar slave-trade has yet received. A further check to the traffio will be given if a hill which was brought before the English Parliament on June 22d, under the title of "Slave-trading of subjects of native Indian Princes," is passed. It has been found that a large part of the African slave-trade is in the hands of the subjects of the native princes of India who are not under the direct rule of the British Government. The intent of the hill is to make these subjects amenable to the British law upon slave-trading.

MISS HENRIETTA PARKER, late of New Britain, Conn., left a bequest of $200 to the American Snnday-school Union, and of $100 and "the residue of her estate" to the American Bible Society. Miss Parker was once a slave, and was freed by her master and sent North abont 1830. She earned and saved an estate of $3294.40, of which she cast $749.69 into the treasnry of the Lord. In sending her gift to the Bible Society, her exeontor, W. S. Hurd, says:

"She directed that her bequest to the American Sunday-School Union should be expended in organizing Sunday-schools among the freedmen in the State of Georgia, and furnishing Bihles and Testaments for the use of the same. I have received a letter from the secretary enclosing the report of their missionary, in which he says he has organized ten new schools near Athens, Georgia, and given each school twenty dollars' worth of books. And who can tell how mnch good may be done among the freedmen hy the hard earnings of this hnmhle servant of Jesns Christ?"

HOW TO TREAT SUNSTROKE.—The report of the Sanitary Committee of the New York Board of Health upon sunstroke says: "Snnstroke is caused by excessive heat, and especially if the weather is 'mnggy.' It is more apt to occur on the second, third, or fonrth day of a heated term than on the first. Loss of sleep, worry, excitement, close sleeping rooms, debility, and abuse of stimulants predispose. It is much more apt to attack those working in tbe sun, and especially between the hours of 11 o'clock in the morning and 4 o'clock in the afternoon. On hot days wear thin clothing. Have as cool sleeping rooms as possible. Avoid loss of sleep and all unnecessary fatigue. If working indoors and where there is artificial heat, see that the room is well ventilated.

"If working in the sun wear a light hat (not hlack, as that absorbs heat) and pnt inside of it on the head a wet cloth or a large green leaf; frequently lift the hat from the head and see that the cloth is wet. Do not check perspiration, but drink what water you need to keep it np, as perspiration prevents the body from being overheated. Have wherever possible an additional shade, as a thin nmbrella, when walking, a canvass or board cover when working in the sun. When mnch fatigned do not go to work, or be excused from work, especially after 11 o'clock in the morning on very hot days, especially if the work is in the sun. If a feeling of fatigue, dizziness, headache or exhaustion occurs cease work immediately, lie down in a shady and cool place, apply cold cloths to and pour cold water ocvr head and neck. If any one is overcome by the heat give the person cool drinks of water or cold black tea or cold coffee, if able to swallow. If the skin is hot and dry, sponge with or ponr cold water over the body and limbs, and apply to the head pounded ice wrapped in a towel or other cloth. If there is no ice at hand keep a cold cloth on the head, and pour cold water on it as well as on the body.

"If the person is pale, very faint, and pulse feehle, let him inhale ammonia for a few seconds, or give him a teaspoonful of aromatic spirits of ammonia (hartshorn) in two tahlespoonfuls of water with a little sugar."

AUGUST FLOWER.

The most miserable beings in the world are those suffering from Dyspepsia and Liver Complaint.

More than seventy-five per cent. of the people in the United States are afflicted with these two diseases and their effects, such as Sour Stomach, Sick Headache, Habitual Costiveness, Palpitation of the Heart, Heart-burn, Waterbrash, gnawing and burning pains at the pit of the Stomach, Yellow Skin, Coated Tongue and disagreeable taste in the mouth, coming up of food after eating, low spirits, &c. Go to the Drug Store and get a 75 cent bottle, or a Sample Bottle for 10 cents. Try it. Two doses will relieve you. For Sale in Hampton by Messrs. Selden & Co., and Druggists generally.

DYSPEPSIA.

Americans are particularly subject to this disease and its effects: such as Sour Stomach, Sick Headache, Habitual Costiveness, Heartburn, Water-brash, coming up of the food, coated tongue, disagreeable taste in the mouth, palpitation of the Heart and all diseases of the Stomach and Liver. Two doses of GREEN'S AUGUST FLOWER will relieve you at once, and

there positively is not a case in the United States it will not cure. If you doubt this go to your Druggist and get a Sample Bottle for 10 cents and try it. Regular size 75 cents. 6-1y

Correspondence.

CALIFORNIA.

III.

CLIMATE.

I arrived in California in the middle of August, supposing that then, at least, in the summer months, I should find a soft and balmy air. To my immense surprise, however, I was at once informed that I had better provide myself with an overcoat whenever I ventured out of doors, as I might any day find it useful. I was also told that no one in this country ever wore thin underclothing, but a heavy grade of woollens was absolutely necessary at all times of the year. I was staggered; but a short experience convinced me of the truth of these suggestions, and my faith in the balmy natnre of the climate of California, or at least, this portion of it, has gone forever. Yet I suppose the ideas I had cherished are almost universal in the East. For the sake of such as may expect to find in the atmosphere of this region a remedy for all the ills of the flesh, I will try to describe this climate truthfully.

In the first place, I should state that San Francisco and the surrounding conntry has a climate of its own. Lying upon the coast it is exposed to the cold and damp winds of the ocean. The summer months, which begin with April or May, when the rains cease entirely, are peculiarly disagreeable. Every day at about ten in the morning quite a strong wind arises and prevails until late in the afternoon. A clear day is throughout the summer months unknown. The sun seldom fails to appear at some portion of the day, hut it is often obscured by the heavy fogs which are almost never wanting. The nights are always very cool, and a really warm and summer-like day occurs hut rarely. A light overcoat I usually find comfortable so long as the summer lasts. And yet there are some days that are quite hot, and which are additionally disagreeable from the fact that one must always dress for cold weather; no other course is safe.

Such is the order of things in this part of the country throughout the dry or summer season which lasts from about the first of April till the first of November, varying somewhat in the different years. Not a drop of rain falls during this time, and the dust becomes excessively troublesome. But November brings rain and a new condition of things. The showers fall copiously, the dust disappears, and the seared, brown fields soon become green. The storms occur very frequently and sometimes continue with hut little intermission for two or three weeks, during which time the sun will be perhaps hardly once visible. But the intervals between the rains give the most perfect weather. The fogs of the summer are now pretty much dispelled; the air is wonderfully clear and usually very mild. The mud quickly dries and the roads are hard and smooth. It is a luxury to live in the warm sunshine and the fresh exhilarating atmosphere. And yet, constantly varying as the climate is, the winter brings many cold days A fire is almost a necessity morning and evening, and during the rainy periods through the whole day. The evening air is so chilly at times that I have often found a heavy winter overcoat none too warm. About twenty inches of rain are expected to fall during the rainy season, which lasts, as I have already mentioned, from about the first of November till the first or middle of April. Such is the climate of San Francisco and vicinity—one of the very worst for invalids. All afflicted with rheumatism, neuralgia, or weakness of the throat or lungs, had best avoid San Francisco. Especially dangerous is it to consumptives, to those whose lungs are really diseased. The cold of this region is a very damp and penetrating cold and hard to bear, and the changes are very sudden. Colds are very tenacious and hard to shake off. And yet I find that the climate is, on the whole, an exceedingly pleasant and agreeable one. The air is very bracing and invigorating to all who can become acclimated without serious difficulty. Though almost fatal to invalids, it is healthful to such as are vigorous and strong. Here one is little likely to feel lassitude and weariness. The young men and women who grow up here are apparently strong and healthy, with fine carriage and rich color. And for my part, I deem it no small blessing to be free from the rigor and the bleak winds of a New England winter.

But I have been describing the climate of San Francisco. Go into the interior, east of the coast range which breaks the force of the sea winds, and you find a very different climate. In the summer, while it is generally cool in San Francisco, it is intensely hot on the plains of the interior. There the thermometer often ranges above one hundred. The heat is disagreeable and in a measure debilitating; hut the absence of winds is grateful. Their constant prevalence in San Francisco is exceedingly detrimental to the nervous system.

Again, go fifty miles south and you will pass into a very different climate, warm and agreeable, and largely free from disagreeable winds. And by travelling two or three hundred miles further you find a climate that is thoroughly tropical, where sea-bathing can be enjoyed throughout the whole year. Indeed there is no California climate, properly speaking. The state presents a great variety in its broad area, and somewhere in its limits nearly all can be suited.

LETTERS FROM GRADUATES.

WINNSBORO, S. C. *May 3*, '76.

Dear Teacher:—I have just finished reading some nice letters in the WORKMAN from the students which sets me to work, for I feel ashamed of myself to think how I have neglected my kind teachers of Hampton Institute. I have really been so very busy that I excuse myself a little, however. I have always worked hard in my schools, but this last term I worked harder than ever before. I had a splendid large school from the 1st of December up to the middle of April. Had to employ an assistant some weeks. Sometimes I feel as though I did well, and, again, I feel the contrary, because I desired to accomplish so much more than I did. I know that my school advanced wonderfully, however. I can scarcely believe when I look back where we started and where we left off. Closed with an exhibition which everybody said was the best ever had here. I wanted an examination, but circumstances would not permit. I felt so much like having one, for I was sure my scholars would do well. I had some of the brightest little girls and boys you ever saw. One of my scholars of last term taught this term, after a few months of instruction during last summer at the Teacher's Institute, in the village. Several of the boys and girls expect to go to the Institute this summer and fit themselves for teachers another winter. They are fine scholars, and just need a little outline instruction to make them good teachers

You would scarcely believe, Miss T——, how much I learned about Grammar the past winter. I have sat up night after night studying Grammar until after midnight, and I am thankful to say I almost understand it thoroughly, though I may make mistakes sometimes. I never thought I could understand the study as well as I do. As for Arithmetic, I have learned to put together and take apart, as I would put in stitches and take them out. In short, I have learned to *study*; and I believe every one who goes out to teach for the good he can do will learn to study, for he will not be willing to put off his scholars with no explanations or reasons. I have found out what teachers have to endure, what anxiety they feel for their scholars. Should I have the pleasure and privilege of going to school again, I would be the most attentive scholar imaginable. I should enjoy being there ever so much to receive instruction with the class after they have graduated. I know they can't but enjoy such a course.

I have seen my faults plainly since I have been out in the world; and, though I say it myself, I know I can make a good teacher in any common branch if I continue the work, for I can see plainer and plainer what to do every day I teach. The people and school committee look upon me as a good teacher, and are pleased with me. I am now spending awhile with the family where I board, before going to Columbia. They want me to stay up here all summer, hut I must not. Have a few little scholars whom I enjoy teaching. Though I have not written I have thought of you and all my teachers and benefactors, times without number. Please to give much love to them all and keep much for yourself.

From your once bad pupil, L.

VIRGINIA.

Dear Teacher:—I opened school the 11th ult. in this county with twenty-eight scholars. At present I have seventy-eight. I taught here during the school term of '73–4, and while I was at Hampton the school was vacant. There are thirty or forty that expect to come after Christmas, so I expect to have over one hundred. I have the school classified; but still, seventy-eight scholars are too many for one teacher. Nearly twenty of them are studying Grammar, 2d Geography, &c. I expect to make assistant teachers of two advanced scholars. We have a Sabbath-school that is well attended and is interesting. A number of the colored people have homes of their own, but they are a small percentage of the whole in this section.

The white citizens seem favorably inclined to the colored people, and the two races are getting along together like citizens.

Hampton is largely represented by her students in this county, as teachers. Nearly all the colored teachers are formerly or recently from Hampton. Experience in teaching convinces me that teaching is an arduous and tedious work; hut I delight in it. I am very much exhausted when I return to my room after school. I believe in a teacher's doing his duty, and, above all, not taking the means for the end, hut constantly keeping the end, education, in view. I believe he ought to keep his high calling in view wherever he goes. He should study a child's physical as well as mental capacity for study; for children often have physical defects. I am well and hope you are the same. Will be proud to hear from you, and your Sabbath-school papers will be perused with much interest.

Respectfully yours, ——.

TRINITY COLLEGE, *February* 1, 1876.

Dear Teacher:—I have tried to get the people interested in the paper, hut they are so very far behind they have not got very much use for a paper. They say that they cannot read and their children would not use a paper enough to pay for getting them one. I hardly thought that there were any of my race so far back as these are. If they get *something* to put on, let it be white, black or blue, it does not differ with them. If there is snow on the ground they only put a dress or a pair of pants on a child and send them three or four miles to school; but they do not fail to give them a box of snuff or a twist of tobacco to bring with them. I told them that they should not use it in school, and some said they were obliged to; if they did not, their teeth would ache. I have succeeded in stopping them from using it in school, and wish I could get them to leave it entirely. It is not strange to see them go to what they call a party and all hands get drunk, men, women and children. I hope they will do better soon. They have always had a white man to teach them, and he did his part as to books; hnt manners to each other had not come in, and to comb their heads was a stranger. I have *times* to get that done. I asked one of the children when they had combed his head, and he said Sunday; and it was very near Sunday again. The committee say they are very much pleased with the school, and most of the white people say it is a good school. They often come to see me teach. They are all very kind and polite to me.

I am yours truly, L.

LIBERTY, BEDFORD COUNTY, VA.

Dear Teacher:—I am again stationed in Bedford County, as you see from the heading of my letter, teaching the same school that I had in charge two terms ago. I have a very pleasant school of ninety-two scholars, with one of my advanced scholars as an assistant. My school, I am pleased to say, seems to be advancing very rapidly, both in their studies and refinement. My first class is studying Intermediate Geography, Grammar, (as far as the verbs), History, Arithmetic, (to division of fractions), Fifth Reader, and composition writing once a week. I have spent the most of my time since I left the Institution in teaching, with the exception of the summer vacations, during which time I have followed my trade as a waiter.

I had a pleasant time while at the Institute dnring the two weeks, hut could have enjoyed myself better had there been some of the teachers and scholars there of my acquaintance.

Please send me some books, such as the Senior class was using, which I have not studied. You would do me a great favor by sending such books, also any reading books, such as you can dispose of. I am still trying to keep up a portion of my studies at a time, as I am afraid this will be the only way that I shall be able to rank with those who will be able to take the Post-graduate course.

We got along nicely with our examination this time, though it was very severe indeed We have several graduates from the Richmond Institute in our corps this year. I, among others of my mates, dreaded them a little when they arrived; hut I have since learned from the Superintendent that we had not any need of any dread, as we were all right. Our number of teachers has greatly decreased this year; for some reason they failed to join us, therefore the demand for teachers at this point is great.

Yours truly, H.

HOW A HOUSE WAS BUILT.

In the town of Audover, Mass., in the early part of this century, there lived an old negro named Pompey, with Dinah his wife, in a little plain cottage near the pond that still bears his name. Pompey and his wife were unlettered and poor, but they lived by honest labor and industry; they were not beggars. He owned a few acres of land, and on this little farm he raised fruits and vegetables, and sold the milk of one cow that was often seen grazing by the green roadside. Pompey was a skilful gardener and earned many an honest day's wages by working for the people of the village. Dinah raised herbs and flowers in her garden, and was also hired for various humble services. When there was a call for charitable labor, gratuitous nursing for the sick, or any other simple offices of kindness, this worthy pair were always ready with their offers and their services, which were useful, sincere and without affectation. There was not a couple in the town who enjoyed more of the esteem and affection of the inhabitants than this old negro and his wife.

Pompey's house was a cottage of very neat and simple construction, of one story, having a small close porch, with a gable, for the front entrance, and a small wing opposite the rear for a kitchen. The roof had two gable ends and two dormer windows in front. These simple appendages made the house a very pretty and suggestive dwelling, besides its beauty of proportion. The house was unpainted, except its facings, which were yellow, and its want of color caused it to harmonize well with the homely landscape around it. But there was so much neatness in the grounds that surrounded it, so many marks of care and industry in the well-constructed woodpiles and clean foot-paths that led through the greensward to the doors of the house, and such a charming though simple variety of flowers in the garden, that the place became one of the sights which people visiting the town were always invited to see, among the interesting objects of classic Audover.—*Atlantic Monthly for April.*

SWALLOWING A FARM.

Somebody once said, "Our Government land costs one dollar an acre, and good whisky two dollar a bottle. How many men die landless, who during their lives, have swallowed whole townships,—trees and all!" There is food for reflection in this statement. Every day of our lives, and almost each hour of each day, we meet individuals not merely landless, but houseless, homeless, penniless, who in the course of their lives have swallowed ardent spirits enough to pay for land and house, and have money in their pockets besides.

But it is not the drinker of ardent spirits alone who thus deprives himself of the comforts of a home—the tobacco-chewer, the cigar-smoker, the young man who spends precious hours of each day and evening in worse than listless idleness. How rarely such persons reflect upon the folly of their course. The young man who smokes three five-cent cigars a day—and many of them use double the quantity, at double the price, puffs away, enough in the course of ten years to give him a handsome start in business, or provide himself a comfortable home. How frequently we hear such persons complain of their inability to take a newspaper, or purchase an interesting book. They will tell you they are too poor for that; and yet the next moment will spend for a glass of ale or brandy, or for a cigar, a sum sufficient to pay for two papers. And this folly is repeated perhaps a dozen times in the course of twenty-four hours. Young man, give this subject a moment's reflection. Sit down and calmly think it over, and if, when you have fairly done so, you conclude it is better to drink and smoke, go on! The day will come when you will discover your error, and that discovery will be made when it is perhaps too late!—*The Expositor.*

BALTIMORE AND NORFOLK.

PEOPLE'S LINE.

The swift and reliable iron steamer *Sue* leaves foot of Gay St., Baltimore, Mondays, Wednesdays and Fridays, at 4 P. M., for Norfolk, touching at Old Point. Returning, leaves Norfolk Tuesdays, Thnrsdays and Saturdays, for Baltimore, at 4 P. M., and Old Point at 5 P. M., thereby affording travelers a delightful view of Chesapeake Bay by daylight.

Fare: Baltimore to Norfolk $2.00.
Round trip 3.00.

Don't buy through tickets. 3t.

CENTENNIAL CHRISTIAN HOMES.

THE great number of visitors in Philadelphia, during the Centennial Exhibition, necessitates the opening of private homes for board and lodging. Many Christian families, who are unwilling to open their doors a to promiscuous public, have arranged a plan by which they give admission to Christians and their friends.

In order to have this select class the price is generally much lower than prevails by other arrangements, varying from $5 to $14 a week, and from $1 to $2.50 per day. Each family fixes its own price and receives its pay direct from its guest. Address,

Office for Centennial Christian Homes,
Care of Rev. Edwin M. Long,

THE VIRGINIA HOTEL,
H. PHOEBUS, PROPRIETOR.
OLD POINT COMFORT, VA.
Terms: Transient $4.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country,are all witbin the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 80°, 74°, 76°, for Summer; 70°, 50°, 46°, for Autumn; 48°, 44°, 42°, for Winter; and 48°, 52°, 63°, for the Spring months. —Open for guests all the year.— 11-75, tf.

60 to 80 BUSHELS PER ACRE!
THE WHITE RUSSIAN OATS
SOMETHING NEW!
Farmers Read This.
Agents Wanted in Every County.

These Oats have lately been introduced into this country and prove to be the best now known. The attention of farmers is especially invited to this new cereal, which for their prolific qualities, hardiness and perfect adaption to every variety of soil and climate, makes them a peculiar favorite wherever introduced. Their yield is enormous—being from 60 to 80 bushels per acre. They are strictly rust-proof. A package that will yield from 8 to 10 bushels of Oats with circulars giving special terms to agents and full instructions as to time and manner of sowing will be sent pre-paid to any part of the United States or Canada on receipt of $1.00 or 3 packages for $2.00; 1 dozen packages for $6.00; one-half bushel $3.50; 1 bushel $6.00.

These Oats we offer are fresh and genuine seed of last year's production.

Now is the time to procure your seed, so as to be prepared for early fall sowing. Address

THE
NATIONAL SERIES
OF
STANDARD
TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNES' BRIEF U. S. HISTORY.
BARNES' SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.
CHAPMAN'S DRAWING BOOK.
CLEVELAND'S COMPENDIUMS.
NORTHEND'S SPEAKERS.
GRAHAM'S REASONABLE ELOCUTION.
PEABODY'S MORAL PHILOSOPHY.
ROYD'S COMPOSITION, ETC.
CHAMPLIN'S POLITICAL ECONOMY.
BEEB'S PROGRESSIVE PENMANSHIP.
PECK'S GANOT'S NATURAL PHILOSOPHY
PORTER'S CHEMISTRY.
JARVIS' PHYSIOLOGY and LAWS of HEALTH.
WOOD'S AMERICAN BOTANY.
CHAMBER'S ZOOLOGY.
STEELE'S "14 WEEKS" IN EACH SCIENCE.
PUJOL'S FRENCH COURSE.
WORMAN'S GERMAN SERIES.
SEARING'S CLASSICS, ETC., ETC.,

The whole crowned by a unique collection of professional manuals known as

THE TEACHERS' LIBRARY,
In Thirty Volumes.

A Descriptive Catalogue of all A. S. Barnes & Co's publications will be sent free to the address of any Teacher or School Officer applying for it.

The National Teachers' Monthly commands in its editor and contributors the best professional talent the country affords. Subscription, $1 per annum.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. V. HAMPTON, VA., SEPTEMBER, 1876. NO. 9.

THE ENGINEER.

THE ENGINEER AT HIS POST.

There is no finer way to ride, if one has the nerve for it, than beside the engineer on the locomotive of an express. Stowed comfortably out of his way on the high leather-cushioned seat, you look with awe down into the yawning furnace mouth which a grimy stoker is crowding with more coal, and wait anxiously for the first thrill of motion in the panting monster to whose power you have trusted yourself. The bell rings, one turn of the engineer's wrist, the wheels begin to revolve, then to take hold on the track, and you start slowly, glide smoother, faster and faster and faster; the fence posts run into each other, the telegraph poles jerk by, and the train dashes screaming past the first way station before you know it. The motion, which is in the palace car an easy rock, you feel as a series of starts and leaps; the engine bounds along the track, flings itself round the curves, pulling against the outer rail while you expect the next moment to fly off in a tangent to instant destruction. You look nervously ahead. What! Another train is coming straight upon you on the same track! No; the perspective has deceived you, and the down express darts by with shriek and thunder. A new danger occurs to you. How can an engineer ever tell the difference between those up and down tracks that blend all together a hundred feet before your eyes? And if a rail is missing there, or some human fiend has turned a switch, or that bridge is open. You glance feverishly at the engineer. No talking to the man at the throttle. How statue-like he stands, his hand on the bar, his hair blown back by the wind, his whole being concentrated in a gaze up the road through the little window before him, with now and then a look at the steam gauge and a word to the stoker. He holds a curb rein on the steed "whose neck is clothed with thunder." It is the sublimity of the triumph of mind over matter. Reassured, you give yourself up to the delight of your wild course, confident that that resolute statue will bring you to a safe end of it, as he does.

The engineer who ran the first train of the fast mail service from New York to Chicago in twelve hours fainted away as he brought his train into the depot on time. Who can wonder? There is no more responsible post than that of the engineer with hundreds of human lives in the train behind him. And brave men these engineers generally are. First to meet the dangers, they seldom shrink to sacrifice themselves unhesitatingly for the chance of saving their passengers, going down to death with their hand on the throttle or the air-break, true to their post.

Business Manager.

HAMPTON, SEPTEMBER, 1876.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at fifty cents apiece.

THE next session of the Hampton Normal and Agricultural Institute opens on the 28th day of September, 1876. All those desirous of admission should present themselves on that day, or as soon after as possible. A circular stating terms, &c., will be sent to any one on application, with such answers to questions as may be desired.

Accommodations for students are, at last, in proper order; the day of camping in tents in the open field has gone by. Every proper comfort and surrounding required for decent christian living is provided.

The terms for board, fuel, washing, lights, mending and medical attendance are ten dollars per month, payable half in cash and half in labor, or *all in cash* if parents or friends so desire. Those under 19 years of age, pay $6.00 and work out $4.00 each month.

While admission to the Junior class requires a knowledge of reading, writing, and arithmetic through Long Division, students who are unable to secure the necessary preparation elsewhere will be admitted to the Preparatory class.

Good character is indispensable to rematning in the Institution. This is not a reform school; it is for earnest, capable youth of both sexes who wish to improve themselves and their people.

SUMMER work and summer play are over, and the time approaches when the little army of pioneer teachers from Hampton will be mustering their forces for the fall and winter campaigns. With the new recruits from the last class of graduates, they may be expected to number not far from a hundred and fifty, scattered over the Virginias, Carolinas and Maryland, with 4,500 children gathered under their instruction, in primary or graded schools.

Hard but hopeful work is before them. Some of them may have to turn to and build their own log school-houses, as well as make their own benches. They will find their raw material very raw, and their tools very imperfect. Few school-books, no newspapers, little civilization, and little or no companionship. They will have to teach parents as well as children the decencies of life; they will have to root out superstition and overcome prejudice. To do all this with a fair degree of success, to alone withstand the demoralizing influence of the degradation about them, and gain the respect of black and white is a severe enough test of the metal of any young man or woman.

The way in which Hampton graduate teachers have very generally stood this test is hopeful for the school and for the race, and encouraging to every new company that goes to the front. The influence for good of this constantly increasing number of intelligent, reliable and earnest young pioneers, that this and other institutions in the South are setting at work in the waste places, cannot be estimated. And in the work their hands are strengthened by the example of those that are already in the field, and by the assurance that they are in the right place, doing God's work for their race and their time, filling a present need, and laying the foundation for permanent prosperity and progress.

Foundation work is always humble and hidden, hard labor and small show, but without it what would become of that fair temple of the Future yet in the Master-Builder's mind?

A PENNY saved seems to be sometimes even more than a penny earned. Recent investigations of social scientists into the condition of the British working classes have brought out the curious fact that the families where the wife as well as the husband works in the factory have usually less money laid up at the end of the year, or of a few years,—or are less likely to lay up any,—than those where the wife stays at home, the husband's wages being the same in both cases. The only reason for such a showing must, of course, be that the value of the woman's work in the factory is more than dissipated by the waste that goes on in the house without her care, augmented, no doubt, by the deceptive sense of being "flush of money." There would be extra expenses of sickness or accidents resulting from neglect of children or her own overwork; there would be more drinking at ale-houses because of the comfortless home.

Whatever might be the exact result of such an investigation in this country, the English statistics demonstrate clearly enough the general fact that the wife's true work is in her own household, and prove strongly enough the great value of it. The judicious laying out of money is at least as important and difficult a task as the making it. It takes as much judgment, thought and resolution. A year's earnings slip away very fast through a very small hole. Miss Bremer's story of "The Iron Hand" which, appearing through the cottage roof of peasants who had become thriftless, snatched away one of their home comforts after another until nothing was left but bare walls, is repeated in many a home, and does not always end as well as for the peasants, who wisely returned to their old habit of saving, when a soft white hand returned their treasures one by one. In central New York, a whole country side seems to be gradually changing hands. One good old farm after another is sacrificed to the extravagance of perhaps the second or third generation of its original owners, and, heavily mortgaged, is bought up cheap in parts by the Irish, who, settling on their little plots, in a year or two have paid all up and are making money.

It is upon the woman's influence that this wonder-working thrift and economy chiefly depends. There are many cases where necessity compels a woman to leave her home and children in order to support them; there may be some, where, for a time, it is best for her to help her husband in such outside work, but that does not affect the general truth that her best work is at home. And to this she should train herself, and give to it as much thought and cheerful service as any farmer should to his crops or merchant to his books.

Of course, money making is not the whole of it, though we have dwelt upon this point as a novel one and less frequently conceded. To keep her husband respectable and respected, to bring up her children honest citizens, good fathers and mothers in their turn, to make herself the centre of a tasteful, comfortable, sunny home, and raise the tone of living all around her, is all included in a wife's work. And that doesn't depend altogether upon money-making. For, statistics to the witness-stand again, the same investigations we have quoted show that a rise in civilization by no means necessarily keeps pace with a rise is wages. Two or three shillings more a week does not put an extra clean shirt on a laborer's back, but only pours an extra allowance of beer down his throat, unless he has been trained up to that degree of civilization that feels the longing for clean shirts. It is to this work of civilizing that woman with her greater instinctive refinement and nicety, and love of beauty and order, is especially called. A work, one would think, in all its extent and variety, sufficient to satisfy any one's ambition.

And the more civilized a man is the more heartily will he respect such a wife as his fellow-worker, as necessary as he is himself to the maintenance and comfort of their home.

SOME statements in regard to colleges in evangelized lands have been published by Dr. Hamlin, the venerable President of Roberts College in Constantinople, which are highly interesting in themselves and contain suggestions valuable in their possible application to the case of the American freedmen. There are some points of resemblance between the mental condition and characteristics of the colored race here and the Oriental races, and Dr. Hamlin's vigorous statements are as useful for one as for the other. He says:

"Another attribute of the Oriental world of which education is the best and the sure remedy is the want of courage. It knows that certain peoples make progress in wealth, intelligence, power and well-being. It considers England and America to be surpassingly rich. But it dares not attempt anything for itself. Hopelessness, uncomplaining submission has been its characteristic from age to age.

"But education is above all things adapted to give the character, courage elasticity suppleness and hope, to grapple with difficulties. The student learns that every people has had its dead past, and by what means and through what processes it has been renovated. He sees that the gifts of God are generously bestowed upon these Oriental lands, and that intelligence, industry, conrage and faith in God will surely bring them a better and happier civilization. Until this courage and hopefulness enter the Oriental mind, nothing is accomplished that will be permanent. We are saved by hope. We need courageous, hopeful, practical men, in the overthrow of long established errors. We need men who have faith in God, and faith in themselves, and faith in men, if we would attempt to remove the evils which time has honored. Such men will both point out and lead the way to a better social, industrial and religious life.

"The East is beginning to break loose from its old systems of religion and civilization. Its half emancipated minds must be treated kindly and tenderly. Attack and denunciation are not only useless but injurious. Truth in its simplicity, and perfect intellectual freedom, must inspire and guide all our efforts. If we imagine their movements slow, we must patiently wait for them. The different races and religions must come together with common rights, and learn that allegiance to truth and to a common Father is the great bond of brotherhood. The Eastern world has never conceived this as possible. Every race has lived apart for centuries. Every religion has anathematized every other religion, and has kept itself like a corpse, dead and chilling, neither touching any one nor to be touched by any one. But all this is passing away. And nothing will hasten its departure like a thorough Christian education, which respects the rights of conscience and maintains the truth of God. The Bible must be placed in its true position, not as a book of science, but as a revelation of God's will for our salvation. And man must be placed in his true position as free yet accountable, as having such a life to live that he shall be blessed, and be a blessing to others.

"The youthful mind, when rightly trained, is disposed to faith, not to infidelity. There is no nobler work than to guide it in the right path and make it feel that there is no legitimate conflict between science and religion, that there may be the profoundest devotion both to the one and the other."

THE NEW YORK TIMES reports, having "received several interesting communications recently from correspondents in the South on the labor question. Some bewail the lack of good white servants and of regular white labor, while others intimate that the fault is with the masters and mistresses, and that the blacks, if their wages were punctually paid and they were provided with the modern house-keeping conveniences, would make quite as good servants or farm laborers as the ignorant whites. They note especially that a very intelligent class of colored servants are now to be obtained in Summer among the gradutes of Hampton College, fitting to be teachers."

BUREAUS OF LABOR EXCHANGE.

In the same article from which the foregoing paragraph is quoted, the *Times* remarks that "still, with all this, there are many districts of the South which suffer from a want of labor. The negroes have crowded into the cities, or have migrated farther South, or prefer their own little farms and houses. The employer cannot find hands for his farm, or domestics for the house, or mechanics to do the necessary work of the neighborhood."

It thinks that the solution of this labor question at the South will be found in drawing white laborers from the north. It says, "that during the last two winters, one benevolent association, the Children's Aid Society, receiving especial funds for this purpose, sent forth a considerable number of families of poor laboring people and mechanics to places where work was needed, in the South. The experiment is reported as an entire success," and it recommends the establishment of labor bureaus to facilitate this supply.

The balance of supply and demand in the labor market is always more difficult of adjustment than in other markets, partly because the poverty of the laborers makes it often impossible for them to go where they may be most wanted; and also because, being men and women instead of dead material their interests are more complicated and delicate. It often seems a pity that the two great cries for good servants and more work could not be made to satisfy each other. Neither cry is entirely confined to any section. As Northern factories, closed for a while by the hard times, start into life again, and business of all kinds recovers from its present depression, good workmen now out of employment will all be wanted again, and more too. Possibly an inter-state labor exchange would help keep the question both ways, assisting colored laborers North and white ones South if they want to go. It would have to be conducted with strictest honor and honesty of course to be successful. One difficulty is the great responsibility incurred to satisfy employers and employed. The differing rates of wages could also affect emigration. Perhaps such mingling of white and black labor will be one means of breaking the color lines North and South, and improving the conditions of laborers—for as the *Times* well remarks; "to retain a good working class, the Southern employers must be ready to consult the convenience of their laborers, promote their comfort, and above all, to pay their wages punctually, more than they have been in the habit of doing." We are inclined to think, however, that the workmen already in the South are, with good management, enough to do its work.

WE QUOTE from the New York *Tribune* of August 16th the following obitnary notice of the Rev. E. P. Smith:

"Information has been received in Washington that the Rev. Edward P. Smith, President of Howard University and Commissioner of Indian Affairs, died at Accra, on the Guinea coast of Africa, during the latter part of June. Mr. Smith was forty-nine years of age, having been born June 3, 1829, at South Britain, Conn. He began his college course at Dartmouth, but was graduated from Yale in 1849 and from Andover (Mass.) Theological Seminary in 1853. In 1856 he was settled over a church in Pepperell, Mass. He became a delegate

under the Christian Commission in 1862, and was soon made Field Agent for the Army of the West and then for the Army of the East. He also acted as Secretary of the Commission at Philadelphia. After the close of the war Mr. Smith entered the service of the American Missionary Association and aided in establishing schools for freedmen. In 1871 he was appointed Indian Agent among the Chippewas in Minnesota, and two years later was made Commissioner of Indian Affairs. While Commissioner his name was connected with many of the scandals which grew up while Secretary Delano was at the head of the Interior Department. None of the investigations growing out of these scandals, however, led to any report against the Commissioner. The latest charges of fraud with which his name was connected were those made last summer by Red Cloud through Prof. O. C. Marsh of Yale College. The commission appointed to investigate the charges spent ninety days at Red Cloud and Spotted Tail Agencies and other points, taking testimony, and made a report last October formally exonerating the Interior Department and the Indian Bureau from all complicity in the frauds. With reference to Commissioner Smith, the commissioners said that they had seen nothing during their investigations that would lead to any other conclusion than that he earnestly and sincerely desired to perform his duty faithfully to the country. They reported that they had encountered no transaction which cast the least shadow upon his personal or official integrity. Last September Secretary Delano resigned, and his departure from the department was followed by others, among them Mr. Smith. He remained, however, long enough to complete his annual report. After his resignation he was appointed President of Harvard University. Soon after, he sailed for Europe for an extended tour."

The Rev. D. W. Burton of West Africa writes: "Brother Smith died on board the steamship *Ambrig*, on the night of June 15th, near the island of Fernando Po, and was buried at the Presbyterian Mission Station, Old Calabar, on the 16th. He left Sierra Leone in good health May 23d, and landed at Monrovia; joined this ship at that place, intending to stop at Accra, but after passing Cape Crast Castle, where he went ashore, he was taken with the African fever and was too sick to land at Accra. He recovered very nicely before reaching Borney and was prepared to go on board the other steamer and return to Accra, where on the 13th of June he was taken with very alarming brain symptoms and from the first was confident that he would not live. He called for the Purser of the steamer and requested him to write for him, and dictated a farewell to his wife."

The Rev. E. P. Smith was a trustee of the Hampton Normal and Agricultural Institute, and in the earlier movements leading to the purchase of its property rendered important service. His death is a serious misfortune to the cause of African evangelization.

NEWS OF THE MONTH.

POLITICAL.

The XLIV Congress adjourned August 15th, after the longest session, with one exception known in twenty years. The British Parliament was prorogued on the same day.

During the session there have been introduced in the House of Representatives 4,105 bills and 164 joint resolutions, and in the Senate 1,045 bills and 25 joint resolutions, making a total of 5,150 bills and 189 joint resolutions. Of this number about 140 public acts, 130 private acts, and 13 public joint resolutions and five private resolutions have become laws. Among these latter, besides the appropriation bills for the departments of Government, are the following: an act appropriating $1,500,000 to the Centennial buildings; acts to enable Colorado to form a State government; for the construction of military posts on the Yellowstone; the "River and Harbor" bill for public works already commenced; an act to carry into effect the Hawaiian treaty; to promote telegraphic communication between America and Asia; to provide for the restoration of the original writing of the Declaration of Independence; to provide for an expenditure of $300,000 to complete the Washington National Monument; appropriating $430,000 to pay the judgments of the Southern Claims Commission; providing that no person shall be prosecuted for any offense not capital, unless the indictment or information be instituted within three years after the offense; authorizing the Secretary of the Treasury to issue silver coin to an amount not exceeding $10,000,000 in exchange for legal tender notes, and declaring that the trade dollar shall not hereafter be a legal tender. Acts were also passed for fulfilling treaty stipulations with Indian tribes, and authorizing the President to accept volunteers to aid in suppressing Indian hostilities.

The House passed a bill for the repeal of that section of the resumption act of 1875 which provides for a special day, January 1, 1879, for the resumption of specie payment. This bill remains in the hands of the Senate Finance Committee, unreported. The Senate passed an amendment to the postal bill which would restore the fast mail service and the franking privilege, but it is postponed in the House till next winter. A bill for an amendment to the Constitution of the United States to prohibit appropriation of public funds to sectarian schools or other sectarian organizations was placed on the Senate calendar after a third reading. The House passed a resolution introduced by Mr. Lord (Dem.), N. Y., that interference with the rights of free suffrage in any State should be prevented or promptly punished.

The Impeachment trial of ex-Secretary Belknap resulted in his acquittal, all but two or three of the negative voters explaining their vote as based on the question of jurisdiction.

The Reports of the Committee of Investigation into affairs in Mississippi were submitted. The majority report confirms the allegements of terrorism and violence; the minority report denies them.

Governor Tilden's and Governor Hendrick's letters accepting their nomination were published after a month's delay. Both urge reform and the repeal of the resumption act. Governor Tilden calls it a hindrance to specie resumption. He favors the one Presidential term.

By proclamation of the President, August 2d, Colorado was declared a fully admitted State.

A commission has been appointed to treat with the hostile Sioux.

The new President of the republic of Hayti, General Boisrond Canal, unanimously elected by the National Assembly last July, has been inaugurated at Port au Prince amid great rejoicing.

The election of President Lerdo has restored quiet in a great degree to Mexica.

The rebellion in Cuba is still advancing.

PERSONAL.

Speaker Kerr died August 19th at Rock Bridge, Alum Springs, Va., after a distressing illness, consumption of the bowels. An escort from the House accompanied his remains to the family residence in New Albany, Indiana. The announcement of his death in Washington was received with general sorrow by all classes.

Rev. J. Sella Martin, the well known colored clergyman, died in New Orleans on Friday, August 11th. He was a native of North Carolina. He was known as a politician in Illinois and Michigan in 1856. In 1860 he was ordained pastor of the Joy Street Baptist Church in Boston. He visited England as the agent of the Freedman's Aid Society of Ohio, and received there some notice as a speaker. He followed Mr. Douglass as editor of *The New National Era* in Washington. He has since been a postmaster in Louisiana. Mr. Martin was a speaker of marked ability, possessing a pleasing address, and having an excellent gift of holding his audience.

Information has been received in Washington that the Rev. Edward P. Smith, President of Howard University and Commissioner of Indian Affairs, died at Accra, on the Guinea coast of Africa, during the latter part of June.

Senator Blaine has recovered sufficiently to enter the campaign for Hayes and Wheeler in his Congressional District.

Sojourner Truth is not dead, as reported, but is alive and well at Battle Creek, Michigan. A citizen of that place writes to a friend: "Truth still lives in the person of our dear friend Sojourner. She has not been sick, but her daughter Elizabeth has been ill for a month. Sojourner speaks to-morrow on temperance at the Health Institute in this city. She wants to go to the Centennial in the last of September, and will, if some suitable place can be found for her to stop at. I think by her speaking and otherwise she would sell many of her books. This is her only means of support."

GENERAL.

Mr. Morley, M. P., of England has given the Jubilee Singers of Fisk University the sum of $500 for their college.

The Centennial Commission has reduced the price of admission to twenty-five cents for the last two Saturdays in every month.

4,000 strangers have attended the great Wagner Musical Festival in Bayreuth, Germany. It was a grand success.

Twenty cents per hundred pounds from New York to Chicago is decidedly cheap freight, but one railroad is making contracts at only fifteen cents to Chicago, and another, it is announced, has made six months' contracts at thirteen cents to St. Louis.

The American Missionary Association, whose work is chiefly among the freedmen of the South, announces that the deficiency of $12,000 impending in June, has been averted by increased contributions of friends. It is thought that if the receipts for August and September can be made equal to those of July an increase of debt may be avoided this fiscal year.

The editor of *The Christian Recorder*, the able organ of the African Methodist Episcopal Church, has issued an appeal to the members of that denomination for an increased support of the paper. He states that it does not meet one-third of its expenses, and unless the subscription list is increased the paper must be greatly reduced in size and published less frequently.

Since Custer's defeat, no great Indian battle has taken place, though rumors of such have been heard from time to time. The policy of the Indians has been to separate into small parties to harass, and, if possible, to separate the United States forces. Generals Crook and Terry were able, however, to at last effect a junction. They report the country much devastated by the Indians whose ponies have nearly starved. The Canadian Indians and the smaller tribes in the States refuse to join Sitting Bull, having great fear and hatred of the warlike Sioux.

Bishop Whipple of Minnesota has written to the President an earnest letter upon the indian question, thanking him for his efforts to establish a peace policy, and declaring it a marvelous success, though weakened by being fettered by the faults of the old policy, and overthrown by the violation of the treaties by the United States' own act. He suggests a plan to obviate some of the evils until Congress provides a remedy: "First, concentrate the Indian tribes on reservations; second, whenever an Indian gives up his wild life and begins to live by labor, give him an honest title by patent of one hundred and sixty acres of land and make it inalienable; third, provide government for every Indian tribe placed on a reservation. The United States Judge might be required to hold one session of his court on the reserve each year." He concludes with the belief "that a just and humane policy worthy of a great Christian nation will save our poor Indian wards and bring upon us the blessing of God."

The particulars of the riot and massacre at Hamhurgh, S. C., are known before now to most of our readers. According to the official statements of Governor Chamberlain and the Attorney General, further confirmed by the evidence before the coroner's jury, they are briefly these. On the Fourth of July at Hamhurgh, two young white men in a huggy met a colored militia company in the streets and insisted on driving through their ranks. After some altercation, the company yielded and opened their ranks to them. Application was made the next day to a Justice for the investigation of the right of the militia to block the highway, and warrants of arrest were issued against some of the officers. The trial was afterward adjourned to the 8th. Before the hour appointed for it, white citizens from the country around began to assemble, armed with guns and pistols. The militia company assembled in their armory, and at the hour set for trial the defendants failed to appear. A proposition was made by the whites that the militia men should deliver up their arms. This they refused to do, and a fight ensued. The first killed was a young white man, at which the whites brought a piece of artillery across the bridge from Augusta and fired into the armory. The militia were thus driven out of it and twenty or more were captured. Of these, five were the next morning taken out and shot to death by their captors. The colored Justice before whom tha case had been brought was obliged to flee for his life, and his house was sacked, though in his efforts to keep the peace he had gone so far as to advise the militia to give up their arms to him. The Attorney General pronounces the original demand for the arms unlawful, and the attack on the militia to compel compliance without legal excuse or justification. The verdict of the coroner's jury charges fifty-seven citizens of Aiken and Edgefield Counties, S. C., and thirty Georgians with murder, and warrants for their arrest were issued at once. General Chamberlain is glad to testify to the general feeling of horror which the event has excited in this state. It can, of course, excite only such feelings in impartial men of all classes. As the *Christian Union* remarks: "Mr. Lamar of Mississippi did credit to himself and his section by saying in the House of Representatives, of the Hamhurgh massacre, 'No excuse or palliation could be found for snoh barbarism.' He also told the plain truth when he said, 'It is the duty of Governor Chamberlain at once to adopt measures swift and just to bring to justice those who shot those prisoners in cold blood.'" And in view of the verdict of the coroner's jury, the N. Y. *Tribune* says: "Governor Chamberlain is setting a good example to other Governors in the South in showing that South Carolina can take care of her own criminals." The *Tribune* says further and forcibly: "We have no hope of peace, order and good government in South Carolina or any Southern State similarly situated until both political parties abandon the bad habit of making every disturbance the occasion of cheap electioneering."

AUGUST FLOWER.

The most miserable beings in the world are those suffering from Dyspepsia and Liver Complaint.

More than seventy-five per cent. of the people in the United States are afflicted with these two diseases and their effects, such as Sour Stomach, Sick Headache, Habitual Costiveness, Palpitation of the Heart, Heartburn, Waterbrash, gnawing and burning pains at the pit of the Stomach, Yellow Skin, Coated Tongue and disagreeable taste in the month, coming up of food after eating, low spirits, &c. Go to the Drug Store and get a 75 cent bottle, or a Sample Bottle for 10 cents. Try it. Two doses will relieve you. For Sale in Hampton by Messrs. Selden & Co., and Druggists generally.

Agricultural.

In this Centennial Year comparisons are being drawn between the present condition of the country and its industries, and their condition a hundred years ago. As compared with many other industries, agriculture does not show a corresponding advance, either in its methods, or its profits. It costs about as much to raise a bushel of corn or wheat to-day, as it did a century ago, and we raise less upon an acre of ground than formerly. On the other hand, a shoe now made wholly by machinery, from the tanning of the hide up to the polishing of the sole, and putting in the eyelets, is produced with very much less labor than a few years ago. But it costs as much to the wearer; the saving is distributed among the thousands of people, whose labor all goes to help in producing the shoe, and they are better off in consequence. The farmer who gets the same price for his wheat that he did many years ago, and does not raise it for any less, is no better off. The world is vastly richer than it was a hundred years ago, but the wealth is not in farmers' hands. It is doubtful if there is a farmer in the world who is worth a million dollars, or a tenth of that sum, who has made it by farming. But there are thousands of persons who have made fortunes by manufactures and trade. The labor of the steam-engine has made the bulk of the wealth of the world. Steam is everywhere, except on the farm. The steam engine, the silent but very valuable labors of chemistry, and scores of other in producing wealth, and lessening manual labor, are at work everywhere but there. It may be that this cannot be helped, but it would be strange if every other industry, except farming, is capable of improvement, and that this is bound to stay where it is, if it does not even go backwards. It is a fact that farmers are not sufficiently well paid for their labor. The reason, or one reason, must be, that their labor is not good enough, or sufficiently intelligent. A man who now makes shoes by hand is a poor man, and must remain so. He can not stand the competition with machinery. The farmer works too much with his hands, and he suffers in competition with other industries, in which handwork is superseded by steam or other power. What is the remedy?—It can not come in a day. It must come only through greater intelligence and enterprise. These are gained by reading, study, and education. Farmers, as a general thing, do not read as much as mechanics. But one in a hundred reads a really good, trustworthy, agricultural paper, or meets in a farmers' club, to discuss question of practical interest to him.—*American Agriculturist.*

Building Walls.—"To learn how to build a wall," says Alex. B. in the *Scientific Farmer*, "it is well to repair an old one. Delective construction is obvious when you see a wall in ruins. When you begin to try the stones, you see that there are some two or three that belong next to each other. To get your hand on these at once half solves for you the problem of wall building;—to fit them snug, and so that each shall have the best possible bearing, and give a good bearing for the stones to come after, is the other half. If you want artistic work, then, perhaps, there is something more to do; but for a farmer's farm this is enough. The ruins before me tell me the last man, however long time he spent, did not get his hand on the two or three stones that should have gone into the wall side by side; then the other two or three that were fit company to these, until the wall was complete. Then neither the frosts nor winds, nor small boy who takes to the wall for roadway as soon as he is in pantaloons, would have parted them."

To Keep Flies out of Cow Stables.—Alderman Mechi directs attention to the method adopted by some farmers of darkening cow-stables with old canvas hangings to keep out the flies. While on a visit to the farm of a friend, he was both amused and instructed to see the latter's cattle "get rid of their tormentors, by passing between pendent canvas curtains, which admitted them and closed after them, rendering the shed dark and flyless."

HELPING THE BIRDS.

BY MISS H. E. HUDSON.

All day I have been hunting
For ends of scarlet hunting,
For pieces, out of rag-bags, whose colors make a show:
Fragments of red, or azure,
Bright hits of doll-house treasure,
And faded bows and ribbons worn many years ago.

From sill and from projection
I hang this gay collection,
I strew the lawn and garden path, I fringe each bush and tree,
I dress the door and casement,
The garret and the basement,
Then watch to see if birds, perchance, will use my charity.

There comes a pretty chatter,
There comes a fairy patter
Of tiny feet upon the roof and branches hanging low,
And flirts of wing and feather,
And little strifes together,
And sheers and flights and flutterings, and wheelings too and fro.

There is a sash of scarlet
On yonder saucy varlet,
And this one, just beside me, is dressed in blue and gray,
This one is golden color,
And that one's coat is duller,
And here's a bird whose crest and tail have orange tippings gay.

A shadow and a flutter!
A chirp above the shutter!
See the swift oriole that wheels above the window here!
Now flitting sideways shyly,
Now, with approaches wily,
Circling and circling closer, between desire and fear.

O, pirates, dressed in feathers,
Careless of winds and weathers,
How you begin to plunder, how bold you all have grown;
How each among the number
His claws and beak will cumber,
And carry off the strings and rags as though they were his own.

The stock is fast diminished,
And when the nests are finished,
The nests of orioles and wrens, of robins and of jays,
In pleasant summer leisures
I'll watch the rag-bag's treasures
Swing in the wind and sunshine above the garden ways. *From Wide-Awake.*

EDWARD BROWN, STOKER.

We were very quiet, Mary and I, as we strolled ont of the churchyard down ons of the lanes and then crossing a stile, we went throngh a couple of fields, and sat down on another stile, with the high hedge on either side of us, and the meadow that they were beginning to mow at the other end, one glorious bed of flowers, and soft, feathery grass.

"Polly," I says at last, breaking the silence, "ain't this heavenly?"

"And you feel better?" she says, laying her hand in mine.

"Better!" I says, taking a long draught of the soft sweet-scented air, and filling my chest, "better, old girl! I feel as if I was growing backward into a boy."

"And you fifty last week," she says.

"Yes," I says smiling, "and yon forty-seven next week." And then we sat thinking for a bit.

"Polly," I says at last, "as I sat there drinking in that cool breeze, and feeling it give me strength, its worth being ill only to feel as I do now."

For yon see I'd been very bad, else I dare say I'm not the man to go hanging about the churchyards and watching funerals. I'm a stoker, and my work lies in steamers trading to the East. I'd come home from my last voyage bad with fever, and been carried home to die, as my mates thought, and it was being like this and getting better that had set me thinking so seriously and made me so quiet. Not that I was ever a noisy sort of a man, as any one who knows me will say. And now, after getting better, the doctor had said I must go into the country to get strong; so, as there was no more voyaging until I was strong, there was nothing for it but to leave the youngsters under the care of the eldest girl and a neighbor, and come down and take lodgings out in this quiet Surrey village.

Polly never thought I should get better, and one time no more did I; for about a month before this time, as I lay hollow-eyed and yellow on the bed, knowing, too, how bad I looked, for I used to make young Dick bring me the looking-glass every morning, the doctor came as usual, and like a brunt Englishman, I put it to him flat.

"Doctor," I says, "yon don't think I shall get better?" and I looked him straight in the face.

"Oh, come, come, my man!" he says, smiling, "we never look at the black side like that."

"None of that, doctor," I says. "Ont with it like a man. I can stand it. I've been expecting to be drowned or blown up all my life, so I shan't be scared at what you say."

"Well, my man," he says, "your symptoms are of a very grave nature. You see the fever had undermined you before you came home, and unless——"

"All right, doctor," I says, "I understand. You mean unless you can get a new plate in the boiler, she won't stand another voyage."

"Oh, come! we won't look upon it as a hopeless case," he says. "There's always hope." After a little more talk, he shook hands and went away.

Next day, when he came, I had been thinking it all over, and was ready for him. I don't believe I was a bit better. In fact, I knew I was drifting fast, and I saw it in his eyes as well.

I waited till he had asked me his different questions, and then, just as he was getting up to go, I asked him to sit down again.

"Polly, my dear," I says, "I just want a few words with the doctor;" and she put her apron to her eyes and went out, closing the door after her very softly, while the doctor looked at me curious like, and waited for me to speak.

"Doctor," I says, "you've about given me up. There, don't shake your head, for I know. Now, don't think I'm afraid to die, for I don't believe I am; but look here. There's seven children down stairs, and if I leave my wife a widow, with the few pounds I have been able to save, what's to become of them? Can't you pull me through?"

"My dear fellow," he said honestly, "I've done every thing I can for your case."

"That's what you think, doctor," I says. "But look here. I've been at sea thirty years, and in seven wrecks. It's been life and death with me a score of times. Why, I pulled my wife there regularly out of the hands of death, and I'm not going to give up now. I've been——"

"Stop, stop," he says gently: "you're exciting yourself."

"Not a bit," I says, though my voice was quite a whisper. "I've had this over all night, and I come to think I must be up and doing my duty."

"But my good man——," he began.

"Listen to me, doctor," I says. "A score of times I might have given up and been drowned, but I made a fight for it and was saved. Now, I mean to make a fight for it right here, for the sake of the wife and bairns. I don't mean to die, doctor, without a struggle. I believe this here, that life is given to all as a treasure to keep. We might throw it away by our folly any time, but there's hundreds of times when we might preserve it, and we never know what we can save till we try. Give's a drink of that water."

He held the glass to my lips, and I took a big draught, and went on, he seeming all the time to be stopping to humor me in my madness.

"That's better, doctor," I says. "Now look here, sir, speaking as one who has sailed the seas, it's a terrible stormy time with me. There's a lee shore close at hand, the fires are drowned out, and unless we can get up a bit of sail there's no chance for me. Now, then, doctor, can you get up a bit of sail?"

"I will go and send you something that will quiet you," he said, rising.

"Thanker, doctor," I says, smiling to myself. "And now look here. I'm not going to give up till the last, and when that last comes, and the ship's going down, why, I shall have a try if I can't swim to safety. If that fails, and I can really feel that it is to be, why, I hope I shall go down into the great deep calmly, like a hopeful man, praying that Somebody above will forgive me all I've done amiss, and stretch out his fatherly hand to my little ones."

He went away and I dropped to sleep, worn out with my exertion.

When I woke, Polly was standing by my bedside watching me, with a bottle and glass on the little table.

As soon as she saw my eyes open she shook up the stuff and poured it into a wine glass.

"Is that what the doctor sent?" I says.

"Yes dear; you were to take it, directly."

"Then I shan't take it," I says "He's give me up, and the stuff's only to keep me quiet. Polly you go and make me some beef tea, and make it strong.

HELPING THE BIRDS.

She looked horrified, poor girl, and was about to beg me to take hold of the rotten life-belt he'd sent me, when I held out my shaking hand for it, took the glass, and let it tilt over—there was only about a couple of teaspoonfuls in it—and the stuff fell on the carpet.

I saw the tears come in her eyes, but she said nothing—only put down the glass, and ran out to make the beef tea.

The doctor didn't come till the next day, and I was lying very still and drowsy, half-asleep-like, but I was awake enough to hear him whisper to Polly, "sinking fast;" and I heard her give such a heart-broken sob that, as the next wave came on the sea where I was floating, I struck out with all my might, rose over it, and and floated gently down on the other side.

For the next four days—putting it as a drowning man striving for his life like a true-hearted fellow—it was like great foaming waves coming to wash over, me, but the shore still in sight, and me trying hard to reach it.

And it was a grim, hard fight; a dozen times I could have given up, and folded my arms, and said good by to the dear old watching face safe on the shore; but a look at that always changed me, and I fought on again and again, till at last the sea seemed to go down, and, in utter weariness, I turned on my back to float restfully, with the tide hearing me shoreward, till I touched the sands, crept up them, fell down worn out, to sleep in the sun—safe!

That's an odd way of putting it you may say, but it seems natural to me to mix it up with the things of sea-going life, and the manner in which I've seen so many fight hard for their lives. It was just like striving in the midst of a storm to me, and, when at last I fell into a deep sleep, I felt surprised like to find myself lying in my own bed, with Polly watching by me; and when I stretched out my hand and took hers, she let loose that which she had kept hidden from me before, and, falling on her knees by my bedside, she sobbed for very joy.

"As much beef tea and brandy as you can get him to take," the doctor says that afternoon; and it wasn't long before I got from slops to solids, and then was sent, as I told you, into the country to get strong, while the doctor got no end of praise for the cure he made.

I never said a word though, even to Polly, for he did his best; but I don't think any medicine would have cured me then.

I was saying a little while back that I pulled my wife regularly out of the hands of death, of course that was when we were both quite young, though, for the matter of that I don't feel much different end can't well see the change. That was in one of the Cape steamers when I first took to stoking. They were little, ramshackle sort of boats in those days, and how it was that more weren't lost puzzles me. It was more due to the weather than the make or finding of the ships, I can tell you, that they used to find their way safe to port; and yet the passengers, poor things, knowing no better, used to take passage, aye, and make a voyage too, from which they never got back.

Well, I was working on board of a steamer, as they used to call the Equetor, and heavy-ladden, and with about twenty passengers on board, we started down the Channel with all well till we got right down off the west coast of Africa, when there came one of the heaviest storms I was ever in. Even for a well-found steamer, such as they can build to-day, it would have been a hard fight, but with our poor, shaky, wooden tub, it was a hopeless case from the first.

Our skipper made a brave fight of it though, and tried hard to make for one of the ports, but bless you, what can a man do when, after ten days' knocking about, the coals run out, and the fires that have been kept going with wood and oil, and everything that can be thrust into the furneces are drowned; when the Paddle wheels are only in the way; every bit of sail set is blown clean out of the bolt ropes, and at last the ship begins to drift fast for a lee shore?

That was our case, and every hour the sea seemed to get higher and the wind more fierce, while I heard from more than one man how fast the water was gaining below.

My mate and I didn't want any telling though. We'd been driven up out of the stoke-hole like a pair of drowned rats, and came on deck to find the bulwarks ripped away, and the sea every now and then leaping aboard and washing the lumber about in all directions.

The skipper was behaving very well, and he kept us all at the pumps, turn and turn in spells, but we might as well to have tried to pump the sea dry, and when with the water gaining fast, we told him what we thought, he owned it was no use, and we gave up.

We'd all been at it, crew and passengers about forty of us altogether, including the women—five of them they were and they were all on one deck lashed in a sheltered place close to the poop. And very pitiful it was to see them fighting hard at first and clinging to the side, but only to grow weaker, half-drowned as they were; and I saw two sink down at last, and hang drooping-like from their lashings, dead, for not a soul could do them a turn.

I was holding by the shrouds when the mate got to the skipper's side, and I saw in his blank white face what he was telling him. Of course we couldn't hear his words in such a storm, but we didn't want to, for his lips said plainly enough:

"She's sinking!"

Next moment there was a rush by me for the boats, and two of the passengers cut loose a couple of the women; place was made for them before the boat was too full; she was lowered down, cast off, and a big wave carried her clear of the steamer. I saw her for a moment on the top of the ridge, and then she plunged down the other side out of sight—and that of everybody else; for how long she lived, who can say? She was never picked up or heard of again.

Giving a bit of cheer, our chaps turned to the next, and were getting in, when there came a wave like a mountain, ripped her from the davits, and, when I shook the water from my eyes, there she was hanging by one end, stove in, and the men who had tried to launch her gone—skipper and mate as well.

There were only seven of us now, as I could see, besides the three women lashed to the side, and only one of them was alive; and for a bit no one moved, everybody being stunned—like with horror: but there came a lull, and, feeling that the steamer was sinking under our feet, I shouted out to the boys to come on, and we ran to the last boat climbed in, and were cast off, when I happened to catch sight of the women lashed under the bulwarks there.

"Hold hard!" I roars, for I saw one of them wave her hand.

"Come on, you fool!" shouts my mate, she's going down!"

I pray I may never be put to it again like that, with all a man's selfish desire for life fighting against him. For a moment I shut my eyes, and they began to lower; but I was obliged to open them again, and as I did so, I saw a wild, scared face, with long wet hair clinging round it, and a pair of little white hands were stretched ont to me as if for help.

"Hold hard! I shouts.

"No, no," roared out two or three, "there isn't a moment; and, as the boat was being lowered from the davits, I made a jump, caught the bulwarks with my hands, and climbed on board, just as the boat kissed the water, was unhooked, and floated away.

Then, as I crept, hand over hand to the girl's side, whipped out my knife, and was cutting her loose, while her weak arms clung to me, I felt a horrible feeling of despair come over me, for the boat was leaving us; and I knew what a coward I was at heart, as I had to fight with myself so as not to leave the girl to her fate and leap overboard to swim for my life. I got the better of it, though, went down on my knees, so as not to see the boat, and got the poor trembling, clinging creature loose.

I raised her up—"hold on by the side while I make fast a rope around you."

And then I stood up to hail the boat—the boat as warn't there, for in those brief moments she must have capsized, and we were alone on the sinking steamer, which now lay in the troughs of the sea.

As soon as I got over the horror of the feeling, a sort of stony despair came over me; but when I saw that pale, appealing face at my side, looking to me for help, that brought the manhood back, and, in saying encouraging things to her I did myself good.

My first idea was to make something that would float us, but I gave that up directly, for I could feel that I was helpless; and, getting the poor girl more into shelter, I took a bit of tobacco in a sort of stolid way, and sat down with a cork life buoy over my arm, one which I had cut loose from where it had hung forgotten behind the wheel.

But I never used it, for the storm went down fast, and the steamer floated still, water-logged for three days, when we were picked up by a passing vessel, half-starved, but hoping. And during that time my companion had told me that she was the attendant of one of the lady passengers on board; and at last, when we parted at the Cape, she kissed my hand, and called me her hero, who had saved her life—poor, grimy me, you know.

We warn't long, though, before we met again, for somehow we'd settle that we'd write; and a twelve month after, Mary was back in England, and my wife. That's why I said I took her like out of the hands of death, though in a selfish sort of way, being far, you know, from perfect. But what I say, speaking as Edward Brown, stoker, is this: Make a good fight of it, no matter how black things may look, and leave the rest to Him.—*Once a Week.*

DOLLY'S PRAYER.

BY EMMA BURT.

"God in Heaven, please to hearken
To your little Dolly's prayer!
While the preacher says the preachin',
Please to tell me where you are!

"For I am so tired waiting
Till the big words all are said,
And Amen, and then the music,
Till the peoples bow their head.

"If I knew the way to Jesus
I would creep so soft along
That I wouldn't 'sturb the preacher,
Nor the prayin', nor the song.

"Then I'd run so very swiftly,
And I'd give him a surprise—
Oh, I'm certain I should know Him
When he met me with his eyes!

"He would be so glad to see me
That his arms he'd open wide,
And I'd quickly climb within them,
There forever I would hide.

"God in Heaven, please to hearken
To your little Dolly's prayer,
While the preacher says the preachin',
Please to show me where you are."

Tired ones with hearts impatient,
How we echo Dolly's prayer:
"God in Heaven, please to hearken,
Please to lead us where you are."

CENTENNIAL VIEWS.

SWINGING ROUND THE CIRCLE.

The best general views of the Centennial Exposition, for picturesque beauty and compactness, are gained from the little "West-end Passenger railway," on which, seated comfortably in open cars, the visitor makes the whole circuit of the buildings through the pleasantest parts of the park, by steam, for five cents. Starting from the station at the rear of the Main Building, between that and Memorial Hall, we run the whole length of Main and Machinery Halls, pass the lake with its ever-springing fountain, circle the Bertholdi fountain, fly past the white tents of the West Point cadets' camp, the open doors of the Glass Works giving a glimpse of red-hot swinging balls of molten crystal in the darkness within, then the long line of State buildings, varied in architecture and picturesque in effect—the red tiles of New Jersey, the gray moss-covered eaves of Mississippi, the yellow pine mosaic of West Virginia, the curious Canadian structure, built of piled lumber from northern woods, and, bearing like a heraldic escutcheon in its side, the huge section of a tree trunk from the "forests primeval," counting six hundred years on its rings.

In contrast with more familiar forms are a Moorish Villa, the brown-latticed English houses, marked "private," where the British commissioners keep house comfortably, and the showy, white facade of Spain who is not content with her brilliant display in the Main Building. We pass the pretty Indiana building with its mammoth boulder of coal at the door, the broad piazzas of the Nebraska and Colorado joint exhibition, and an unpretending frame cottage of two rooms, bare of everything but a few chairs, a cot bed, and one oil painting. This cottage was erected at his own expense by a patriotic resident of Philadelphia who could not stand the idea of his Mother State's vacant chair at the Nation's feast. It bears her venerable name sadly over the threshold of its emptiness—"Old Virginia."

We make a long sweep round Agricultural

DOLLY'S PRAYER.

Hall, glancing in by every doorway through the long vistas of pointed arches; stopping a minute on the further side to let off passengers for the elevated railroad that takes a dizzy bird's flight across a deep ravine for the excitement of adventurous visitors; then make the home stretch by another route by the Woman's Pavilion and Horticultural Hall, completing the round of three miles in twenty minutes.

THE WOMAN'S PAVILION.

Our readers have already had a view of the interior of this building, and some account of its origin and purpose. They know that it was rather an afterthought of the great Exhibition, and undertaken by the enterprising Woman's Commission to demonstrate the effect and value of woman's work in this and other countries. It does this, of course, only to a limited extent. Women artists and artisans are not apt to be rich enough to meet the expenses of such an exhibit, and the commissioners had to come to their assistance to secure some of the best of the representations. Then, besides, in spite of those who think her above it and those who think her beneath it, woman's work gets so mixed up with man's work in this workaday world that it is not so easy to separate them. Many of the finest exhibitions in the Main Building and Machinery Hall owe a share of their beauty and perfectness to her busy brain and fingers. The carpets, silks and laces that stream like banners from the foreign and American arcades, the painted Dresden chinn fit for royalty, the artistic French fans, the humbler products of shoe making, envelop making, book binding and—though that should seem uncongenial—cartridge making; these and, doubtless, a hundred other departments of industry represent her work as well as man's. One of the principal designers for one of the largest houses exhibiting oil-cloths and feltings is the daughter of the proprietor. Woman's hooks are on the publishers' shelves, and her pictures and sculptures are in the art gallery, where Edmonia Lewis, the colored sculptress, shows her Cleopatra, while the educational departments of more than one country recognizes women as their most efficient teachers.

But what then is in the Woman's Pavilion? Much that is interesting. A good deal of fancy work it is true. Almost too many elaborate nothings one looks at with a mixture of respect and pity, as at those illuminated manuscript volumes upon which the monks of the middle ages used to lavish lifetimes while the world went by them. It is a pity, too, that the women of New York could do no more than "show out a flag and sign of love," though their flags cost $3,000, we are told.

Aside from this, however, there is much good work in art and industry. One of the most remarkable exhibits is that of the Cincinnati School of Design; chiefly a collection of carved work in wood, of very marked artistic merit in originality of design and beauty of execution. Pianos, mantel-pieces, doors and furniture in oak and walnut and rosewood, covered with elaborate ornamentation of carving and inlaid work, executed with a freedom and strength of handling that will be a revelation to many of women's capabilities. The most elaborate of all is a walnut bedstead inlaid with ebony and painted slate panels by Misses Hattie and Mary Johnson. Trailing trumpet vines, bunches of lilies and poppies carved to perfection, and lavish of detail, painted morning-glories folded up for sleep are the chief designs. This and many of the articles are for sale. Some very pretty chess tables belong to this exhibition; among them is one, each square of which is illustrated with one of the fantastic creatures of the fairy tale of "Alice's Adventures behind the Looking Glass."

The Massachusetts ladies show some beautiful painted tiles and porcelain tea sets.

WOMEN'S INVENTIONS.

It is often said that women have no inventive genius, but here are at least seventy of their inventions, by our own count. The great majority are naturally domestic labor-saving machines; washing machines, locking barrel covers, baby holders and cooking stoves, one "parlor cooking stove," indeed, showing the innate craving of every American woman's soul for a parlor, even though the kitchen has to be in it. There are various systems of dress cutting, and at least two good and sensible models of the "reform under garments" for which Mrs. Flint and her sisters deserve the thanks of the civilized world.

But the women do not stop with the housework. Here is an ingenious life saving mattress that will float in the water and support two or three persons in the enclosed sack that hangs between its two divisions. It has been adopted and put in use by the U. S. Board of Steamboat Inspectors. Here is a new building material, patented by a young lady of a Western city, a horse umbrella extending the idea of a horse sunbonnet—it would delight good Mr. Bergh's heart,—here is a wonderful combination desk, accommodating half a dozen persons with desk room and all sorts of contrivances, yet folding into a space of eighteen inches by six feet. Here is a bedstead which far out-rivals Goldsmith's "bed by night and chest of drawers by day," for it is also a sofa, a safe and a dressing room. Here are illuminated night-signals in general use in the United States Navy. They were indeed the invention of the patentee's husband, but perfected and brought into practical use by the wife after years of experiment and labor after his death. Here are curious out-line models of wire for drawing classes, and here a "soot and spark arrester" for cleansing the black smoke from soft coal before it leaves the chimney—an invention we always meant to make ourselves, and guess we shall have to after all, for if this is a success why haven't poor, sooty St. Louis and Pittsburgh washed their faces yet? The gentlemen learn here that every time they twist their screw-studs into their shirt bosoms they have a lady to thank for this comfortable device. We have not exhausted our list of seventy inventions, and they, of course, do not begin to exhaust all that women have originated. Did not a woman invent the shot-tower, and do we not ourselves know a fair New Yorker who has invented a stone cutter and patented a folding staircase for upper berths? We must stop here, however, with the remark that women's arts are not all understood yet.

The New Century is a newspaper edited, set up and printed by women in the Woman's Pavilion, and finds a ready sale. Carpet and silk looms, tended by women, are seen at work there. We have in a former article told our readers of Miss Allison, the young woman engineer, who has sole charge of the engine which furnishes power to the machinery there.

For the success of the Woman's Pavilion, and indeed for much of that of the whole Exhibition, great credit is due to the ladies of the commission, Mrs. Gillespie and her coadjutors, among them Hampton's good friend, Mrs. S. T. Hooper at the head of the Massachusetts commission, whose work outside, we regret to say, made us always unsuccessful in finding her in the Pavilion.

THE QUEEN'S SPINNING.

The women of other countries are to some extent represented and very creditably, by wood carvings from Sweden and feather flowers from Brazil, for instance. Queen Victoria heads the list with a napkin of finest linen, spun by her own royal hands, and twenty-six etchings. Her daughters, also, send a screen embroidered by the Princess Beatrice, a table-cloth embroidered by the Princess Louise of Hesse and Princess Christian, and four drawings of flowers by the Marchioness of Lorne. So industry is at home everywhere, like the diligent spider who "taketh hold with her hands in kings' palaces."

The general effect of woman's share in the great Exhibition must be, we think, to encourage women workers and to increase respect for them.

CROSS WORDS.

"Oh," said a little girl, bursting into tears, upon hearing of the death of a playmate, "I did not know that was the last time I had to speak kindly to Amy!" The last time they were together she had spoken crossly to her, and she thought of the last cross word, which now lay heavily on her heart.

Speak kindly to your brothers and sisters and school-fellows, when you are talking to them, lest it may be the last time you may have the opportunity. Cross words are, indeed, very sorrowful to think of. Little children, love one another.

TRUTHFULNESS is a corner-stone in character; and if it be not firmly laid in youth, there will always be a weak spot in the foundation.

THE CENTURY.

From The New York Tribune.

DEVELOPMENT WITHOUT PARALLEL.

The first century of the United States has closed. It has been a century of development without parallel in history. The population has increased from 2,750,000 to 44,675,000. The area bas been extended from 800,000 to 3,603,844 squere miles. The development of agriculture under the pressure of immigration and the stimulue ef mechanical invention has been utterly without precedent. The valne of manufaeture has edvanced from $20,000,000 to $4,200,000,000. Foreign and domestic commerce has taken gigantic strides. The marvelous development of mineral resources has not heen the work of a century hut of fifty years. There was not a singlo bank in the colonies in 1776; tbere ere more then 0,000 now. Internel improvements and the common school system have kept pace with immigration. On the threshold of the new century, a revlew of the netionel progress is worthy of carefnl etudy.

POPULATION.

At the outbreak of the Revolution the Continental Congress ascertained approximetely the population of the thirteen colonies, in order that the hurdens of the war might not fall too heavily npon any section. The total population was estimated at 2,250,000, exclusive of 500,000 elaves at the South. In 1870 the nation which the representatives of these colonies fonnded was the fifth of the great empires of the world in reepect to population, and it is now nndoubtedly the fonrth. The Chinese Empire in 1670 had 477,500,000 inhabitants; the British Empire, 174,200,000; the Rnsaian Empire, 76,500,000; the German Empire, 40,200,000; the United States, 66,556,871. The average increase in the aggregate population since 1670 in the fifteen States in which a census has been taken is 16 per cent., and at the same rate of increase the total popnlation in 1675 would be 44,675,000, while the German Empire according to the recent ceneus is 42,757,612. During sixty years (1600–60) the population of the United States increased 593 per cent.; that of England and Wales, 121 per cent., and that of France, 37 per cent. The great factor of the marvelone growth of onr population has been immigration. Annexation has contrihuted very little.

The colonies were founded in a religions age nnder the best possible conditions for ultimate self-government. Nearly all the early settlers belonged to the industrione middle classes of the Old World. A euhstantial equality existed among the Puritans in New England, the Dutch in New York, the Quakers and Germans in Pennsylvania, the Swedes in New Jersey and Delaware, the English Roman Catholics in Maryland, the English Churchmen in Virginia, tbe Nonconformists in North Carolina, and the Huguenots in South Carolina. At the time of the English Revolution of 1066 settlements bad been made in all the thirteen coloniee except Georgia, and the total population was about 600,000. Growth was slow and unequal, and it was not until 1750 that the population exceeded 1,000,000. During the next twenty years the popnlation of the colonies was doubled, and on the threshold of the Revolution there swept a great current of immigration from Germany and Irelend into Pennsylvania, New York, and the Carolinas. The first census of the United States was taken in 1790. The population was 6,929,214, including 757,208 slaves. From 1790 to 1620 about 234,000 immigrants arrived. A great wave of immigration then swept across the Atlantic.

At tbe outset America was regarded as a refuge for oppressed labor. The immigrants were accustomed to the simplest forms of labor, and were ready to build canals, and subsequently railroads. The development of manufactures in New England changed the aspect of immigration, and foreigners came to regard the United States as a merket for skilled labor. The cheap lands offered under the Homestead bill attracted an immense numher of industrione farmers. During twelve years an area greater than that of New England was occupied and tilled by 275,000 families under the operation of this act. Inter-State migration has been from the first a popular instinct. There was a constant movement from tbe half-settled States to the unsettled territory, and those wbo were left be hind manufactured for those who were on the frontiers. From 1845 to 1654 there was a great exodus from Ireland and Germany. After the famine of 1846 immigration from Ireland more than douhled, reaching its maximum in 1651. During this period nearly 1,500,000 Irisbmen landed in Castle Garden. German immigration reached its higbest point in 1654. After the years 1637, 1857, and 1676, there was a most remarkahle decline in immigration, a commercial revnlsion acting as a wet hlanket. The total number of immigrants from 1820 to 1676 was 8,808,141, of whom 2,907,565 were from Ireland, and 2,663,437 from Germeny. About 60 per cent. (efter deducting women and children) were in the prime of life; 46 per cent. were trained to various pursuits, and 10 per cent. were traders.

Nearly 10,000,000 of our popnlation are foreigners, or the descendants of foreigners. It has been estimeted thet, if the fusion of elements were complete, of 100 drops of American hlood 25 would be Anglo-Saxon, 27 Germen, 2 Dutch or Scandinavien, 30½ Celtic, 3 Romanic, and 12½ uncertain. The white, red, black, and yellow racee are all represented. In 1870 the ratio of the colored to the whole population was 14½ to 100. The rate of increas of the colored race during the decade was far behind thet of the whole population. From 1653 to 1874 a small percentage of immigration has come from China. The total number of Chinemen who errived during that period was 144,3z6. The total number of Indians in the United States in 1670 was 363,712, of whom 96,360 were on Goverument reservetions. Ae regards sex, the popnlation of the United States is nearly equally divided.

In 1790 one-thirtieth of tho population was in cities, end there were only six towns whose population exceeded 6,000. In 1670 one-fifth of the population was municipel, and there were three hundred and seventy-four incorporsted cities. The growth of some of these cities has been mervelous. During the colonial period the principel occupetions were husbandry, lumbering, trading, hunting, and fishing. One-third of the lebor of the country was employed in timber-cutting. According to tbe last census nearly 6,000,000 are engaged in agricultural pursuits, 1,200,000 in trade and transportation, 2,700,000 in manufacturing and mining, and 2,600,000 in professional life; and there are 43,000 clergymen, 40,000 lewyers, 62,000 physicians, 126,632 teachers, 2,000 actors, 5,200 jonrnalists, 1,000,000 laborers, and 975,000 domestic servants. Alexander Hemilton's dream of the diversity of humen industry in the New World has come to pass.

AREA.

The territory nominally occupied by the colonies that nnited in the Declaration of Independence extended from the seaboard to the Mississippi and the great lakes, and exceeded 800,000 square miles. The aggregate area covered by population in 1790 was 239,935 square miles. The main line of settlements ran 1,000 miles along the coast from the mouth of the Penobscot to the Altamaha, witb an average extent inland of from one hundred to two hundred and fifty miles. A few pioneers bed made tbeir homes in the Obio Valley; there were two or three patches of settlement in Kentucky; tbere was a village in Indiana and another in Michigan; and there were hands of adventurous spirits as far west as Illinois. The total area is now 3,603,844 square miles, or 1,942,000,000 acres, one-half of wbich are public lands. In eurface extent three nations surpass the United States—the British, Chinese, and Russian empires. The arahle land under cultivation is less than one-third of the total area.

AORICULTURE.

The early colonists were of necessity experimental farmers. Experience was the only hand-book of agriculture which could teach them the adaptability of crops to the new conditions of climate and soil, and for a century they husied themselves in compiling and editing tbis practical manual. At the outbreak of the Revolution, however, attempts to raise cotton in the Connecticut Valley, or cinnamon in the Carolinas had been abandoned; farmers were well versed in the arts of agriculture, and were the largest, the most industrious, and the most prosperons class in the community. Nearly all the Revolutionary leaders were farmers. In a letter written four days before his death Washington reminded hie managar of the exhausted state of his farm, and urged the importance of a rotation of crops. While Washington was anticipating the application of science to agriculture, Jefferson was at work upon a new plow which he hoped might prove more usefnl than the clumsy "har share" then in use. Science and labor-eaving machines—the whole progress of agriculture during the century—ie contained in those words. When Sir Humphry Davy was experimenting with bones, turnips, gypsum, and even guano, land was so cheap in America that it was more economical for a farmer to go west and make a new clearing than to attempt to restore hy artificial means the fertility of an exhausted farm. One of the Southern States is now expending $10,000,000 annually in the purchase of fertilizers, and tbe number of scientific farmers who bave studied the laws of production and the principles of farm drainage is increasing rapidly. But agriculture has derived far more from the genius of American invention than from science. The farmer of 1776 went to tbe villaga blacksmith when he needed a plow, and many of his tools were made in bis own woodshed. To-day the manufacture of farm implements is one of the leading industries of the nation, the production of 2,000 establishments amonnting to $50,000,000 in 1670. The centnry opened with the invention of an imperfect drilling machine; it closes with the steam plow and an annual average of 1,200 petents releting to agriculture. Lahor-saving machinery and immigration heve gone hand in hend in the development of the West.

At the close of the Revolution the production of cotton in the South scarcely exceeded ono hundred hales. Tho invention of the cotton gin mede it the greet eteple of the South, tho production increasing with marvelous rapidity until it reached its maximum in 1870—over 5,000,000 hales. The total value of the farm, garden, orchard, and forest products (including live stock sleughtered) was $2,074,761,009 or $60 for each inhabitant. The aggregate area of the farms was 407,735,041 acres, or about 21 per cent. of the surface of the country. The cash value of these farms was $9,262,803,361; farm implements, $336,673,429; live stock, $1,525,276,475.

This summer there are 300,000 reaping mechines in motion. But while the countless lehor-saving appliances which have been introduced during the past century have given the egricultural industry of the nation enormous dimensions, the lend is superficially cultiveted, and exhaustion follows as inevitably as it did in Washington's dey. The rursl populetion is fast decreasing in New England, for farming ie not as remnnerative as it was twenty years ago. In Ohio the yield of wheat is fifteen hushels to the acre, where it was thirty hnshels fifty years ago. But at the present rate of progress it will be two hundred end fifty years before the Great West is crowded with settlers end scientific farming rendered a national necessity.

MANUFACTURING.

The Virginians attempted to manufacture silk and iron soon after the settlement of Jamestown, and eight years after the landing of the Pilgrims there was a water-mill at Dorchester. Manufacturing was an American instinct. The early colonists had heen born on a shopkeeping island and they naturally wanted to make and sell their own wares. At tbe close of the eighteenth century Boston and Philadelphia were smell mannfacturing centres, woolen cloth, paper, iron, glass, and leather being the principel prodncts. At the opening of the Revolution a strong impnlse was imparted to manufactnring, inasmuch as the colonies were cut off from Greet Britain and compelled to rely upon themselves. The disordered state of the finances at the close of the war caused a reaction, hut when Weshington wrote to Lafeyette manufactures were flourishing. There were fifty-three paper-mills near Philadelphia. New England linen was selling in the Carolinas, Lynn was making shoes hand over hand, Ipewich was turning ont silk and finery, Lancaster had oil and hemp mills, and in the Providence Plantations the Baptist traders were building new factories. Tench Coxe, Assistant Treasurer under Mr. Hamilton, estimated that the value of the manufactories of the United States in 1790 was more than $20,000,000.

In the following year Hamilton presented his report on American manufactures, in which he enumerated as regular trades, skins and leather, glue, flax and hemp, iron, iron and steel implements, bricks and pottery, starch and hair powder, brass and copper manufactnres, including andirons and philosophical apparatus, tinware, carriages, refined sugars, oils, soeps, candles, hats, gunpowder, chocolate, silk shoes, "women's stuffs," snuff, chewing tobacco, and lamphlack. The cotton-gin and the factory system combined to huild up industry in New England. The era of steam opened and American mechanical skill enabled the manufacturing interests to keep pace with immigration and the development of the West.

In 1670 there were 252,148 mannfacturing establishments in the United States, with a capital of $2,116,206,769. The raw material consumed was worth $2,433,427,242; the value of the products was $4,232,325,442; the wages amounted to $775,584,643; and the profit realized was $1,743,698,200, or $45.25 for every inhabitant. The leading industries are leather, lumber, cotton, wool, paper, clothing, flour and meat, pig and bar iron, agricultural implements, carriages and wagons, sugar refining, and tobacco. The iron indnstry in 1670 was second to that of Great Britain. Leather is now the principal industry of New England. In the departments of the dressing and tanning of skins, the manufacture of boots and shoes, saddlery, harness, &c., the capital invested is nearly $134,000,000, and the annnal product, exclusive of the value of the material used, is $163,000,000. The centre of the manufacturing industry of the country is New York City, whose prodnct exceeded $332,000,000 in value when the last national censue was taken. Philadelphia ranks secoud and St. Lonis third.

COMMERCE.

Three years after the landing of the Pilgrims a small vessel was launched in the Plymouth Colony. The lumber trade was the first commercial industry in which New England devoted her growing energy. A brisk market was opened in the West Indies, and as fast as the manufactures of Boston sprang into life home bottoms were built for tho coasting trade. In 1676, five hundred end fifty vessels were said to heve been hullt in Boston, and in 1731 the Massachusetts commercial fleet numbered six hundred sail, exclusive of 1,000 vessels employed in the fisheries. Ship-huilding was elso prospering in the other colonies. The colonial merchants now sought to extend their trade to various perts of the world in the teeth of the restrictive legislation of Great Britain. The contrahend trade enlisted not only the fortunes hut the moral sense of the shipowners. Nine-tenths of the merchants were engaged in smuggling. John Hancock was one of the biggest shipowners in the contrahand trade, and Jonethan Trumhull end Alexender Hamilton elso were interested in it.

The export trade of Virginie and the Carolinas was eleven times as great as that of New Englend, hut when the Declaration was signed it hed been virtually suspended. When the States had hed time for hreath after the Revolution, there was a vigorous revival of trade. From 1792 to 1607 exports and imports set up with extraordinary rapidity. During the long period of commercial depression ending in 1830 they averaged $73,000,000. The crisis of 1637 ceused another decline, and then the figures rose rapidly, until in 1360 the exports exceeded $400,000,000 and the imports $362,000,000. The principel exports were wheet, flour, cotton, tobacco, pork, ham, butter, and cheese. During the last fifteen years petroleum has become one of the leading staples for export. In 1673 the imports exceeded $642,000,000, and the exports $626,000,000, the development of foreign trade during the decade having been unprecedented.

The only drawhack to tbe marvelous progress which these statistics reveal is tbe fact that tbe internationel commerce of the United States is at present mainly carried on in foreign bottoms.

MINING.

The development of the mineral resources of the United States is the crowning work of the last half century of American history. During the colonial period a few crude attempts were made to mine copper, and lead and iron ores were worked with partial success in Pennsylvania. Coal was mined in Virginia as early as 1750, hnt the anthracite of Eastern Pennsylvania was not discovered nntil 1770. The extent of the productive coal-fields now known is 135,000 square miles. The Appalachian field has an area of 60,000 square miles, and embraces the Pennsylvania anthracite beds and the great hituminous tract which extends into Alabama and Ohio. In 1673–74, 45,413,340 tons of coal were mined. The anthracite beds will be exhausted in a few generations, hut the supplies of true hituminous coal are endless. The first petroleum well was sunk in 1857. Tbe prodnct in 1674 was over 10,500,000 harrels of crade oil, and the value of the export was nearly $31,000,000.

The iron ore produced hy sixteen States in 1670 aggregated over 8,000,000 tons, one-third of which came from Pennsylvania. The copper mines of Lake Superior were not opened until 1849. In 1674 the total production exceeded 19,000 tons. Since the gold discoveries of 1847 thc United States have held the first place in the production of the precious metals.

BANKING—FINANCE.

Two centuries ago Governer Dudley was paying his son's college expenses at Harvard with Indian corn. Five days after the hattle of Bunker Hill $2,000,000 of Continental paper were issued. The colonists, from prudent Massachusetts to easy-going Virginia, had tasted the sweets of paper inflation and had found them to be suhtle poisons. But the Continental Congress hed no alternative; the experiment was repeated with the same disastroue results; its paper issues were increased from month to month until the aggregate was $350,000,000, and the hills so utterly worthless that a Philadelphia harher papered bis shop with them. While the inflationists of that day were keeping the printing-press in motion, Robert Morris borrowed money where he could on his own notes. "Hard money for the army," was his appeal to his wealthy Qnaker acquaintances. In 1781, notwithstanding the relief afforded hy the French loan, the treasury was $2,500.000 in debt for current expenses, and the army was starving and half clothed. Mr. Morris issued his own notes for $1,400,000, and Washington's army set out for Yorktown, where the war closed, after $93,465,696 (specie) had been expended and a large debt had been incurred. Not far from this scene of triumph there was brought to an end toward the close of a century a civil war that had cost North and South nearly $6,000,000,000. Between Yorktown and Appomattox there was a century of growth, in which the real and personal property of the nation had increased from $1,000,000,000 to $30,000,000,000. At the crisis of the civil war the Government borrowed the expedient of the Continental Congress, and resorted to paper; the Legal-Tender and National Bank acts were passed, and the largest loan ever sanctioned by any government was placed successfully npon the foreign market. Bnt the most mar-

velous feature of the financial history of the hundred years is the growth of banking. When the Declaration of Independence was signed there was not a single bank in the thirteen colonies to aid Robert Morris in keeping the wolf from the door of the American camp. There are to-day in the United States 907 chartered State banks, 2,118 National banks, 666 savings banks, and 2,875 private banks—6,066 in all. The pioneer was the Bank of North America, established in Philadelphia by the Continental Congress in 1782, with a capital of $400,000.

INTERNAL IMPROVEMENTS.

Washington was the pioneer of the American system of public improvements.

The first canals built in the United States were in Massachusetts. The Erie Canal was begun in 1817, and opened in 1825, at a total expense of $7,602,000. It gave value to the products of the West, and extended the navigable water-line 1,400 miles inland. Pennsylvania Maryland, Virginia, Ohio, Indiana, and Illinois soon followed the lead of New York, and in 1840 there were 3,850 miles of canal in operation.

A year after the completion of the Erie Canal the first charter for the construction of an American railroad was granted. It was a short tramway of three miles from Boston to the Neponset River. The cars were drawn by horses after the failure of an attempt to propel them by sails. It was not until 1832 that locomotives were attached to the cars. Steam had already been applied to navigation. When the Declaration of Independence was signed there were two steam engines of the crudest design in the United States. There are to-day 74,658 miles of railroad in operation with an aggregate capital of $4,658,208,630 and gross earnings of $508,065,505, paying dividends amounting to $74,294,208, and moving 200,000,000 tons of freight. The canals, with the exception of the Erie, Champlain, Delaware and Raritan, Delaware and Chesapeake, and the Delaware and Hudson, have given place to the railroads and a large extent of mileage has been abandoned.

The telegraph service of the United States is now rendered by seven corporations, controlling 80,000 miles of wire line and carrying 14,000,000 messages annually.

CHURCH AND SCHOOL.

Washington made an address to the Quakers in 1789, in which he took the broad ground that man was not responsible to man for his faith. "While men," said he, "perform their social duties faithfully they do all that society or the State can with propriety demand or expect, and remain responsible only to their Maker for the religious or modes of faith which they may prefer or profess." On this broad American platform of equality the religious denominations have gone on in their own way. The Methodists, Baptists, and Congregationalists have made the most rapid progress, the three communions comprising to-day about one-third of the total population. In 1870 there were 72,459 congregations and 63,082 religious edifices, with a total of 21,665,062 sittings, or four to every seven inhabitants. The aggregate value of the property owned by the religious denominations was $354,483,581.

In 1870 the school population was 14,000,000; the number of enrolled scholars over 8,000,000; the number of teachers, 241,300; and the annual expense of the system, $75,000,000. There were 4,500,000 persons over ten years of age who could not read, and 5,000,000 who could not write. The freedmen of the South, and the immigrants from countries where education is neglected, have swollen the array of the illiterate.

In 1770 there were nine colleges in the colonies, six of which had been open only thirty years. In 1875, degrees were conferred by three hundred and seventy-four colleges; and there were, in addition, one hundred and six schools of law, medicine, and theology, and five colleges for women.

INVENTION—ART—LITERATURE.

The General Court of Massachusetts granted in 1646, to Joseph Jencks of Lynn, a patent for "the making of Engines for mills to go with water, for the more speedy dispatch of work than formerly, and mills for the making of Sithes and other Edged Tools." This was the beginning of a national patent system. In 1800, there were 675 patents granted in England and 306 in the United States. In 1870, the record was 85,079 for England and 79,612 for the United States. There have been 120,000 patents granted by the Federal Government since 1800, and on the roll of honor are such names as Fulton, Whitney, Morse and Howe.

The number of printing presses in the colonies in 1776 was forty. The number of libraries in 1870 was 164,815, with 45,528,988 volumes, and the aggregate circulation of the newspapers and periodicals was 1,500,000,000 copies annually.

The Teachers' Table.

HAMPTON INSTITUTE LECTURES ON TEACHING.

BY PROF. F. A. ALLEN.

As Hampton graduate teachers begin to open their school-houses for the fall term, they will turn their eyes again to this Teachers' Table for some words of greeting and advice from home. We wish them all success and shall hope to receive frequent letters as usual. The instructions and suggestions many of them received last June from Professor Allen's valuable course of lectures at Hampton, will, no doubt, bear fruit through the coming year in work made lighter and success more certain.

For the benefit of the many who were not able to attend the course, we are able, they will be glad to know, to give them, with the Professor's consent, some report of his lectures in this column. The lectures were familiar and, to some degree, conversational. Topics were introduced or enlarged upon according to the suggestion of the moment—and this very fact made the teaching more practical and useful, if sometimes less systematic.

The large class, of fifty or over, who listened to the lectures will be glad of the opportunity to review their own notes.

LECTURE 1.

1st. To understand his
Materiel, viz.: boys and girls.
Tools, " books and apparatus.
Work to be done.
2d. A plan of work, made out beforehand.
3d. A method for carrying out this plan.
4th. A true order of studies.

Now, first, to understand our materiel. Many teachers do not begin to understand their boys and girls. For example, people think children don't like to learn. That is a great mistake. Children have a natural appetite for all kinds of knowledge. That is why children ask so many questions. You can make a child like any study if you set about it in the right way. Or you can spoil his appetite for knowledge just as you can his appetite for food. A child likes sugar, but you could make him sick of it by forcing it upon him in larger quantities than he could swallow, or when he is full. He wont like hoaey if you cram it into his eyes and ears. No more will he like geography if you set him down to study a list of hard words he knows nothing about. To keep his appetite keen, give him his food or his lessons in a pleasant form and in not too large quantities. Make him see that you like it yourself, that you have something to tell him that is interesting and will be of some use to him. Be sure and begin this way. Let him feel at the start that his lessons will be interesting, and he will take what hard work may come with them the more cheerfully.

Now, second, our plan of work. Make out your plan for the first day before you go to the school-house. It will be a temporary one of course, but the great thing is to set your pupils to work at once. That will keep them from staring at you and getting disorderly, and will give them a sense of your power—that you know what you are about. At the same time, it will give you a chance to study them, and to decide on your permanent organization and programme and school regulations. You will want to arrange a time for study, for recitation, for recess and for interruptions. In arranging your classes, remember that it will save time and labor to have as few as possible. It is better to condense the classes when you can, especially the reading classes. You will find perhaps very little difference between the 2d and 3d Readers, say, or the 3d and 4th. In that case it is just as well for the two classes to read together, from the same book.

(Some objections were made to this by some of the graduate teachers present who thought such a course would be difficult and unsatisfactory, perhaps, to parents or trustees. The Professor said it was merely a suggestion to be used where practicable; that in his own long experience he had found it a great saving of time often wasted in an unnecessary multiplication of classes.)

Here is another hint. Remember that knowledge is communicated by, first, Reading, second, Writing. You want to teach your boys and girls the proper use of words. There is no better way than by having them write. An excellent plan is to make them write all requests they may have to make. A boy wants a drink. He writes on a slip of paper you have lying on your desk:

Sept. 11, 1876.

Dear Mr. Smith,—May I go out and get a drink? Peter Jones.

That is what I have all my boys do. It teaches them spelling, writing, punctuation, and the proper use of language all at the same time, besides making them a little less in a hurry to make requests. In the evening I mark the mistakes in the written requests and give them back for correction.

Give your youngest pupils, your little tots, three or four short exercises a day and turn them out to play, between times, the rest of the day. If your trustees don't like it, go and talk them over. Tell them you'll teach the little things all they are big enough to learn, and to keep them sitting on hard benches in a close school-room any longer than necessary would be only useless and cruel, and make your room disorderly.

Our school should always be opened with prayer and reading a short portion of Scripture. But don't make this exercise too long, and never begin it in a cross temper.

Now one word about your business relations with the school. You have the right, of course, and you ought to make as good a bargain for yourself with your school committee as you can. Business is business. But when the salary is once fixed, put all idea that you are teaching for money out of your mind. Work as hard and as faithfully for a small salary as for a large one; for $20 as for $200. Work as if you meant to stay ten years. Then you will work faithfully, and your work will last ten years whether you stay or not.

In the next lecture I will tell you what I regard as the true order of studies.

Correspondence.

We have received the following letter from a Southern workman, who, though not a student from Hampton, is in sympathy with its work. We thank him for his good will, and hope that his earnest labors for his people's improvement will be rewarded with much success.

MT. TABOR SCHOOL, COLUMBIA, MARY CO., TENN., *May* 9, 1876.

Gen. S. C. Armstrong,

Dear Sir:—I have received the SOUTHERN WORKMAN, have read the same with great satisfaction; and, from its tenor, I regret that it is not found in every cottage, in the hands of the opulent and of the humble peasant, for in my opinion it would do a great deal toward advancing the moral standard of the people. And if any information from me regarding the work in the South will be beneficial to you and your readers I will gladly give it.

I have been here since October 8, 1874, as a Presbyterian missionary. We have two churches and one pastor. One church is a mile from the city. My school is doing well. I had one hundred and forty pupils up to the time of the small-pox breaking out among them, of which three died. At this date I have fifty-three pupils; my wife assists in teaching. My A class studies Latin Grammar, Anetomy, Physiology, Hygiene, Geology of Tennessee, Physical Geography and Arithmetic. Three of this class are public school teachers, three assist us, six are too young to command situations. Those who taught made during vacation nine hundred and twenty dollars. The building I teach in belongs to the colored people here. It is situated on West Market St., near the two large white female schools. It has three recitation rooms, a chapel seating three hundred, and two rooms for teachers. We have one acre of ground, and good water.

Our Sabbath-school is doing well, considering the former prejudice to Presbyterians which is fast dying out here. The colored people are doing very well; some have farms and many have good homes in the city. The South-east and North-west are colored towns. There are five churches, three schools and nine societies. Among the societies which are doing great good are the young men's Literary Lyceum and Good Templars. All the South needs is men of good qualifications imbued with the desire of doing right to all mankind.

The first colored school in this city was opened by Rev. C. Jardon in 1866, and for opening such a school in which colored children were to be educated, he was whipped in the school-room and the little ones sent home. But that did not stop throbbing hearts who were looking for education. And the men who once looked unfavorably upon colored men being educated are to-day good friends, and have been for some time, to the cause of education. Some of the men have visited my school.

I believe that Christianity and education are the only barriers and safeguards of national greatness. And every one who loves the name of America, and having American blood coursing in their veins, ought to arise and do something to perpetuate the good name of the nation. And at the same time, while we have a good name, we have something yet among us which, if not eradicated, will blacken the pages of American history: ignorance and immorality, for in some parts of this state, the proud state of Tennessee, many colored people are treated as if they were not free, having neither church nor school. And thinking of this, notwithstanding we in the city are doing well, it gives me heart throbs for those who live in the back woods. How is this to be stopped? By the young men and young women who are completing their education in the different schools, grasping their sythe firmly and dauntlessly and coming forth to the sunny South to help in reaping the long-ripe field of ignorance.

You must pardon me for saying so much, for the work here has all of my time, and when I start I never know when to stop.

Respectfully yours, &c.,

A. F. A. POTT.

P. S. Two young ladies of my school I would like to send to you; they want to come to your school after my telling them about it, but the girls are poor and think they never will be able to leave home. If you can make arrangements for them, making it as low as you can, I know they will be students of which Hampton would be proud. Let me hear from you at once. Please send me catalogue.

Yours,

A. F. A. POTT.

The following communication was received too late for insertion in our August number. Violent thunder storms and strokes of lightning have been remarkably frequent this summer. The excessive heats of the season would seem to have some connection with this, but, after all the discoveries of science, there is yet a great deal of mystery about atmospheric electricity. We are glad that the case our correspondent reports resulted altogether so favorably.

GATESVILLE, GATES CO., N. C., *July* 22, 1876.

To The Editor of The Southern Workman.

DEAR SIR:—A fearful wind and rainstorm struck here yesterday, partially blockading the streets and yards with trees. It was accompanied with heavy thunder and lightning which struck several houses; one in which Mr. Charles Sears was living, striking his nephew, his child and himself senseless for several minutes, burning off their clothes and leaving them badly bruised but living. A large meeting of the Colored Societies here had convened and they were marching in procession when the storm burst upon the place. One of the female members of one of the societies fainted with terror and lay speechless for fifteen hours, but with medical attention is recovering.

C. W. GREEN.—Class of '75.

LETTERS FROM GRADUATES.

OPINIONS AS TO WHIPPING NOT LEARNED AT HAMPTON.—A LAST WINTER'S LETTER LAID OVER; WHAT GRADUATE TEACHERS HAVE ENDURED AND MAY AGAIN.

VIRGINIA.

Dear Teachers:—Your very interesting letter was brought to me Tuesday morning the 21 inst. by my sister who attended the mail before school opened. When she came, I was getting ready to open school and only had time to notice from whom it came, till after the morning exercises. After I opened school I read it and found it deeply interesting.

I will now tell you something about my work here. I am trying to do my duty and I believe the Lord will protect me in so doing. Pray that I may be strong in Him and that I may have the moral courage to do right at all times. I started my school with a very small number, but it has increased rapidly.

Among so many girls and boys we may expect to find a diversification of character, traits and disposition. I don't believe that it is a good punishment to whip; but what *can* be done with unruly and disobedient scholars? I have had some very trying cases, and I had to use the birch very diligently to bring them to time. There was a great deal of bitterness of feeling against me before I punished these trying cases. [*Caused apparently by an unfortunate division in a temperance society to which the writer belonged.*—ED.] After I inflicted the punishment that I did, this feeling broke out in all its fury. Some came to the school-house with clubs; some came to my own house, and once two big, rough men met me in a butcher's shop where I was purchasing meat, and attacked me, cursing me and threatening to whip me for whipping the daughter of one of the combatants. The girl was only lightly switched, and, in fact, none have been whipped in any other way. You don't approve of whipping, because I remember talking with you the last summer I was at Hampton, and your recital of some difficulty you had once in a school in Georgia. I try to look at all these unpleasant and trying ordeals through which I pass, from a pleasant standpoint, knowing that intelligence is lacking on the part of those who have been guilty of such conduct. Though I am Principal of the school, I can safely say, considering all things, that it is in a pretty fair way to become quite a good school. I enjoy teaching very much, though it is very hard work.

Winter of '76.

My Dear Teacher:—I have enrolled fifty-eight pupils with an average of about fifty, though I have the most uncomfortable school-house that I ever saw or taught in in my life. I can tell the time of day by the sun through the top, and my scholars are continually breaking through the floor. Providence has smiled upon me so far and kept back the snow, and if any should fall here the scholars and I will be compelled to leave the school-house until it is over. The people disappointed me very much about the school-house; they promised to build a new house if I would come and teach this winter. As my scholars seem to be so anxious to learn I shall look to God and go ahead.

FOR our pictures this month we are indepted—as for many heretofore—to our friends of the New York *Christian Weekly*, and Mr. Shorey of Boston.

DYSPEPSIA.

Americans are particularly subject to this disease and its effects: such as Sour Stomach, Sick Headache, Habitual Costiveness, Heartburn, Water-brash, coming up of the food, coated tongue, disagreeable taste in the mouth, palpitation of the Heart and all diseases of the Stomach and Liver. Two doses of GREEN'S AUGUST FLOWER will relieve you at once, and there positively is not a case in the United States it will not cure. If you doubt this go to your Druggist and get a Sample Bottle for 10 cents and try it. Regular size 75 cents. 6-1y

THE CONSERVATORY
OF THE
Hampton Normal & Agricultural
INSTITUTE

Now offers for sale—roots of the *Yellow Jasmine, Coleus, Begonia, Honeysuckle*—Fragrant Monthly, *Pink Azalea, Geraniums, Heliotrope, Euoymous or French Laurel, German Ivy*, and grasses for hanging baskets; bulbs of the *Amaryllis Atamasco, Calla Lily, Smilax* and *Oxalis*.

THE HYGEIA HOTEL,
OLD POINT COMFORT, VA.
H. PHOEBUS, PROPRIETOR.
TERMS: Transient $4.00 per day; $17.50 per week and upwards, according to location, &c.

This Hotel, throughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the Old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years as taken from the notes of the Meteorological Observatory, shows an average of 60°, 74°, 79°, for Summer; 70°, 85°, 46°, for Autumn; 49°, 44°, 42°, for Winter; and 48°, 52°, 63°, for the Spring months. —Open for guests all the year.— 11-75, tf.

THE
Leading Clothing House
OF THE
UNITED STATES.

The principles upon which we do business are to treat all buyers alike by selling at one uniform price, which is marked upon every garment in plain figures, and by exhibiting upon every garment a printed label stating the material of which it is made and guaranteeing the workmanship over our own name.

These are advantages that are offered by no other house in New York.

We keep constantly in store an immense stock of clothing
FOR MEN'S WEAR,
FOR YOUTH'S WEAR,
FOR BOY'S WEAR.

Our stock is always
THE NEWEST,
THE LARGEST,
THE FINEST,
THE CHEAPEST.

When visiting New York do not fail to examine our goods.

THE
NATIONAL SERIES
OF
STANDARD
TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known* and *popularly used in every section of the United States*, and *by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the Primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publication whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS
BY
PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR
BY
W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY
BY
MONTEITH & McNALLY.

NATIONAL SYSTEM of MATHEMATICS
BY
CHARLES DAVIES, LL. D.

BARNE'S BRIEF U. S. HISTORY.
BARNE'S SCHOOL SINGER.
SMITH & MARTIN'S BOOK-KEEPING.
JEPSON'S MUSIC READERS.
CHAPMAN'S DRAWING BOOK.
CLEVELAND'S COMPENDIUMS.
NORTHEND'S SPEAKERS.
GRAHAM'S REASONABLE ELOCUTION.
PEABODY'S MORAL PHILOSOPHY.
BOYD'S COMPOSITION, ETC.
CHAMPLIN'S POLITICAL ECONOMY.
BEER'S PROGRESSIVE PENMANSHIP.
PECK'S GANOT'S NATURAL PHILOSOPHY.
PORTER'S CHEMISTRY.
JARVIS' PHYSIOLOGY and LAWS of HEALTH.
WOOD'S AMERICAN BOTANY.
CHAMBER'S ZOOLOGY.
STEELE'S "14 WEEKS" IN EACH SCIENCE.
PUJOL'S FRENCH COURSE.
WORMAN'S GERMAN SERIES.
SEARING'S CLASSICS, ETC., ETC.,

The whole crowned by a unique collection of professional manuals known as

THE TEACHERS' LIBRARY,
In Thirty Volumes.

A Descriptive Catalogue of all A. S. Barnes & Co's publications will be sent free to the address of any Teacher or School Officer applying for it.

The National Teachers' Monthly commands in its editor and contributors the best professional talent the country affords. Subscription, $1 per annum.

J. W. SCHERMERHORN & CO.,
No. 14 Bond Street, New York,
Publishers and BOOKSELLERS, in School Books,
And Manufacturers of Modern School Material.
Manual of School Material has 344 pages, tinted paper, over 600 Illustrations, names and describes nearly 1,200 articles in School Use. Price, 25 cents.

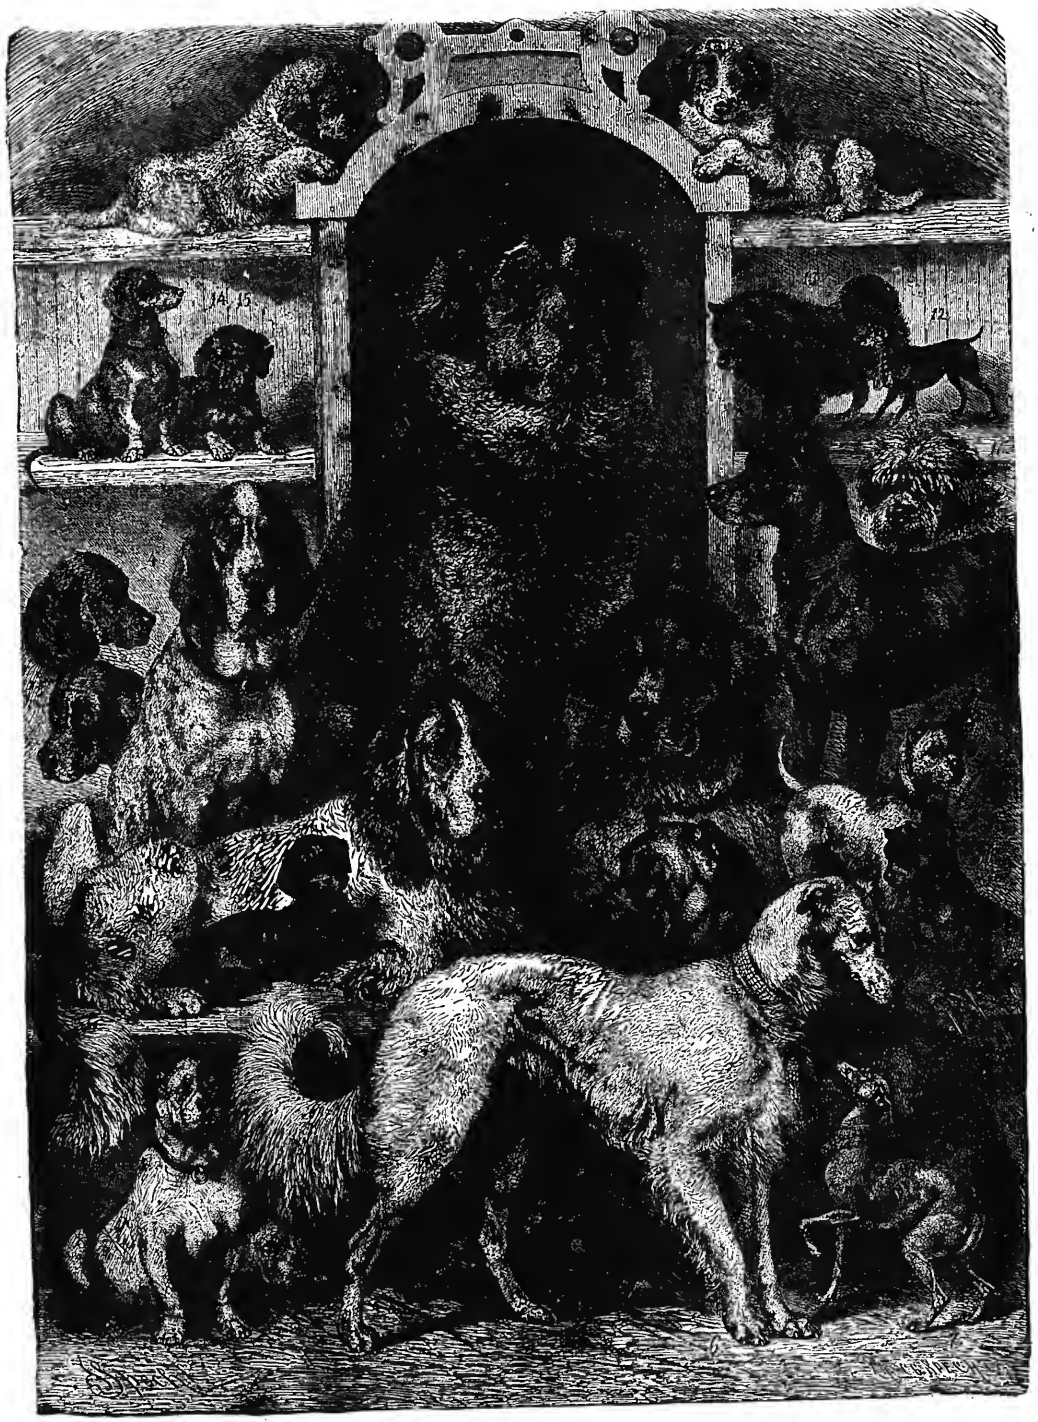
The Cheapest and Best—Weighs 18 lbs.—Packs in a Trunk—Carpeted, Metal Bound, Nickel Plated, Durable, and Ornamental for Parlor. A COMPLETE GYMNASIUM for ALL—A REMEDY FOR ALL COMPLAINTS. It Equalizes the Circulation of Blood—Gives Simultaneous, Co-operative and Harmonious Action to all the Functions of Mind and Body—Tones the Nervous System—Increases Vitality—Concentrates Exercise into a few minutes per day, yet Distributes it over the Whole Body—Rests and Relieves the Mind of the Brain Worker—Cures the Sick—Strengthens the Weak—invigorates the Healthy—Doubles the Strength in a few Months. ALL INVALIDS and persons of Sedentary Habits should have this Best Means of Exercise and Health, recommended by all leading men. Send for full circular. Agents wanted. Price, with Cross-bar grasp, $25; with Side Handles, $30.

J. W. Schermerhorn & Co., *Manufacturers*, 14 Bond St., New York.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. V. HAMPTON, VA., OCTOBER, 1876. NO. 10.



DOG SHOW.

Southern Workman,

ISSUED MONTHLY.

Business Manager.

HAMPTON, OCTOBER, 1876.

PREMIUM.

From and after November, 1875, on receipt of one dollar, one year's subscription to the SOUTHERN WORKMAN, *we will send to any one who shall forward five cents for postage, a neat pamphlet entitled "Cabin and Plantation Songs, as Sung by the Hampton Students," containing 82 pages of original negro music, with words in dialect.*

These songs, arranged by Prof. T. P. Fenner, were sung in the three hundred concerts, throughout the United States, given by the Company in 1873-4-5. The books are sold at forty cents apiece.

A PROMINENT topic in politics is the protection of the negro; over it orators and editors on both sides have warmed up until the North and the South stand arrayed as during the stormiest periods of reconstruction.

There are points of absolute difference between the sections that every four years have kindled, and are likely hereafter to kindle the passions of war. We do not yet have peace. The result is a slow instead of swift return of Southern prosperity through immigration and capital from the North, which is itself crippled by this prostration.

Political campaigns, as now conducted, make reconstruction impossible. Southern feeling is natural. It may be unwise and wrong, but it is inevitable, considering the people and their past.

Garrison the three turbulent states with U. S. troops in order to protect colored voters and the rulers of their choice, and you support not such rulers as Prussia gives her conquered territories, but governments which "no white race on this earth ought to endure or will endure." "This is the greatest problem of our time and a most complex problem," says Mr. James Redpath in the N. Y. *Times*, "for on the other side the problem reads: If we fail to protect the negro in the right of suffrage we thereby surrender the states of South Carolina and Mississippi to the same brutal banditti who drove those communities into civil war."

To politicians it is simple enough. Their remedy, success at the polls, makes the fate of the negro in certain states, every four years, an all important issue—a political firebrand over all the land. All the worse for the delay should his party be finally routed.

Negro influence in politics has passed its maximum; its strongholds are fated to yield; rightly or wrongly they will fall. Ignorance and corruption within, and a vigilant and determined enemy without have doomed them.

In the cause of peace political success counts for little. Many are hopeless because the trouble cannot be voted away or the regular army stamp it out.

Just as the white race is the resultant of its circumstances so is the black race the product of its circumstances. It is not capable of self-government.

Can anything be done for the negro? Improve his opportunities.

The Peabody fund for Southern education, yielding about one hundred thousand dollars annually, has done more for both races, of late years, than all the politicians in Congress.

The lady in Massachusetts who gave a forty thousand dollar school-house and sends five thousand yearly for the instruction of poor whites in North Carolina; the Friends of Philadelphia, who for twelve years have expended ten thousand dollars annually on colored schools in Virginia and North Carolina; the outlay of the American Missionary Association of nearly two millions of dollars already, and two hundred thousand yearly, in the darkest places it could find, from the Potomac to the Rio Grande; and the steady annual flow of from sixty to seventy thousand dollars from each of the great denominations, Presbyterian, Episcopal, Methodist and Baptist, for colored schools and colleges,—are all an offset to those reconstructors, whose inspiration has been plunder and whose offices are the wages of wire pulling.

Something can be done for the negro and for the healing of the terrible troubles in the South.

National aid for their education, through the proceeds of public land sales—a measure already urged by Congressmen on both sides—would result in gradual improvement and in better feeling. It would go to the root of the matter. Local taxation and charity are utterly inadequate to this work. The alternative is, in some States, an armed force. Which is the cheapest?

Virginia has vainly applied to the nation for help in instructing its "wards." They are not responsible for their ignorance and unfitness to rule. Their suffrage was a necessity; but it is dangerous to them and to all. It is, at any rate, a fixed fact, and the condition of eight hundred thousand voters in such mental and moral darkness is not only worthy of the noblest efforts of individuals and societies, but of the prompt attention and wise aid of the general government.

NO ONE who does not read the *Educational Journal of Virginia* can realize how deeply rooted in her soil is the free school system or how ably it is managed. Its progress has been amazing. Two of her ablest and best known men, of the highest intellectual rank have recently attacked it impetuously, dubbing it as a "Yankee notion," denouncing it as tending to amalgamation of the races, as false in principle, wrong as an object of state aid, wrong in the sight of God "by whose act the negro is made inferior to the Caucasian," and appealing to all the sentiment and pride of Virginia to abandon it.

A convention called to their aid was a failure. The assailants were met on their own ground by men of equal force and social rank, and have probably retired forever from the field.

Whoever in the North is ready to lend a helping hand in the cause of universal education in Virginia—struggling in her pinching poverty to educate all her children—will do it a good turn and get ten times the worth of their money by sending one dollar and a half, a year's subscription, to the *Educational Journal of Virginia* at Richmond.

THE *Southern Planter and Farmer*, although professedly an agricultural paper, has been the vehicle of violent and long winded attacks upon the school system. Yet it is, compared with the many agricultural journals that lie on our reading room table, inferior to none in interest and value. The school crusade has apparently ceased of late, and its pages are filled with experiences of great importance to those in the North who would know of the farming resources and methods of the "Old Dominion." It is published at Richmond, Va.; price, $2 per year.

A WELL KNOWN gentleman of Connecticut recently related to us his experience of aiding needy students to an education.

During the past ten or twelve years he had loaned to a number of young white men nearly three thousand dollars, about half of which was covered by promissory notes and the balance by verbal agreement. Not a dollar of this amount had been refunded, although several of them were well established in life. On one occasion he loaned a hundred dollars to a poor negro boy at Berea College, Kentucky, and the money was refunded.

An eight years' experience of colored students' credits at the Hampton Institute has shown a steady improvement in respect to paying up after graduation. It was not at first debt, but pressure to pay that was dreaded. This is not peculiar to the race. In some cases there has been entire neglect of duty; in many others there is a keen sense of honor and a self-denying effort to pay up, that is worthy of all praise. Columns could be filled with good accounts of this kind. A wisely applied loan fund for colored students would produce far greater results than could a charity of equal amount.

A SIGN of enterprise in this locality is the establishment of the *Monitor*, a weekly newspaper; terms, $2.00 a year. It is headed with the "Democratic Reform Ticket," advocates party measures, and will be of service to it in the campaign.

The editor says: "In the discussion of all political subjects it will endeavor to exercise due respect for the opinions of those who may differ with it, and to advocate and advance its own ideas and principles by appeals to the reasoning faculties of its readers, and by the use of arguments and facts rather than by the abuse and political clap-trap which too frequently disgrace partisan papers of both parties."

THE cause of popular education in Virginia has suffered a serious loss in the death of Capt. James H. Binford, Superintendent of the Richmond City Schools. He studied carefully the systems of northern and western cities and quickly became one of the best managers and teachers in the state. He was a genial, cheerful gentleman and had great prudence and tact. He died at the Red Sulphur Springs, of rheumatism of the heart.

THE city of Lynchburg, Va., has long enjoyed remarkable advantages in climate, location, society and business privileges, and now means to lead in school privileges. The Lynchburg Public High School offers the best of educational advantages, and appears from the tone of its circular to be in the advanced line of schools of its class. The Superintendent of Lynchburg Schools, Mr. A. F. Biggers, has the oversight of the High School. He is better known to us as an active ally in sending the best fitted graduates of the colored city schools to the Hampton Institute.

WE commend to our readers special attention to the article upon Centennial Harvests which we publish whole from the *New York Tribune* in another column. It is a fairy tale that is all true. The wonderful progress of the last hundred years is in nothing more apparent than in the growth of the wheat harvests of America, which feed the world. We do not live by bread alone, and this view of our increase is suggestive of others we might take. But it gives one a new idea of progress. It is like getting off our jog trot pace on the earth's surface on to some ontside standpoint where we can see at what a rate the old planet is spinning.

NORTHERN AND CENTRAL AFRICA.

BY DR. GERHARD ROHLFS.

In ancient times, commerce on the northern coast of Africa flourished, and several of the countries enjoyed a high degree of civilization. One great hinderance to the development of the continent was the Moslem religion, whose false doctrines impeded progress by making its followers fanatic and indolent. Almost the only article manufactured in Morocco, which is exported, is Morocco leather. The art of tanning this leather the Moors brought over with them when they were driven from Spain. The other articles of export are wool and fowls. In Algiers, in spite of forty years of French rule, very little progress has been made. Frenchmen, though they are excellent cultivators of soil, possess very small administrative powers, especially in their colonies. Ever since their conquest of the country they have shown too much leniency to the natives. Colonists of Tentonic origin have always driven before them savage and other inferior races, and have thus obtained complete mastery of their new homes. The French, however, allow nomadic tribes to encamp close to their settlements, and so long as they pursue this policy they will never be safe from revolts. The Bedouins and Berbers will not be civilized, and look upon their conquerors with jealousy and hatred. The French Government should drive these barbarians into the desert as the only way of developing the country.

Tunis, is a small but very fertile country. The production of oil is so great that one year the people did not have vessels enough to store it in. And yet hardly any of this oil finds its way to Europe because the natives are too fanatical to sell it to Christians. Tripoli labors under an additional disadvantage, that of Turkish rule. The Pashas seek only to enrich themselves during their short terms of office, and the natives are outraged. The principal product of the Sahara oases is dates. The houses of the natives are built of the palm tree, and the leaves of the tree are made into baskets and mats. Central Africa, though isolated from the rest of the world, still carries on a greater commerce with foreign countries than many people suppose. Ostrich feathers, which are found in all European and American markets, form a prominent article of export. The negroes cannot form an idea of the uses to which these feathers are applied. Some say they are woven into broadcloth. Another important article of trade is ivory, and the tusks of African elephants are of much larger size and finer quality than those of india. Arachis, the oil of a nut, is largely exported to France, where it is refined into salad oil. Palm oil forms another article of commerce, and in Germany is used for lubricating railroad machinery. Gold dust also is taken to the Western coast and thence shipped to England.

MIGRATING TO THE SOUTH.

I have lately traveled by wagon, with three friends, from Lake Erie to the Gulf of Mexico at Cedar Keys; thence across Florida to Lake Monroe on the St. John's. Here we sold our horses and came home by water and rail. Our object was mainly to see the country, and learn what we might about the South and its people. Having traveled our country from north to south, we could only think of it as composed of three great belts—one north of the Ohio, one south of the thirty-fourth parallel, and the other lying between these two, and partaking somewhat of the character of both. After we had been through Southern Alabama and Florida, we could hardly think of Tennessee as belonging to the South. In the southern half of Tennessee they grow cotton, but more or less throughout the State; and in the coves and valleys of Northern Georgia and Alabama, the capabilities of the soil and climate are favorable for grain and stock-growing. But farther south, after we reach the sand where cotton still is and always has been the leading crop, and still farther, where sugar cane and oranges grow, we are in a sort of other world, where wheat and clover fields, and meadows of the cultivated grasses, are never seen—this is properly the South.

Tennessee in the middle belt, and Florida in the southern belt, are attracting the attention of northern people, more perhaps than any other portions of the Southern States along our route. Tennessee has published an account of her resources, and interested parties are from time to time adding to the facilities for acquiring a knowledge of the country. Quite a good many northern people are locating in Tennessee.

I may say in a general way that the South is no place for a poor man to move to. The South is full of poor people now, and it will not help the matter for more to go there. The scale of prices for farm labor tells the story—Ohio, $18 to $20 per month; Kentucky, $12 to $15; Tennessee, $10 to $12; Southern Alabama, $8 to $10, Florida, $6 to $8. A man who goes south should be able to employ himself and others. With five thousand dollars at command, if he is careful to find the right place to invest his money, he may do well in the middle belt of the South. He will hardly keep out of the hands of land agents, of which the South

is full, but he wants to give little heed, and should take time to study the situation well for himself.

Let no Northern man be deterred from going South by the partizan hue and cry of Southern hate and intolerance toward Yankees. This is one of the devil's own slanders. Nothing promises so much immediate aid to the depressed South as the influx of Northern energy and Northern capital. This is perfectly understood and freely acknowledged. Every intelligent person you meet, and all the leading journals in the South, are vieing with one another, each in his special way, to encourage immigration. They do not want Northern politicians to come down there and run their state and municipal governments, but they do want working and business men from the North to settle among them. All such are sure of a cordial welcome. I am quite inclined to think that farmers may do better to go South than to go West; hence I send this brief statement, founded on personal observation. No one has employed the writer to say or not to say anything whatever concerning the South or its people, and he has not the slightest interest except that of having the facts known. J. S. PATTERSON.—*In Country Gentleman.*

CENTENNIAL HARVESTS.

A WONDERFUL CONTRAST.

In the third week of June, 1776, *Dunlop's Weekly Packet*, published in Philadelphia, contained a brief advertisement to the effect that the city cart for broken victuals made its rounds every evening, and householders were urged to contribute, as the need of the prisoners was great. Our exchanges for the same week in 1876 contain the briefer announcement that the wheat crop of the West promises to be fair. It is worth our while to look into the meaning of the two notices. The prisoners were in truth near starvation, there allowance being half of a fourpenny black loaf per diem; for all else they were dependent on the refuse from kitchens, collected each day in a barrow. Prisoners in England at that date were worse off, being chained in cages and left to beg loudly for food from passers-by. Fifteen years later, during Washington's administration, the need of the poorer classes in the capital of the new republic was so great that footpads attacked men on the principal streets. In London, bangings of the purloiners of loaves of bread were frequent. The rich as well as the poor lived on oats and barley, and they were scarce enough. "Only a wealthy family," says Eden, in 1797, "could afford in Cumberland a "peck of wheat flour yearly, and that at "Christmas. Not a penny white loaf was to be "found in towns as large as Carlisle." Meat was a luxury almost unknown to the English and French peasant. In short, there was not enough food in the civilized world for its inhabitants. The gnawings of hunger drove as many emigrants to our shores as did religious persecution; and if Louis XVI could have filled the empty stomachs of the Jacquerie, there is every probability that he might have died comfortably in his bed. America brought very little food then into the world's market; the narrow strip of soil rescued from the forest, along the sea-coast, barely sufficed to feed her own colonists, and that so scantily that the influx of a small number of troops into a province produced a famine. In Asia, the need of new producing fields was felt more sharply then than in Europe; and it has increased with every year since. So near to famine does the overcrowding of population bring the poorer classes of China, that their practice of infanticide pleads a horrible sort of quasi justification on the ground of humanity. Thousands of families live the year round on the yield of a scanty rice field.

Now let us see what it means to this long hungry world when we say that "our wheat "crop promises to be fair." It means that in these hundred years we have helped feed every nation under heaven as it never was fed before. The wheat fields alone which failed to supply the troops at Valley Forge with bread, throw into the European market every year 250,000,000 bushels; the exportation from Chicago, which began in 1838 with 78 bushels, increased in 24 years to 23,000,000 bushels, so rapidly were the vast fields of the West opened and planted. We take wheat only as a gauge for the whole food-producing power of the country,—a power so enormous and steady that, even in the spasm of the civil war, when an enormous proportion of the male population of both sections was withdrawn from agriculture for five years, no famine ensued. Taking an average of the five years, never were armies so vast so well fed.

It is worth our while to look at the cattle upon our thousand hills, at the fields blooming for the harvest from sea to sea, where in 1776 was a gloomy, impenetrable wilderness. Not only have the hungry peoples of Europe emptied themselves into these welcoming fields, but the abundance of provisions in foreign markets caused by our exports has made a wholesome change in the very minds and temper of the poorer classes. Revolutions lose much of the elements of brutality when the rebels are well fed. There will never probably be guillotines in the streets of Paris as long as bread can be had for a sou or emigration is cheap. "If thine enemy hunger "feed him," is a maxim as politic as it is Christian. We have done our share toward feeding the lean and hungry Cossacks of the world in this last century, and so blunted the edge of many insurrections. We might take the yield of cotton and wool, and show what we have done toward clothing the world. But our readers can look into these matters themselves. The more closely they look the more they will be convinced that it is in the most practical as well as theoretical work that the Republic has contributed to the "ease of creation."—*New York Tribune.*

THOSE who have resumed the cares of school will appreciate the following extract from a letter written by a veteran teacher, who has comforted and inspired hundreds of her pupils, through all their lives, by her sweet words and shining life:

"Although I have taught school so many years, the re-opening always feels more or less formidable. To set the machinery again in motion, to examine the new pupils and arrange fresh classes, and unite all in a harmonious whole, is not an easy task; yet help has always been furnished, and, after the new arrangements are made, the work is delightful; the consciousness of being in the line of one's duty brings with it a sweet reward. There are, of course, difficulties, obstacles and disappointments; but when we are following our Master's call, we are sure of His aid. Peter walked on the Sea of Gennesareth at his Lord's command, but when he looked at the stormy waves and listened to the fierce wind, he began to sink. Had he kept his eyes fixed upon his Lord, he would doubtless have walked steadily and safely forward upon that treacherous element,—not in his own strength, but upheld by divine power.

"While I have the ability, and it is 'the day' with me, I desire to work. I know not how soon 'the night' may come. At the same time, I do not intend to shorten the day by overtaxing my strength, contrary to the laws of Him who made the body as well as the soul.

The reopening of school seems to me more truly the beginning of a New Year than the season usually so regarded,—a time for renewed dedication of heart and consecration to my mission. Is it not a privilege to work (even with feebleness and many imperfections) in our Redeemer's cause, to promote His reign and spread the glad tidings of his salvation? St. Paul's words '*whose I am and whom I serve*,' seem to me sublime. I love to speak of them to my pupils, and contrast this glorious service with that which is paid to an earthly monarch, hoping to induce them to enter it. How eagerly do the attendants upon royalty seek the honor which comes from such service, and which few comparatively can attain, while the service of the King of kings is free to all and infinitely more noble!"

PHILADELPHIA, *August* 29, '76.

Dear Lucy and Judy:—

Yesterday at the great Centennial I had a thought of you when I saw those little handkerchiefs which I send by mail with this letter. Now I suppose you do not know what the Centennial is, so I must try to give you a little idea of it.

"Once upon a time"—it was a time of *peace* all over the world—there was a very large family (of Nations), and one of the youngest children, a fine, healthy child who grew rapidly, was called America. She is just having a birthday party and was allowed to invite just whom she pleased, for she is one hundred years old! They selected the best park they had and made every arrangement to have a good time on the lawns and in the summer houses. America sent a little note of invitation first to one of her mother's relatives, and England came with a rose in her hand. France came, bearing a chicken cock, and a great, powerful boy named Russia had a curious bird with two heads, it looked like an eagle. Italy was a fine maid with a golden chain about her neck, and she brought *such* pretty pictures and images with her. Another child, *China*, brought a cup of tea, and it tasted so good at supper time! A little Indian looking boy, Japan, brought some beautiful silks and satins, fans, and carved ivory. All these and ever so many more, brought some of their work with them to the party so that America could see what they could do—just as you get out your patchwork to show me when I go to your grandmother's house to see you.

One little boy named Corliss came with his big engine and astonished everybody, for he can do everything with it, from weaving a silk ribbon to pumping a Niagara stream of water; it is ever so much bigger than Mr. Goff's steam pump in Virginia Hall. I saw one little colored boy there from Hampton; he had his spelling book under his arm and had a good deal to say about *education*. All the different members of the American family were present, each in her best dress and hat. Indeed, it seems as if all the world is here.

If I should try to tell you all I saw at the great Exposition it would be like trying to count the sands on the shore. As I was walking along with Miss L. we met a nice colored woman from Annapolis, Md., and she was very glad to meet some one she knew. We looked for Mr. Howe in the crowd yesterday, but did not find him. We met, however, Mr. Whiting and Judge McDevitt from Hampton. I went into one house which was called "Old Virginia," sat on its broad verandah, but there was no Hampton creek in sight as is at Griggs Hall.

One of these days, when you study geography, you will learn a great deal more of the Birthday Party than I have told you. One day we took lunch at the Vienna Bakery and had a nice cup of hot coffee and some rolls that were equal to Nancy's. Last Sunday morning at breakfast Mr. M. was wishing for some of Nancy's nice fishballs, for here in Pennsylvania they do not have such things—they are not yankee enough to like codfish.

You may tell your mother that I saw Aunt Fanny Jackson and Walter Washington in Boston. I hope Lee Jackson has begun to build a house for her, and when I come I shall hope to see it almost finished.

Perhaps your friend Mrs. S. or Miss Mary will be kind enough to read this letter to you, and if it does not seem so clear to you as it should, remember that my head and eyes are tired with all they have seen and heard at the beautiful birthday party of America.

If you see Mrs. C., tell her we heard of the arrival of the gentlemen party from Hampton and hope to see them; they are having perfect weather for their trip and as cool as need be.

I hope you two girls try to help your mother and grandmother all you can, for everybody has work enough to do, and the world needs every little industrious girl even, to do her part. I hope this letter will give you pleasure, and that I shall find you all well when we return to Hampton. Ever your friend,

M.

Agricultural.

CATTLE HUSBANDRY THE BASIS OF GOOD FARMING.

No fact in the whole range of rural economy is more plain or forcible, than that those countries in which the greatest number of cattle are found, take the highest rank in the agricultural scale. Go over the countries of the old world, and it will be found with hardly an exception, that in those sections where agriculture is based largely upon cattle husbandry—there will be found the highest farming and the largest share of general prosperity. To begin with, large numbers of cattle cannot exist in poor regions, where the soil is thin and the herbage scanty—a soil which yields the nutritious grasses in abundance, is a strong, retentive soil which will sustain heavy drafts for years. And the very fact that land of this character will carry a large number of cattle, is of itself evidence that it may, with judicious management continue to do so; the manure made from the cattle being all restored to the soil to keep up its character and sustain the demands made upon it. And it is also a general rule that where large numbers of cattle are kept, a system of high farming prevails. This, it is true, does not apply to the vast cattle feeding regions of our own great west, to the steppes of Russia, or other places where immense numbers of cattle are grown and sold to supply the demand of popnlous centres for meat—agriculture, as such, generally being low in these sections of country. But in States and countries where large numbers of cattle, oxen, cows and sheep, are owned and kept by the residents as a part of their farming capital, there, almost without exception, a high culture of the land prevails, the largest crops per acre are grown, and the largest profits secured. In proof of this look at Brittany and Normandy in France; the islands of Jersey and Guernsey; some parts of England, and a few portions of some of the American States. And while we in Maine take rather low rank as a farming State, and especially as a cattle growing State—and here, certainly, the two principles are found side by side—we shall find that in sections well adapted to it, an increase of our cattle will tend directly and positively to the permanent improvement of our general farming. This is so true that in advising it, we can hardly go astray. It will depend somewhat upon circumstances as to the particular line of cattle farming each one adopts, but it may be generally said—and here we feel we are on safe ground—that an increase of milch cows and sheep, and a steady, permanent system of breeding there two classes of cattle, will in the long run be the best for Maine, and bring the most satisfactory returns to the average Maine farmer.

—*Maine Farmer.*

DON'T DO IT.—The greatest mistake that a farmer can make is, to allow his manure to remain exposed to the air and water, under the eaves of his barn, instead of being securely placed under cover, and then kept from the action of the weather. A covering over the manure heap is easy to build, and any farmer can do it. The amount of money to be paid out for material, will not amount to much, and will be many times returned, in the increased worth of the manure. Once more, brother farmers, if tempted to leave things in the old way, don't do it; spruce up, and don't allow the sun, air, and water, to take what the land of your farms so much need to make them productive. Western farmers may afford to lose manure, but we in New England cannot.—*N. E. Farmer.*

WINTER APPLES.—Apples ought to have as sweet an air in their winter home as any other kind of food. They take in, very readily, the musty odors of close, moist cellars, that are little better than vegetable pits and the difference between a crisp, highflavored apple, and one that is flabby and poor, is often simply the difference in the storage which they have had. This fruit needs gentle handling, a cool dry room, just safely above the freezing point, and distance from all rank vegetables or unpleasant odors.

MORE ABOUT SUNFLOWERS—"Sunflowers," says a recent writer, "are richer in honey, and are consequently good neighbor for bees. Oil, hardly to be distinguished from olive oil by any one but an expert, may be extracted from the seed, in the porportion of one gallon to one bushel. One acre will produce something like fifty bushels of seeds. The seeds too, make food, not unpalatable for human being, and very good for animals and poultry. The Portuguese and the American Indians make a kind of bread for them, and roasted they may be ground and used as a substitute for coffee. The stalks may be used as benn poles while growing. Dry, they make passable roofs for sheds and the like, and burn readily on the hearth. The ashes are very rich in potash. Altogether, the sunflowers is a very useful plant; and, to crown all, it has a reputation which the scientists have never disproved, for absorbing malaria, and acting as an effectual screen against that scourge of low-lying districts, fever and ague. Planted in the back years of city dwellings they make not an unhandsome appearance, and if possessed of the disease-destroying property alluded to, their presence becomes very valuable."

A DRUNKEN FARM.

Often and often, while riding through the country, have we passed farms whose history we could read at a glance. The door-yard fence had disappeared—burnt up in the shiftlessness born of drink. The house was unpainted and battered; broken panes of glass were stopped with rags or old hats; the chimney stood in a tottering attitude; the doors swung in a creaking fashion on one hinge; the steps were unsteady, like its owner; everything was dilapidated, decaying, untidy, cheerless. A single look showed that its owner traded too much at one shop—the rum shop. The spirit of thrift had been killed by the spirit of the still. Fresh paint, repairs, improvements, good cheer and beauty for the home,—all had gone down the farmer's throat.

Outside matters were the same. The barnyards were wretched styes; the doors were off, the roofs leaky, the gates down, the carts crazy, the tools broken, the fodder scarce and the stock poor and wretched. Neglect, cruelty, wastefulness, ruin—all had come from drink.

The farm showed the trail of the same serpent. The straggling and tumbled stone walls, the rickety fences, the weed-grown fields, the sparse and half-seeded crops, the dying orchard, all said to the passer-by: "Whiskey did it." Drink had given the plaster of a mortgage instead of a coating of fertilizers, sloth instead of labor, untbrift in the place of care and demoralization in lieu of system. The farm was drink-blighted, and advertised its condition as plainly as its owner did when he came reeling home from the town. One of the most impressive temperance lectures, for young farmers especially, is a good look at a drunken farm.—*Golden Rule.*

At Home.

A WISH.

Mine be a cot beside the hill,
A bee-hive's hum shall soothe my ear;
A willowy brook that turns a mill,
With many a fall shall linger near.

The swallow oft beneath my thatch
Shall twitter from her clay-built nest;
Oft shall the pilgrim lift the latch,
And share my meal, a welcome guest.

Around my ivied porch shall spring
Each fragrant flower that drinks the dew;
And Lucy, at her wheel shall sing
In russet gown and apron blue.

The village church among the trees
Where first our marriage vows were given,
With many peals shall swell the breeze
And point with taper spire to heaven.
